It also means that the markets for the businessmen and manufacturers are suffering because you cannot do business with people who do not have any income to spend. The temptation is to view the rising rate of national income and personal income reported on pages 2, 3, 4, and 5 of the Indicators as evidence that we are climbing out of our trouble, but I find the answer to that unwarranted optimism in the chart on page 6, which deals with per capita disposable income. The dotted line shows the per capita disposable income in terms of 1958 prices, and there we find that there has been an increase registered in 1952 and an increase in 1955, but only stability or decline in the other years.

Our annual rate of growth per capita should be about 3 percent. This, together with a population growth of almost 2 percent, explains the calculation that our national income should grow by 5 percent. Let us assume that per capita income should have grown by 3 percent each year since 1952. Using 1958 price levels, we would have started in 1952 at about $1,650, and grown by more than $50 each succeeding year so that today per capita disposable income should be about $1,970, rather than the $1,790 reported by the Council.

Year	Per capita disposable personal income (dollars) [1]		At 3 percent annual growth
	Current prices	1958 prices [2]	
1952	1,520	1,654	1,654
1953	1,582	1,708	1,702
1954	1,582	1,701	1,753
1955	1,661	1,792	1,804
1956	1,727	1,835	1,858
1957	1,782	1,831	1,913
1958	1,790	1,790	1,970

This represents the real loss to the American people or represents a failure of the economy to grow at the rates at which we may expect it to grow in peacetime conditions. I submit, Mr. Speaker, that the economy has not had adequate economic expansion.

But it has had inflation. The Consumer Price Index for all items in the year 1952 and 113.5; it rose slightly in 1953 and then during the 1954 and 1955 recessions held relatively stable for 2 years, but climbed very sharply in 1956, 1957 and 1958, until it now stands at 123.8. The Consumer Price Index has gone up by more than 10 points, although the level of unemployment has risen at the same time.

The price index kept rising even after the onset of the recession in late 1957 and early 1958. It has only shown stability in the last 7 or 8 months. And that stability has been purchased at the expense of the American farmer, because the falling food prices have made up for the rise in the price of housing, rentals, apparel, transportation, medical care, personal care, reading and recreation, all of which have shown price increases during the succeeding months of 1958 and 1959.

[1947–49=100]

Period	All items	Food	Housing		Apparel	Transportation	Medical care	Personal care	Reading and recreation	Other goods and services
			Total [1]	Rent						
1948	102.8	104.1	101.7	100.7	103.5	100.9	100.9	101.3	100.4	100.5

I yield to no man with respect to the firmness of my hostility to inflation. I do not share the dangerous conviction of those who believe that we can forever freely tolerate mild inflation. There is already a temptation to program for a modest inflation into the planning of business units and of governmental units.

This week the Committee on Government Operations will hold hearings on a measure which I have introduced—H.R. 3317—to add to the purposes of the Employment Act of 1946 just four additional words. I want to promote and maintain maximum employment, production, and purchasing power "at stable price levels."

I think it is terribly important for the Congress to call a halt to inflation. I think the way to do this is, first, to announce to the country that we, too, believe in stable price levels. I am opposed to the version of this bill which the administration has submitted, which calls for adding the words "at reasonably stable price levels." To say "at reasonably stable price levels" is to suggest that we are prepared to confess failure in our ability to stabilize the value of the dollar, and will tolerate some percentage increase each year as being "reasonably stable."

I do not believe in putting weasel words into such important acts of Congress, and therefore my version of what is needed is unequivocal. It calls for stable price levels.

I recognize in a dynamic society that some prices must rise. But there should also be prices which fall, and we ought not to allow any further erosion of the value of savings, the value of insurance policies, the value of pensions, the value of Government savings bonds, and other reflections of dollar values. If there are any Members who are in doubt of the consequences of inflation I invite them to view the history of European nations during the 1920's. As a matter of fact, there was one economist at Versailles who foresaw what inflation would do to the governments of central Europe, and who cautioned the world against it. His book, which is well worth reading, is called "The Economic Consequences of the Peace." His name is John Maynard Keynes, and he wrote the history of the period between the wars before it happened.

Mr. Keynes has taken much abuse at the hands of people who have not read him nor understood him, but no one can read his book, written on the heels of the peace conference, without receiving a sober reminder that inflation can indeed destroy a nation, and that it has destroyed many nations. For those who may have forgotten, I would remind them that in the closing days of Gen. Chiang Kai-shek in China it took 8 million Chinese dollars to buy 1 American dollar. Unchecked inflation may have done more to explain the recent history of China in the years before 1949 than all of the actions taken by this Congress and the previous administrations of the United States, although it has received far less attention.

I said, Mr. Speaker, that the administration has expressed its concern about inflation not merely in words but also in efforts to balance the budget and to pursue a hard money policy. I would call to the attention of the Congress that the administration not only has not succeeded in this approach but it cannot succeed in this approach. Mr. Gardiner Means in testimony before the Senate Antitrust and Monopoly Committee has spelled out the difference between the classical inflation of too much money chasing too few goods, that occurred during the years 1942 to 1947, and the inflation of the current period 1953 to 1958. His charts, reprinted in the Washington Post and Times Herald of February 8 of this year, dramatically summarize the difference between monetary induced inflation, and administered price inflation.

[From the Washington Post and Times Herald, Feb. 8, 1959]

INFLATION BESETTING US IS OF A NEW BREED

(By Bernard D. Nossiter)

A pioneering approach to the peculiar price inflation that marked our recent past is embodied in the strange looking charts at right.

They were put together by Gardiner C. Means, of Vienna, Va., a distinguished but lonely economist. He held a slew of Government posts in New Deal days and was recently an adviser to a relatively sophisticated business group, the Committee for Economic Development. Twenty-seven years ago, Means rocked economic thinking when he and Adolf A. Berle wrote "The Modern Corporation and Private Property."

What the Means charts show is that contemporary inflation is a very different animal from the classical demand inflation. The chief difference lies in whether big price increases come in competitive or concentrated industries.

In other words, what Means has done is violate a sacred taboo of economic thinking. He has actually gone and looked at where the price increases are taking place and asked whether the differences over separate periods of time aren't meaningful.

To compound his sins, he has married economic theory to economic fact. And as everybody in the business knows, the gulf between the "institutionalists" (fact men) and theoreticians is as wide as the breach between Montagues and Capulets.

Classical inflation is pictured in the top chart, covering the war and immediate postwar years. This was a money phenomenon, an increase in money demand which was not offset by an equivalent increase in goods—what Federal Reserve Board Chairman William McChesney Martin likes to call, "too much money chasing too few goods."

In drastically oversimplified form, this is what happened:

The staggering war expenses were paid by the Government through borrowing (deficit financing). To the extent that the Government borrowed (sold bonds) to commercial banks, the Government was simply printing money. The goods this money bought were shot off, exploded, dropped on cities or left to rot in military warehouses. So, when controls came off, the extra money in the hands of people and businesses bid up prices much more than it induced increased production. Even with the best will in the world, increased production could not come about quickly enough because resources of men and materials were almost fully employed—too much money was chasing too few goods.

According to Means' charts, the biggest price increases came in the highly competitive industries—lumber, farm products, processed foods, textiles. In these, producers can't control their prices which are set by those impersonal market forces so dear to Adam Smith.

But the concentrated industries with few producers—steel, autos, aluminum, electrical machinery—held back. They do have considerable discretion over price and didn't take full advantage of the big increase in money demand.

Now, the new inflation presents a different picture. All the price push comes from the concentrated industries. The competitive industries in several cases cut prices—textiles, farm products, miscellaneous. And there is a logic in this. The period under study, 1953 to October 1958 (the last month for which Means got data), was a time of much less than full employment. The period spans two recessions (1953–54 and 1957–58). The money supply did not zoom upward.

So, only industries who need not rely on impersonal market forces but have considerable control over their prices could make increases stick. And the charts show that they did.

Many economists will quarrel with Means' interpretation of his charts. They will contend that the ability to administer prices has nothing to do with whether an industry is competitive or concentrated. They will argue that all Means is showing in his new inflation chart is what you would expect in a period of investment boom—and the Nation certainly was enjoying one from 1955 through 1957—steeply rising prices in steel and other producer goods industries as the result of extra demand for producer goods.

This debate can't be settled in this space or anywhere else now because relatively little is still known about administered prices, or for that matter, concentration.

Let's take a closer look at the charts. The solid black bars are industries or industry groups which are highly concentrated—a handful of producers account for most of their production. The cross-hatched bars are mixed concentrated and competitive—chemicals, furniture, and the like. The light gray bars are the competitive industries with thousands of producers, no one of them big enough to affect prevailing prices or production.

The bars are two-dimensional, but that's not as scary as it sounds. The height of each bar measures the percentage of price increase or decrease at wholesale in each industry. For example, in the bottom chart, steel prices went up 36 percent between 1953 and October 1958; farm products prices went down 5 percent.

The width of each bar measures the industry's weight in the wholesale-price index—that is, the amount of sales of that industry in relation to the amount of sales of the other industries. If steel sales during 1953–October 1958 were $8 billion and farm products sales were $24 billion, then the farm products bar would be three times wider than the steel bar.

The height of any bar times its width is its area. In these charts, the height (price increase) times width (economic weight) gives a graphic picture of the economic impact of each industry on the price level. In other words, the area of each bar shows how much force each industry or industry group had on the price level.

We can see very quickly that the competitive industries accounted for almost all the pull in the war period. There is much more light gray than black in this picture.

But in the recent period, the push comes from the concentrated industries. Means figures that they account for 85 percent of the gross increase in the wholesale index. If they hadn't gone up in price, the wholesale index would have risen less than 1 percent instead of 8 percent. And this is what you would expect during a period when total output of goods is increasing little and so is the money supply.

There is one other point to note. In the bottom chart, Means has broken out steel and fabricated steel from the broad category

of metal and metal products. He did this to demonstrate the overwhelming force of the steel and steel-using industries (machinery and motive) in pushing up recent prices.

While Means appears to have demonstrated that the new inflation stems from the concentrated industries, he still hasn't answered the question agitating political debate: Is it the unions or is it the corporations?

Is it Roger Blough's United States Steel, Frederick Doner's General Motors, Ralph Cordiner's General Electric? Or is it David McDonald's United Steelworkers, Walter Reuther's United Auto Workers, James Carey's International Union of Electrical Workers? Or, have both sides embarked on an unspoken wage-price or price-wage collaboration?

The charts are of no help here. But Means, who prepared his material for the Senate Antitrust and Monopoly Subcommittee, went back into the committee's steel hearings for some arithmetic. After lengthy calculations, based on a series of arguable assumptions, he concluded that labor costs per ton went up $1.75 during 1956–57; prices went up $11 a ton.

This would appear to make United States Steel, the industry's price leader, the chief culprit. However, it must be repeated that Means' computation is derived from assumptions which can be debated. At best, his conclusion is suggestive.

Who are these concentrated steel and steel-using industries? They can be reduced to 10 corporations. In terms of ingot capacity, steel is United States Steel (29 percent); Bethlehem (16 percent), and Republic (9 percent).

The "motive" end of the "machinery and motive" category is: General Motors (51 percent of 1958 auto production), Ford (29 percent), and Chrysler (14 percent).

The machinery end is tremendously complicated by definitions. But electrical machinery is General Electric (owned 16 percent of the industry's assets in 1947, the last data year); Westinghouse (13 percent); Western Electric Co., an American Telephone & Telegraph subsidiary (13 percent), and Radio Corporation of America (6 percent).

Some policy implications flowing from Means' analysis were spelled out by Chairman ESTES KEFAUVER, Democrat, Tennessee, of the Senate subcommittee. If Means is right, then:

A tight money policy won't hold down prices without bringing on a recession because corporate giants are the least affected by a shortage of lendable funds. They raise their expansion money largely from profits, not borrowing.

A balanced Federal budget is irrelevant because this is not a money, but an "administered price," inflation.

To be sure, easy money and unbalanced budgets would, according to anybody's analysis, worsen the situation by piling a money inflation on top of an "administered price" inflation.

(However, a minority group of economists headed by Leon Keyserling paradoxically argues that easy money and budget deficits will stimulate an offsetting amount of extra production when, as now, men and resources are not fully employed.)

But what Means is really saying is that some new institutional devices must be invented to control concentrated industries and/or their unions if price stability is to be achieved.

What form the new devices should take might well be on the agenda of Vice President RICHARD M. NIXON'S new Cabinet committee on inflation and the massive congressional study Majority Leader LYNDON B. JOHNSON, Democrat, Texas, once proposed for the Joint Economic Committee.

Many of us were taught to think about market behavior in terms of a classical picture of impersonal forces of supply and demand operating through so many sellers and so many buyers in a market, and that the action of no one buyer or seller could have any significant effect on the resulting price. But we now operate in a world in which a handful of firms are the chief buyers of certain commodities—what the economics textbook calls monopsonists or oligopsonists, and many markets are dominated by a handful of sellers.

We use the word "monopoly" carelessly and often erroneously, for it properly relates to a single seller who has sole control, and a truer representation would be of a handful of sellers cooperatively controlling the market in what should technically be called oligopoly.

But whatever we call it, and whatever the fine phrases of the economists may be, the facts are simple:

We have private control of prices. Prices can be set by a group of men meeting around a small table. Indeed, in some markets which follow the leader the decision of the largest single firm becomes in a matter of hours—sometimes a matter of minutes—the decision of all the other firms in the trade. The only area in which classical competition could be found would be in the field of agriculture, and even here not only Government controls but also vertical integration are disrupting what might otherwise be a free market condition.

If we are effectively to fight inflation, we must be prepared to do more than make anguished speeches against it. We must do more than trust the Federal Reserve; we must do more than talk about balancing the budget. The two policies urged by the administration are inadequate. The battle against inflation requires the use of other weapons as well.

What would be a program for adequate economic expansion without inflation?

It would be a composite of many decisions. There is no single highroad by which these goals can be served, and we are mistaken if we think that any one or two answers will suffice. Let me suggest in broad outlines the kinds of policies which must be used harmoniously to achieve these goals:

First of all, our monetary policy needs reexamination and reform. High interest rates tend to reduce the profit margins of business firms, and to discourage economic expansion and growth by those who must borrow the funds. High interest rates are more damaging to small businesses than to large enterprise because the large enterprises tend to be self-financed and do not have to go into the market place for their funds.

High interest rates discourage investment in basic capital plant that would expand the productivity of our economy. When borrowed funds can only be repaid over a long period of years, as is the case in public utility investments, in housing and apartment construction and other basic investment which has a low turnover ratio, the high interest rate greatly increases the cost of the investment and reduces the prospects for profits. High interest rates therefore reduce the volume of investment which would otherwise contribute to an expanding economy. Unhappily high interest rates do not deter consumer credit, but rather tend to funnel money into consumer use where it does not truly increase productivity. The user of consumer credit is more interested in the amount of the down payment and the length of the loan than in the interest rate. Indeed, because it adds to the cost of automobiles and refrigerators, it ultimately causes consumers to consume less rather than more because an increasing portion of their income must go to pay carrying costs rather than to buy goods and services. It diverts purchasing power from goods into interest payments. High interest has already doubled the cost of servicing the public debt. Congress is appropriating $8 billion to pay the interest on the public debt. There was not a budget during any of the years of the New Deal's attempts at recovery in the 1930's which for all purposes was as high as $8 billion.

This increased interest burden subtracts at least $4 billion too much from the pockets of the taxpayers and provides not 1 penny's worth of increased public service, but only increased income to money lenders. The raising of the public interest rates has caused private interest rates to rise in like fashion, and so the cost of housing to the young family, buying a home in recent years, has also gone up. Private debts in the aggregate are greater than public debts. The private debt is more than double the amount of the outstanding Federal debt, and so we have added much more than $4 billion a year to the interest payment burdens of those who must borrow.

High interest rates have not fought inflation; they have contributed to inflation. They have increased costs without increasing output; they have indeed reduced output. But you may say that at lower interest rates there might be a great expansion of the money supply. I submit that this ignores the many possible alternatives, some of which were used very constructively during and after World War II in an effort to hold the line against inflation. Reserve requirements can be used by the Federal Reserve effectively to hold in check the expansion of the money supply, and selective credit controls such as consumer credit controls can be used to discourage temptation of consumers to abuse low interest credit.

I would submit indeed that both in the months following the outbreak of hostilities in Korea, and again in 1955 and 1956 consumer credit rose by too large an amount. Turn to page 28 of Economic Indicators and you will note that during 1955 consumer credit rose by more than $6 billion, and it rose an additional $3,500 million in 1956. With these undue increases in consumer credit we bought not only too many cars; we bought inflation and helped buy subsequent depression. The administration in its single track pursuit of high interest rates as the sole device for rationing credit found itself unable as well as unwilling to deal with the problems of operating its monetary policy in a sound and constructive manner.

I submit that the economy would operate more productively and at higher levels of employment under monetary policies which are willing to use other weapons in the arsenal than merely high interest rates. It is quickly becoming evident that high interest rates feed upon themselves, and unless Congress and the administration join to call a halt the end is not yet in sight. We can cut interest rates, cut costs, and still keep the money supply in proper ratio to an expanding economy.

A second area in which policy should be reassessed and revised in order to encourage adequate economic expansion without inflation is the field of tax policy. Our present tax rates are too high; our present tax base is too small. The very high rates now applied to those who are caught by them encourage waste. Costs are not as carefully reviewed when the major share of the expense will be borne, in fact, by the Treasury.

Let me interrupt to tell one of the favorite wartime Washington stories. It seems that three Government contractors had lunch in the Hay-Adams, and the bill came to $10. The first salesman reached for the check and said, "This will only cost my company $5." The second salesman took it out of the hand of the first one, saying, "We are in the 90-percent excess-profits tax bracket, and it will only cost us $1." The third salesman took it out of the second man's hand and said, "We are in a cost-plus contract, and my company will make $1.50 on the deal."

Whether this story be apocryphal or true, it certainly reflects a prevalent condition. The administration is to be commended for showing an increased concern over the abuses of expense accounts. If our tax laws are not subjected to a thoroughgoing scrutiny and reform, we may well expect our major business firms will have succeeded in socializing consumption far more rapidly and lavishly than even the most devout Socialist could have imagined the Government might accomplish.

There are many forms of socialized consumption, subsidized by the Treasury, through the techniques of corporation clubs, paid vacations through attendance at national conventions held at vacation spas, plus housing, meals, transportation, and health insurance, not to mention retirement programs. These forms of socialized consumption do not constitute income for tax purposes and are well advanced. I submit that a more efficient and productive economy would result from reducing the incentives to much profligacy and waste.

The rates, as I said, are too high, but the base is too low. Not only do these forms of socialized consumption, if I may call them that, escape taxation, but many other forms of income receive special exemption or special treatment. The capital gains feature has become so valuable that all kinds of devices and dodges are developed in the effort to convert what ought to be regular income into capital gains in order to secure the tax benefits that flow from this.

Whether the resulting business decisions are the best decisions for the prosperity of the economy is a serious question, but one which can only be asked in the hopes that tax reform will be pursued. To plug the loopholes we must define income more broadly. Then we can operate the Government successfully at lower tax rates and meet the argument that high tax rates depress economic expansion by using lower rates.

It is only fair to note in passing that there are economists who have suggested that the high corporate tax rates may encourage businessmen to take risks which increase productivity. This may partially offset the losses of which I have been speaking. I doubt if they fully offset these losses.

A third area of policy involves the socialization of risk which the Congress has regularly approved in an effort to encourage business to be more enterprising. I refer not only to the risk of loss of bank deposits or the risk of loss on mortgage loans, but the risk on loans to businessmen and farmers through Federal credit instrumentalities. But the most important sharing of the risk is the carryforward and carryback of losses contained in the income tax. The Government becomes a nonvoting but otherwise participating partner in business losses as well as business gains through the operation of the corporate income tax laws.

By the passage of S. 57 in the next few weeks we will be encouraging the homebuilding industry to add materially to the housing supply of the United States. We will do this by authorizing the Federal Housing Administration to insure some mortgages and by authorizing the Federal National Mortgage Association if need be to buy some mortgages.

These programs have not really cost the taxpayer a cent. We have used the power of the Federal Government for the good of the economy without using tax dollars in these programs. Tax dollars have only been funneled into the very specialized programs of public housing, slum clearance, and urban renewal. This demonstrates that it is possible for a congressional action, effectively administered, to expand the economy without taking money from the taxpayers to accomplish this purpose.

You will note, Mr. Speaker, that I have been discussing policies that are in no way a burden upon the Federal budget. Indeed, many of them would help to relieve the Federal budget. Let me turn to programs that may influence the budget but are not a burden upon the taxpayers. I refer to the Government's loan programs.

Congress will no doubt approve the report of the Banking and Currency Committee for the passage of H.R. 4452, the amended Bretton Woods Agreement. We are going to increase the capital of the International Monetary Fund and the International Bank for Reconstruction and Development. It may be said that this sum is a burden upon the taxpayers, but the taxpayers are investing in assets which will not be destroyed because we know now that these programs are competently and honorably administered.

But just as we will approve making the loans abroad, so will we approve making loans at home. The money we spend improving the rural electric lines, improving rural telephone service, improving our public power facilities, all represent investments in the expansion of the economy. They increase our capacity to produce goods and services; yet these sums are repaid with interest by the borrowers. They represent no burden on the budget. They represent no waste of funds.

I would like to talk about the management of the public debt, but this topic was so ably covered by the distinguished gentleman from Wisconsin, who serves with me on the Banking and Currency Committee, and is a member of the Joint Economic Committee, Mr. REUSS, that I will refrain from commenting here about it except to say that wise management by the Treasury and Federal Reserve of the outstanding public debt can contribute to the necessary expansion of our economy without inflation. Note that I say "can"—I do not argue that it always has. I would argue that it always should.

Before I come to a question of expenditure policy, let me turn to one other area, the control of inflation.

For too many years we have said to ourselves first, that we are opposed to inflation, and second, that we are opposed to controls. I do not recommend controls for their own sake, but I think if we are absolutely opposed to public control we must be honest and admit that we are then going to tolerate without public review the existing private control of the matter.

A year ago the economists in Colorado and Wyoming in their annual meeting discussed this question, and I think agreed informally that the time has come to ask for public review of the private control of price. This private control can be found in our strongest labor unions as well as in the hands of the cooperative executives who sign contracts with them. It can be found in the hands of those executive who dictate the price policies for the basic pacesetting industries in American life. Either we must prove that we really want to prevent inflation, or we must confess that we will tolerate continued inflation rather than vote for the necessary public review of the private controls of price.

I am not here recommending the creation of a new Office of Price Administration and a Wage Stabilization Board. Rather I am simply raising the question as to whether this Congress should consider granting to the President some measure, if only the power of pitiless publicity, as a weapon whereby he might effectively fight against inflation. Even if the President's powers were merely standby powers over basic wage and price decisions, these would at least be some basis upon which he might call onto the White House carpet and before the bar of American public opinion those men whose decisions will, if not subject to review, serve to debase the currency of every American citizen.

I do not pretend to have ready for introduction a detailed bill suggesting the

line of attack. But I welcome the approval of the resolution empowering the Joint Economic Committee to hold hearings on this matter. I suggest that the President's Cabinet Committee Against Inflation should have the same willingness to examine this course of action or other strong courses of action, if in their judgment such courses of action are needed to fight inflation. I grow weary of being told that we must refuse to build our ports; we must refuse to clean up the Nation's streams; we must refuse to build housing units because this is inflationary, when I know that inflation will go on occurring so long as we tolerate the private control of price, the administered prices of monopolistic industry.

I think the American people have a right to ask us to let the deed support the word. I recognize that there will need to be price changes, and I would want a law that did not prevent changes which were actually necessary. But I would like a law and the administration of such a law that would assure the American people that upward changes in prices were indeed necessary.

This does not mean that there could be no further wage increases, for these can be granted so long as the wage increases are no greater than those which can be justified through increased productivity and increased output per man hour. The worker is entitled to a fair share of the increased efficiency which his labor makes possible. But business ought not to be allowed to use the alibi of a wage increase to promulgate a price increase which is far greater than needed to pay the wage increase. The testimony submitted by Gardiner Means suggests that this is happening. The oil industry is currently getting a restriction on imports, and raising prices.

So I would attack inflation directly and at the front door, without unlocking the back door. Naturally I would want our monetary policy to be administered in a fashion which did not create the classical type of inflation by permitting the money supply to increase more rapidly than the volume of increased business requires.

Let me come briefly to matters of budget policy. I will have more to say on that subject another day. Let me simply say here that our expenditure policy has been viewed almost exclusively in quantitative terms—it deserves to be viewed in qualitative terms. I was taught that expenditures could be divided into four basic, and basically different, categories.

The first is self-liquidating. I have already referred to the loans which are used for productive purposes, which will not only be repaid directly into the Treasury but which will be used to create a higher standard of living both at home and abroad.

A second basic category are those expenditures which are essentially reproductive. The money which we spend improving our highways, reduces the cost of transportation, increases the speed of transportation and communication, and enlarges the productivity of our economy. The money we spend on better health improves our people, and represents outlays which will lead to an expansion of our national income far greater than the amount of the outlay. Certainly the investment we make in the education of our children will be repaid many times over in higher standards of living for them, and even in higher tax payments by them out of the increased income the education produces. While you cannot tie the return to the Treasury or to the economy directly to each individual outlay, we all know that such outlays are reproductive. The people support and want an adequate school program.

There are those outlays which can be viewed as merely productive. They expand our well-being; they add new dimensions to our personal and cultural life. I have in mind our park and recreational facilities, the National Gallery of Art, and the Smithsonian Institution, many research services, many publication activities, certain welfare services, and so forth. To the extent that we can afford and want the particular service involved, we vote for it.

Finally there are services which are unproductive. At first blush one might say all of these could be eliminated, but sometimes they too, are necessary. Those which save lives and protect property and persons, and these involve our whole structure of courts, police, fire departments, and so forth, are necessary outlays. They are productive only in the sense that if we do not have them things might be worse, and therefore we pay for them.

They are a kind of social insurance of our well-being. So long as the Nation believes that its security is dependent upon the size of its Armed Forces and the number and type of its weapons systems, the Nation will support these outlays even though most of them are not productive in any economic sense. Yet we owe it to the people to examine all of these outlays to see that waste is avoided.

The quality of our national life will be affected by the quality of our budget. I shall not argue the thesis propounded by Mr. Galbraith in his book, "The Affluent Society," but certainly the questions that he has suggested that such a society ought to assure the education of its children without regard to poverty of the parents is a recognition which is as old as free public education.

I am not in love with the number 77. The decision by the administration to choose a magic number, one to conjure with, has become a great snare and a delusion. I am not sure but what the number may be too large. If we were to cut out the fat and leave the necessary bone and muscle we might find it possible to have a lower budget total.

I have already suggested that there is $4 billion too much in interest in the public debt alone. The important principle is that the budget should serve to help to balance the national economy. There are still a few who believe that Congress can and should be neutral with respect to the health and well-being of the economy. When the Federal budget itself represents more than 20 percent of the national income, it is obvious that the decisions of the Congress with respect to this single item are bound to have an influence upon the economy. We must be economically responsible, even in our fiscal responsibility.

The money machine was made an instrument of the Federal Government with the adoption of the Federal Reserve Act. The Congress cannot look the other way at the consequences of the behavior of one of its most powerful children. It is important for the Congress and for the administration, and for the American people, to understand that there will be consequences from whatever decisions we make here with respect to all these matters. It is our responsibility to act so the consequences serve to expand the economy without inflation, in keeping with the covenant of the Employment Act of 1946. We must pursue an intelligent balance of policy in our choices in these great areas of public policy so as to achieve these goals of maximum employment, production, and purchasing power at stable price levels.

The temptation has been to insist we should pursue the goal of adequate growth because the rate of economic growth in the U.S.S.R. is greater than the growth here. I would not deny the importance of this argument. I would simply say that my obligation as a Congressman under the Constitution always has and always will require me to promote the general welfare, and therefore require that I support those courses of action that I believe to be best suited to that marvelous goal.

In closing, let me repeat the point I made at the outset: the United States is a powerful country—one of the leaders of the free world. We have tried to pursue a policy which would strengthen that free world. If we continue to neglect here at home the necessity to strengthen our own economy by securing adequate economic expansion without inflation we not only imperil our leadership abroad; we imperil our domestic support for any effort to continue to exercise any leadership abroad.

I utter this warning as a note of sober caution. This is no time for cheap demagoguery. Political analysis encourages both sides to easy oversimplification. Statesmanship demands honest analyses of the whole complex of issues, and frank statement, even of the unpopular truth. How to secure and maintain peace and prosperity at home and throughout the world cannot be viewed as a little campaign issue. These are the fundamental issues facing this generation. We must find constructive answers. If we fail, we imperil the whole free world.

Mr. RHODES of Arizona. Mr. Speaker, will the gentleman yield?

Mr. JOHNSON of Colorado. I yield.

Mr. RHODES of Arizona. I have been listening very intently to the remarks of the gentleman. I think they are very scholarly. By and large, I think they have done a very good job of presenting his ideas on this very important subject. May I probe a few of the ideas a little bit?

Mr. JOHNSON of Colorado. Surely.

Mr. RHODES of Arizona. As I understand, the first point the gentleman made was roughly to reexamine and reform the monetary policies of the country, with the idea of getting lower

interest rates. Is that paraphrase fairly accurate?

Mr. JOHNSON of Colorado. That would be a portion of the needed revision of the monetary policy; yes.

Mr. RHODES of Arizona. May I ask the gentleman how he expects to get lower interest rates? As I understand, the gentleman did not advocate increased credits. He did not advocate increasing the monetary supply. I was left dangling wondering how he was going to get lower interest rates if he was not going to do either of those.

Mr. JOHNSON of Colorado. There was a passing reference to the necessity for an increase in the monetary supply equal to that required by a growing economy, because a growing economy requires a growing money supply.

Mr. RHODES of Arizona. The gentleman's thought is, then, that the supply of money should be geared to having a certain fixed rate of interest throughout the years?

Mr. JOHNSON of Colorado. No; the point I am making is that we have had defended in these past 6 years a rising interest level as a device for fighting inflation. Notwithstanding this defense, we have had inflation. I would submit that we succeeded for the many years before 1953 in maintaining a relatively low rate of interest and a rapidly expanding economy.

Mr. RHODES of Arizona. But, with very, very high rates of inflation. The cost-of-living index went up very considerably between the years 1946 and 1953.

Mr. JOHNSON of Colorado. The high inflation we had was not necessarily the function solely of low interest rates. The Congress during the war years was asked, for example, to increase taxes very appreciably. I recall the Budget Bureau recommended to the President a $14 billion tax increase one year. The Secretary of the Treasury recommended a $9 billion increase. The Congress labored for a year and came up with a $2 billion increase. We borrowed too much of our way through the war and the increase in the money supply was not so much a function of the interest rate as a function of the timidity of the Congress to vote adequate funds during the war years to finance the war. Congress has been far more fiscally responsible since the end of World War II than it was during World War II.

Mr. RHODES of Arizona. I understand what the gentleman says as to the high interest rate being a weapon. I do not agree with him. I think the high interest rate we now have is a result rather than a weapon. I do not think anyone set out to use high interest rates as a weapon against inflation, but in the process we got high interest rates.

Mr. JOHNSON of Colorado. I should not presume to impute motives to the administrator and, therefore, shall refrain from doing so.

Mr. RHODES of Arizona. I thank the gentleman. Now, could the gentleman tell me again how he is going to get low interest rates?

Mr. JOHNSON of Colorado. I was suggesting that if we made it a part of our official policy to balance the budget, the other necessary policies to avoid inflation would include the selective use of consumer credit, a responsible tax policy with respect to a balanced budget at reasonably high levels, and possibly an overbalanced budget at high levels of employment, but a budget deficit, if need be, at low levels of employment—these policies taken together with the monetary policies would help. I would use, if need be, a higher reserve requirement. I would give the Federal Reserve greater power than it now has, if you want me to prejudge the outcome of the study that we just authorized a few minutes ago. But my present thinking without sitting on that committee, would be that I would be prepared if need be to vote the Federal Reserve additional powers over the size of the reserve requirement. We discussed the other day the wisdom of reviewing the accord made in 1951 by which the Federal Reserve got out of the position of helping to support the level of Government bond prices which, as the gentleman realizes, is the benchmark of all other interest rates. It is the basis on which the rest of the structure rests.

Mr. RHODES of Arizona. Of course, that uncertainty over the benchmark has been removed and the amount of interest the Government pays, is now the amount of interest which the market demands.

Mr. JOHNSON of Colorado. It is the basis, the market adds to that because no one normally lends to others for less than he lends to the Federal Government. Presumably, this is the best you can get.

Mr. RHODES of Arizona. The gentleman mentioned as far as the tax policy is concerned that the rates were too high and that the base was too small.

Mr. JOHNSON of Colorado. That is right.

Mr. RHODES of Arizona. I understand what the gentleman means when he says that the rates are too high, but what does he mean when he says the base is too small?

Mr. JOHNSON of Colorado. Congress has cheerfully or otherwise given out many exemptions. The House of Representatives the other day passed a further exemption and one which the Treasury noted in its report to the House may open the flood gates for a great many more requests for exemptions. I am hopeful that the Committee on Ways and Means will take a fundamental look at the whole tax structure again. What we did in 1954 was to pursue every little inequity into a new special class in the act, these become in effect new loopholes. Ultimately simplicity is as important a virtue in the tax laws as some uncertain thing called equity, particularly when no one can know what equity is because the laws are so complex. I am sincerely hopeful that I shall serve in a Congress that will try to get a simpler definition of the tax base.

I think we have a great deal too much use of the capital gains. We cut that base in half before we tax it and then we say the tax rate cannot go above 25 percent no matter how high the regular marginal rate will be. That is what I mean when I say the base is too small.

Mr. RHODES of Arizona. I will just ask the gentleman to yield for one more question: How would you end unemployment? The gentleman started out by talking about unemployment, and then, as I recall, it was left dangling.

Mr. JOHNSON of Colorado. I have only 1 hour this afternoon, and I do not presume to solve all the world's problems in that 1 hour.

Mr. RHODES of Arizona. I think the gentleman did a pretty good job at least in attacking all the world's problems in that hour.

Mr. JOHNSON of Colorado. I am a firm believer in encouraging private sectors of the economy, both business and consumers. They should use their funds to expand the output. High interest rates frequently divert funds which ought to go into expanding the economy into the relatively unproductive use of consumer credit. I decry the huge increase in consumer credit in recent years. What we need is greater capacity to produce goods and services. If it had gone into business expansion we would not have had the overzealous use of consumer credit. We did the same thing in 1950. I have sometimes quipped about the Korean incident that the "patriots" rushed out into the market to buy on credit before the "hoarders" got into the market. We had a billion dollars a month increase in consumer credit for 7 straight months from the onset of hostilities until Congress finally lowered the boom in February of 1951.

This was almost unconscionable. I am not being partisan by saying that both sides have failed to recognize that the interest rate alone will not do the job. We must give the Federal Reserve some control over consumer credit. I do not care whether the control is lodged in the Secretary of the Treasury, the Federal Reserve Board, or the Comptroller of the Currency; I am less concerned with the details than I am with the substance.

Mr. RHODES of Arizona. The gentleman spoke of private monopolization. I think those are my words.

Mr. JOHNSON of Colorado. Go ahead and use them; concentration would be a better word.

Mr. RHODES of Arizona. I think there is a tendency to feel that the monopoly laws, the Sherman Act and the Clayton Act are not now capable of dealing with this particular problem.

Mr. JOHNSON of Colorado. I do not know. I think tribute should be paid to this administration for going as far as it has in its pursuit of monopoly, but this administration did not go far enough. We have too long set it aside. In 1950 or 1951 the Congress passed an act to try to close the loopholes on the acquisition or the purchase of controlling interest by purchase of assets, but we put these weasel words into the law: Only if it is shown that there is "substantial monopoly", or similar language, does the law apply. It goes to the lower court and is so vague as to allow the court practically to write the law as it wants. And it puts a tremendous burden on an administrator who tries to prepare a case, trying to anticipate what line of

reasoning the court will take. We know that the problem exists.

Mr. RHODES of Arizona. As I understand, the gentleman would advocate some form of price control, at least standby control.

Mr. JOHNSON of Colorado. I would advocate standby control.

Mr. RHODES of Arizona. Under what circumstances do you think they should be put in force and become effective?

Mr. JOHNSON of Colorado. I envision something like this: The White House commands powerful publicity. If the President had standby price controls and called the oil companies in when they ask him for a reduction of oil imports, they would hesitate to suggest that they will thereafter raise prices.

As things stand at the present time, all the President can do is to say he will reconsider the oil import quotas. The oil companies say they have no intention of raising prices; yet the prices are inching up.

Where there is no price control available to the President the most he can do in a fit of anger is to withdraw the import restrictions. Even that might not necessarily work because you have a follow-the-leader price pattern in this area. The oil industry have their backs up on this thing and they can win. If the President were to call them in today, all he can do is to scold them, he could not stop their behavior, he could not prevent the results. If he had at least a shotgun in the closet and they knew he had a shotgun in the closet, he could call them in and have a pleasant little chat upon due inquiry into the facts. It is conceivable that, knowing he had the power to do more, they would yield to his request. He has "jawed" at them all these years and has gotten no results. I say, put a shotgun in the closet. We hope he will not have to use it, but I would rather he have it in the closet and not use it than not have it and need to use it.

There is a need for such power. Incidentally, when I have made these comments in both business and labor communities, I have found surprising support. I think the country is ahead of the Congress on this issue. I think they would be prepared for sober thought in the Congress and in the administration on this very issue.

Mr. RHODES of Arizona. I agree with the gentleman. The people of the country are tired of inflation. They do want the economy to grow, but they do not want the value of the dollar to go down, and I think that applies particularly to people on fixed incomes.

Mr. JOHNSON of Colorado. Yes. I have been working with this matter for many, many years.

Mr. RHODES of Arizona. The gentleman will understand that people like myself, and I am sure he shares this view, when we talk about inflation are thinking primarily of the things that happen to our people on a fixed income.

Mr. JOHNSON of Colorado. Yes.

Mr. RHODES of Arizona. We have a tight rope to walk, because I cannot think of anybody, and certainly no Member of this body, who wants to stifle our economy, but at the same time we do want it to grow and grow as systematically as possible without ruining the country by runaway inflation. I think the gentleman and I basically agree on what we want. I may say that we do not agree on the means of obtaining it. I certainly respect him for the very forthright manner in which he has explained his ideas and for his scholarly approach to the problem.

Mr. JOHNSON of Colorado. I invite the attention of the gentleman to my remarks on the budget. I hope to make more extended remarks on that subject at another time.

Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include tables and other extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

POWELL CALLS FOR IMMEDIATE NEW POLICY FOR AFRICA

The SPEAKER pro tempore. Under previous order of the House, the gentleman from New York [Mr. POWELL] is recognized for 60 minutes.

Mr. POWELL. Mr. Speaker, today, I wish to call attention to the continuing revolution against colonialism that is now engulfing the continent of Africa—a revolution which we, in the United States, started in 1775. Although accounts appearing in the daily press keep us sufficiently informed on the nature of riots and killings that have occurred in French Equatorial Africa, the Belgian Congo, Italian Somaliland and, presently, Nyasaland and the extent of these eruptions, we are not so clear on the U.S. policies and programs for coping with the changes now taking place. We have heard nothing of future plans of meeting the challenge of a new Africa in the coming years.

Although in recent years attention has been directed periodically to the problems of the African continent, and though money has been appropriated by this body for a Department of African Affairs, and smaller sums for technical aid and the exchange personnel, the great majority of U.S. citizens and, particularly those of us charged with the responsibility of leadership in this country, do not know what our policy is toward Africa and the Africans. We need to know this badly. Moreover, there is concern that in the coming months U.S. action undertaken will increasingly be at variance with the will of many American people as well as the Africans.

A policy toward an area of such threatened volcanic eruptions cannot be trusted to time to work out. Confusion results as each outburst demands reaction in response to actions as they occur by applying a policy suitable only to the immediate occasion. In this area we can no longer ponder leisurely or trust to luck. Africa, as in the world at large, is an area that demands immediate attention one day with one kind of problem and issues, to be replaced the next day by another eruption as important as yesterday's seemed. As the conflict intensifies, as the struggle for freedom broadens, this country is inevitably going to have to operate from one base or the other on behalf of either the 200 million Africans struggling against every form of fascism on that continent or cast our lot with the 5 million departing Europeans determined to continue colonialism into the 20th century. At some point our leaders, armed with the U.S. policy and program, are going to have to make a decision as to which direction this country will go. Shall it be the road of freedom down through to the end of the 20th century, a road that leads to security, plenty, and brotherhood, or will it be backward in retreat and out of Africa's back door for all times together with the other Western powers who learned too little too late?

So intense has been our concentration upon the struggle of the Soviet-Western world that we failed to observe that a new world was being born. It is in this new world arena that the struggle for peace and freedom in our time is going to be waged and our very survival will depend on its outcome. Our survival, our freedom, our beliefs in the dignity of man are inextricably tied in with the ultimate outcome of the struggle against oppression in central Africa and the Union of South Africa. However much we of the West talk about the Union of South Africa's membership in the free world and the responsibility of the free world to close ranks to maintain that freedom, the African is fighting mad today for he knows it is freedom for whites only. So all of us of the United States in a holy crusade against communism that threatens our way of life are banded as one under the banner of freedom together with the Union of South Africa and other powers are ourselves subverting the cause of freedom in the eyes of the African people. Moreover, the entire Afro-Asian bloc expresses itself from time to time against Western indifference to the suffering there.

Nor is the unrest limited to certain geographical areas and certain tribes against a particular European military and political force. If that were the case we might pass a resolution here and take some positive action there on Nyasaland, on the Cameroons, on Algeria, on Egypt, on the Union of South Africa and be done with it. But it is not that simple. All over the vast continent of Africa in addition to the determination to remove the European rider from his back there is a revolution against the continuance of colonial traditions of any kind.

The 19th century and all that went with it is dead and a new chapter opens in the area of colonial and imperial activities. For Africans everywhere are determined to cram the revolution which has taken the West 500 years to accomplish into one generation.

Therefore, Africa is experiencing in one combustive outburst a revolution against old political ways, a revolution in economic techniques and social outlook and in values which affect the whole relationship of man's relationship and survival

on this globe. What we have achieved slowly and too painfully and at the expense of many suffering colored peoples, they are determined to do quickly with the greatest good for the greatest number.

As the struggle for African freedom expands vertically and horizontally, the polygamous relations of the U.S. marriages in the area since World War II will be increasingly exposed. Since the cold war began and the subsequent birth of NATO this country has been experiencing a growing dilemma over what policy to underwrite in Africa for Africans. For the United States, the leader and organizer of the forces of the West, has considered its obligations to its NATO allies of highest priority, but in this crusade against the imperialism of Russian anti-imperialism our strongest European backers were oppressing those who also wanted freedom. If we choose principles over interest in such cases, we then face the problem of possibly alienating the metropolitan powers in Europe—allies whose aid we have had to have and must of necessity continue to have in the critical times facing us. Moreover, we find it hard to champion the cause of freedom in lands where our strategic minerals are involved and where we have established bases for protecting our freedom. But we need reminding that Africans are people with feelings of personal dignity and loving concern for their children and they could not care less for our freedom at the expense of theirs. If the freedom in point which we extol so highly is composed of a world with the Union of South Africa and its ilk as an equal partner, the African will ultimately conclude that some people's meat is other people's poison and react accordingly. If America has any lesson to teach or to relearn itself it is that all men are created equal. Less we forget this fact, turn ye to the protestation of Jano Kenyatta from the tombs of incarceration and listen as he emphasizes the people's aspiration:

> Africans will never be satisfied until they enjoy full self-government, economic and social security, the realization of which can only be achieved in a nonimperialist social order.

Africa, four times the size of the United States, rich in minerals, with a potential of food production capable of eradicating hunger in this world, with 200 million proud people, suddenly makes its appearance on the kaleidoscope of history. We are bewildered and caught off guard for it is like the sun's thrusting a new planet into the atmosphere. This new world challenges our leadership, our energies, our aspirations.

To cope with this continental quake which is beginning to rock the universe, to meet the challenge of unrelenting Africans, the United States has no long-range policy with a consistent body of convictions and aims concerning Africa. In fact, a summary analysis of our platitudes and preachments and policies read like exercises in double talk which critics readily seize upon as proof of American hypocrisy. Moreover, the preachments of American leaders to Africans have the familiar ring of colonialism and Western supremacy of "Father knows best."

To be honest about it American policy is split down the middle by a stubborn and troublesome contradiction between immediate strategic and ultimate historic interest. In fact, politically we have been leading a polygamous relationship, consorting with our equals, the Europeans, to whom we are wedded in the big house while maintaining a relationship in the little house with the Africans down across the field. Such gettings together as have taken place in Accra recently with emphasis on the pan-African movement are a threat to our position for it exposes for all to see the contradictory operation of governmental, business, and even some religious enterprises.

To date our vacillating and undefined and unexposed system has been able to maintain itself without detection by the Africans. However, the question before us is not where we stand but how much longer can we occupy two different positions and pursue a dual program on the continent of Africa. Our concern should not be primarily directed toward where we are today but where we will be next year as regards Africa.

Today, when our Government is busy all over the globe trying to put out all sorts of fires—fires which are burning because we delayed too long in removing the plain dangers of combustion, or have been set off by the improper or unwarranted conclusions of our free press or that our selfish vested enterprises in foreign lands helped to kindle. Whether it is in Bolivia or Cuba or Iraq we have in recent years been continually beset by a series of dilemmas. As for Africa, I shall seek from the foregoing to pose the combination of dilemmas that will be ours if we continue to ignore the realities of the time, the revolution of rising eruptions abroad in this nuclear age.

First. We find it hard to champion the cause of freedom in lands where our bases and strategic minerals are involved. Therefore, it is to our interest to maintain the status quo however tired the Africans may have grown with that status quo.

Second. Whether to choose principle over interest in the numerous African-European controversies which are increasingly arising at the risk of alienating our NATO allies whose support must be at our command at all times if we are to meet the challenge of Russia successfully.

Third. What positions to take when the plaguing question of African freedom versus European oppression are thrown into the international arena of the United Nations. For sitting across and beside and behind our U.N. delegates are friends of the African people as determined as they that the African shall know freedom on their terms and in our time.

Fourth. What is to be our action? How can we steer successfully our international ship through the roughest waters of history, for we must get through the roughest waters of history, for we must get through any possible barricade they might consider erecting, for we must get along with the cold war. Yet our program in the cold war is related to the vast wealth in natural and human resources that is Africa's and success and final victory can be decided whether or not we shall continue to obtain strategic minerals or hold distant air and naval bases. What to do about the Africans in this regard when from the viewpoint of security against Communist military attack, maintained George Fielding Eliot in "Africa—Key to Western Security" we are concerned that all the principal NATO powers, Britain, France, Belgium, Portugal, our allies, holding African territory, shall maintain their present position in Africa so that African bases and African resources shall continue to be available for the defense of the free world.

Fifth. But in the above regard, if the United States and its allies are deprived of these African supplies by unwilling and uncooperating Africans, our fighting capabilities would be seriously crippled.

Sixth. With Africa now half slave and half free the question of whether to cast our lot with the slave area, the settled controlled areas of east, central, and South Africa directed toward serving America strategic and profitmaking prerogatives in the continent and utilizing and supporting the European system of control, or shall we have the courage and faith to identify our future now unqualifiedly with free Africa—Ghana, Sudan, Guinea, and others; shall we shift to a go-it-alone policy in areas where Europeans are no longer in the saddle, thereby enabling this country to speak in a loud, clear voice for freedom in the U.N. and in other areas of international controversy?

Seventh. As the white minorities of eastern, central, and South Africa move to close ranks in defense against the blacks and to maintain their profitable existence on the African Continent and as Africans in response solidify their positions through various pan-African movements, we are going to be forced to take sides.

I have attempted above to spell out the most obvious dilemmas which await us around the corner as we move to another position in this new world. It would be ironic, indeed, if we deliberately choose the losing side. For it is written, Africans will play a large role in our country's future, in fact, in the future of all the nations of the West. Have we forgotten that ultimate security depends on decisions made beyond the borders of the United States as much as on those made within our country?

We are challenged today and have but little time left to decide whether or not to abandon our double-edged policy in Africa, to decide whether to permit our sympathies for our European heritage to take precedence over the welfare of mankind even when there is clear recognition that the period of European ascendancy in Africa is drawing to an end.

To the dilemmas imposed we inquire again how long can we operate under a policy, "To be or not to be, to do or not to do" as a program of action?

Therefore, there is need at this point to refresh our memories on the current disasters, and atrocities, and oppression, and general negations of freedom that is the climate of occupied Africa.

I am informed that Africans wherever they live, whether in Capetown, in Cairo, Accra, or Nairobi are becoming increasingly suspicious of Western moves in and toward their continent. Moves of European settlers to federate white dominated governments as protective measures against black nationalism set off counter movements by Africans to work hard and fast for pan-Africa. Expressed or unexpressed in the continentwide meetings such as assembled at Accra recently are pledged to the realization of Africa for the African and, they are committed as one to fight until every vestige of colonialism and imperialism are removed from their lives. Freedom, self-determination or whatever we choose to call it is not directed alone against the remnants of 19th century colonialism, but toward all outside activities which would exploit the people and the continent itself or its resources. So increasingly the fight for freedom will be directed against business enterprises enjoying the blessings of local white settler governments as well as against the colonial domination of metropolitan governments. Like the Bolivians and many other nations Africans could conceivably come to identify U.S. business interest and U.S. policy as one and the same which prompts us again today to urge a new look at our country's relations with African questions involving the continent now before the United Nations, relations with metropolitan powers and their subsequent effect upon Africa and if possible locate the impact of domestic private enterprise and its strengthening effect upon European anti-African policies. For Africans everywhere, I have been informed, are beginning to feel that a huge vise for continuing the domination of Africa by the West is being fashioned, big and powerful enough for its prongs to extend from the tip of the Union of South Africa to the banks of the Suez Canal. That at the proper time friend and foe alike will spring the trap capturing the entire continent in a new system of economic imperialism made possible through the establishment of a series of programs of economic dependence and obligations and tie in with foreign business of various sorts.

Suppose we take a brief look at the brush fires, the eruptions, the bloodshed taking place over much of that continent and move swiftly from the tip up the eastern coast all the way to Cairo. In the Union the following stand out, even here in our press:

First. All nonwhites, 12 million of them, are forcibly separated geographically and every other way from the whites under a government system of "Apartheid."

Second. The nonwhites are denied any civil rights or participation in political activities of any kind or any expression for that matter of dissent to the policies of the Europeans.

Third. For those who dare resist the Fascist policies, are dubbed Communists, indicted and convicted as criminals.

Fourth. In order to enjoy any freedom of movement without arrest Africans must carry passes. While we freely decry the denials of freedom in China, behind the Iron Curtain, toward those 12 million suffering nonwhites in the Union we are absolutely silent or speak in unheard voices less we offend our colleague of the free world—the Union of South Africa—a government of Europeans only. During the long drawn out trials of 90 people charged with subversion against that government, we have as a Nation remained disgustingly silent carrying on business as usual with the Union itself.

Africans can but question the full operation of business men from the United States operating there and the impact they may have upon the asserted indifference this Government has taken to the conditions there. This beautiful paradise of the world, endowed with 99 percent of the world's industrial diamonds and otherwise rich in gold and other minerals is rapidly becoming the happy hunting grounds for new profiteers, for the economic exploitation of the U.S. business interest. In recent months we have seen in our press announcements of several Wall Street brokerage firms floating loans for the Union. Need we be reminded that such authority was derived from the European settlers, not from the Africans. I was interested in reading a couple of years ago a report of the Union's government to the effect that the U.S. business interests and investments had increased since the enactment of apartheid for it "stabilized their labor supply." Moreover, the Union maintained to those who questioned whether the denials to Africans might not drive away investment capital, that the U.S. enterprises had learned first hand at home how to cope with those of African descent.

Now moving across the border from the Union and up the eastern coast of Africa we come to the Federation of Rhodesia and Nyasaland where in recent weeks all hell has broken loose against the extension of Union-like policies into that territory, against the apparent operations of outside business interest, against the determination to turn that rich land into the world's largest plantation system with a few white settler overseers and millions of Africans in a slave relationship.

Sitting on the throne of white supremacy and ruling the vast terrain of Southern Rhodesia, Northern Rhodesia, and Nyasaland is Sir Roy Welensky, the Prime Minister. The career of the Prime Minister has significance to America for he is the son of the late Michael Welensky who made his first money and developed his frontier tactics in the Missouri-Mississippi Valley territory in the 19th century. Following the Civil War the elder Welensky departed for the Union of South Africa to continue his economic interest in a climate of slavery which continued there. So it is highly probable that the "Simon Legree" tactics which young Welensky is now exemplifying were inherited from his father. Is it any wonder that American Negroes are aroused in righteous indignation over the deaths, riots, and imprisonments which Mr. Welensky's government is applying to those who but dare to insist upon the freedom for which we all aspire? Every Protestant and Catholic leader has condemned Sir Roy.

All over America there should be resolutions and condemnation of Welensky's government and any other action undertaken to bring an end to the suppression there. Specifically, there should be loud protestation against the expulsion from Nyasaland of Dr. Hastings Banda, the leader of a passive resistance movement—a man who seeks to liberate his people in the spirit of Gandhi which we of the West now unashamedly extoll. The attack and suppressions in Nyasaland against Africans are spreading into Northern Rhodesia where the American Metal Co. enjoys great profits and prestige from its copper mining enterprises. This is but a summary report of the power and unlimited control that the 1 million Europeans exercise over 7 million Africans in the Federation. Is this the democracy of which we talk so much and fight so hard? Is this the kind of freedom we seek and trust Africans will accept? If not, it is time we made our kind of democracy known by expressing official condemnation against what is happening there. Maybe the application of economic sanctions such as applied in other areas outside Africa against those who deny human rights should be considered.

These conditions are repeated in the Congo where the equivalent of the total budget of Belgium, is met from the returns of the Belgian Congo.

Moving into Kenya, Jono Kenyatta, a Western trained scholar of renown and a nationalist leader, still languishes in jail after almost 7 years with promise of expulsion from his native land when his term of imprisonment is over.

It's time that we make up our minds, and there is not much time left, whether we are going to continue to behave during this transition in such a manner, that we too will be unwelcome in the new Africa aborning. Eruptions and brush fires, if they continue will ultimately engulf the whole territory in flames of destruction disastrous to the world and most particularly to our positions there. None save Russia can prosper if present conditions are allowed to continue. A report of confidence in Communist progress last week by the Polish Foreign Minister, Adam Rapachi, that "the balance of power in the world was changing in favor of socialism" undoubtedly had the changes and their consequences in Africa in mind. It is highly probable the Communists are considering the outcome of the struggle between the western Africa as the determinant of the balance of power in this cold war rather than Berlin.

So free Africans meeting with enslaved Africans in official and unofficial gatherings pledge their mutual energies to fight until every black brother is freed, to devise methods that the prongs of the vise shall not snap again, encasing them in a new trap whereby they shall continue in subservience and want and oppression. Africa cannot, they know,

remain indefinitely half slave and half free. We are informed that the steering committee of the All African Peoples Conference has moved to support the fight for freedom in central Africa by earmarking $38,000 to the freedom fighters of Nyasaland.

It seems to me that the time is at hand for a drastic appraisal of Western policies toward Africa and most particularly for our purposes here, that of the United States. We need to ask ourselves just what we in the United States offer to the dependent peoples—the African.

How will present independent African countries, now our friends and allies, view our vacillations and apparent indifference to issues and actions pertaining to their future well-being? As for me and many others of similar mind, I have been profoundly appalled by the apathy displayed by the United States in general and also in the United Nations; the failure to initiate discussions of these problems in Africa looking toward some long-range types of solutions. If we in the Western World do not awaken to our present opportunities and responsibilities, the Soviets, through economic penetration, expect to so dig their economic tentacles into the area that they may eventually exercise a stranglehold on the political institution there.

Who knows but that the present knocking of Africans on Western doors may not be the result of its 300 years of being ignored? And maybe convinced that further knocking is futile, they may turn to others.

Mr. Speaker, I conclude by reminding that we have suddenly come upon a crossroad in our relations with Africa and hereafter we are condemned to travel but one road toward one objective—forward toward total freedom and survival for ourselves in this nuclear age or to travel backward to the depth of degradation, thereby destroying the fruits of all our endeavors.

I wish to finally conclude this exhaustive presentation by stating my plans for presenting a followup report in which I am going to make some pertinent proposals as to the future course of action to be followed by the United States. We have passed from the ox-wagon to the jet age in less than one generation. Should not our progress in political advancement keep pace?

FREEDOM OF COMMERCE SHOULD APPLY TO MILK AS WELL AS POULTRY AND MEAT

Mr. JOHNSON of Wisconsin. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

Mr. JOHNSON of Wisconsin. Mr. Speaker, in the March 22, 1959, St. Paul (Minn.) Pioneer Press, Al Stedman did some reminiscing about the days when succulent, golden-brown fried chicken was reserved for special occasions. Now, because of modern, sanitary, refrigerated transportation—and a Federal inspection system for poultry shipped in interstate trade—some 18 to 20 semiloads of southern fryers roll into Minneapolis and St. Paul every week. And since the fryers are so plentiful, they no longer have to be considered luxury food.

The Federal inspection system has been doing the same thing for the meat industry for the past 50 years. As a result, we are a Nation of meat eaters.

Mr. Stedman raised this question, "If the principle of freedom of commerce in wholesome food applies to meat and poultry, why shouldn't it apply to milk?" He also noted that my national milk sanitation bill—H.R. 3840—would apply that principle to the milk industry. Under leave to extend my remarks, I would like to include a copy of Mr. Stedman's editorial in the RECORD:

GEORGIA FRYERS

Remember when fried chicken was a luxury? When its fragrant brown succulence was for holiday dinners only? Well, flavor and the aromas linger, but gone forever are the luxury days.

Now the housewife can rub her eyes at the great buys being offered by the food ads in frying chickens.

Loss leader selling? Could be! For bargains in chickens or fresh milk are fine bait for attracting shoppers into a store. But also behind these prices is a mighty drama of the effects of a Federal guaranty of freedom of interstate commerce in wholesome food.

Though the trade calls them Georgia fryers, they come in fact from several Southern States. As with meat and milk, perishability was once thought to bar them from nationwide markets. But, also as with meat and milk, that problem is solved by modern sanitary, refrigerated transportation.

Eighteen to twenty semitrailer loads of these Georgia fryers roll into the Twin Cities each week from afar. By summertime, the arrivals will be up to about 30 refrigerated vans a week, each loaded with 7,500 or so 2- to 3-pound dressed chickens, all iced.

These birds are products of one of agriculture's great revolutions, known as integrated farming. Production, processing and selling are integrated under one management. One man may feed five batches totaling 60,000 a year of these broiler or fryer chickens.

A uniform Federal inspection system guarantees freedom of wholesome dressed poultry to cross State lines into the Nation's markets. It is mighty tough competition for our Midwest chicken raisers.

That's one story back of our housewives' bargains in fryer chickens. Another story is that this same Federal poultry inspection system is putting the foundation of free markets under our Midwest turkey industry. A third story is that our Midwest fryer industry, with advantages of a short haul and economical feed, is competing more and more strongly in our markets. Our housewives are getting good buys and more of our own homegrown chickens, too.

But the traffic of southern fryers into Milwaukee, Chicago, Des Moines and other Midwest Dairy Belt cities is still immense. And when we try to ship our wholesome milk in refrigerated tank trucks into those markets that so freely send us chickens, we are stopped by Federal, State or local bans in the name of sanitation. Even Washington is barring our milk, regardless of proved wholesomeness, on those ostensible grounds so as to serve local monopoly.

No industry or region can do well under such discrimination and the Lester Johnson bill in Congress would abolish it. The bill would apply to milk, the same principle of freedom of commerce in wholesome food the United States already applies to dressed meat and poultry.

For more than 50 years the Federal meat inspection system has been providing the equivalent of the Johnson bill for meat. A foundation of access to markets everywhere sustains the meat industry. We are a nation of meat eaters.

For dressed poultry, the equivalent of the Johnson bill went into effect on a voluntary basis last year and became compulsory for interstate commerce this year. At competitive prices, consumption of fryers and other dressed poultry has risen to break all records.

For many years the branch of Government most concerned with sanitation, the U.S. Public Health Service, has had a uniform sanitary code for milk. But the U.S. Department of Agriculture and eastern and southern States and cities won't accept this code. Behind their monopoly walls, high milk prices are enforced. U.S. consumption per person of milk since World War II has slumped.

The Johnson bill would let American consumers drink more milk at competitive prices. It would let the Nation's dairy industry share with meat and poultry the blessings of American freedom of commerce in wholesome food.

U.S. PUBLIC HEALTH SERVICE SHOWS RELIABILITY OF MILK UNDER U.S. MILK CODE

Mr. JOHNSON of Wisconsin. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

Mr. JOHNSON of Wisconsin. Mr. Speaker, as a result of the Washington, D.C., milk situation, the U.S. Public Health Service has been getting questions concerning the reliability of the U.S. Milk Ordinance and Code. On March 20, 1959, the Public Health Service issued a statement pointing out why milk produced in accordance with the U.S. code is safe and of high quality. Because my national milk sanitation bill would make this code the quality yardstick for milk moving in interstate trade, I would like to include the Public Health Service's statement in the RECORD under leave to extend my remarks:

U.S. MILK CODE RESULTS IN TOP-QUALITY MILK

The Public Health Service said today that milk produced in accordance with the Public Health Service Model Ordinance and Code is safe and of high quality.

The statement was made in response to questions the Public Health Service is receiving as a result of the local milk situation.

Service officials explained that sanitary practices at dairy farms are designed to prevent disease producing bacteria getting into milk, with pasteurization applied as a final safeguard.

Most bacteria in milk are harmless, according to the Service. The standards recommended by the Public Health Service limit bacterial counts to a maximum of 200,000 per cubic centimeter in raw milk which is to be pasteurized. The District of Columbia Code prescribes a 100,000 limit. For pasturized milk delivered to the consumer, the Public Health Service standard has a maximum limit of 30,000 per cubic centimeter. The District of Columbia Code permits 40,000 per cubic centimeter.

The Public Health Service Model Ordinance and Code was developed with the aid of a national advisory committee of experts in public health, dairy, and veterinary science. Since the code was first established in 1924, it has been revised 12 times to keep abreast of modern techniques and new scientific knowledge. The Public Health Service standards are currently used by 1,900 communities and 35 States.

PROVIDING FOR THE REGISTRATION OF LEADERS IN INTERSTATE AGRICULTURAL EMPLOYMENT

Mr. CHAMBERLAIN. Mr. Speaker, I ask unanimous consent that the gentleman from Pennsylvania [Mr. KEARNS] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. KEARNS. Mr. Speaker, migratory agricultural workers are almost completely dependent upon their crew leaders for obtaining their transportation and employment and for securing adequate housing and other facilities. Frequently they are also paid either directly by or through their crew leaders. These workers are thus particularly vulnerable to exploitation and abuse by irresponsible crew leaders, and there is increasing evidence that the channels and instrumentalities of interstate commerce are being used to spread such exploitation and abuse. This bill is designed, through the exercise of congressional authority to regulate interstate commerce, to afford a method of correcting these abuses by mandatory registration in order to curb the activities of persons who, because of criminal records, misrepresentation or failure to deal honestly with members of their crews, should not be permitted to operate in interstate commerce as crew leaders. Compulsory registration would make the arrangements between crew leader and crew a matter of record.

The legislation would require any person, who for a fee is engaged in the recruitment, hiring, furnishing, or transporting of three or more migrant workers for interstate agricultural employment, to obtain a certificate of registration from the Secretary of Labor. No person could engage in such activities without a certificate. The submission of certain information to be prescribed by regulation is required, and a certificate may be denied or revoked upon the Secretary's finding of conviction of a felony, misrepresentation in application for a certificate, knowingly giving false information to workers in the crew concerning conditions of employment, failure to comply with the reported working arrangements with the crew, and failure to comply with the act or any regulations issued thereunder. Certificates would be renewable for each calendar year and revocation or refusal to issue would be upon notice and hearing in accordance with regulations prescribed by the Secretary. All administrative proceedings, conducted pursuant to the authority of the act, will comply with the provisions of the Administrative Procedure Act. Willful violation of the act is made a misdemeanor subject to a fine of $500 for each offense.

THE MEANING OF THE SPENDING SPREE

Mr. CHAMBERLAIN. Mr. Speaker, I ask unanimous consent that the gentleman from Ohio [Mr. HENDERSON] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. HENDERSON. Mr. Speaker, the recent demonstration of the House in passing an airport bill $97 million greater than the administration requested, $97 million greater than the Agency charged with the responsibility for carrying on the program says it needs, is a performance that will be difficult to explain to the people of the 15th District of Ohio. How can a responsible Congress, knowing the effects that increased and deficit Government spending can have upon inflation, upon the purchasing power of a dollar, continue to add fuel to the inflationary fire that is burning in America?

Since I have been in Congress, scarcely a day has passed in more than 4 years that has not found a letter on my desk from a constituent complaining about the decreasing value of the American dollar. In recent months the volume of such complaints has increased many fold.

I had a letter recently from an industrialist who explained that he had been requested, along with many other companies, by the Treasury Department to conduct a bond selling program among the employees of his firm. He asked me if I could give any real assurance that he could relay to his employees that those employees could purchase a savings bond from the U.S. Government with confidence that it could be redeemed at a later date in dollars that would have as great purchasing power as they have at the present time. I replied to him that it was my own opinion, based upon the disposition of this Congress to force a program of spending beyond revenue, that he could not give his employees the assurance that he sought. I stated in the honesty of my conviction that there is every sign that the inflationary spiral will continue to diminish the purchasing power of the dollar year by year. I concluded my letter with the suggestion that U.S. savings bonds would continue to be sold almost solely upon an appeal to the patriotism of American citizens.

Returning for a moment to the airport bill and its excessive authorization, it has been suggested that this $97 million is not the straw that will break the camel's back and that this figure alone will not contribute to the inflationary spiral. Nevertheless, it is disheartening to witness the enthusiasm with which the majority in this Congress increased the administration's request. The signs now point to the probability that on the other side of the Capitol, pressure will be brought to bear to send to the White House an airport bill which is even higher than the $297 million provided by the House bill. This and the volume of legislation calling for huge expenditures which will follow this bill lead me to believe that the spending spree is deliberate, intentional, designed and planned. This is in the face of requests, pleas, demands and insistence from the people back home that the Congress of the United States once again become a body responsive to their wishes and conduct itself so as to restore value to the dollar and stop the spiral of inflation which it has generated.

It is most strange that representative government as we know it seems to have broken down. I cannot understand how some of my colleagues can deliberately flaunt the wishes of the people whom they represent or have the courage to add to the economic burden of those of low income or fixed income—the social security annuitant, the veterans, the widows, the old-age pensioners—by taking a course of action deliberately designed to decrease the purchasing power of the meager dollars that they receive. This is, indeed, one of the most cruel by-products of what is being done here in this year's spending spree. There is no inclination on the part of those who would add burdens to the oppressed to provide for revenue to pay for the increased cost which they have placed upon our Government. For years the Congress has been content to finance this fantasy of spending with money which it has borrowed from its own citizens through the use of savings bonds. Now it appears that the easy money obtained in that way is slowing up, the spring appears to be going dry. People who have placed their savings in the hands of the Government find that they have been betrayed, that because of the depreciating value of the dollar their savings are needed in order to support themselves. Wage earners now appear to be reluctant to invest any surplus of wages which they may have in a falling dollar.

Where then can the Congress look for revenue to finance its spending policy? From whom can it borrow if it will not embark on a pay-as-you-go plan? There was a time when the full faith and credit of the United States was meaningful. Purchasers of bonds of the United States bought them gladly with the feeling often expressed that if these are not good, nothing else will be.

Today, the Congress seems motivated by a theory of economics which extolls the benefits of debt. This theory points to a fiscal way of life where the principle is to encumber the Government with debt because the dollars borrowed today will be paid back in cheaper dollars tomorrow. Therefore, the debt will be easier to repay. How long can this monstrous deception continue? How long can those entrusted with our legislative leadership continue to sell programs which assure eventual chaos for short-term political gain?

I have a suggestion for returning to a course of fiscal responsibility and of income sufficient to meet the needs of the U.S. Government. It is found in

one of the proverbs of Benjamin Franklin which every schoolboy knows, "A penny saved is a penny earned." Many of our colleagues in Congress seem to feel this philosophy is embarassingly naive, just as they have forgotten or ignored the words of wisdom of many of Franklin's contemporaries.

If the money spring is failing and we cannot return to it for funds with which to expand our expenditures, if we are reluctant to impose additional taxes upon American citizens, then we must learn to live within our income. We once thought of our Government as solvent only so long as its revenues exceeded its expenditures. Then someone suggested a new definition which included as assets the power of the Government to borrow. Thereafter America was considered solvent so long as it lived within its capacity to borrow. So far as I know, there can be no further watering down of that definition and we must face the stark realization that when the Government's capacity to borrow has become impaired then we are unmistakably reaching the point of insolvency.

It seems futile to argue the point further. Surely, the people back home have advised their representatives in Congress of their desire to stop the inflationary spiral and of their reluctance to invest in the depreciating dollar. If the Congress refuses to heed their pleas and their requests, then mine or those of my colleagues who feel as I do will scarcely be heard.

I can only conclude that for some reason not yet apparent to us, there is a desire, conscious, or subconscious, to bring the economic health of our Nation to the breaking point. Step by step, dollar by dollar, and vote by vote, this is being accomplished.

NEW CITIZEN EXPLAINS WHAT IT MEANS TO BE AN AMERICAN

Mr. PROKOP. Mr. Speaker, I ask unanimous consent that the gentleman from Massachusetts [Mr. BOLAND] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. BOLAND. Mr. Speaker, one of the most heartwarming letters that I have received in a long time came into my office over the weekend from one of my new constituents. She was recently admitted as a new American citizen.

ONCE LIVED IN SOVIET UNION

Under unanimous consent, I ask to have the letter printed in the RECORD, so that my colleagues can read how a person, who lived in the Soviet Union and spent time in a displaced persons camp in Germany, feels about the benefits of American citizenship. Too often people in this country take these benefits in stride, never stopping to think what it means to be an American who is free.

NOW WANTS TO HELP AMERICA RESIST COMMUNISM

Natalia Logunow, of 116 Butler Street, Springfield, Mass., not only wants to enjoy the benefits of her new American citizenship, but she wants to use the freedom that citizenship imparts to help make her new country strong in its fight against communism.

The letter follows:

SPRINGFIELD, MASS., *March 19, 1959.*

EDWARD P. BOLAND,
Congress of the United States,
House of Representatives,
Washington, D.C.

DEAR MR. EDWARD BOLAND: I received your very kind letter, which you congratulated me to become an American citizen. You understand my situation well, because your father and mother were immigrants too.

I am very happy to be an American citizen, because I had very bad life in Soviet Union and later in DP camp in Germany. I am glad to have now a right and free life and I try to help my new country to be strong and to help her to oppose with Communist.

I can't yet speak and write English well, but I try to read American magazines and hope that year after year this will go better and better.

Excuse me, please, now my mistakes in this letter and receive assurance in my goodness to you as a Representative of Massachusetts.

Yours respectfully,

NATALIA LOGUNOW.

RESEARCH PROGRAM TO DETERMINE MEANS OF IMPROVING CONSERVATION OF GAME FISH IN FEDERAL RESERVOIRS

Mr. PROKOP. Mr. Speaker, I ask unanimous consent that the gentleman from South Dakota [Mr. MCGOVERN] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. MCGOVERN. Mr. Speaker, good sport fishing has become increasingly important to millions of Americans in recent years. Greater leisure time, continual population growth, improved transporation, better physical facilities in fishing areas, and that intangible aspect—recreational enjoyment—have contributed greatly to the expansion of this type of fishing. The creation of reservoirs behind the large Federal dams in the Missouri River development program has enthusiastically awakened the people of South Dakota, as well as other Missouri Basin States, to the recreational and commercial benefits to be derived from these areas.

America now has 25 million anglers and a $2 billion sport fishing industry. By 1966 it is conceivable that 180 million man-days of angling will be experienced on U.S. Corps of Engineer projects alone. The Missouri River is being converted into a series of huge, clear-water lakes which will entail over a million surface acres of water. In South Dakota the water area along the Missouri will nearly double the natural water area of the State. South Dakota's interest in recreational fishing is illustrated, for example, by the successful efforts of South Dakota fishery biologist, Ted Shields, to include saugers as game fish to be listed in world record fish charts. They are the top game fish in the tailwaters and are asserting themselves rapidly in the main reservoirs. The 1958–59 paddlefish season in the Fort Randall Reservoir tailwaters alone attracted 3,870 fishermen who snagged an estimated 15 percent of the total paddlefish population.

RESERVOIR FISH PRESENT SPECIAL PROBLEM

Reservoir fishing presents special problems, however. While initial fishing in new reservoirs is usually phenomenal, the fishing yields in older reservoirs tends to taper off to a stable, and many times, undesirable level.

The problem of trying to maintain or improve fishing in reservoirs has been too great for State fish and game agencies. These State agencies have limited budgets spread so thin that it is impossible for them to deal adequately with this vexing question. There is great need for increased emphasis on basic research that must be met if the growing demand for good fishing is to be satisfied.

The Nation should be concerned with the decline in fishing yields as reservoirs age and develop conservation practices to offset or eliminate them. This will, of necessity, be a long-range project. Ten or 15 years will be required to complete the basic research. Aging must be studied over a period of years to develop a conservation program that will solve the reservoir aging problem. The cost of such a program of research is minute compared to the potential benefits that will accrue to the millions of sport fishing enthusiasts throughout the country and to the terrific economic impact on the area fished. Unlocking the secrets of reservoirs is an immediate need of the fishing public and those charged with providing good fishing in them.

Mr. Speaker, I am today introducing legislation authorizing a research program designed to solve the problem of declining reservoir yields. It would give the Secretary of the Interior authority to conduct a nationwide study of reservoirs—Federal, State, local, or private—to determine methods for maintaining and increasing fishery assets. Similar legislation has previously been introduced by Senator FULBRIGHT of Arkansas.

Under unanimous consent I include the text of the bill at this point in the RECORD:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Interior shall establish a program of research and experimentation in order to determine means of improving the conservation of game fish in dam reservoirs.

SEC. 2. For the purpose of carrying out the provisions of this Act, the Secretary of the Interior is authorized (1) to acquire by purchase, condemnation, or otherwise such suitable lands, to construct such buildings, to acquire such equipment and apparatus, and to employ such officers and employees as he deems necessary; (2) to cooperate or contract with State and other institutions and agencies upon such terms and conditions as he determines to be appropriate; and (3) to make public the results of such research and experiments conducted pursuant to the first section of this Act.

SEC. 3. There are hereby authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. FLOOD, for March 24, 25, and April 7, 1959, on account of official business.

Mr. HOSMER (at the request of Mr. HOLT) indefinitely, on account of illness in family.

Mr. THOMPSON of New Jersey (at the request of Mr. ADDONIZIO), for Monday, March 23, 1959, on account of official business.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. FERNÓS-ISERN, for 10 minutes, on tomorrow.

Mrs. WEIS, for 5 minutes, on April 8.

Mr. VANIK, for 5 minutes, on tomorrow.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mr. RAY.

Mr. BERRY.

Mr. JONES of Missouri (at the request of Mr. MAGNUSON) and to include a speech by Senator SYMINGTON.

Mr. PELLY and to include extraneous matter.

Mr. WALLHAUSER.

Mr. SIMPSON of Pennsylvania.

Mr. PASSMAN and to include a letter he addressed to each Member of the Congress.

Mrs. BOLTON.

Mr. LANE and to include extraneous matter.

Mr. IRWIN (at the request of Mr. JOHNSON of Colorado) in two instances.

The following Members (at the request of Mr. CHAMBERLAIN) and to include extraneous matter.

Mr. AVERY.

Mr. ALGER.

Mr. MAILLIARD.

Mr. CHAMBERLAIN.

(At the request of Mr. PROKOP, and to include extraneous matter, the following:)

Mr. TOLL.

Mr. EVINS.

Mr. WOLF.

Mr. MCCORMACK.

ADJOURNMENT

Mr. PROKOP. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 4 o'clock and 52 minutes p.m.) the House adjourned until tomorrow, Tuesday, March 24, 1959, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

751. A letter from the Comptroller General of the United States, transmitting a report on the review of selected supply operations of the Northern Air Materiel Area, Europe (NAMAE), Department of the Air Force, Burtonwood, England; to the Committee on Government Operations.

752. A letter from the Chairman, Federal Communications Commission, transmitting a copy of the report on backlog of pending applications and hearing cases in the Federal Communications Commission as of January 31, 1959, pursuant to Public Law 554, 82d Congress; to the Committee on Interstate and Foreign Commerce.

753. A letter from the Acting Postmaster General, transmitting a draft of proposed legislation entitled "A bill to amend title 28 of the United States Code to increase the limit for administrative settlement of claims against the United States under the tort claims procedure to $3,000"; to the Committee on the Judiciary.

754. A letter from the Acting Postmaster General, transmitting a draft of proposed legislation entitled "A bill to require information concerning the average of the number of copies of each issue sold or distributed to paid subscribers to be included in sworn statements relating to all publications, and for other purposes"; to the Committee on Post Office and Civil Service.

755. A letter from the Secretary of Labor, transmitting a draft of proposed legislation entitled "A bill to provide for the registration of crew leaders in interstate agricultural employment, and for other purposes"; to the Committee on Education and Labor.

756. A letter from the Comptroller General of the United States, transmitting a report on the audit of the Foreign Agricultural Service, Department of Agriculture, covering selected activities of the agency to June 30, 1958; to the Committee on Government Operations.

757. A letter from the Chairman, Civil Aeronautics Board, relative to items 5, 6, 7, 8, and 9, relating to the Civil Aeronautics Board's legislative program; to the Committee on Interstate and Foreign Commerce.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. FORRESTER: Committee on the Judiciary. H.R. 4345. A bill to repeal clause (9) of subdivision a of section 39 of the Bankruptcy Act (11 U.S.C. 67a(9)), respecting the transmission of papers by the referee to the clerk of the court; without amendment (Rept. No. 239). Referred to the House Calendar.

Mr. FORRESTER: Committee on the Judiciary. H.R. 4340. A bill to amend sections 43 and 34 of the Bankruptcy Act (11 U.S.C. 71, 62) to simplify the filling of referee vacancies; without amendment (Rept. No. 240). Referred to the Committee of the Whole House on the State of the Union.

Mr. FORRESTER: Committee on the Judiciary. H.R. 4692. A bill to amend sections 1, 18, 22, 331, and 631 of the Bankruptcy Act (11 U.S.C. 1, 41, 45, 731, 1031), to provide for automatic adjudication and reference in certain cases; without amendment (Rept. No. 241). Referred to the Committee of the Whole House on the State of the Union.

Mr. FORRESTER: Committee on the Judiciary. H.R. 4693. A bill to amend the Bankruptcy Act so as to consolidate the referees' salary and expense funds; with amendment (Rept. No. 242). Referred to the Committee of the Whole House on the State of the Union.

Mr. HARRIS: Committee on Interstate and Foreign Commerce. H.R. 5610. A bill to amend the Railroad Retirement Act of 1937, the Railroad Retirement Tax Act, and the Railroad Unemployment Insurance Act, so as to provide increases in benefits, and for other purposes; without amendment (Rept. No. 243). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BARRETT:

H.R. 5917. A bill to amend the Social Security Act and the Internal Revenue Code so as to provide insurance against the costs of hospital, nursing home, and surgical service for persons eligible for old-age and survivor's insurance benefits, to remove the limitation upon the outside income which an individual may earn while receiving social security benefits, and for other purposes; to the Committee on Ways and Means.

By Mr. BERRY:

H.R. 5918. A bill to amend section 661 of title 18 of the United States Code to provide that the punishment for larceny of livestock shall be the same as the punishment for larceny of property of a value exceeding $100; to the Committee on the Judiciary.

By Mr. BONNER:

H.R. 5919. A bill to amend title XI of the Merchant Marine Act, 1936, as amended, with respect to insurance of ship mortgages, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. BOSCH:

H.R. 5920. A bill to amend title II of the Social Security Act to provide that an individual who had maximum earnings for a year before 1951 shall be credited with four quarters of coverage for such year (with certain exceptions) in the same manner as is provided for years after 1950; to the Committee on Ways and Means.

By Mr. CELLER:

H.R. 5921. A bill to require jukebox operators to pay royalty fees for the use of the musical property of composers, authors, and copyright owners; to the Committee on the Judiciary.

By Mr. CHAMBERLAIN:

H.R. 5922. A bill to provide a tax incentive for the employment of physically handicapped workers; to the Committee on Ways and Means.

By Mr. DINGELL:

H.R. 5923. A bill to amend the Social Security Act and the Internal Revenue Code so as to provide insurance against the costs of hospital, nursing home, and surgical service for persons eligible for old-age and survivors insurance benefits, and for other purposes; to the Committee on Ways and Means.

By Mr. DIXON:

H.R. 5924. A bill to punish the use of interstate commerce in furtherance of conspiracies to commit terroristic crimes and activities, and for other purposes; to the Committee on the Judiciary.

By Mr. ELLIOTT:

H.R. 5925. A bill to repeal the excise tax on amounts paid for communication services or facilities; to the Committee on Ways and Means.

By Mr. FERNÓS-ISERN:

H.R. 5926. A bill to provide for amendments to the compact between the people of Puerto Rico and the United States; to the Committee on Interior and Insular Affairs.

By Mr. FORRESTER:

H.R. 5927. A bill to authorize the conveyance to the city of Warner Robins, Ga., of about 29 acres of land comprising a part of Robins Air Force Base; to the Committee on Armed Services.

By Mr. HARGIS:

H.R. 5928. A bill to make an appropriation for the construction of the Elk City (Table

Mound) Dam and Reservoir, Kans.; to the Committee on Appropriations.

By Mr. HOEVEN:

H.R. 5929. A bill to amend the Federal Farm Loan Act to transfer responsibility for making appraisals from the Farm Credit Administration to the Federal land banks, and for other purposes; to the Committee on Agriculture.

By Mr. KEARNS:

H.R. 5930. A bill to provide for the registration of crew leaders in interstate agricultural employment, and for other purposes; to the Committee on Education and Labor.

By Mr. LAIRD:

H.R. 5931. A bill to amend section 612 of title 38, United States Code, to provide outpatient treatment for veterans of the Indian wars on the same basis as such treatment is furnished to veterans of the Spanish-American War; to the Committee on Veterans' Affairs.

H.R. 5932. A bill to increase and extend the special milk program for children; to the Committee on Agriculture.

By Mr. LANDRUM:

H.R. 5933. A bill to repeal the excise tax on amounts paid for communication services or facilities; to the Committee on Ways and Means.

By Mr. MEYER:

H.R. 5934. A bill to provide for the establishment of the Morrill Homestead National Monument at Strafford, Vt.; to the Committee on Interior and Insular Affairs.

By Mr. GEORGE P. MILLER:

H.R. 5935. A bill to amend section 1552, title 10, United States Code, and section 301 of the Servicemen's Readjustment Act of 1944 to provide that the Board for the Correction of Military or Naval Records and the Boards of Review, Discharges, and Dismissals shall give consideration to satisfactory evidence relating to good character and exemplary conduct in civilian life after discharge or dismissal in determining whether or not to correct certain discharges and dismissals; to authorize the award of an exemplary rehabilitation certificate; and for other purposes; to the Committee on Armed Services.

By Mr. MORRIS of Oklahoma:

H.R. 5936. A bill to authorize the construction, operation, and maintenance of the Canton project, Oklahoma, by the Secretary of the Interior; to the Committee on Interior and Insular Affairs.

By Mr. NORBLAD:

H.R. 5937. A bill to amend the act providing for a program to eradicate the dogfish shark on the Pacific coast in order to expand such program; to the Committee on Merchant Marine and Fisheries.

H.R. 5938. A bill to amend section 1(15) of the Interstate Commerce Act, so as to aid in alleviating shortages of railroad freight cars during periods of emergency or threatened emergency, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. POWELL:

H.R. 5939. A bill to amend the Federal Credit Union Act; to the Committee on Banking and Currency.

H.R. 5940. A bill to extend the benefits of the Panama Canal Construction Service Annuity Act of May 29, 1944, to certain individuals; to the Committee on Merchant Marine and Fisheries.

By Mr. RAINS:

H.R. 5941. A bill to expand the public facility loan program of the Community Facilities Administration of the Housing and Home Finance Agency, and for other purposes; to the Committee on Banking and Currency.

By Mr. ROOSEVELT:

H.R. 5942. A bill to amend section 4 of the Sherman Act to prescribe a procedure with respect to consent judgments, decrees, or orders, and for other purposes; to the Committee on the Judiciary.

By Mr. SMITH of Mississippi:

H.R. 5943. A bill to amend title 38, United States Code, to provide pension for the remarried widows of Confederate forces veterans where the remarriage of the widow has terminated; to the Committee on Veterans' Affairs.

By Mr. SPENCE:

H.R. 5944. A bill to expand the public facility loan program of the Community Facilities Administration of the Housing and Home Finance Agency, and for other purposes; to the Committee on Banking and Currency.

By Mr. WILLIAMS:

H.R. 5945. A bill to authorize the improvement of Natchez Harbor, Miss.; to the Committee on Public Works.

H.R. 5946. A bill to repeal the excise tax on amounts paid for communication services or facilities; to the Committee on Ways and Means.

By Mr. BRAY:

H.R. 5947. A bill granting the consent and approval of Congress to the Wabash Valley compact, and for related purposes; to the Committee on the Judiciary.

By Mr. BURLESON:

H.R. 5948. A bill to provide for the denial of passports to persons knowingly engaged in activities intended to further the international Communist movement; to the Committee on Foreign Affairs.

By Mr. ELLIOTT:

H.R. 5949. A bill to amend the Fair Labor Standards Act of 1938, as amended, to insure to farmers engaged in raising livestock an exemption for the employment in agriculture of certain of their employees engaged in other duties related to livestock auction operations; to the Committee on Education and Labor.

By Mr. FALLON:

H.R. 5950. A bill to amend the Federal-Aid Highway Act of 1958, as amended, to extend for 1 additional year the 1958 estimate of cost of completing the Interstate System as a basis for apportionment of authorizations therefor; to the Committee on Public Works.

By Mr. FASCELL:

H.R. 5951. A bill to provide for the denial of passports to persons knowingly engaged in activities intended to further the international Communist movement; to the Committee on Foreign Affairs.

By Mr. FISHER:

H.R. 5952. A bill to regulate the foreign commerce of the United States by amending section 350 of the Tariff Act of 1930, as amended, and for other purposes; to the Committee on Ways and Means.

By Mr. FOLEY:

H.R. 5953. A bill to provide for loans to small business concerns which suffer economic injury because of federally aided urban renewal programs; to the Committee on Banking and Currency.

By Mr. FOUNTAIN:

H.R. 5954. A bill to provide for the denial of passports to persons knowingly engaged in activities intended to further the international Communist movement; to the Committee on Foreign Affairs.

By Mrs. GRIFFITHS:

H.R. 5955. A bill to provide for the recognition of the Polish Legion of American Veterans by the Secretary of Defense and the Administrator of Veterans' Affairs; to the Committee on Veterans' Affairs.

By Mr. PILCHER:

H.R. 5956. A bill to provide for the denial of passports to persons knowingly engaged in activities intended to further the international Communist movement; to the Committee on Foreign Affairs.

By Mr. ABBITT:

H.R. 5957. A bill to provide for payments to States for the benefit of local governments based upon proceeds of sales of timber located on land within military and naval reservations; to the Committee on Armed Services.

By Mr. JOHNSON of Colorado:

H.R. 5958. A bill to amend the Federal Credit Union Act; to the Committee on Banking and Currency.

By Mr. McGOVERN:

H.R. 5959. A bill to direct the Secretary of the Interior to establish a research program in order to determine means of improving the conservation of game fish in dam reservoirs; to the Committee on Merchant Marine and Fisheries.

By Mr. CELLER:

H.J. Res. 317. Joint resolution to change the designation of Child Health Day from May 1, to the first Monday in October of each year; to the Committee on the Judiciary.

By Mr. SAUND:

H.J. Res. 318. Joint resolution directing the Secretary of the Interior to continue certain studies on the quality of water of the Colorado River and related matters and to report thereon to the Congress; to the Committee on Interior and Insular Affairs.

By Mr. STRATTON:

H. Res. 221. Resolution creating a select committee to conduct an investigation and study of the causes and effects of the movement of industries out of established industrial areas; to the Committee on Rules.

MEMORIALS

Under clause 3 of rule XXII, memorials were presented and referred as follows:

By Mr. KING of Utah: Memorial of the Senate of the State of Utah urging the Congress and the President to remove the limitation on the number of acres of public lands which the States may acquire for State park developments; to the Committee on Interior and Insular Affairs.

Also, memorial of the House of Representatives of the State of Utah urging the Congress and the President to remove the limitation on the number of acres of public lands which the States may acquire for State park developments; to the Committee on Interior and Insular Affairs.

By Mr. MAGNUSON: Memorial of Washington State House of Representatives memorializing the Congress of the United States and the President to take such action as is necessary to preserve and guard the interests of American fishermen through bilateral negotiations between Japan and the United States; to the Committee on Foreign Affairs.

By the SPEAKER: Memorial of the Legislature of the State of Alaska, memorializing the President and the Congress of the United States urging that consideration be given the questions involved with relation to the proper amendments to laws governing interstate commerce affecting the broad problems of transportation to, from, and within the newly created State of Alaska; to the Committee on Interstate and Foreign Commerce.

Also, memorial of the Legislature of the State of Colorado, memorializing the President and the Congress of the United States to decline passage of legislation creating a national wilderness preservation system or a National Wilderness Preservation Council, or any other legislation which does not carry out the long-established policy of wise multiple use of the federally managed property of the people of the United States; to the Committee on Interior and Insular Affairs.

Also, memorial of the Legislature of the State of Washington, memorializing the President and the Congress of the United States to take such action as is necessary to preserve and guard the interests of American

fishermen through bilateral negotiations between Japan and the United States; to the Committee on Foreign Affairs.

Also, memorial of the Legislature of the State of Washington, memorializing the President and the Congress of the United States to make provision for the inclusion of the convertible features during the initial construction of the new atomic reactor at Hanford, Wash.; to the Joint Committee on Atomic Energy.

Also, memorial of the Legislature of the Territory of Hawaii, memorializing the President and the Congress of the United States expressing the thanks and aloha of the people of Hawaii to the the House of Representatives of the Congress of the United States for admitting Hawaii into the Union; to the Committee on Interior and Insular Affairs.

Also, memorial of the Legislature of the Commonwealth of Puerto Rico, memorializing the President and the Congress of the United States to consider certain changes in the Federal Relations Act in order to clarify the legal nature of the Commonwealth and to modify certain aspects of its relationship to the Federal Union; to the Committee on Interior and Insular Affairs.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BOLAND:

H.R. 5960. A bill for the relief of Andrew Main Duncan; to the Committee on the Judiciary.

By Mr. CHAMBERLAIN:

H.R. 5961. A bill for the relief of Sidina Walters; to the Committee on the Judiciary.

By Mr. GREEN of Pennsylvania:

H.R. 5962. A bill for the relief of Mrs. Hannah Mae Powell; to the Committee on the Judiciary.

By Mr. HEALEY:

H.R. 5963. A bill for the relief of Ivy May Lee; to the Committee on the Judiciary.

By Mr. POWELL:

H.R. 5964. A bill for the relief of Eladio Aris (also known as Eladio Aris Carvallo); to the Committee on the Judiciary.

By Mr. SCOTT:

H.R. 5965. A bill for the relief of Mrs. Erika Elfriede Ida Ward; to the Committee on the Judiciary.

By Mr. WAINWRIGHT:

H.R. 5966. A bill for the relief of Mrs. Barbara Gluck Reuger; to the Committee on the Judiciary.

By Mr. WALTER:

H.R. 5967. A bill for the relief of Kim Yang Ja; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

123. By Mr. ANFUSO: Petition of 1,000 students of St. Bernardine of Siena College, Loudonville, N.Y., expressing their support of the resolution urging the U.S. Government to establish diplomatic relations with the Vatican; to the Committee on Foreign Affairs.

124. By Mr. HORAN: Petition of 270 citizens of Okanogan County, Wash., urging the Congress to confine their expenditures to existing sources and limits of revenue and not to increase taxes; to the Committee on Ways and Means.

125. By Mr. McGINLEY: Petition of 243 citizens of Custer County, Nebr., who are dependent, partially or totally upon the service rendered by the post office at Gates, Nebr., in opposition to any plan which the Post Office Department may have to close said Gates post office; to the Committee on Post Office and Civil Service.

126. By the SPEAKER: Petition of the president and others, National Railroad Pension Forum, Inc., Chicago, Ill., petitioning consideration of their resolution with reference to being in favor of passage of H.R. 3289, and being opposed to H.R. 1012 and S. 226; to the Committee on Interstate and Foreign Commerce.

127. Also, the petition of the conservation chairman, the Garden Club of Houston, Houston, Tex., petitioning consideration of their resolution with reference to supporting proposed legislation to make Padre Island a national park; to the Committee on Interior and Insular Affairs.

128. Also, petition of county clerk of Kauai Lihue, Kauai, T.H., relative to expressing deep gratitude and appreciation for having given Hawaii statehood; to the Committee on Interior and Insular Affairs.

129. Also, petition of the president, Associated Students of the University of Hawaii, Honolulu, T.H., petitioning consideration of their resolution with reference to expressing appreciation and thanks for the passage of the Hawaii statehood bill; to the Committee on Interior and Insular Affairs.

130. Also, petition of Apolonio M. Ontimare, Burauen, Leyte, Philippines, relative to a redress of grievance relating to property destroyed during World War II; to the Committee on Foreign Affairs.

EXTENSIONS OF REMARKS

Press Release Relating to Address by Hon. Henry S. Reuss, of Wisconsin

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, March 23, 1959

Mr. PROXMIRE. Mr. President, I note that on Thursday the distinguished minority leader [Mr. DIRKSEN] commented on a brief newspaper account of a speech delivered recently by my Wisconsin colleage, Representative HENRY S. REUSS.

The minority leader used this five-paragraph news article, which appears on page 4585 of the RECORD for March 19, 1959, as a basis for defending the administration against Mr. REUSS' charges of "politics as usual." The fact is that the Reuss speech covered a good deal more ground than that.

I think the minority leader ought to have the opportunity to reply to the other points made by Representative REUSS. Also, the readers of the RECORD ought to have a more complete account of the speech.

Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD the text of a press release issued by Mr. REUSS on March 11, 1959, covering his speech of that date.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

"UNITED STATES MUST GIVE UP ECONOMICS AS USUAL, POLITICS AS USUAL TO SURVIVE," CONGRESSMAN REUSS DECLARES

WASHINGTON, D.C., March 11, 1959.—"If the United States is to survive and to win in the mounting struggle of international competition, we have to give up two luxuries—economics as usual, and politics as usual," Congress HENRY S. REUSS, Democrat, of Wisconsin, said Wednesday morning.

REUSS spoke to the second annual National Workshop for Religious Liberals at All Souls Church in Washington.

"It is ironic that the administration which, quite rightly, declares itself ready to stand up to danger in Berlin, is so Milquetoastish about our own economy," REUSS declared.

"In practicing economics as usual, the administration is declaring itself afraid to try to make our economy work on the full employment-full production basis that is obviously required to meet our international responsibilities.

"It submits to some 5 million unemployed, and about one-fourth of our productive capacity at a standstill, and an annual growth rate in our economy of only 2 percent, while the Soviet Union advances at a rate of 8 to 10 percent a year.

"Growth through bold economic policies, not drift, is what the United States must have, both for our own defense and to make an effective contribution to the democratic advancement of the uncommitted, underdeveloped countries of the world," REUSS declared.

REUSS noted that Secretary Dulles, Undersecretary Dillon and other administration officials "have been saying, rightly, for some time that the Development Loan Fund needs $1 billion a year for 5 years, to do a good job."

"But what happens when Ike-the-Economizer gets through preparing his flimsily, fancifully balanced budget? The Development Loan Fund comes out at $700 million for 1 year—and that's all.

"This is but one example of economics as usual that has to be discarded. Just as worshipping the golden calf was almost the end of the children of Israel, so worshipping the unrealistically balanced budget may be the end of us."

Turning to "politics as usual," REUSS asserted that "American foreign policy needs a new face—the face of the ugly engineer and the Iowa chicken expert and the Wisconsin powdered milk master in the Ugly American.

"It's not enough to have a sound diplomatic, military and economic policy, even if we did. In addition to having policies, we must stress the character and quality of our American representatives abroad," REUSS said.

"We can't afford the luxury of having ambassadorships purchased with campaign contributions.

"We can't afford the luxury of refusing to appoint the best qualified man to head our foreign aid program because he's not a card-carrying Republican. (In passing, let's note that Paul Hoffmann was chosen Marshall plan chief by President Truman because he

was the best man. The fact that he was a Republican was no disqualification.)

"We can't afford the luxury of having the State Department becoming a wastebasket for schedule C political appointees, and having these spoils-seekers turn up later Wristonized into the Foreign Service where they can hurt us forever.

"We can't afford the luxury of encouraging two-way international trade, and having a reasonably sincere reciprocal trade program, and then kick low foreign bidders in the face when a Republican senatorial candidate says his election depends on giving the contract to an American high bidder.

"If we want loyal friends and allies, we must treat them with consistent fairness, not inconsistent churlishness. If we want to win the peoples of Asia, and Africa, and South America to our side, we must send out the kind of men Abraham Lincoln would have chosen for the job—humble, friendly, knowledgeable and eager to learn—instead of arrogant men such as King George sent to keep the Colonies under English control."

A Teenager Looks at Our Foreign Aid Program

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, March 23, 1959

Mr. IRWIN. Mr. Speaker, in virtually every edition of our newspapers there are ugly and disturbing stories about juvenile delinquency.

Yet, I have just received eloquent proof from my district not once, but twice that by and large there are far more fine, wonderful young teenage boys and girls who are serious-minded, clear-thinking, alert, good God-fearing and decent citizens.

For example, I have just received a letter from a young constituent of mine named Thomas M. Shaw of Greenwich, Conn. It was a letter on foreign aid, a subject hardly associated with the thinking of a juvenile delinquent.

Thomas is only 14 years old—yet in the intelligence of his thoughts and the forcefulness of his argument, he is quite mature.

This fine young man is very interested in government and is opposed to any cuts in foreign aid funds.

In his letter to me, Thomas wrote:

I was surprised to find out that a large part of this foreign aid is military aid. I do not think that we should place such an emphasis on military aid.

Starving children cannot eat guns and bullets, nor can farmers plow their fields to grow needed food with tanks and bombs.

I think such interest in government on the part of a 14-year-old boy is highly laudable and speaks volumes for those who feel, as I do, that the vast majority of young American boys and girls are fine, clean cut, and clear thinking.

Only a small, misguided few contribute to the juvenile delinquency harassing so many of our communities in the United States.

Then, Mr. Speaker, there is a young man from Bridgeport, Conn., named Neil Harding who is my second example of youth at its best.

Neil has just been selected as the North End Boys' Club Boy of the Year and will be honored by his Bridgeport friends at a dinner on April 9, at which I will be privileged to be one of the speakers.

This young man, 16 years old, is the choice from more than 3,000 other boys in the club. He is a third-year student at the University School in Bridgeport.

Neil has volunteered many hours of service to his club as an aid to the swimming instructor, teaching younger boys how to swim. And despite his youth, he has coached the club's swimming team, being active as a member of the basketball team, and is an officer of the club's senior council. Neil also serves as an altar boy at St. Patrick's Roman Catholic Church and is a member of its CYO group.

I do not think, Mr. Speaker, that America can have too many boys like Thomas Shaw and Neil Harding.

Boys of this caliber are in the vast majority among our youth and we need have no fears of their becoming juvenile delinquents so long as they maintain an intense interest in so many activities.

I want to extend my congratulations to these fine young men, Mr. Speaker, and to all the other millions of American boys and girls like them.

Youngsters like these are a credit to their families, their schools, their churches, and certainly to their country.

Senator Karl E. Mundt Salutes 40th Anniversary of American Legion

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday March 23, 1959

Mr. BERRY. Mr. Speaker, this past week the Nation saluted the American Legion in recognition of its 40th anniversary. Among those joining in the tribute was South Dakota's senior Senator, KARL E. MUNDT.

In view of the recent recognition of this notable occasion, and particularly since South Dakota's American Legion posts have made major leadership contributions through establishment of such youth programs as Boys' State and American Junior Legion baseball, I think it is appropriate to call attention to the remarks of Senator MUNDT and a letter from the American Legion to the South Dakota Senator.

Mr. Speaker, I ask permission to include at this point in the RECORD, the brief remarks of Senator KARL MUNDT and the letter to Senator MUNDT from the Honorable Preston J. Moore, National Commander of the American Legion.

SENATOR KARL E. MUNDT SALUTES THE AMERICAN LEGION
(By Senator MUNDT)

The American Legion has always been in the forefront of community activities and patriotic endeavor. All Americans can join in saluting this great veteran's organization on its outstanding record of achievement. The American Legion, along with other veterans organizations, has made tremendous contributions to the welfare of the Nation.

The 40th anniversary is particularly significant to South Dakota, because our State has been a national leader in American Legion affairs. Through able, imaginative, and dedicated leadership of South Dakota Legion members, the Boys' State program was developed. Junior American Legion baseball was also a South Dakota Legion invention.

South Dakotans can take pride in their 259 Legion posts for their many activities which reflect the devotion and recognition of Legion members to those fundamental principles which have kept America free.

The American Legion deserves the highest commendation for its many efforts to help America remain alert to the dangers of communism and the subversive agents in our midst.

The Legion has continually encouraged Americans to spend that amount of money and effort necessary to keep America strong in the realization that our only hope for peace is to remain strong.

The American Legion rightfully advocates that our strength is the convincing argument to dictators and potential enemies that war against freedom and America would be both futile and fatal.

Mr. Speaker, the letter from Comdr. Preston J. Moore follows:

THE AMERICAN LEGION,
March 20, 1959.

The Honorable KARL E. MUNDT,
U.S. Senator,
Senate Office Building,
Washington, D.C.

DEAR SENATOR MUNDT: Your generous letter of congratulations to the American Legion on the occasion of its 40th anniversary is sincerely appreciated by the officers and members of our organization.

South Dakota can well be proud of its part in pioneering several of the Legion's outstanding programs of youth training that exist in our country today.

Thanks to the vision of South Dakota Legionnaires, a million boys will be playing baseball on sandlots throughout the United States under the auspices of the Legion's junior baseball program. In addition, over 18,000 high school students will be attending Boys' State throughout the Legion's departments, learning the fundamentals of American citizenship and government.

These annual events are but a part of our basic Americanism program which for four decades has attempted to instill in all Americans a genuine love of country and a true appreciation for the sacred obligations of citizenship. The realization of these ideals constitutes a living memorial to the wisdom and foresight of the Legion's founders who met in Paris just 40 years ago this week.

I enjoyed seeing you during the affair at the Army-Navy Country Club, and was proud to have the Washington Post carry the picture of you, Ce Gunn, and myself.

Sincerely yours,

PRESTON J. MOORE.

Tabulation of a Poll

EXTENSION OF REMARKS
OF
HON. WILLIAM S. MAILLIARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 23, 1959

Mr. MAILLIARD. Mr. Speaker, one out of every four registered voters in the

Fourth Congressional District of California was invited to respond to my annual questionnaire on some of the important problems confronting our Nation. To date over 15 percent have replied, including a considerable number of detailed comments indicating careful thought.

The following tabulation may be of interest to my colleagues:

1. The President's budget for the year beginning next July 1 calls for expenditures of $77 billion and an estimated income of $77.1 billion. Additional expenditures totaling several billions are being proposed by some Members of Congress. How would you vote on the following:

	Amount	Percent		
		Yes	No	No opinion
Aids to housing	$1,000,000,000	47	50	3
Added payments under Soil Bank	700,000,000	12	81	7
Increased payment to civil service retirement fund	600,000,000	33	62	5
Aid for school construction	480,000,000	69	29	2
Postal subsidy (above amount proposed in 1960 budget)	350,000,000	21	74	5
Payments to highway-building fund	250,000,000	51	44	5
Aid to minerals industry	160,000,000	21	73	6
Financing community facilities	150,000,000	27	68	5
Grants for airports	110,000,000	41	55	4
Aid to depressed areas	100,000,000	66	30	4

2. Of those who answered "yes" to one or more of the items listed above (88 percent), payment for the project(s) by an increase in taxes was favored by 62 percent. Adding to the national debt was recommended by 29 percent, while 9 percent expressed no opinion.

	Percent		
	Yes	No	No opinion
3. Do you favor a substantial reduction in the 27.5 percent oil and gas depletion allowance permissible under current tax laws?	45	37	18
4. Do you favor a freer flow of political leaders, students, farmers, businessmen, etc., between the United States and the Soviet Union?	68	29	3
5. Do you favor a trial test for pay TV?	34	62	4
6. Do you favor increasing the Federal gas tax from 3 to 4½ cents per gallon to maintain pay as you go in building Federal-aid highways?	62	36	2
7. Do you favor legislation providing that all quota numbers not used in any year shall be made available to immigrants in oversubscribed areas the following year?	45	52	3
8. The prices of 12 farm commodities (wheat, corn, cotton, etc.) are supported by Federal law at prescribed minimum levels. In general, do you approve of the support program?	20	78	2
9. Would you favor a national fair trade law permitting establishment of a minimum price on trademarked or brand-named merchandise?	26	71	3
10. Do you favor Federal legislation raising the minimum wage from the current $1 an hour?	60	37	3

Easter Letter From Representative James C. Wright, Jr.

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, March 23, 1959

Mr. JOHNSON of Texas. Mr. President, one of the ablest Members of the Texas delegation in Congress is Representative JIM WRIGHT, of Fort Worth. Representative WRIGHT is making a fine record, not only by the farsighted, responsible way in which he is serving his district, but also through the outstanding newsletters which he sends each week to the people he represents. His most recent letter is such a beautiful and inspiring Easter message that I ask unanimous consent to have it printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE WRIGHT SLANT ON WASHINGTON

EASTER WEEK, 1959

(A report from JIM)

Congress hurries to complete its work for a brief Easter adjournment. Like the long stream of generations before us, we seek throughout the land to review again the events of those 7 days which changed the world and split history into two clearly definable parts. It seems almost a sacrilege to write of other things.

Never before nor since has there been a week so fraught with meaning, so supercharged with drama, so interladen with pathos, and yet so tremendous in triumph as that first Easter week.

The familiar story never grows stale in the telling. Like springtime, it is always new. After 2,000 years it still has the power to arrest our thoughts and even change the pattern of our lives. Yet, but for the one exception, there is nothing unusual about the people who parade through the pages of the Easter story. They were real people, ordinary people, very much like you and me. Perhaps we can even see ourselves in some of them.

There were the crowds—the glad crowds that lined the streets and filled the temple square on that Palm Sunday—and the angry crowds that jostled one another in Pilate's courtyard on Friday. With wild abandon, they cheered the Carpenter of Nazareth as he rode into the city. They threw their clothing in the street and tore the branches from the trees to wave in tribute, and 5 days later some of the same people stood in front of Pilate's palace and shouted "Crucify Him! Crucify Him!"

They were real people all right. Like the people we know. Like the people we are. The public is still said to be fickle. Yesterday's hero is today's villain and tomorrow's forgotten man. Even today, the mob spirit that flamed them into unreasoning condemnation still smoulders about us at times, needing but a sudden breeze to burn afresh and to destroy whatever lies in its path. Like the people of ancient Jerusalem, we are susceptible to mass psychology. Like them, we sometimes find it simple and convenient to find a scapegoat to condemn without comprehending. It is easier than trying to understand. Have you ever been in that crowd? I am afraid that I have, at times.

And there was Judas Iscariot, the zealot, the treasurer of the little band, he who sold the hope of the world for 30 pieces of silver. History has dealt harshly with Judas, for deliberate treachery is a trait we universally condemn. Yet think of Judas for a moment. He wanted to overthrow the Roman invaders by force of arms. At last it became obivous to him that this was not the plan. He saw the powerful forces being arrayed against the Nazarene and his followers. He felt that the movement was doomed * * * a lost cause. The chief of priests and the leaders of his people were determined to destroy it.

How crass was his betrayal and how empty his reward. Yet in all of history practical men have abandoned lost causes, have deserted sinking ships. And this still goes on today.

Pontius Pilate was the procurator, his business to administer the Roman law. He didn't understand the people in this obscure province and didn't particularly care to. He'd rather be back in Rome, but his career had led him here. Little did he realize he was judging history's most famous case, or that by a strange twist of irony it was he himself who was being tried and found wanting.

As the accusers hurled their denunciations and spat out their poison stream of invective, there came to him the clear conviction that if ever in his life he had seen an innocent person, this prisoner who stood before him now with the strange light shining in His eyes was the most innocent of all. Three times Pilate tried to release Him, once to give Him an easy way out. But finally, confronted with the threat of being reported to Ceasar, his will crumpled like a heap of ashes. He took the course of least resistance and tried to wash his hands of the matter, allowing the Christ to be crucified.

Have you ever been cast in the role of Pilate? Have you ever been convinced in your mind that a thing was not right and yet reluctantly assented to it because everyone else seemed so determined? Have you ever known the right decision but found it too hard to make—and let others make it for you? Have you ever tried to wash your hands of a difficult situation by pretending it was not your responsibility—when you knew in your heart that it was? Could there be a lingering touch of Pilate even in you and me?

Not all of the characters of Easter week, of course, were villains. There were the faithful ones. There was Joseph of Arimathea, who provided a tomb for the lifeless body of the Son of God. Speculation has identified this Joseph as a member of the Sanhedrin. A legend has grown up connecting him with the rich young ruler who had been willing to go so far but only so far.

Now, at the last, the fire that burned in him had erupted to the surface. He offered to share his family vault with Him who had no place to lay His head. Is there the spirit of Joseph of Arimathea in us today?

Or of Mary of Magdala, who had been healed of her afflictions? The New Testament refers to her maladies simply as "demons." In our age, when mental illness has become a fad and the psychiatrist's couch the altar of its faith, we find it easy to believe that she had been beset by neuroses and

nervous disorders. It matters not at all the nature of her earlier life. What matters is only that she was healed, redeemed, and grateful with a boundless love. What matters is the adoration that brought her to the tomb that Sunday morning.

What matters is the unquestioning faith, as she stood there in the softly breaking dawn, to recognize Him risen, to see the transformation taking place and to feel that transformation in her own soul, and to return at His command with a shout of triumph to tell the glad news of the resurrection. Can you see yourself in Mary Magdalene?

Or in Simon of Cyrene, who bore the cross of Christ up the long, steep pathway to the hill of Golgotha?

Crosses still there are to bear. The hill we climb to a peaceful world where men may beat their swords into plowshares and each may know in his heart the peace of God that passes understanding, is a steep hill. The crosses of selfishness, of avarice, of hatred and revenge, are heavy crosses, and He staggers under their weight. Must He bear them unassisted, or can we see ourselves in Simon of Cyrene who picked up the burden and carried it?

In each of us there dwells the same human nature which motivated them in that Easter week in old Jerusalem. If He who was perfect should come to earth today, He might be crucified again.

Yet, even so, He would live again. And with Him would live the hopes and dreams of a better world which moves, ever so imperceptibly, nearer and nearer to fruition.

Four Major Problems Face the Nation

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Monday, March 23, 1959

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD a copy of my Washington newsletter which has been released today.

There being no objection, the newsletter was ordered to be printed in the RECORD, as follows:

WASHINGTON REPORT

(By Senator HOMER E. CAPEHART)

In my opinion, four major problems face this Nation.

In these columns, on the floor of the U.S. Senate, in public addresses and a series of weekly radio broadcasts, it will be my purpose to analyze, discuss and present suggested solutions for each of them.

As I see these problems they are:

1. The threat of Russian communism, both military and economic.
2. The farm problem.
3. Labor problems.
4. Inflation.

These problems must be solved.

These problems, in one form or another and in varying degrees, have been with us for many, many years. Thus it would serve no purpose to attempt to place the responsibility for them on either of the major political parties. They are our problems, not partisan political problems.

Your Government, meaning the administration and those of us who represent you in the Congress, needs your help and your suggestions in arriving at solutions.

It will be my purpose to offer some concrete suggestions.

I hope you will help me, and through me the administration and the Congress, by presenting your ideas.

Certainly no one man is wise enough to have all of the answers.

I am so thoroughly convinced, however, that the future of this Nation and the free world depends upon sound solutions of these problems that I propose to seek out, with the help of others whose responsibility it is also to try to solve these problems, concrete programs aimed at their solution.

It is my duty to do so because that is what you elected me to do.

Some of my suggestions may be partly or wholly unsound. In any event I am going to speak out with my ideas and it will be the prerogative of those who read what I have to say or hear my broadcasts and telecasts to be the judges.

Someone must come up with the right answers and soon.

It is my best judgment that we just cannot go on as we have been without risking real difficulty.

I foresee the possibility of:

1. A third world war.
2. Ruinous inflation.
3. Unbearable taxes.
4. Huge governmental expenditures.
5. A bankrupt agriculture.
6. Chaos in labor-management relations resulting in great suffering on the part of our people.
7. The adoption of socialistic schemes.

Let me discuss in a little more detail the particulars involved in each of the major problems.

1. The threat of Russian communism, both military and economic, of course, involves the possibility of war.

(a) It likewise involves the possibility that Russia could force us through her cold war tactics to bankrupt ourselves with resultant socialism.

(b) Somehow, someway, the Berlin situation must be solved.

(c) So must the problem of the division between West and East Germany.

(d) So must the problem of the control of atomic weapons.

(e) Should we consider trade with Russia?

2. Our farm problem must be solved.

Look at these facts:

(a) Our agricultural program this year for every purpose will cost over $6 billion.

(b) Yet we have in storage $9 billion of surplus.

(c) It is apparent that the price support program yet has failed to accomplish the purpose for which it was intended.

(d) Farm prices today are much too low.

(e) We continue to involve farming, strictly a private enterprise, with politics.

3. The seriousness of our labor problem is generally recognized.

Look at these facts:

(a) Labor and management in many instances are not working together.

(b) Much of this difficulty is due to existing Federal laws and/or the failure of local law enforcement officers to enforce existing laws.

(c) Approximately 4 million are unemployed despite an otherwise very high level of economy.

4. Inflation is a real danger.

(a) We continue deficit spending.

(b) Governmental expenditures on all levels—local, State, and Federal—continue to increase.

(c) Taxes continue to go up and up—local, State, and Federal.

(d) The purchasing power of the dollar continues to decrease.

These are the problems I propose to attack. If you should disagree with me, as many of you will, I hope you will at least give me E for effort along with your own ideas.

The solution of these problems is the responsibility of every American, regardless of politics.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 23, 1959

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of March 21, 1959:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

MARCH 21, 1959.

H.R. 10 and 11, the Self-Employed Individuals' Retirement Act of 1959, to encourage the establishing of voluntary pension plans by self-employed individuals, passed after spirited debate. The bill permits an income-tax postponement on retirement savings. Thus the self-employed are given the retirement tax relief which employees now enjoy. Providing for one's own future is an old American concept, rooted in tradition and our forefathers' concepts of individual responsibilities and obligations. These are supported by the spiritual beliefs, out of which grew our Declaration of Independence and Constitution. This bill makes an interesting comparison to the relatively new concept of Federal social security, with the individual's increasing dependence on Government. A debate sprang up between those who felt the revenue loss to the Government of approximately $350 million was untimely and those who felt the inequity between employed and self-employed should be corrected. The latter view I shared, outweighing the former.

The temporary unemployment compensation (TUC) bill was passed terminating the Federal part of the program, except for the tapering off which permits those whose claims are recognized by the end of April to receive compensation. Since few emergency Federal activities are ever terminated, this action is surprising and refreshing. Only 17 States participated in the program. Texas was among those States decrying the need for Federal participation, maintaining this is a State function, to which view I subscribe.

The Federal airport bill amendment to continue Federal grants brought on the year's first knock-down political fight. By the time of final passage with debate and amendments completed, possibly a voting pattern for the year emerged. The debate centered about three aspects: (1) Would the amount of Federal money be $297 million or $200 million for 4 years; (2) would the formula for payout be 75–25 or 50–50, the 25 and 50 figures being the percentage amount of the total solely at the discretion of the FAA (Federal Aviation Agency) Administrator to allocate; (3) would the Congress insist on regular appropriation procedures or permit direct expenditures out of the Treasury. The first two were combined (becoming $200 million at the 75–25 ratio), making for a clear-cut choice of economy versus spending, since some Democrats disapproving the Republican 50–50 could now have both economy and the formula they preferred. So it was that 57 Democrats joined 137 Republicans for economy while 209 Democrats and 5 Republicans voted for bigger spending. The liberals or big spenders won. (Nine Texans, including myself,

voted for economy.) Secondly, on the vote for closing the door to the Treasury and returning to constitutional appropriation, 53 Democrats joined 138 Republicans for it, and 212 Democrats and 4 Republicans teamed up to defeat this one, too. Five Texans, including myself, voted for the amendment. The Democrat leadership worked hard on the floor to line up the votes, and succeeded. Since these amendments failed, I voted against the bill. The bill passed by a vote of 272 to 134. Seven Texans (out of 22) opposed the bill. The record is now clear as to who is for bigger spending and constitutional appropriation. The coalition of Democrats and Republicans at full strength no longer outnumbers the liberals or big spenders. Only a veto can save the day—there aren't yet enough votes to override the veto. This will be a rough year. This test demonstrates that the Democrat leadership is not worried about balanced budget, inflation, or preserving the value of our money.

The Joint Economic Committee Report on the President's 1959 Economic Statement establishes the battlelines between Republicans and Democrats as to economic philosophy and the role of Federal Government. No shred of conservatism remains on the Democrat side. A study of this report's majority and minority views should be mandatory reading for members of both parties in Texas.

An amendment to the agriculture bill was my legislative contribution this week. This bill would permit a farmer to grow wheat on his own land for his own use without Federal control or fine. This supports Judge T. Whitfield Davidson's decision concerning Evetts Haley, Jr.'s, right to grow wheat, a decision the Supreme Court summarily reversed. I join Judge Davidson and Evetts Haley in branding unconstitutional the Supreme Court decision. The attacks on the rights of property ownership have become all too similar to the aims of the Socialist and Communist doctrines.

Urban renewal repeats the attacks on property ownership in various ways. First, your property can be seized through eminent domain, the result of a redevelopment board's judgment of spiritual or esthetic values in community planning. Secondly, Government public housing, the antithesis of home ownership, goes along hand-in-glove with urban renewal. I presented a thorough study of urban renewal in the House this week. (Tuesday, Mar. 17, pp. 4363–4378, CONGRESSIONAL RECORD.) I forewarned Members of the heavy expenditures for urban renewal and public housing in housing bills now pending. Forecast: Bigger spending and inflation unless people demand economy of Senators and Representatives.

Bill To Correct Discrimination in Civil Service Regulations

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 23, 1959

Mr. PELLY. Mr. Speaker, yesterday my colleague from the State of Washington [Mr. TOLLEFSON] and I introduced companion legislation designed to correct what we feel is a weakness in the Civil Service Act which permits an agency to force the resignation of a Federal employee very possibly on personal or punitive grounds.

These bills, H.R. 6071 and H.R. 6062, were initiated by reason of the recent decision of the Civil Service Appeals Board denying the petition of one Joe King.

Very briefly, Mr. King appealed the right of his agency to force his resignation by eliminating his job in the Puget Sound Naval Shipyard and refusing him the opportunity of accepting similar employment in the same agency without competitive examination. Therefore, his only alternative was to accept a job at one grade lower by bumping a nonveteran civil service employee with some 20 years seniority. This, Mr. King, as a matter of principle, refused to do.

The King case received national publicity. Joseph Young, writing in the Washington (D.C.) Evening Star, devoted his entire column to a critical report of the Board's action the day the decision was handed down. However, while both Congressman TOLLEFSON and I feel that Joe King has been discriminated against by reason of a loophole in the civil service regulations, the primary purpose of our legislation is to change these regulations by legislative action to prevent any similar injustice in the future.

Aside from his personal popularity with his associates and subordinates in his own agency, one of the principal reasons Mr. King's case received national attention lies in the fact that thousands of Federal employees are visualizing themselves in the same situation, and with the precedent now established by the denial of his appeal every Federal employee in a similar situation is subject to the same discriminatory treatment.

Therefore, Mr. Speaker, in behalf of my colleague and myself, I urge immediate action on the part of the Post Office and Civil Service Committee on this urgent legislation to provide justice and to bolster employee morale.

TVA Yardstick Works Again in Measuring Costs

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, March 23, 1959

Mr. EVINS. Mr. Speaker, in connection with the recent interest in the award of a contract for turbo-generators to A. C. Parson, Ltd., I include in the CONGRESSIONAL RECORD my recent newsletter which comments on this award and its significance, and also an editorial comment by the Reporter magazine in its current issue on this award. My newsletter and the article follow:

TVA YARDSTICK WORKS AGAIN IN MEASURING COSTS

(Capitol comments by JOE L. EVINS, Member of Congress, Fourth District, Tennessee)

The TVA has served the public interest of the entire Nation in many ways since it was established 25 years ago. One of the greatest of these has been the yardstick measure of cost of producing electric power and also the cost of producing fertilizers with resulting savings to farmers, power consumers and others.

Recently we have seen another example of TVA's use of a yardstick measuring of costs. There are only three companies in the United States who manufacture large turbogenerators for powerplants; these companies are the giant General Electric Co., Westinghouse, and Allis Chalmers. During recent years these three companies have built not only all of the generators that TVA has purchased, but also all the big generators for the private utilities and for other Federal power projects. Almost one-third of all the funds the TVA has spent have gone to States in which these three companies are located, largely to pay for these turbogenerators. For example, $350 million has gone to New York, the home of the General Electric Co.; $190 million has gone to Pennsylvania, the home of Westinghouse, and some $64 million to Wisconsin, the home State of the Allis Chalmers Co.

The bids of these three companies have always been remarkably close—usually the spread between the lowest and the highest has been less than 1 percent—so close as to raise a suspicion in some instances of bid rigging. Over the last 8 years these firms have boosted their prices for these big generators by more than 50 percent although the average wholesale price for all commodities has increased by only about 5 percent.

In view of these facts, and especially the increasing costs, when the TVA last year was ordering one of the largest turbogenerators ever built in the world, the TVA decided to invite bids also from qualified foreign suppliers.

Under the terms of the Buy American Act, purchases may be made from competing foreign firms if the domestic prices are unreasonably high. Purchases are required to be made from domestic sources if the domestic price is no more than 6 percent higher than a foreign price, or 12 percent higher if the domestic bidder is in an area of substantial unemployment. Leaning over backward, the TVA said in its invitation for bids that it would accept an American bid if it was no more than 20 percent higher.

TVA received three bids: One from General Electric, one from Westinghouse, and one from A. C. Parsons, Ltd., the largest British manufacturer of turbogenerators. The bid of the Parsons Co. was the only legally acceptable bid because it was the lowest and the only bid responsive to the specifications in the invitation. The TVA has had much trouble with late delivery of turbogenerators in the past. As a result of late deliveries, the TVA has had to buy power from private companies at high prices. Therefore, the invitation for bids called for payment of damages in the event of delays in delivery. Only the Parsons Co. bid included this guaranteed prompt delivery. In addition, the American bids were some $6 million or 50 percent higher than the Parsons bid. American wages are higher than British—about 40 percent higher in this industry. But this difference in wage scale accounts for only about $1½ million in increased labor costs, and this difference the British firm has to make up by paying an import duty of the same amount.

One of the greatest problems in our economy, which in many instances is dominated by giant corporations, is that these giants no longer compete with each other in the old-fashioned free enterprise way. There exists a need for some device to measure their costs. In addition to all the other services TVA performs, this great agency is also providing a yardstick of cost in many fields—power, fertilizer, electric generating equipment—and, in keeping

costs down, benefits accrue both to the taxpayer, the consumer and the entire Nation.

[From the Reporter magazine]

THE YARDSTICK THAT WORKS

The Tennessee Valley Authority, whose continued growth our President once characterized as "creeping socialism," has gotten out its yardstick again, much to the embarrassment of certain leading private enterprisers. Last month, TVA awarded a contract for a half-million-kilowatt turbogenerator to the British firm of C. A. Parsons & Co., Ltd., after having received bids from General Electric and Westinghouse. The two American companies promptly announced they were appealing to Leo A. Hoegh, Director of the Office of Civil and Defense Mobilization, to invoke the Buy American Act and revoke TVA's purchase in the interest of national security. To their workers the two companies brought the sinister news that British labor, paid only 40 percent of the comparable American wages, was depriving them of more than a million man-hours of work. Rumbles of protest began to mount of Capitol Hill.

A short time ago TVA, whose Chairman, Brig. Gen. Herbert D. Vogel, is an Eisenhower appointee, issued an explanation of its decision to buy British. For some time TVA has been disturbed by the fact that over the last 8 years American firms manufacturing large turbogenerators have boosted prices by more than 50 percent, while the average wholesale price of all commodities has increased only about 5 percent. When it sought a foreign bid, TVA had announced that it would accept the lowest bid from a U.S. manufacturer if it did not exceed the lowest foreign bid by more than 20 percent. (The Executive order issued under the Buy American Act ordinarily requires only a 6-percent preference.)

But when the General Electric and Westinghouse bids, which fell within 0.4 percent of each other, were analyzed, it turned out that they were nearly 50 percent higher than the Parsons bid. The Parsons bid was the only one of the three not containing an escalator clause to provide for future price increases; it also was the only one to accept TVA's requirement of a penalty clause in the event of tardy delivery. By accepting the British bid, TVA stood to save over $6 million.

The TVA yardstick revealed still other interesting comparisons. Taking the General Electric and Westinghouse estimate for the wage differential and multiplying this by the number of man-hours involved in the project, the TVA analyst discovered that the British firm's saving in labor cost, in comparison with American wages, amounts to $1.5 million, which, incidentally, is the amount it will pay in U.S. import duty. There still remains a discrepancy of $4 to $5 million between American and British bids, once the labor-cost factor is eliminated. As the International Union of Electrical, Radio, and Machine Workers pointed out: "This means that if General Electric and Westinghouse had gotten their labor completely free, they would have had difficulty in competing."

This raises some interesting questions. Despite cutbacks in older plants in Schenectady and East Pittsburgh which have caused unrest among the workers, the capacity of the hydraulic-turbine industry in this country increased by 50 percent from 1950 to 1957. Sales of electrical equipment abroad have been running about 10 times our imports. Last year's third-quarter profits for General Electric were the highest for any third-quarter in its history; Westinghouse's third-quarter earnings were its second best. Neither company appears in imminent danger of collapse because of British competition.

The real problem for our private-enterprise economy is how to devise suitable yardsticks by which the performance of our industrial leviathans can be measured. In addition to all the other services it performs, TVA, which is one of the electrical industry's biggest customers, proves its usefulness in this respect, too.

Unless, of course, we decide that a nation's security is endangered whenever it buys generators from foreign firms. If this is true, General Electric, Westinghouse, and all the big exporting companies should try to sell as much as they can to China.

A Party of Principle

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, March 23, 1959

Mr. RAY. Mr. Speaker, I am glad to place in the RECORD the thoughtful and constructive address "A Party of Principle" which was delivered last Friday evening by the Honorable JOHN W. BYRNES of Wisconsin to a meeting of Republicans in the 15th District, N.Y., which I have the honor to represent.

A PARTY OF PRINCIPLE

As Republicans, we have been going through a period of critical self-examination. The crushing defeat we suffered in the national and State elections last fall requires a searching look at our party. The main emphasis of our studies and discussion has been on making our party a more effective political mechanism, on the organization we must create to win elections. Certainly there is much that must be done in this area.

I do not want my remarks tonight to be misconstrued as quarreling with that objective. As a partisan Republican, and an officeholder, I want our party to win elections, too, and I have been tremendously encouraged by the earnest enthusiasm which has gone into reorganization efforts since November.

My principal point tonight, however, is that the major concern of the Republican Party cannot be just to win the next election. Our principal job is, and must be, the preservation of our Nation and its institutions.

It is to that job we must dedicate our principal effort. For, if we fail in it, there will not be much need to worry about elections. And, if we succeed—by awakening the American people to a recognition of their peril—victory at the polls will follow.

We must bring to our task more than just an urge to take power. A political party enters this fray ill-equipped unless it is armed with basic principles—unchanging beliefs so precious they cannot be sacrificed for any political victory. Without such principles, a political party is nothing more than a gathering of office seekers and their friends. Without principles, a political party, in the words of our President, is only a conspiracy to gain power.

We must face up to the fact that a party without principles has captured control of the most important branch of our Government—the Congress. The Democrat Party today is a party, not of principle, but of expediency. Its method of gaining power is to divide the people into groups, to appeal to their special interest, promising special largess from their Government.

Such a party can have no principles, except to assert, in order to make good its promises, that the answer to any problem, real or fancied, is massive governmental action or massive Federal spending. Without principles to guide it, the Democrat Party cannot concern itself with preserving this Nation and its heritage. It is guided only by the day-to-day demands of its own lust for power.

The Republican Party, on the other hand, no matter what its other failings, is a party of deep-seated principles and it must remain so. It is true that any party representing a broad cross section of the American people will encounter differences of opinion as to details and method. That is true of our party. In fact, I suggest that we Republicans have permitted these differences to become so magnified in our own minds and the public mind that the principles which unite us have been forgotten or ignored. As a result there has been all too much talk about hyphenated Republicans—liberal-Republicans, conservative-Republicans, modern-Republicans. It is time—if we are to face the challenges that confront us—that we start thinking, talking, and acting as Republicans—period.

Let us heed the words of Lincoln when he said: "I'm afraid of the result upon organized action where great results are in view—if any of us allow ourselves to seek out minor or separate points in which there may be differences of views as to policy and right, and let them keep us from uniting in action upon a great principle in a cause on which we all agree."

Let us remember that our strength can stem only from the basic principles which unite us.

These principles are so deep and instinctive that we have unfortunately too often felt it either unnecessary or too difficult to put them into words. But they must be put into words; they must be enunciated over and over again. Our beliefs and principles must be articulated so clearly and forcefully that there can be no doubt as to where we Republicans stand and why.

Let me presume here tonight to make a modest beginning at putting into words what we so deeply and firmly feel.

We believe, we Republicans, that no generation can live solely for itself but rather that it has the heaviest of obligations to preserve the Nation and its institutions, strengthened and improved, for those who follow. We know that our heritage was won only by the sacrifice of those who preceded us. We have the high moral duty to sacrifice, if need be, to preserve and protect it.

We know, as we face the problems inherent in preserving our society, that the right way is not always the easy way, but that we have no choice except to take the hard way if it is, in truth, the right way. We recognize that we will find ourselves frequently bucking the popular tide, for we know, just as surely as the Democrats, that there is little political appeal in self-denial. If we accept the responsibility of leadership, however, and that is one of the functions of a political party, we must serve as stern guardians of the national common sense.

We accept, as part of the responsibility of leadership, the duty of making clear to the people that the easy way, if it is wrong, leads only to the misery of retraced steps or the finality of disaster. Championing what we believe to be right may at times lose us political battles; but we are supremely confident it is the only way to a clear conscience and ultimate victory.

We believe in a government of laws which have as a principal aim the prevention of the seizure of dominant power by any man, or group of men.

We believe that the political and economic strength of a nation depend upon the genius of its people and that genius cannot flourish wrapped round with the chains of an all-powerful state or an all-powerful minority.

We believe that liberty is man's most precious possession and that it includes the freedom to have an incentive to produce. This has led to our faith in the soundness of an economic system based upon man's universal urge to better his lot. We believe that success, if it is to be the incentive for all, cannot be mocked and scorned and discouraged in an appeal to the envy of others.

We believe in a limited government as the best means of preserving individual freedom and initiative, but this does not blind us to the legitimate needs of our citizens or the challenges which confront our Nation.

We insist, however, that the needs the Federal Government is called upon to meet be real needs which cannot be met by individual initiative or by the unit of government closest to the people, and particularly, that they are not needs manufactured by those looking for special advantage or power.

We believe that the challenges to our Nation's survival can best be met, not through ill-considered actions based on fear or emotion, but by a nation which itself is guided by basic principles, proceeding confidently because it is physically strong, morally right, and carefully prepared.

It is because of these beliefs, these principles, that the Republican Party is called upon by its own conscience to move vigorously to the task of preserving our Nation against the present-day threats to its survival.

In my book there are today three great threats facing us as a people and as a nation.

The threat of communism.

The threat of inflation.

The threat of the new monopolies.

Each must be met head on. Each must be fought relentlessly if what we call the American way of life is to survive.

The first threat is the most dramatic and the most apparent. It stems from the rapid rise of Soviet military and economic power. We have seen the Soviet Union ruthlessly trample on the rights of its people and other nations in its drive to rule the world. By concentrating on the means to produce military power, it has rapidly industrialized its economy and achieved far-reaching scientific advances, a combination which has made it a real threat to world security. We may deplore their methods, but we ignore, at our own peril, the presence of vast military and economic power in the hands of a small group of men imbued with a fanatic belief in the inevitability of communism's world conquest.

The reaction of the Democrats to the more dramatic evidences of Russian military power has been characteristic. Conditioned from habit, their immediate response has been that we outspend the Russians and achieve victory through sheer weight of the American dollar. Democrat spending bills followed quickly in the orbit of the first Russian satellite and every new announcement from the Kremlin quickens their flow.

It would indeed be wonderful if all we had to do to preserve our Nation against the Rusian military threat was to turn on a spending spigot. It is not that easy, and the political party which tells the American people that it is, is gambling recklessly with the future of our Nation. If, as a nation, we rely solely on scattering our national wealth to the winds in order to quiet every fear, we can lose this fight before we start.

We cannot meet the Russian military challenge by siphoning off and diluting our available resources, both of brains and materials. Yet, the numerous critics of our defense policies insist, when you put all their charges together, that we engage in just such a scatterbrained effort. The net effect of following the advice of a Symington who wants more money for one missile, a Johnson who wants more money for shooting at the moon, an Anderson who wants more money for one kind of airplane, a Vinson who wants more money for one branch of service, and a Jackson who wants more money for submarines, would be weakness through dissipation of our strength. It would be a defense based not on the best estimates of our National Security Council, the entire intelligence resources of the Nation, and the expert advice of our Joint Chiefs of Staff and our President, but on the worst fears of our most frightened politicians.

What it will take to beat the Russians at this gruesome game is a government and people ready, of course, to sacrifice whatever is needed for our overall superiority, but determined at the same time to proceed only on the basis of sound estimates, rational thinking, and carefully conceived plans which look not just to today but also to tomorrow. This is the hard road, and only a party of principle has the courage to stand up to the fearmongers and tell the American people it is the road we should follow.

It is clear, too, that only a party of principle can furnish the kind of leadership which stands fast against those Democrats who would sacrifice our world position in the face of the potent power of the Soviet Union. When it is all boiled down, the constant carping over the inflexibility of Mr. Dulles, the demands for a new approach to the Soviet Union, and the laments for the lack of viability in our foreign policy are nothing more than a frightened unwillingness to face up to the fact that you can't appease the Russian without losing your shirt in the process. We are confident the American people won't soon again be led down the so-called easy road of appeasement.

The second threat to our security as a nation is the insidious menace of inflation. Our response to inflation is not only significant in its own right but it cannot be divorced from the challenge of the Soviet Union.

No greater test of the principles of the Republican Party can be provided than in the fight against inflation. It cannot be successfully undertaken unless we are willing, as a nation, to think more of the future than of ourselves and to take the hard but right way so that our Nation and its institutions can be preserved.

As we move positively against the threat of inflation, we Republicans are accused of being preoccupied with balanced budgets, of being negative when we oppose unessential spending programs, and of having a narrow bookkeeping attitude toward the problems of our Nation.

I say to you: There can be no more positive programs, for our party or any party, than to try to save this Nation from the disaster which will take place if inflation, through habitual spending beyond our income, becomes the national way of life.

As we oppose programs which individually have vote appeal but which taken together lead swiftly and surely to national bankruptcy, we lay ourselves open, of course, to the demagog's cry. But what we seek is more important than any single spending program. Unless we can maintain the stability of our currency, we will not have the strength to support any governmental program, no matter how desirable—be it for defense, for scientific advance, or for human welfare. Bound up in the fight for a balanced budget is the question of whether our economy will have the strength and stability to maintain us in the battle for survival.

Let it be remembered that we have been living beyond our income in 23 of the last 28 years. The credit of the U.S. Government is at the breaking point.

It is not just the national budget that is involved in the Democrat spending programs. The personal budget of each and every individual and family is involved. An unbalanced national budget means unbalanced family budgets; it means loss of credit, of earnings and savings, insurance, pensions and annuities. When unbalanced national budgets and inflation become our national way of life, they all go down the drain together.

There is also a moral issue.

The time has come to end the completely immoral practice of passing on to our children the debts we incur for our own immediate benefit. We could at least have respect for the morality of the spenders if they would suggest that this generation pay, through higher taxes, for the cost of the programs they so glibly propose. They lack the courage for that, and in many cases, like the junior Senator from my State, they not only beguile the people with vast spending programs but promise simultaneous tax reductions. Let us call a spade a spade. Mortgaging our children's future is basically immoral.

There is the question of equity.

The first obligation of government is to treat its citizens equally. There is no equity when a government spends to provide special benefits for some of its citizens, because they are politically powerful, at the expense of all other citizens. But, the inequity is tragically multiplied when a government must borrow and inflate its currency to do so. For inflation does not strike all citizens an even blow; it hits hardest at the weak, the unorganized, at those who lack the means to protect themselves from its subtle and devastating robbery, the widow living on insurance, the aged living on pensions. No government which pretends to serve all the people can retain their confidence if it promotes wholesale inequity by choosing the easy road of unbalanced budgets.

There is the issue of survival.

I have spoken of the military challenge of Soviet Russia and the kind of response we must make to it. Will we have the sheer physical strength for that challenge—no matter how many missiles are on the launching pads—if our underlying base of a sound fiscal structure and a strong economy are rotted away by inflation?

The answer, of course, is no, but the Soviet challenge is more than military: it is a total challenge on the military, political, economic, and moral fronts. Can the United States meet that total threat with its currency debased, its credit gone, its economy in turmoil, its citizens divided and its morality compromised, if we adopt inflation as a way of life? Of course not.

Politically, can we hold ourselves up to the nations of the world as a shining alternative to communism if we are unable to keep our own house in order, if we display a fatal political weakness in our form of government by casting aside principle for the fatal charms of expediency? How can we be an example to the world if we cannot in times such as these even meet our current needs out of current income?

Can we meet the Communist economic offensive if through inflation we price our goods out of the world market and if the American dollar becomes a currency to be shunned rather than desired?

And morally, where does this Nation stand as opposed to immoral communism if it succumbs to the immorality of inflation?

Let no man tell you that those who fight against the unbalanced budgets which cause inflation are preoccupied with the mechanics of bookkeeping. We are preoccupied, but our preoccupation consists of the most urgent and positive program this Nation can undertake—the prevention of a national disaster. It is our job as Republicans, as a party of principle, to awaken the Nation to this clear and present danger.

The President has presented the Nation with a balanced plan for security and public welfare. He has presented a plan balanced as to income and expenditures. It is a truly Republican program. It is our job as Republicans to exert every effort to make this plan a reality.

I mentioned earlier that one of the basic principles of the Republican Party is the belief in a government of laws which have

as a principal aim the prevention of the seizure of dominant power by any man or group of men. Because of this principle, the Republican Party is called upon to meet the threat of the new monopolies, powerful labor organizations under the domination of a handful of men.

Under Republican leadership, this Nation met the challenge of the seizure of dominant power by a few industrialists and financiers a generation ago. It curbed the power of the trusts when in the public interest it enacted antimonopoly legislation under Republican leadership.

Today similar power rests in the hands of men who dictate the policies of our national labor unions. It consists of vast economic power, the power to cripple an industry or a nation. It is economic power which has reached out so successfully for political power that it has taken over, for all practical purposes, the Democratic Party and now controls the Congress of the United States. It is a combination of economic and political power which threatens the national interest because it is a power which places its own interest above the interest of all citizens.

Curbing the power of the new monopolies will be infinitely more difficult than dealing with the old industrial and financial monopolies, for the new monopolists have wrapped themselves in the cloak of the so-called common man. They have been careful to inculcate the doctrine that their monopoly interest is identical with the interest, only only of union members, but all working men and women. No attempt can be made to curb the power of the new monopolies without incurring their charge that it is a move against the public interest.

But the public—the consuming public—does not benefit from the exercise of naked monopolistic power to raise wages, and hence prices, beyond the level justified by increased productivity—nor from the extortions of a Hoffa made possible by the power his monopoly gives him.

The public—the union worker public—does not benefit when its dues are stolen, or frittered away, or spent for propaganda or political activity against its wishes.

The public—the taxpaying public—does not benefit when the political power of the new monopolies is used to extract special benefits from a pliant Congress or legislature.

The public—the small-business public—does not benefit when its choice, confronted with the overwhelming power of a giant union, is to accede to its demands or go out of business.

The public—the farm public—does not benefit when the new monopolies drive up farm costs far beyond the ability to increase farm prices.

Nor can the public—all of us as free citizens—benefit when dominant political and economic power rests in the hands of a few men, no matter how much they claim to have our best interests at heart.

Let there be no mistake about it. The evils which have arisen because of the emergence of the new monopolies are the result of the power they hold in their hands. We cannot eliminate the evils until we restore the balance of power and to do so, we must curb the powers of the new monopolies even as we protect the very legitimate rights of working men to organize for their own protection and own welfare.

As a party of principle, we cannot dodge this issue. The Democrats must avoid it at the peril of their extinction as a political force. They are incapable of going beyond what the new monopolies will permit, and this consists only of wiping the smudges off from the faces of those union leaders who have gotten dirtiest in their greed for power. It's up to us to take the lead in a sustained effort to curb this threat to the stability of our Nation. It will in the end earn us the gratitude of the vast majority of the American people who, even now, sense the danger involved in letting unbridled monopoly power run loose in our land.

In these great tasks, then, in meeting the Communist threat, in fighting inflation, in curbing the new monopolies, we Republicans have a job to do. At stake is the future of our Nation and the security and happiness of our people.

There is only one way we can go about this task and that is to devote our every resource to it. We cannot succeed, in the face of an overwhelming Democrat majority in the Congress, unless we arouse the American people to the dangers which confront them and unless we imbue them with a belief in the principles we uphold. We must, through them, make it politically impossible, for any party or group, to lead this Nation down the easy road to its downfall.

We need to make our party an effective political organization. We need to enlist in our ranks the millions who believe, as we do, in the principles we uphold. We need the devotion, discipline and dollars without which a party cannot function. We need to tell our story, clearly, unhesitatingly, forcefully so there is no man in this land who does not know our party's principles, program and goals. We need, in short, to get down to work.

And, as we set upon this noble task of saving a nation, should the path look dim, the goal remote and the obstacles insurmountable, we can do no better than take courage from the faith that: "Right makes might, and in that faith let us to the end dare to do our duty as we understand it."

Questionnaire Results From Michigan's Sixth District

EXTENSION OF REMARKS
OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 23, 1959

Mr. CHAMBERLAIN. Mr. Speaker, few of us have been so endowed with wisdom that we cannot profit by sound advice honestly given. For that reason, it is my practice to send each year, to as many homes as I can reach in my district, a questionnaire offering the people I represent an opportunity to give their opinions on some of the most important issues facing us here in Congress.

Under leave to extend my remarks, I want to share my findings with my colleagues by including in the RECORD the results of my poll. They will, I think, find much of interest and some of surprise in this consensus of a district which is evenly divided politically; which is industrial and yet maintains a considerable agriculture; which includes more UAW–CIO workers than any other congressional district in the country; and in which unemployment is at a critical level because of the slump in some parts of the automobile industry.

To me, some of the more interesting aspects of the results are the insistence upon a balanced budget, the unpopularity of present farm support levels—shared, incidentally, by farmers and nonfarmers alike—the nearly unanimous support of a firm stand on Berlin, the overwhelming demand for effective labor reform legislation, the general satisfaction with our missile and space efforts, the heavy backing for continuation of mutual security. I would also call the House's attention to the heavy preponderance in favor of repealing the 10-percent automobile excise tax which I am again sponsoring, and I suggest that any of my colleagues would find much the same result in his own district if any considerable number of his constituents own and drive automobiles, and I do not know of any horse-and-buggy districts.

I was deeply impressed by the flood of responses to this questionnaire in which more than half of the participants added their carefully considered additional comments on these and other issues. These polls, I am convinced, serve the double purpose of not only giving me the benefit of others' opinions, but in stimulating public interest in participating in our governmental processes.

The results of the tabulation are as follows:

Questions	Percent		
	Yes	No	Not certain
From information available are you satisfied with our missile and space efforts?	54	21	25
Do you agree with the President's "pay as you go" emphasis on having a balanced budget?	84	8	8
Do you approve of our firm stand with respect to Berlin?	91	3	6
Considering world tensions should we continue our mutual security military and economic aid to friendly nations?	66	12	22
Do you favor the general idea of broadening social security benefits to include medical services, to be financed by increased contributions by individuals and employers?	36	52	12
Do you favor statehood for Hawaii?	80	8	12
To provide necessary funds for Federal highways it is suggested that Federal gasoline tax be increased from 3 cents to 4½ cents per gallon. Do you favor this increase?	33	57	10
Do you favor repeal of the 10 percent automobile excise tax?	62	26	12
Has the Federal Government given sufficient attention to the problems of the small businessman?	18	48	34
Do you believe our civil defense effort is adequate?	32	36	32
Should labor reform legislation cover the problems of secondary boycotts and blackmail picketing?	82	7	11
With respect to education, should the Federal Government:			
Consider it a local and state problem?	64	24	12
Aid school construction?	42	42	16
Help pay teachers' salaries?	20	63	17
Last session, Congress approved flood control projects in both Lansing and Flint, but provided no funds. Considering budget problems, should we ask funds for:			
Flint River (cost $2½ million)?	26	46	28
Grand River (cost $13 million)?	21	45	34
Regarding farm price supports, should they be:	*Percent*		
Increased	4		
Decreased	62		
Left unchanged	16		
No comment	18		

Results of 22d Congressional District of Ohio Opinion Poll

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 23, 1959

Mrs. BOLTON. Mr. Speaker, the results of my third annual opinion poll, which was recently sent to every household in the 22d Congressional District of Ohio, have just been tabulated. Replies to this questionnaire were received from 17,000 families which comprise a well-balanced cross section of the various economic, racial, political and religious groupings of the 22d Congressional District of Ohio. Since this district represents a sizable portion of the Greater Cleveland area, I believe the results of this poll will be of interest to the Congress in revealing public opinion on certain issues in one of our large metropolitan areas.

The fine response received from my constituents is deeply appreciated. The many detailed explanations and helpful suggestions received are very reassuring, and indicate the serious thought being given by my constituents to some of the vital domestic and foreign issues of our Government. The results of this poll follow:

	Percent		
	Yes	No	No opinion
1. Do you favor a relaxation of the trade barriers imposed by the United States against Soviet Union?	25.5	63.5	11.0
2. Would you favor diplomatic recognition by the United States of Communist China?	22.8	68.1	9.1
3. Do you favor continuation of our mutual security (foreign aid) program at approximately the same cost as the past several years?	43.0	45.7	11.3
4. Do you favor gifts of surplus farm commodities to underdeveloped countries?	76.9	17.4	5.7
5. Would you favor price, wage, and rent controls if our economy is faced with a period of accelerated inflation?	70.3	24.5	5.2
6. Do you favor Federal programs, such as the proposed community services legislation to provide long-term, low-interest-rate, Federal loans for local public works projects?	59.0	29.4	11.3
7. Do you favor legislation to provide lower downpayments, and smaller monthly payments through larger and longer mortgages on FHA insured homes?	59.3	31.7	9.0
8. Would you favor larger Federal participation in local slum clearance and urban renewal projects?	51.6	41.0	7.4
9. Do you favor Federal aid to needy States for school construction?	61.4	33.2	5.4
10. Do you favor Federal aid to needy States for increased teacher pay?	49.4	43.4	7.2
11. Do you believe Federal aid to education will result in Federal control of education?	41.0	46.9	12.1
12. Do you favor continued Federal aid to local airports?	30.7	55.1	14.2
13. At present a person drawing social security benefits is prohibited from earning in excess of $1,200 yearly. Do you believe this limitation should be removed?	72.9	22.9	4.2
14. Do you favor a Federal program to provide hospital and surgical care for social security beneficiaries by increasing the wage base for social security taxes to $6,000?	48.5	38.9	12.6
15. Would you favor extension of coverage, and an increase in the $1 per hour minimum wage law?	62.3	27.1	10.6
16. Would you favor legislation during the present session of the Congress to grant statehood to Hawaii?	82.9	7.5	9.6

Our Mammoth Foreign-Aid Program

EXTENSION OF REMARKS
OF
HON. OTTO E. PASSMAN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 23, 1959

Mr. PASSMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following information concerning our foreign-aid program:

MARCH 23, 1959.

MY DEAR COLLEAGUES: As chairman of the Foreign Operations Subcommittee on Appropriations, I feel that it is my duty to place in the hands of every Member of Congress as much official information as possible on our mammoth foreign-aid program.

On Tuesday, there may be an attempt to include in the supplemental appropriation bill additional funds for the development loan program for which there is no real need. The reaction of high public officials, including some 1960 presidential candidates, to the committee's action in disallowing the supplemental request would indicate that it was an act akin to another Pearl Harbor. Now, let us go to the record for facts and not be persuaded by oratory and last-minute departmental revisions intended to sway the Members.

The attached reproduced letter gives you factual information on the Development Loan Fund and the figures have been brought down to the last accounting period, February 28, 1959. Also it shows the total amount of MSA funds unexpended as of December 31, 1958.

I should like to point out the amount of foreign aid funds available in all categories on July 1, 1958, the first day of the present fiscal year. I quote verbatim from information furnished by the Office of Business Economics, U.S. Department of Commerce, and published by the Library of Congress: "Thus, the carryover funds of 9.5 billions, plus new funds of 6.1 billions, provided an estimated availability of 15.6 billions for foreign aid during fiscal year 1959."

Item 1 in the attached letter shows only MSA unexpended funds for foreign aid as of December 31, 1958. It does not include other categories such as Public Law 480 and overseas military construction, etc.

Expenditures for the foreign aid program in the postwar period through June 30, 1958, amounted to $71,551,940,000. Now, add the available as mentioned in the above paragraph for the total foreign aid funds expended and available.

Do you not agree that the foreign-aid program should be operated on the basis of need and not on the basis of bureaucratic demand or political expediency? We are the board of directors of a $75 billion annual business (the U.S. Government), representing 175 million stockholders. Should we not take into account that in this day of great prosperity, to some extent political expediency and bureaucratic demands for excessive spending prompt our action? Is it not true that during this fiscal year we will spend $13 billion more than revenues collected, or, as we would say in private business, more than the net profits?

Sincerely yours,

OTTO E. PASSMAN,
Member of Congress.

The U.S. Defense Policy—Where Do We Go From Here?

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 23, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include the transcript of the American Forum of the Air in which Congressmen JOHN W. MCCORMACK, of Massachusetts, and LESLIE C. ARENDS, of Illinois, participated, which deals with a very vital subject, "The U.S. Defense Policy."

TRANSCRIPT OF AMERICAN FORUM OF THE AIR, WITH CONGRESSMAN JOHN W. MCCORMACK AND CONGRESSMAN LESLIE C. ARENDS, SUBJECT: THE U.S. DEFENSE POLICY—WHERE DO WE GO FROM HERE?

The ANNOUNCER. The American Forum of the Air, produced by the Westinghouse Broadcasting Co. in association with Theodore Granik.

Tonights' guests are Congressman JOHN W. MCCORMACK, Democrat, of Massachusetts, and LESLIE C. ARENDS, Republican, of Illinois, who will discuss "The U.S. Defense Policy—Where Do We Go From Here?"

Our guests tonight are two of the most experienced and respected Members of the House of Representatives.

Congressman MCCORMACK is the Democratic majority leader and has been in Congress since 1928. He serves on the Government Operations and Space Committees.

Congressman ARENDS is the Republican minority whip in the House and has been a Member of Congress for 26 years. He serves on the House Armed Services Committee.

Mr. MCCORMACK and Mr. ARENDS are here tonight to discuss one of the major arguments of the 86th Congress, "Is our defense program adequate?"

Mr. SNYDER. Gentlemen, everyone in Washington seems to have taken sides on the running argument on our defense program.

Congressman ARENDS, as a veteran Republican Congressman, how do you feel about our defense program? Is it adequate?

Mr. ARENDS. I shall base my answer on my experience on the Armed Services Committee of the House of Representatives for many years.

During the session of Congress beginning in January, our committee set up hearings as to our military posture, our present-day defense forces.

We started by having the Secretary of Defense, the Chairman of the Joint Chiefs of Staff, the various chiefs of staff of the respective services who both on and off the record gave us a very factual and informative outlay of what our military posture is at the present time.

Frankly, let me say that I was reassured as to our capabilities in strength, that I feel today that we have the necessary military posture to carry out any assignment that may come to us for one reason or another.

In other words, putting it this way, I think we have the capabilities to combat any

such thing as a brush war, or we have the retaliatory forces necessary to combat an all-out war.

In other words, putting it in one sentence, I think that we are ready and able to meet any contingency that might arise at this particular moment.

Mr. SNYDER. Congressman MCCORMACK, I won't ask you to agree with Congressman ARENDS. I will ask you on what points do you disagree with him

Mr. MCCORMACK. I am not in sharp disagreement with Congressman ARENDS as of today, but there are some sharp differentiating considerations that must be borne in mind.

When you ask is our defense adequate, it is a relative term. Adequate in relation to whom? Little Liberia? Oh, it is too adequate.

We don't have it too strong in relation to Britain because we have no fear from Britain or France or any other country. Our military strength could be sharply reduced if it was relative to countries like that, but national defense is relative to the Soviet Union as everyone knows and the question is is it adequate in connection with the Soviet Union?

Now, I am one of those Members of Congress, and one of those Americans, whether one agrees with me or not, it is my sound judgment, and it is consistent with my conscience that I, in the world of today, believe the only thing the Communists respect is what they fear.

That is military power and strength greater than they possess themselves.

If I am going to err, I would rather err on the side of strength than on the side of judgment.

Now, my friend from Illinois has said we are adequate for brush wars. Well, the President ruled that out in his press conference the other day. He said, "We are not going to have any ground affairs."

Brush war means essentially foot soldiers, the Army and the Air Force in cooperation with the Army. It is therefore the objective analysis of what the President has in mind is, we are not going to commit ourselves against large masses like the Soviet Union, either in Europe where they have unlimited reserve strength from a military angle, or in Asia, so far as the Soviet Union and Red China is concerned.

Mr. SNYDER. Are you questioning the President's military leadership?

Mr. MCCORMACK. I am just commenting. You asked me the question, is our defense adequate? And therefore, it means that we are going into an all-out nuclear war from our angle. That is our policy now.

Now, the question is, are we adequate?

Well, it is known we are behind the Soviets so far as the intercontinental ballistic missile is concerned. I think with time we can catch up and go ahead of them, but as of today we are behind them.

Furthermore, we find our Army being reduced from 900,000 to 870,000. I honestly question that. If not from a military angle, from a psychological angle, at this particular time.

Mr. SNYDER. Congressman ARENDS, how do you feel about the reduction in forces?

Mr. ARENDS. Let me cover a couple of points my good friend, Congressman MCCORMACK, has made.

Mr. MCCORMACK. I have only started, of course, but go ahead.

Mr. ARENDS. I think what you say in part is true, but I do think there is still a possibility of some brush wars like we have had in the past and which we are capable to cope with almost immediately.

I think the thing we overlook in this question of whether we have sufficient missiles of one kind or another—and it is true that we possibly are behind to a small certain degree in the ICBM's—the fact remains that in the matter of defense as far as the United States of America particularly is concerned, it is a question of balance.

In other words, a balanced offense necessary at a particular time.

Now, in looking at both the Army, the Navy, the Air Force, the Marine Corps, we have that type balance in this country today which is so vital, I think, to prosecuting anything that might happen in the way of aggression on the part of, let's say Russia, and therefore I think the need for being comparable in every respect to them is not as great as it might be in their instance, and so with this balance defense, I think we are able to cope with this situation and will be able to cope with it.

Looking at these charts and the information that has been given to us, as I say, both on and off the record, I can visualize the picture as the Joint Chiefs of Staff see it as to their capabilities and really I must repeat, I feel better about it than I did prior to the time we had these hearings.

Mr. MCCORMACK. Well, of course, the Joint Chiefs of Staff are not happy. You know that, because they have all made reservations, every one of them now. They agree to the budget figures with reservations.

In other words, they said, "We have to agree to it, but we are making the record as to what we ought to have."

They are not satisfied, my good friend from Illinois, and you know it. Let's give the public the truth now because the American people ought to have the information.

Mr. ARENDS. As many years as I have been on that committee, never yet once have I heard any one of the chiefs of any single service say they had enough. That is true. But the chairman of the Joint Chiefs of Staff, through the respective chiefs, has said that they could and would do the job necessary under the provisions in this budget.

Mr. MCCORMACK. That is a different proposition. As good soldiers and good officers, they would say that if they are ordered to do a certain thing they will do the best they can. But they are not satisfied with it.

Now, the question was asked, Are you satisfied with the reduction in the Army from 900,000 to 870,000?—by our friend and I haven't heard you answer that yet.

Mr. ARENDS. I will be glad to answer just as quick as I can get the time.

I thought the President handled that very well the other day in his press conference, and I was pleased to have him state as he did, for the American people to learn and to understand what his position was; namely, that it is wholly impossible for us to fight a ground war in Russia.

In other words, we are not going to accept the type war that Russia might want us to fight.

Mr. MCCORMACK. So you agree with my interpretation that the only thing left is a nuclear war.

Mr. ARENDS. Let me complete if you will. In other words, we are going to fight the kind of war necessary to win a war if it comes about.

Mr. MCCORMACK. I am in accord with that.

Mr. ARENDS. Let's finish the other question first.

The reduction of the Army from 900,000 to 870,000, a matter of 30,000 people; in the Marine Corps a matter of 20 or 25 thousand which the reduction may be, as the President said the other day, how could you particularly use those people at this moment? How are we going to get them over there? What could they do?

If we are not going to fight a ground war, and these people are mainly ground soldiers, then what good are they at this particular time?

Now, I am not averse to building up the kind of defense we need in this country; in fact all of us do. We are all loyal, patriotic American citizens and we want to appropriate every dollar we need in this country to do the job. It is a matter of difference of opinion. And the other angle of it is, I certainly have a wholesome respect for the President because of his background, his ability—I don't think he knows as much about politics maybe as I do, but I certainly do not know as much about the business of being a military man as he does with 40 years background and experience, and I think he is trying to do the kind of a job that needs to be done in view of the world conditions as we see them at this moment.

Mr. SNYDER. There are many Congressmen questioning the President's military judgment.

Mr. MCCORMACK. There are more than Democratic Congressmen, too.

You rely on the President and, of course, I agree that the President is a great military man, but General Taylor is a great military man. He is the Chief of Staff of the Army. He says the Army ought to have 925,000 officers and men.

General McC. Pate is a great man, the commandant of the Marine Corps. He says the Marine Corps ought to have 200,000 officers and men.

Do you throw their views out the window, my friend?

Mr. ARENDS. Not entirely, no. And they sit around the table with the other members of the Joint Chiefs of Staff and they reach a final agreement as much as we do up here on the hill. Many times we pass pieces of legislation which we think are inadequate as far as the House is concerned; the Senate does likewise, and eventually around the table we reach a conclusion and a determination is made that although we do not get all we want yet this will suffice and do the job, and therefore we proceed and, as a rule, if it needs correction, later on it is corrected, the legislation.

So, I think what we are doing today in view of the whole world situation, in view of the situation we are in, as far as dollars and cents are concerned in this country, that we are on good sound ground and we are moving right ahead.

Mr. MCCORMACK. In other words, you are telling the American people that you are happy and you are pleased and you are contented, and they just simply sit back in their seats and say, "Don't worry, my friend, my fellow Americans, everything is all right."

Mr. ARENDS. I am not saying that at all.

Mr. MCCORMACK. Suppose President Eisenhower is wrong, my friend. When you rely on the judgment of one man wholly. I understand a man making a decision, but we now know that every Chief of Staff doesn't agree with him.

Mr. ARENDS. Without being too political, let me say this, Mr. McCormack.

Mr. MCCORMACK. There are no politics in this.

Mr. ARENDS. If we are going to question the President of the United States' capacity to make a determination on what is good militarily, certainly the individuals who may be candidates for the presidency or for public office, I would have the right to question them first.

Mr. MCCORMACK. Well, you are the only one who is throwing politics into this discussion at this time.

Mr. ARENDS. No, I don't mean to do that.

Mr. MCCORMACK. I said the President has to make a decision but there are the views of the others and you and I have got to consider all views.

Now, you talk about a balanced defense. There is a very nice, beautiful phrase. It is pretty much like when I read some

speeches made to the effect that "overall we are military strong" but the word "overall" is a word most of us overlook and which interests me.

Our balanced strength can disappear overnight in connection with the Soviet Union if they perfect the intercontinental ballistic missile, its reentry and hitting the target—and they are ahead of us, you know that—before we do and if at the same time they have a defense against our intercontinental bombers, and you know they are trying to prepare one, then we are in the defenseless position and they won't let us catch up and we can never let ourselves get in that position.

Mr. ARENDS. Let me say that your statement right now wholly disagrees with that has been said by some of the Members before the Armed Services Committee as to our capabilities in the way of defense.

That goes to our standpoint of position of strength throughout the whole wide world. Our Air Force, our alertness of the Air Force wherever it may be; our flattops, wherever they may be; our submarines, wherever they may be, and which we on the Armed Services Committee happen to know about at this particular time, this whole program of being ready to do what has to be done, let me say that what you have just said, Mr. MCCORMACK, in my humble opinion, is a contrary opinion to what these people have told us before our committee.

Mr. MCCORMACK. Well now, Mr. ARENDS, you are just telling the people that I am wrong.

Mr. ARENDS. No.

Mr. MCCORMACK. Well, you are just seriously mistaken because I have asked General White, I have asked everyone who appeared before the Science Committee of which I am a member. You were a member of the select committee last year, and we are a rather important committee—the Armed Services Committee, you know, hasn't got the omnipotence of brains in the Congress of the United States on military matters.

Mr. ARENDS. No.

Mr. MCCORMACK. Some of us have a little commonsense and the Committee on Science has pretty much the same availability for executive session and public session testimony as your committee, and I have asked everyone the question, assuming—they admit that the Soviets are ahead today in intercontinental ballistic missiles.

They don't know how far they have gone in connection with defense against our bombers because our Central Intelligence hasn't ascertained that yet. They admit they are trying to perfect a defense.

Then I say, "Well, suppose they perfect their intercontinental ballistic missile before we do? And they perfect a defense against our bombers, and we lose our retaliatory power. Where are we?"

And they all admit we are in bad condition.

I think you will agree with me that we can never afford in America to lose a retaliatory power.

Mr. ARENDS. That is right.

Mr. MCCORMACK. The ability to hit back.

Mr. ARENDS. That is right, and at this moment I don't think we are going to. I just don't think we are going to.

Mr. MCCORMACK. I hope so and I agree. I agree with you that we have the men, we have the men and women, we have the brains, we have the facility in America, the facilities. What we need is coordinated leadership. We are talking as of today.

Now, we just have to be practical. Now, you are talking about tomorrow and that is a different proposition.

Mr. SNYDER. Gentlemen, I don't think there is any question now where each of you stand on this defense argument. Let's move on.

Mr. MCCORMACK. Well, I know that my friend is one of the most powerful national defense men in the Congress. I think he knows I am. And might I give this message to the American people as the Democratic leader: Our country is in very fortunate condition because whatever differences of opinion there might be between the Democrats and the Republicans, the difference is not on the side of weakness where we Democrats are advocating weaker defense.

We are advocating greater defense. So I think our country is in a very fortunate position because we Democrats agree with the President, only we say a little more, plus.

Mr. SNYDER. I think that is an excellent and reassuring point.

Mr. ARENDS. I think I should interject here that that goes for the Republicans as well as for the Democrats because we are all motivated by the same thing necessarily: "Be prepared to do what has to be done. Pray God nothing happens."

Mr. MCCORMACK. I thoroughly subscribe to that.

Mr. SNYDER. It is nice that you agree with each other. Let's move on to a topic upon which I am sure you will disagree again. Labor legislation.

Are you in favor, Congressman MCCORMACK, of the Kennedy-Irvin labor bill and do you think it will get through the House this session?

Mr. MCCORMACK. Why, yes. Of course, there are two bills there and they are separated. It is a question of whether there should be one bill or two bills. That is really the basic question.

I think the other questions involved could be quickly ironed out by reasonable Members in both branches and I think that the protection of the welfare funds is of such paramount importance that it might be wise to put through two bills, to put that one through first, because if you combine them all together, you are going to get into a lot of difficulties and it might end up with road blocks being thrown in the way to the point where nothing might come through. So I think Senator KENNEDY'S approach to two bill is probably the best.

Mr. SNYDER. How do you feel about the Kennedy-Irvin bill, Congressman ARENDS.

Mr. ARENDS. It is always difficult to determine what the Senate may do. Last year the Senate passed the Kennedy bill by 88 to 1 and it came to the House and nothing was done.

Mr. MCCORMACK. Oh, yes; something was done. We had a vote.

Mr. ARENDS. We failed to pass it under suspension.

Mr. MCCORMACK. I voted for suspension.

Mr. ARENDS. And I voted against it because it did not incorporate all the things I felt were necessary to do the kind of job the American people expected to be done. Due to the revelations before the McClellan Committee, but over in the Senate this time I think there is some reason to believe as we read the press that they are trying to do a better job this time in perfecting the bill and incorporating therein certain amendments which are necessary if, I repeat, a good comprehensive bill is written.

Over in the House at this time I wouldn't even want to predict what our Labor Committee in the House is going to do and what will be in the bill if they report a bill, so I am just going to have to bide time on that and see what, I hope, if action is taken, if final conclusive action is taken in the Congress, that we write the kind of bill that will protect not only the workingman himself as to his rights, but also the public and just make a good fair bill out of it.

Mr. MCCORMACK. I think that is as fair a statement as any openminded Member could subscribe to.

Mr. SNYDER. Gentlemen, there is another issue that is concerning the American people quite a bit these days. It doesn't involve legislation. It is this whole matter of nepotism.

There has been so much publicity lately about this subject. What message would you have for the American people in view of all these revelations that have come out?

Mr. MCCORMACK. How much time is left on this?

Mr. SNYDER. One minute.

Mr. MCCORMACK. It would take more than a minute to adequately answer that. I have no hesitancy in saying that I think it is perfectly all right for a publisher of a newspaper to hire his son or daughter or the editor of a newspaper to hire his son or daughter.

If I heard they refused to hire them because they are a son or daughter, I would say they are no good. I think it is all right for the president or vice president of a corporation to hire a son or daughter, and I think it is all right for a Member of Congress to hire a son or daughter.

Mr. SNYDER. Congressman ARENDS, what do you have to say on that?

Mr. ARENDS. I somewhat agree with Congressman MCCORMACK.

If these people are hired by their parents to work in their office and they work there, well then, that is their business.

The ANNOUNCER. Thank you, Congressman JOHN MCCORMACK and Congressman LES ARENDS for being our guests today on the American Forum of the Air.

Family Service Association of America

EXTENSION OF REMARKS
OF

HON. GEORGE M. WALLHAUSER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 23, 1959

Mr. WALLHAUSER. Mr. Speaker, our Nation's Capital will be the scene from April 1 to 3 of a biennial meeting of an organization that is outstanding in its contribution to the human welfare. I refer to the Family Service Association of America.

This is a growing federation of almost 300 family counseling agencies in the United States, Canada, and Hawaii, which annually serves nearly 1 million people. This service is rendered mainly through case work help for marital, parent-child, and other family-living problems.

The agencies are supported largely by local united community campaigns, and this is but another reason for all of us to take an active and intense interest in our local fund-raising campaigns conducted yearly by United Funds and others of similar goals.

The Family Service Association of America national headquarters, staffed as it is with highly trained professional people, provides a variety of central services to help local agencies and communities develop effective family service programs for strong family life.

If you have been privileged to observe the conscientious and never-ending efforts of the agencies to cope with the manifold problems of our complex existence, you could not help but be impressed by the devotion and skill of those who render this service.

Additionally, there are hundreds and hundreds of citizens who serve on the boards that direct the agencies' work,

without compensation other than a reward for contribution to better living.

It is my hope that these few words will in some small measure emphasize the very greatness of the Family Service Association of America and will point out to the devoted people who work so untiringly in its behalf that those of us who are in the Congress appreciate this great effort on the part of private citizens.

We salute the Family Service Association of America and wish it a very long and successful future career.

Area Redevelopment: Antidote for Unemployment

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Monday, March 23, 1959

Mr. IRWIN. Mr. Speaker, on Friday, March 20, I was privileged to appear before a joint committee on State development of the Connecticut General Assembly in Hartford, Conn.

Along with some of my congressional colleagues from my home State, I was asked to present my views on area redevelopment legislation under consideration by this Congress.

This, Mr. Speaker, I was very pleased to do, for I believe strong area redevelopment legislation—legislation with substance—is needed to eradicate joblessness and to help remove economic waste.

I think that my colleagues in Congress would be interested in my comments before the Connecticut Assembly's Joint Legislative Committee on State Development, and, therefore wish to introduce my statement before that group into the CONGRESSIONAL RECORD.

STATEMENT OF CONGRESSMAN DONALD J. IRWIN, BEFORE JOINT COMMITTEE ON STATE DEVELOPMENT OF CONNECTICUT GENERAL ASSEMBLY, ON SENATE JOINT RESOLUTION 13, MARCH 20, 1959

It gives me special pleasure to appear before this committee to present my views on legislation now pending before Congress relating to redevelopment and the alleviation of unemployment in this country and in Connecticut and my district in particular.

As the congressional Representative from the Fourth District, which as of yesterday had 14,000 unemployed, I am vitally concerned with the passage of legislation that will help put these thousands back to work.

In the entire State of Connecticut, according to the March 19 figures released by the employment security division of the Connecticut Labor Department, there are presently 52,067 unemployed.

My district, with 14,000 jobless, therefore, has well over one-fourth of all the unemployed in this State.

Obviously, I am extremely anxious to do whatever I can, as their Representative in Congress, to put this vast number of idle people back to the business of drawing regular pay checks.

Legislation now before Congress which will stimulate area redevelopment unquestionably will contribute materially and effectively to the alleviation of such substantial and persistent unemployment as now exists in Fairfield County.

The city of Bridgeport, for example, second largest in this great State, has nearly 9,000 jobless walking the streets looking for work. Stamford, Danbury, and Norwalk—other cities in my district—have approximately 5,000 more of the unemployed in Fairfield County.

We must do something drastic to wipe out such situations as this—and I repeat that area redevelopment designed to eliminate economically depressed areas should go far toward achieving that goal.

I feel very strongly that the maintenance of the national economy at a high level is vital to the best interests of the Nation, the State, and, of course, my own district.

But only yesterday I heard of layoffs in three cities in my district. A transportation equipment manufacturer in Bridgeport laid off more than 100 people. There were 30 people idled in the hat industry in Danbury, while an electrical products firm in Norwalk furloughed 35 more.

And I think the mere fact that the House Banking and Currency Committee in Washington is plowing through some 50 bills calling for area redevelopment programs throughout the country is proof positive of the seriousness of the problem all over America and not only in Connecticut.

Before leaving Washington, I was informed that the House Banking and Currency Committee intends to conclude its hearings today on all these bills. A committee report will be forthcoming within a few days, I understand.

What will emerge from committee, undoubtedly, will be a compromise bill embracing, certainly, many of the provisions contained in H.R. 2969 and H.R. 3450, which are under discussion here today.

The Senate Banking and Currency Committee has already completed action on area redevelopment legislation and has voted 9 to 6 a bill authorizing $389.5 million for redevelopment of chronically depressed areas. This is a bill similar to the one which President Eisenhower pocket-vetoed in 1958.

I firmly believe the area redevelopment bill which will emerge from the House Banking and Currency Committee (in probability a compromised version of H.R. 2969 and H.R. 3450, sponsored by Congressman BOWLES) is must legislation to bring renewed industrial vitality and thus full employment to such surplus labor areas of Connecticut as Bridgeport, Stamford, Danbury, and Norwalk, where, as I have said, there are now 14,000 jobless.

Other surplus labor areas in Connecticut—Bristol, Danielson, Norwich, Ansonia, Meriden, New Britain, Torrington, Thompsonville, Waterbury, Middletown, Willimantic, and New Haven, to name them—will, of course, similarly benefit.

Proponents of Federal legislation to alleviate unemployment in economically depressed areas—and I am such a proponent—argue quite logically, I think, in claiming that the Federal Government has a clear-cut obligation to promote maximum employment, production and purchasing power.

This obligation, I maintain, is not being fulfilled, is not being met, so long as we have critical pockets of unemployment in communities such as Bridgeport and the other Connecticut communities I have mentioned.

I further maintain that unemployment such as now exists in Connecticut generally and in my district specifically is a threat to the stability of our entire economy.

A depressed area—such as the one in Bridgeport right now—is much like the proverbial acorn which grows into a big oak tree. The local depression, unchecked and unresolved, also can grow and spread to surrounding communities, since the purchasing power of residents in a depressed area is cut below adequate levels.

Something much more than a shot in the arm is needed to restore employment and to encourage the establishment of new industry.

The passage of appropriate legislation by Congress to alleviate unemployment in economically depressed areas will, I believe, provide the industrial stimulant necessary to revitalize the economic health of such cities as Bridgeport and other hard-hit communities of this State and my district.

My esteemed colleague, Senator PRESCOTT BUSH, has opposed area redevelopment legislation, I understand, because of fears that it would stimulate the highly unethical practice of industrial pirating.

H.R. 3450 contains an antipirating clause which, if retained in the final bill brought to the floor, should eliminate Senator BUSH's fears.

In section 6(a) of H.R. 3450 it is stated specifically that "financial assistance shall not be extended to assist establishments relocating from one area to another when such assistance will result in substantial detriments to the area of original location by increasing unemployment."

In summary, I would like to reiterate my belief that adequate area redevelopment legislation is required in the national interest.

The restoration of economically sick areas is essential to the national welfare. Putting these regions back on their feet is an urgent necessity. The Nation and Connecticut need their productive capacities to fight inflation and to maintain the posture of economic strength essential to our survival as a free country.

I maintain that we must not allow the Soviet Union to outstrip this Nation in economic progress.

Consequently, it is dangerous folly to consign millions of Americans to unemployment. Our country and our State must have their fruitful labors and appropriate area redevelopment legislation will go far toward putting the legions of jobless back into the Nation's work force.

Joblessness in large numbers is costly. It cuts heavily into tax revenues. It denies to the market billions of dollars' worth of goods and services. It accounts for large outlays of public funds for unemployment benefits and direct relief.

And vitally necessary as these programs may be, it would be much better for all concerned if the jobless had the opportunity for gainful employment.

We need strong area redevelopment legislation—legislation with substance—to eradicate joblessness and to help remove economic waste.

I thank you most sincerely for inviting me to appear before this committee and I hope my remarks have helped you understand why I feel substantial and appropriate area redevelopment legislation will be good for Connecticut generally and revitalizing for my own district in particular.

Address by Hon. Victor L. Anfuso Before Space Law and Sociology Conference, American Rocket Society

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 23, 1959

Mr. McCORMACK. Mr. Speaker, in my extension of remarks I am pleased to include a splendid address made by the gentleman from New York [Mr. ANFUSO] at a luncheon held on March 20, 1959, by the Space Law and Sociology

Conference of the American Rocket Society in New York City. The subject that my distinguished friend, Mr. ANFUSO, discussed is one in which he is well versed. There is no more serious Member of the Congress than the gentleman from New York, [Mr. ANFUSO], who, as a member of the Committee on Science and Astronautics, is rendering outstanding service to our country:

ADDRESS BY THE HONORABLE VICTOR L. ANFUSO, MARCH 20, 1959, BEFORE THE SPACE LAW AND SOCIOLOGY CONFERENCE, AMERICAN ROCKET SOCIETY, UNITED NATIONS PLAZA, NEW YORK

Fellow astronauts, it gives me great pleasure to address you on this historic occasion. This is the first instance, I believe, of formal participation by a congressional committee in a meeting of the American Rocket Society. This partnership of the American scientific and industrial community on the one hand and government on the other is a good augury for the succees of our efforts in creating an adequate space program and devoting its fruits, in concert with other nations, to peaceful purposes for the benefit of all mankind.

There is no need to repeat in this company that space development and exploration are important to the peace and prosperity of the world. Many of you, no doubt, believe as I do that they will inevitably become a joint international enterprise.

Space flight is inherently international. Many space activities require the cooperation of other nations for technical reasons, e.g., the use of tracking or telemetering equipment or geographically suitable launching sites. Costs which are too great for one nation can be shared with others. Human and other resources and facilities can be pooled in a common effort.

You are already familiar with the economic benefits to be expected from the peaceful use of space—for example, in communications, navigation, and weather satellites. There will doubtless be even greater savings and benefits than anyone can now foresee, just as radioisotopes resulting from the atomic energy program have yielded unexpected economies which already amount to roughly $500 million a year.

The peaceful exploration of space will also make possible many kinds of basic investigation—in geophysics, astrophysics, astronomy, and other fields of science. For example, Dr. Hynek of the Smithsonian Institution recently predicted that observations in outer space will do as much for astronomy as Galileo's original invention of the telescope. Dr. Alan T. Waterman, the Director of the National Science Foundation, has stated:

"There is no question whatever that scientific experiments and observations conducted with satellite and space probes will disclose a far-reaching understanding not only of outer space but of conditions upon the earth itself which will progress toward consequences of enormous importance to mankind."

Much of the benefit to be gained from the use of outer space will be lost, or at least limited, unless space development and exploration are carried out as a joint international enterprise. A military race to dominate outer space must be avoided. It will be far less likely if the use of space for peaceful purposes is international, so that national rivalries will not be extended to science or economics nor projected into outer space.

In this connection, let me say a few words about the prospect that within a matter of months the Soviet Union may launch a manned satellite and will represent it to world opinion as a great military achievement. I am not making any prediction out of my personal knowledge, nor am I the first to call attention to this possibility. Almost a year ago Dr. Walter Dornberger, of Peenemunde fame, stated that in 1½ years a spaceship could be built that would carry a man around the globe. In its space handbook the House Select Committee on Astronautics and Space Exploration predicted that the Soviet Union would put such a vehicle into orbit soon. In another report of the same committee, Dr. Frederick Durant expressed his belief that the U.S.S.R. would send a man into orbital flight and recover him several times during 1959. In a recent speech, Dr. Hugh Dryden, the Deputy Director of the NASA, referred to the same event, which he appeared to regard as probable. Earlier this month Dr. Fred Singer said the Soviet Union may put two men into orbit during the middle of the year.

In view of this chorus of opinion in qualified quarters, there seems to be a good chance that the prediction may be accurate.

Putting one or more men into orbit around the earth would certainly be an admirable achievement for which Soviet scientists and engineers and the brave men who first risk their lives in outer space would richly deserve congratulations. At the same time, such a feat, while involving great effort and expense and advanced technique, would not require any great extension of the state of the art nor have any direct military application. It is the responsibility of the ARS members, I suggest, and of others whose expert knowldge and experienced judgment in astronautics entitle their opinions to respect, to help prepare the American public for this possibility and to put the matter in proper perspective. I recognize that the Government shares this responsibility. It also behooves us all to consider appropriate means of preparing world opinion—which has shown itself to be too impressionable and too ready to ascribe immediate military significance to Soviet astronautical feats.

As an American, and especially as an elected official, I am happy to say that Congress and the administration have foreseen with approval the peaceful international development and exploration of outer space. As long ago as January 10, 1957, in his state of the Union message to Congress, President Eisenhower proposed mutual (i.e., international) control of space missiles and satellites. His suggestion was incorporated in formal disarmament proposals submitted by the U.S. delegate to the United Nations 4 days later, calling for the dedication of outer space exclusively to peaceful and scientific purposes and for international responsibility and control of satellites and space missiles. This proposal was sanctioned in December of 1957 by resolution of the General Assembly. In a letter dated January 13, 1958, to the Chairman of the Soviet Council of Ministers (at that time Bulganin), the President offered to agree that outer space be used only for peaceful purposes. Both Houses of Congress unanimously adopted a resolution (H. Con. Res. 332) in June of 1958 calling on all nations to join in the peaceful exploration of outer space. The National Aeronautics and Space Act itself expressly authorizes the Space Administration to engage in a program of international cooperation in peaceful astronautical activities.

More recently, as you know, the General Assembly of the United Nations has voted favorably on a U.S. proposal to establish a study committee on the peaceful uses of outer space. The opening statement of the United Nations resolution recognizes the common interest of mankind in outer space and proclaims that it is the common aim that it should be used for peaceful purposes only.

It is my firm belief that the United States must take the lead in a peaceful and productive international space program.

At present only the United States and the Soviet Union have made the quantum jump into outer space. Soviet cooperation in astronautics with countries of the Western World has been thus far limited, and it is my opinion that division in blocs is not justified when we are concerned with peaceful endeavors destined for the benefit of all. The Soviet Union has cooperated in the IGY program and has agreed to cooperate in the Committee on Space Research (Cospar), established in October 1958 by the International Council of Scientific Unions (ICSU).

We must continue to seek the Soviet Union's cooperation in the peaceful exploration of outer space for the benefit of all mankind. It is our hope that their cooperation will be more extensive in the future because of their invaluable knowledge and experience in this field. To give up hope at this time of reaching an agreement with such an advanced nation in the field of science and astronautics is to admit that a conflict is inevitable and that there is no hope for the world.

Certainly, the foregoing declarations of principles and intent by Congress, the President, and our actions of the United Nations manifest the willingness of the United States to join such a partnership. I believe that the scientists, engineers, technicians, industrialists, and industrial workers of the entire world would rather put their ingenuity to work for an abundant world than one reduced to shambles by total war.

An illuminating example is the nuclear burst in outer space announced yesterday. The American people would doubtless prefer to share the planning of such experiments—and the burden of their execution—with other nations for the benefit of mankind. The announcement of this great achievement, and the indication that its results will be released in accordance with the IGY Agreement, confirms again the willingness of the United States to cooperate as a partner in utilizing the limitless possibilities of outer space.

It is true that a good deal of work in astronautics is already underway in many countries of the free world. In general, however, high costs have deterred both Government and industry. Many foreign scientists and engineers looking for an outlet for their creative abilities and energies are hampered by lack of equipment, facilities and financial support, and are frustrated by lack of Government encouragement.

The situation is ripe for an internationally coordinated astronautics program. Initially, specific astronautical projects could be conducted as joint ventures utilizing the specialties of other countries in scientific talent or other facilities. Plans should soon be made for exchanges of scientific, engineering, and technical personnel among all countries willing to cooperate in a common space effort. American training facilities in the space sciences should provide increasing opportunities for talented foreign students.

Let me emphasize that the measures I have described would be no more than first steps. They can and should be taken now within the authority granted by the National Aeronautics and Space Act to engage in a program of international cooperation.

Beyond such immediate steps there is a clear need for a common space effort among free world governments, as well as among individual scientists and scientific societies. Sooner or later there must be an international organization for space development and exploration, open to all the world's scientists as working participants. I should think that an organization of this kind might develop under the United Nations, perhaps as a result of recommendations to be made by the study committee to the General Assembly in the fall of this year. I am hopeful that the Soviet Union and other bloc countries will cooperate in this great

humanitarian effort. Meanwhile, the free world should take the initiative and set an example in demonstrating the feasibility and fruits of international space cooperation, which will bring greater and greater benefits with every passing year to everyone on earth.

H.R. 5894, a Bill To Clarify and Strengthen the Escape Clause in the Trade Agreements Act

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 23, 1959

Mr. SIMPSON of Pennsylvania. Mr. Speaker, last week I introduced a bill, H.R. 5894, which will clarify and strengthen the escape clause in the Trade Agreements Act. Considerable litigation, uncertainty, and hardship have resulted and may continue to result from various attempts to interpret the language of the Trade Agreements Extension Act of 1951 with the many amendments that have been added since that time.

My proposal will, if enacted, make unnecessary costly and time-consuming reviews by the courts. It will clarify the escape clause and will remove serious legal clouds from the actions of the President with regard to past escape clause cases.

My bill in the nature of an amendment to the Trade Agreements Act is designed to do two things:

(a) Permit the President, as he has in the past, to reject the recommendations of the Tariff Commission, or to put them into effect in whole or in part, or to take other action aimed at the remedying of the injury found to exist.

(b) Permit the establishment of a firm date for the termination of escape clause cases so the Tariff Commission could entertain a new application. Under this amendment the Congress would be able to participate in escape clause decisions pursuant to the amendment in the 1958 extension legislation which gave to the Congress authority to apply the Tariff Commission recommendations if it could do so by a two-thirds majority. A third benefit that would result from this amendment is that affected industries would not be left indefinitely hanging in the balance wondering what the final decision, if any, might be.

Although these proposals are largely self-explanatory, I might say just a word about the circumstances that make these amendments necessary.

The President has, in a number of escape clause cases, followed the recommendations of the Tariff Commission only in part, or has used other measures not recommended by the Tariff Commission which he hoped would remedy an injury found to exist. All of these actions have now been brought under a legal cloud by a decision of the customs court which said, in effect, that the President had exceeded his delegated authority. Specifically, the President's action in the so-called bicycle case was held to be in excess of the powers granted to him by Congress in the Trade Agreements Act. That case is being appealed and in due time may be decided by the Court of Customs and Patent Appeals. In the meantime the validity of all similar actions by the President have been placed in question.

My amendment would remove this legal cloud on his current actions as well as those of the past. It would remove the necessity for much legal maneuvering. It is true that the administration has not accepted the finding of the customs court and hopes that the decision will be reversed. Such reversal is by no means certain, in fact some highly respected and experienced lawyers have indicated to me that the language of the present act would hardly permit a reversal. In any event a decision appears to be several months away.

Some of my colleagues may object to this possible broadening of the powers of the President with regard to the escape clause. I hope they will consider the great confusion that would result if the appellate court should uphold the lower court. I suggest they consider the probability that seldom, if ever, would any remedial action whatsoever be taken if the President had only the choice of accepting the Tariff Commission recommendations in full, or of doing nothing.

With regard to the second aspects of the proposed amendment—serious criticism has been directed toward the long delay in executive decision as to final disposition of specific escape clause cases. For example, in one recent rejection of an application for an escape clause study, the Tariff Commission asserted that it had no authority to initiate an investigation because a prior one on the same subject had never been concluded even though that investigation was already 2 years old. In this case the Commission had found unanimously that serious injury had resulted from a lowering of a rate of duty in a trade agreement. The industry had painstakingly proved beyond any doubt that it was being seriously injured and that the tariff reduction in the trade agreement concerned was the cause of the injury.

The President took no action. Neither did he close the case, but kept it open and asked the Tariff Commission for further study of the matter. Even if the President should eventually conclude the case, and even if, at that time, he should take some modified action aimed at remedying the injury, the customs court ruling could render such action an invalid one. If there were an appeal of such a decision an already suffering industry would be forced to go through a long period of further indecision, great expense, and, in the end, the possibility of losing everything.

Under existing law the President is granted 60 days to make up his mind in these cases—an ample time to review the Tariff Commission findings and recommendations and he should not be permitted to extend beyond that period the uncertainty.

We have another major problem in such cases. Such unilateral extension of the 60-day period might remove the Congress from participation in escape clause cases even though a year ago we definitely legislated so that Congress, by two-thirds majority, could put into effect the findings and recommendations of the Tariff Commission should the President refuse to act. Congress and the affected industry should be given clear opportunity to act at the end of the 60 days, and it should not be possible to block the entrance to a new action.

It is only in unusual cases where an industry would want to institute a new investigation immediately after one was concluded, but I have already mentioned one such case. My bill would not require the Tariff Commission to act unreasonably and begin a new study before there was time for any new information to be available. Nevertheless, in the interest of clearcut legislation, the Congress should require that executive action be taken within the time authorized.

I shall press for the consideration of this amendment to the Trade Agreements Act and hope my colleagues will join me in the clarification of what now seems to be serious problems in this area. In taking this action I am not unmindful of the fact that there are other defects in the trade agreement program.

As Republicans, How Do We Stand?

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 23, 1959

Mr. AVERY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an excellent address by Secretary of the Interior Fred A. Seaton, at the annual banquet of the Kansas Day Club, Topeka, Kans., January 29, 1959. The address follows:

AS REPUBLICANS, WHERE NOW DO WE STAND?

The pessimists among us may answer: "These are days of black defeat—an unpalatable foretaste of what is to come."

I do acknowledge that not since the avalanche of 1936, when only 89 Republican Members of the House and 17 Republican Senators survived, has our party's representation in Washington been so shrunken.

A second view, hopefully expounded by our opposition, is that these are the days of the great divide—days when the Republican Party is hopelessly split between two wings, each at the throat of the other with such all-out ferocity as to preclude mutual understanding and combined effort.

Whatever the correct appraisal of our situation may be—and everyone is, of course, entitled to his own—I say this: "Where the Republican Party is today is the place to start, not the place to quit."

I refuse to believe that no matter what we do we can't win in 1960, or that we are so hopelessly divided as to make even the effort unworthwhile.

As Republicans, we can unite. Moreover, we've got to unite. We have no other choice if we are devoted to the salvation either of our party or of our country.

Of course, the job won't be easy.

According to a recent Gallup poll, if all American voters—including self-described independents—now were asked to register as party members, 54 percent would line up as Democrats and only 36 percent as Republicans. (Ten percent couldn't bring themselves to express even an academic preference for either party.) Yes, even with our 36 percent as a solid phalanx, our job as of today is rough enough. If that 36 percent were torn into shreds, our job, frankly, would be impossible.

A split party is a luxury only Democrats can occasionally afford. We Republicans can't afford it at all. In our party today a wing doesn't even have a prayer, much less a chance of victory.

We are in the third month of the campaign of 1960.

Now, how do we go about turning to advantage the instruction of defeat?

First, it seems to me that we have to revolutionize our thinking about politics and campaigning.

You and I know some Republicans to whom politics is a four-letter word. You and I know a lot of people who regularly vote Republican but won't run, work, contribute, or sometimes even talk Republican. Unfortunately, there is much to be said for the generalization that while many Democrats make politics a career, too many Republicans view it as a sacrifice.

We must begin now to recruit for every senatorial and congressional seat, for every governorship, and for every State and county office the most capable and articulate candidates we can find. Notwithstanding the fact that a good candidate does not necessarily insure victory, and that good Republican candidates were defeated last November (as witness what happened here in Kansas), it is an unassailable rule of politics to have the best candidates—if you can. Any political party owes that obligation to itself. It owes that to the country even more.

By revolutionizing our thinking about politics—by getting superior candidates and enthusiastic party workers into action day and night now—we can help make sure that we will have turned a dark 1958 into a much brighter 1960.

There is a second much-needed Republican revolution: the shift from negative to positive thought, from reverse to forward drive. We must not limit ourselves to telling people what we are against. We must also tell them what we are for!

Sure, we know our Party's purposes and our Party's accomplishments. We have kept the peace, we have kept the Nation's defenses strong. Since 1953, with the leadership of a Republican President from Kansas, the American people have earned more, built more, saved more, and invested more than ever before; they have enjoyed the biggest tax cut and the biggest advances in social security in American history.

If I may paraphrase a man who ought to know, George Meany, the head of the AFL–CIO, "We have never had it so good." Yet in political debate, what happens? Time and again we Republicans find ourselves cleverly maneuvered into seemingly supporting reaction and negation because of our valid and necessary resistance to the wild, even if oftentimes politically appealing, proposals of the Democrat opposition.

You know, it is a wonderful political advantage to be against nothing except higher taxes.

While it isn't even responsible politics, much less responsible government, it is a fact that up to now many—though not all—Democrats have seemingly found the royal road to political success in advocating just such a program.

The Democratic party's record is there for everyone to see if we just make it plain.

They are for more Federal airport money, road money, welfare money, small business money, urban renewal money, and agricultural price support money while they simultaneously advocate low Federal interest rates, lavish tax cuts, and a Federal budget always in the black. The Democratic National Advisory Council only the other day proposed that Federal interest rates be cut and inflation brought to a halt—simultaneously. It would be quite a trick if they could just do it. In fact, if their being allowed to try wouldn't be so disastrous to the country, it would be to our selfish political advantage to stand aside and let them make the attempt. That, of course, we simply can't do.

To sum it up, those opposition salesmen have been getting away with peddling a unique political model car—one which has two forward speeds, left and right, and a reverse; one which will go in all three gears, forward and backward simultaneously.

Do you remember the state of the Union message—not President Eisenhower's, delivered on January 9—but Senator LYNDON JOHNSON's own unique innovation, delivered 2 days earlier? As I understand his thesis, it was this: The President's spending proposals would be inadequate no matter what they turned out to be.

Self-convinced, the distinguished majority leader proposed a series of Federal programs, all without benefit of dollar figures or without indication of who would pay the bills, if indeed he had in mind that anybody would without resort to increasing the Federal debt and thus helping create more inflation.

In his speech, Senator JOHNSON charged that the President and the Republican Party suffers from a "deficit of vigor." Well, my answer is that Senator JOHNSON and his party have an unusual vigor for deficits.

Sure, you and I know the political flivvers of the opposition are phonies. But have we really proved it to the American people? The answer is obvious. We haven't—yet. Nor can we do it by simply digging in to resist one politically appealing spending scheme after another. That simply makes our opponents look great hearted and makes us look stingy. What we have got to do is to climb out of our defensive trenches, go over the top and launch an offensive onslaught of our own.

One thing is certain. If we are to get our message across, we must translate it into words and terms that are commonly understood. Above everything else, we must translate it into local terms—words and facts which make our thesis crystal clear in every locality in America.

After all, most people don't care what happens to the Republican Party as such, our job is to show that when we lose, they also lose.

For example, take the proposal for a Federal dam at the Hells Canyon site on the Snake River in Idaho. We are told that issue will be raised again in the new Congress, and raised for the sixth time.

The fact is, the proposal for a high Federal dam at Hells Canyon is the reclamation fraud of the 20th century. Not one single acre of irrigated land has ever been directly connected with it.

It would cost the taxpayers of America nearly $600 million, exclusive of any damage claims paid to the Idaho Power Co. Non-Federal development of the same stretch of the same river, which began in 1956, will produce roughly the same results in power production and all the flood control needed in that area, and it costs the taxpayers nothing.

Now, to some people an additional $600 million may not seem to be of much consequence when included in a Federal budget of billions. But consider it this way: $600 million would pay for the Almena Unit of the Missouri River Basin project nearly 40 times, it would pay for the Kanopolis Unit more than 40 times. It would buy more than 50,000 miles of Kansas primary highway or 15,000 elementary and high school classrooms.

Of course, you could save the $600 million altogether, use it to reduce the Federal debt or reduce taxes. Some would call that old-fashioned, but it's an idea, anyway.

When you put the facts that way, people understand what such wild spending schemes mean to them in terms of what they desire or need from Government.

Then ask them this: What happens if all these new and renewed spending proposals become law—those which are vital, those which are nice but not absolutely necessary now, those which are ludicrous?

Who pays?

You know the answer: Every man or woman who makes out a Form 1040 between January and April.

But suppose the greathearted spenders on Capitol Hill just don't have the heart to raise taxes? Suppose they just increase the Federal debt?

The answer's the same: We—you and I—will pay anyway, and our children will pay, and we'll pay in a rougher and more dangerous and costly way: Through inflation, plus more taxes in the end.

For a family or a government, it's always easy in the beginning to spend all your income and then go borrowing. What's hard is to stay in the black, to put something aside. If the Federal Government can't do so now, in a time of high and rising prosperity, when can we citizens hope for relief from the crushing burdens of an ever higher Federal debt or high taxes? You and I know the answer—never.

Time and again the President has put just that question to the American people and the Congress. It lies behind his presentation to the Congress of a 1960 Federal budget which is in balance.

He knows, as you and I know, that unless people throughout America wake up to the renewed threat to the buying power of their dollar which is involved in the Democrats' congressional program, a lot of Americans are going to get hurt, and the country is going to suffer, and deeply. That is just as inevitable as death and taxes.

Oh, yes, some people doubt the danger. Even some of those who stand to get hurt the most say: "Let prices go up, my union will protect me; I'm on an escalator clause." To be sure, there are 4½ million workers who have some such assurances that they can keep their heads above water—so long as their employers are in business—though they may not gain against the tide. But in the total civilian labor force, a worker on an escalator is 1 man or woman in 16. What about the other 15? For them, wages are on the ground, while prices will be in an elevator headed for the roof.

Not only that, all 16 workers will one day probably be living in part on social security payments: Already there are 14 million Americans receiving benefits under various Federal pension plans, plus another million and a half under private plans. When retirement time comes, escalator clauses are worthless. The dollar bill, I remind you, is neither Republican nor Democrat. When it goes sour, people of either political affiliation—or none—who are on fixed incomes, suffer.

The grim reaper also has no politics. One hundred twenty-four million Americans now own life insurance policies. If you, for example, should die tomorrow, would you want your wife and children to face certain inflation while subsisting on fixed payments from the insurance company, to have the digits on the monthly payment check never change and the prices on tags in every store keep increasing?

You know people who say, well, it did happen in Germany, and only recently in France; but it can't happen here.

Can't it? Think back to the Truman years, 1945–52. The Consumer Price Index went up 18 points. To be sure, that's a statistic. Putting it in plain, everyday language, what it means is that the price of a pair of overalls went from $2.10 to $3.46—an increase of 65 percent; that the price of a pound of white bread went from 9½ cents to 16 cents—an increase of 68 percent; that the price of a 10-foot two-by-four went from 45 cents to 84 cents—an increase of 88 percent; and the price of a two-bottom plow went from $136 to $255—another increase of 88 percent.

Price increases at the same rate, beginning now, would, within 7 years, take the pair of overalls to $5.77; the price of bread to 31 cents a pound; the price of lumber to $263 per thousand board-feet; the price of a plow to $525.

And I'm sure you remember another thing: The controls that went with this seemingly uncontrollable upward-thrust in prices. I'm sure you remember the Office of Price Stabilization, which fastened small white tags to items after item you had to buy—socks and shoes, toasters, and frying pans.

The Eisenhower administration, I can assure you, is still dead set against controls. And it's still dead set against the weakening of your dollar's buying power. It's against the return of either the disease or the proposed remedy.

That's why the President wants a balanced budget.

That's why, in his state of the Union message, he urged the Congress to amend the Employment Act of 1946 in order to declare it the continuing responsibility of the Federal Government to combat inflation.

That's why we in the administration will fight with all our ability against every spending proposal of those who think that now is the time to launch a new, New Deal.

By taking the offensive, we Republicans can show that contrary to some pundits of political persuasion, being for the dollar is often the best way of being for the man—including the wage earner, the farmer, the housewife, and their children.

What good are wage or profit rises if offset by continual price increases and more taxes? What good is it to talk about bigger and better insurance policies, or higher pensions, when their value is constantly being eaten away by the cancer of inflation?

Don't ever let anyone get away with saying that your party—the Republican Party—yields to any other on the face of this land in its concern for every working man and woman. Since 1953, all American wage earners, organized or not, have made unprecedented gains. And remember, with this record to run on in 1956, a Republican President, Dwight D. Eisenhower, won from 30 percent to 50 percent of the labor vote in one major industrial center after another—an even higher percentage than he had won in 1952.

If we'll just hammer and hammer and hammer those facts across; we shall go far toward victory in a third Republican revolution. By ripping off once and for all the false labels our opponents have pasted on us, we can reveal the true image of the Republican Party as the party of the American people—all 175 million of them.

Can we accomplish these three revolutions—the revolution in our attitude toward politics, the shift from negative to positive thought, the restoration of the Republican Party's true image? Of course we can. The unanimous adoption of the Des Moines conference last week of Chairman Alcorn's plan for revitalizing the party is a heartening indication we're already moving in the right direction.

Every Kansan surely remembers the Republican resurgence of 1952 with a man from Abilene leading the fight—Dwight D. Eisenhower.

We should never forget what he did that year under his leadership. Nor should we forget what happened in England the year before. The two, taken together, point the way for us between now and 1960.

Following the defeat of 1945, the British Conservatives rebuilt British conservatism. They got rank and file party members to make regular contributions to the party, invigorated its appeal to labor, to intellectuals, and to the young; and started campaigning the year 'round to bring to everyone its principal product, fact.

And in 1951 they won.

The moral for us is clear. Here in the United States in 1958, 1959, and 1960, we Republicans can and must build on fact for victory. We can and must put fight and heart into our party. Once we've accomplished that, we will win, and we will deserve to win.

The time to begin moving is now.

The Area Redevelopment Act

EXTENSION OF REMARKS
OF
HON. HERMAN TOLL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 23, 1959

Mr. TOLL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me before the Banking and Currency Committee in favor of the area redevelopment bill.

STATEMENT OF HERMAN TOLL, SIXTH DISTRICT, PENNSYLVANIA, BEFORE SUBCOMMITTEE NO. 3, HOUSE BANKING AND CURRENCY COMMITTEE, ON THE AREA REDEVELOPMENT ACT, MARCH 19, 1959

Mr. Chairman and members of the subcommittee, thank you for the opportunity of presenting this statement in behalf of the Area Redevelopment Act. I have introduced a companion bill (H.R. 5330) to the Douglas-Flood bill.

We hear again and again from the executive branch that cities and States should try to help themselves to the greatest extent possible. Unfortunately, the tax structure leaves to the cities only a small portion of the total tax dollars. The only method which would enable cities to take care of more of their problems is to give them a chance to increase their tax base—as the possibility of raising the tax rate or adding new taxes is virtually exhausted. The imaginative aid which would be given to my home city, Philadelphia, for instance, through the various provisions of the bill before us would do just that.

While it is true that Philadelphia, or for that matter any diversified metropolitan area, is not as badly off as the chronically depressed coal or textile areas, it is also true that Philadelphia is in a worse economic condition than the Nation as a whole. Among the reasons are that some industries, such as textiles, have left the city over time, that there are, among a large number of different industries in an old manufacturing center, always some which are in a weak competitive position, or are losing employment due to automation; and that manufacturing employment in an older area like Philadelphia declines due to its congestion, its built-up character, and the fact that it does not have space for industry to expand in, or for new industry to find attractive places in which to build new plants. This situation, as well as transportation difficulties and obsolescence, is particularly bad in and near the core of the city where small but intensive manufacturing establishments would like to locate from the point of view of their consumers, their suppliers, or their labor force. The decline of this type of manufacturing industry and of associated business services in the core of the city, which is serving the entire metropolitan area, endangers the function of the center as a cohesive force, and thus Philadelphia's entire tax base.

Section 5E of the bill is specifically designed to help this type problem by permitting not only entire metropolitan areas, not only entire counties, but clearly defined portions of an area, county, or municipality, to become eligible for help under the Area Redevelopment Act if the problem clearly lies within such a portion of the city. This should not be understood as giving an opening to arbitrary gerrymandering. The center city of Philadelphia, for example, where many of the problems lie for which the Area Redevelopment Act can provide some help, is clearly defined by the proposed expressway loop, as well as by certain economic characteristics. The importance of this provision lies in the fact that due to it an entire metropolitan area will not be judged ineligible just because the suburbs are sufficiently well off to balance the unemployment rate of the problem areas and thus put the total area beyond eligibility, while the problems are concentrated in one particular portion of the area, which need the help this bill can provide.

Philadelphia is typical of older cities which suffer from obsolescence and congestion. Neither the municipality nor private enterprise have the funds to tear down obsolete buildings at these expensive locations and make more room for existing industry, for expansion of off-street loading, for parking, and so forth. Yet the industrial slums created over time by increasing age and progressing technology near the center of cities must be eliminated and new industrial areas must be developed in order to give the city a tax base which can sustain the necessary municipal services without having to go hat in hand to the State and Federal Governments for emergency help just to keep up with current needs.

Section 14 of the bill, by explicitly removing some of the restrictions which have so far inhibited industrial redevelopment under the existing urban renewal legislation, makes it possible to do some redevelopment of industrial slums along with residential slum clearance. It will still be up to the local authorities to decide what the best balance should be between industrial redevelopment and other kinds of slum clearance; but the provision of this section gives the city a chance to redress this balance on the basis of its own best judgment and thus to make room for new industry and for an increased tax base.

Philadelphia has been consistently concerned over the last several years with the problem of a declining industrial base. It has done everything within its power to remedy that situation. The city administration has joined with the chamber of commerce in founding a nonprofit corporation for the retention of industry in the city, and the attraction of new industry into the city which, although it has only been in actual operation for a few months, has already shown some remarkable successes. The State has spent millions over the last few years for bringing industry into Pennsylvania, and Philadelphia has received a portion of this help. There again, however, the limits of available private and public funds are very evident.

The Area Redevelopment Act provides funds for all kinds of remedial action on this problem, and makes it possible to dovetail these remedies with particular problems involved. It provides, for example, for loans

for developing land for industry, for building plants, and even for machinery and equipment for industry. This last possibility is particularly important, as our experience shows that the financing of construction of new buildings and equipping it with the necessary new machinery presents a major stumbling block for attracting new industry or for giving a chance of new ventures to industry already here. As for the development of older industry, particularly in loft structures, which cannot afford or do not need entirely new buildings, the Area Redevelopment Act provides for loans for rehabilitation of old buildings, for their conversion or enlargement (section 6). The flexibility of this section is of signal importance for the complicated and varied needs of different industries within as diversified an area as Philadelphia.

The demands from many sides upon the capital expenditures of a city such as Philadelphia makes it very hard to support industry with the public facilities which are in many cases a prerequisite for enlarging the city's economic base. Section 7 provides for loans to any eligible jurisdiction for those public facilities needed to develop the land for industry, as well as for the alteration and improvement of existing public facilities for the successful establishment or expansion of industrial plants or facilities. Section 8 even provides for grants for this purpose. In many cases the improvement or extension of existing utilities must precede the successful location of industry. The building of parking lots or parking garages will make it possible for a large labor force to be available to new industry locating within the city. A new grid of streets adapted to truck use around an industrial area may be necessary before loans to industry are of practical use, etc.

Philadelphia, as mentioned before, has lost industry in the past. This leaves a number of workers with obsolescent skills. Under the present system these men retrain only if it can be proven that a job is waiting for them after their training period. Sections 16 and 17 of this bill provide for training and retraining of workers and for payment of subsistence to them while they train. This is also of great use for workers who lack industrial competence and the basic knowledge of working in an industrial society (because they come from rural areas, largely in the South). As the number of workers without skills or with obsolete skills in Philadelphia is great, this provision of the bill, which helps overcome the rigidity of the existing training apparatus, would make it possible for more workers to be equipped with the kind of skills useful in today's and tomorrow's labor market—which in turn makes the location a great deal more attractive to industry.

The Area Redevelopment Act would give Philadelphia a chance to fully use the great locational advantages and the splendid community spirit it has to offer to old and new industry, by making it possible to offer industry the public facilities, the necessary loans, the training of workers, etc., all of which adds up to a persuasive argument for old firms not to leave the city and for new firms to build plants here. It so happens that the city's efforts in this direction show clearly (and chapter and verse can be cited) that the best will in the world and great community efforts time and again flounder on the difficulty of obtaining financing for clearing out industrial obsolescence, of being unable to provide needed public facilities in time, etc.—all problems which in each case could be solved by the help promised in the Area Redevelopment Act. It is therefore not only of great importance for the chronically and deeply depressed areas of Pennsylvania, but also of vital importance to the well-being of the 2 million residents of the city of Philadelphia that this bill be passed.

Strontium 90

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 23, 1959

Mr. WOLF. Mr. Speaker, herein are certain letters to the chairman of the Joint Congressional Committee on Atomic Energy; letters that the Defense Department apparently wanted kept secret because they present certain disturbing facts; namely, that more fallout exists over the United States than any other country and that strontium 90 contaminates the earth at a faster rate than was originally conceived by scientists.

I might add in passing that one of the most insidious results of the continuing crisis with the Soviet Union is the subtle change that has occurred in the United States in the field of public information. The refusal of the executive branch to keep the public informed of scientific data concerning radioactive fallout and other science and defense subjects has resulted in an uninformed and unaware public in issues which are life and death matters to the public. We are all aware that rational decisions on science and defense policy can only be made when facts are available. If these facts are not available to the general public, the public cannot participate in making decisions which concern their destinies. Decisionmaking falls to fewer and fewer men who cannot be questioned or criticized because the people do not have the facts. This false security consciousness must be stopped before the public loses all power over its servant, the Government.

We in the United States have prided ourselves on our right to know, on freedom of the press, and on freedom from censorship. It is a terrifying thing to think that we may be losing the fight against tyranny internally because we are not forever aware and vigilant in protecting these basic rights.

The letters follow:

[From the New York Times, Mar. 22, 1959]

TEXTS OF DOCUMENTS MADE PUBLIC BY ANDERSON ON FALLOUT OF RADIOACTIVE MATERIALS

STATEMENT BY ANDERSON

In commenting the other day on the Defense Department leak of classified information on the Argus shots—high-altitude nuclear explosions in the South Atlantic in September 1958—I pointed out that it was curious that the Defense Department at the same time was gagging the Joint Committee on making public some important data on fallout from weapon tests.

The Defense Department and the AEC (Atomic Energy Commission) have now released their fallout correspondence with classified deletions, and it is made public in the attachments. First is a letter to me dated February 19, 1959, by the Defense Department revealing new data from classified sources on the residence time of fallout in the stratosphere, and the areas of maximum dripout. Next is a letter from the AEC spokesman, Dr. W. F. Libby, commenting on the Defense Department letter and research project on which it is based. Then there is a transmittal letter from AEC stating their official reservations. Finally there is a brief chronology of our attempts to make this information public.

The process of making public any fallout information is an example of how difficult it is to make available to the public the information it is entitled to have.

The February 19 Defense Department letter states that their measurements indicate that the radioactivity in the stratosphere has a residence half-life of 2 years, instead of 7 years as had previously been assumed by AEC. It also indicates that there is a latitude band of maximum dripout of the fallout from the stratosphere which occurs from 35° to 50° north or south. This area includes the northern part of the United States, and the letter states that the concentration of strontium 90 on the surface of the earth is greater in the United States than in any other area in the world.

In laymen's language, it looks like strontium 90 isn't staying up in there as long as AEC told us it would, and the fallout is greatest on the United States. Perhaps this information may account, in part, for the recent higher readings of radioactivity in soils and plants.

This new data appears to further contradict the official doctrine of AEC spokesmen as to residence time of fallout in the stratosphere and the theory that stratospheric fallout tends to drip out uniformly throughout the earth. The AEC letter of February 27, 1959, ought to be checked for consistency with the speech of the same AEC spokesman on March 13, 1959, at Seattle.

The Joint Committee will look into these matters when it holds its fallout hearings in May of this year under the chairmanship of Congressman CHET HOLIFIELD (Democrat, of California) of the special Subcommittee on Radiation.

DEFENSE DEPARTMENT LETTER

FEBRUARY 19, 1959.

DEAR MR. CHAIRMAN: The following is a brief status report outlining the present programs for analyzing and evaluating the radiation hazards resulting from atomic detonations:

Fallout reports from Operation Redwing (1956), Plumbbob (1957), and Hardtack (1958) are currently under preparation.

The hazards of local contamination from nuclear-weapon detonations have been fairly well delineated. However, the difficulty in accurately predicting the rapidly varying atmospheric conditions results in uncertainties as to the area of fallout. Predictions of local fallout contours from enemy bombs must be based on a large number of assumptions, such as the type of weapon, height of burst, and yield. These unknowns do not allow accurate prediction of fallout from enemy bursts during wartime. Delineation of contaminated areas by airborne radio instruments after deposition of the fallout is presently practicable and will be of considerable military and civil value during wartime.

The deposition of worldwide fallout or worldwide surface contamination is now beginning to be accurately measured * * * (classified portion deleted) * * *. Recent indications are that the radioactivity in the stratosphere has a residence half-life of 2 years (in contrast to the previously assumed value of about 7 years) and the present amount of strontium 90 in the stratosphere would be maintained by the injection of about 6 megatons of fission products per year. The concentration of the strontium 90 on the surface of the earth is greater in the United States than in any other area of the world. The danger of carbon 14 and cesium 137 has been examined and the immediate probability of any one individual being affected is about 1 in 500,000.

The risk of damage resulting from the testing of weapons is, therefore, extremely

small and much less than other common day occurrences such as X-rays, contaminants, household cleaners, etc. However, the probable casualties attributable to radioisotopes from weapons testing when summed over the populations of thousands of years create a moral issue that could be of considerable propaganda importance.

The distribution of the radioactive debris in the stratosphere as a result of detonations to date is not clearly defined as to its altitude and latitude variation. The altitude dependence partially determines the dripout rate and the latitude dependence influences the extent to which the worldwide fallout is uniform over the earth. Tentative conclusions to date indicate that three-tenths of the quantity of radioactive debris leaves the stratosphere each year, that the north-south diffusion of radioactive particles in the stratosphere does exist, and that in both hemispheres there is a latitude band of maximum dripout which is from 35° to 50° north or south.

There is a need for more experimental and collecting programs in the following areas of the effects and behavior of fallout from nuclear weapons:

(a) Amount of fallout deposited locally from a low height of burst.

(b) More accurate determination of the dripout rate of radioactive particles from the stratosphere.

(c) Further define the estimate of the amount of radioactivity formed per kiloton of fission yield.

(d) The refinement of measuring techniques to account for all radioactivity produced from a nuclear yield.

(e) Advancements in the knowledge of fireball chemistry, physics, and particle behavior.

(f) Response of biological systems to radiation.

Sincerely yours,

HERBERT B. LOPER,
Assistant to the Secretary of Defense (Atomic Energy).

LETTER FROM DR. LIBBY

FEBRUARY 27, 1959.

Hon. HERBERT B. LOPER,
Chairman, Military Liaison Committee.

DEAR GENERAL LOPER: In connection with your letter to Senator ANDERSON of February 19, 1959, concerning radiation hazards resulting from atomic detonations, I have just completed a study of data which you kindly made available to us last December. I am sorry that, because of the complexity of the problem and my preoccupation with other duties, I have been so slow in finishing my consideration of the data and in sending on my comments.

I think your letter to Senator ANDERSON is an excellent exposition of the present position we are in. There are, however, one or two points you make, on which I believe further words are necessary in order to resolve some questions.

The extensive data that have already been published by Project Sunshine and the United Kingdom study group, together with your beautiful * * * work, still leave us, despite their great volume and complexity, in some uncertainty, as you say, as to the distribution of the radioactive debris in the stratosphere to both altitude and latitude variation, since the altitude variation determines in part the dripout rate and thus the residence half-life in the stratosphere, this quantity is left in some doubt. My own present conclusion is in agreement with yours as stated in your letter, in that my previous value of 7 years for this important number is too long and that it should be reduced. In a restudy of this question, being released March 13 in Seattle, a copy of which will be sent you as soon as it is printed, a new value of about 4 years rather than the earlier 7 is arrived at. I find it difficult to push it down to the 2 years you give as an indicative value.

On the amount of strontium 90 in the stratosphere, at the present time there is a somewhat larger difference in our estimates which may be due to your not having included the Russian series of last October which in itself alone, according to my estimates, increased the stratospheric inventory by about 50 percent You give the present inventory as requiring 6 megatons (megatons fission equivalent) per year to be maintained at its present level. For a half-life of 2 years this corresponds to only 17 megatons total and appears to leave too little room for the injections from tests before last October, which I estimate still have left some 25 to 30 megatons and a corresponding required rate of injection for steady maintenance of about 7 megatons per year. The closeness of this figure to your 6 megatons per year number shows how badly we need further information on the actual stratospheric content.

Evidence increasing

You indicate that the stratospheric fallout occurs at maximum rates in the 30°–50° bands of latitude in both hemispheres. This old argument still is not quite settled, I believe, although the evidence in favor of your conclusion is increasing. My principal difficulties with it at the moment are that we know that a considerable part of the peak in observed fallout in these latitudes in the Northern Hemisphere is due to tropospheric or local fallout which was never in the stratosphere and the evidence for a corresponding peak in the Southern Hemisphere seems to be rather weak.

With respect to the carbon 14 and cesium 137 hazards, the laboratories measuring radiocarbon dates in various parts of this country, in Europe and New Zealand have sent me data on the present increase in the carbon 14 content of living matter which amounts to about 10 percent of the natural level of carbon 14 from the cosmic rays which in itself corresponds to about 1.5 milliroentgen per year—about 1.5 percent of the average total natural dose rate. Turning to cesium 137, Dr. E. C. Anderson in the Health Division at our Los Alamos Laboratory has just reported data on the human level in the United States and Europe for the late summer and early fall of last year which amount to an average of about 75 micromicrocuries per gram of body potassium for an internal dose rate of about 3 milliroentgens per year. The total cesium 137 fallout in the United States now amounts to about 50 millicuries per square mile. This adds about 1 milliroentgen per year of external dose for a total of about 4 milliroentgens per year due to cesium 137 which is about 3 percent of the natural average radiation dose rate from natural radioactivity and the cosmic rays. I can't tell whether these numbers are in strict keeping with your estimate that the immediate probability of any one individual being affected by bomb test carbon 14 and cesium 137 is about 1 in 500,000 but I think your estimate looks reasonable.

On the many other points in your letter I find myself in complete agreement, particularly about the importance of more experimental and collecting programs on the amount of fallout deposited locally from a low height of burst. Since it may be that we will not again have the opportunity to test devices, at least above ground, it is particularly important to consider whether we may not collect more information at this point from past tests. I believe there are some possibilities of doing this and I suggest that we undertake such a program jointly right away.

W. F. LIBBY,
Commissioner, Atomic Energy Commission.

AEC LETTER

(From the General Manager to the Joint Committee, received March 21, 1959.)

This is in reply to your letter of March 9, 1959, by which you forward a copy of General Loper's letter to Senator ANDERSON dated February 19, 1959, and requested our comments thereon.

Commissioner W. F. Libby has written his comments to General Loper in a letter dated February 27, a copy of which was sent to Senator ANDERSON at that time. For your convenience another copy of Dr. Libby's letter is attached.

The revised estimates of stratospheric burden and the residence time presented by General Loper are consistent both with the data referred to by General Loper and with the "Ash Can" data obtained by the Atomic Energy Commission in its balloon sampling up to 90,000 feet. However, it should be kept in mind that knowledge of the stratospheric content alone is not sufficient to determine retention time. In addition, one needs the knowledge of either the stratospheric injection or of total stratospheric fallout as a function of time. Within the range of accuracy with which fallout has been measured, observed fallout to date is not incompatible with General Loper's estimate of the injection rate which would be required to maintain the present stratospheric burden.

The two main reasons for the uncertainty in the stratospheric burden and residence time are (1) that the entire stratosphere has not been adequately surveyed from pole to pole and up to altitudes beyond which the overlying radioactive debris can be confidently neglected and (2) that the data obtained at the higher altitudes by balloon only are subject to sizable sampling errors, uncertainties of collection efficiency of the sampling filters, and radiochemical analysis errors due to the small amounts collected.

As a consequence of these uncertainties we do not consider that the data now available are sufficiently decisive to resolve the differences between the estimates of stratospheric content and retention time made by General Loper and the higher estimates given by Dr. Libby in his letter to General Loper. It may be observed that on the basis of the estimates made by General Loper the total worldwide fallout of long-lived radioactive fission products anticipated from all tests up to date would be roughly two times the total deposition so far and that on the basis of Dr. Libby's estimate the total would be roughly three times.

We concur with General Loper in recognizing the need for further investigation along the lines suggested in his letter. We plan to continue our efforts in all these fields. In particular, we hope to be able to differentiate Operation Hardtack surface-burst debris and high-altitude debris, by analysis of tungsten and rhodium isotopes respectively, and, in turn, to distinguish these from the recent U.S.S.R. debris. In this way it should be possible to obtain a much better picture of the actual patterns and rates of spread of stratospheric debris originating in different latitudes and altitudes.

The information bracketed in red on the first page of the attached copy of Dr. Libby's letter of February 27, 1959, is considered by the originating agencies to be confidential defense information. With these deletions Dr. Libby's letter is declassified.

Sincerely yours,

(S) A. R. LUDECKE,
General Manager.

CHRONOLOGY

Brief chronology of action by Joint Committee on Atomic Energy to make public Defense Department report on fallout:

December 1958: Dr. Libby furnished new data by Defense Department indicating that

the radioactivity in the stratosphere has a residence half-life of 2 years instead of previously assumed value of 7 years.

February 20, 1959: Joint Committee received fallout report by the Department of Defense dated February 19, 1959 classified "Confidential—Restricted Data."

February 27, 1959: Confidential letter sent to Defense Department by Dr. Libby with copy to Joint Committee chairman in which Dr. Libby arrived at new value of 4 years instead of previous 7 years.

March 9, 1959: Joint Committee by letter this date to the Defense Department questioned the reasons for the confidential classification of the report and inquired as to what extent the information could be discussed in public without compromising classified information. A separate letter this date was also sent to the AEC requesting the Commission's views on the report and to what extent the conclusions affected previous assumptions and statements.

March 13, 1959: Restudy by AEC of worldwide stratospheric fallout released at Seattle, Wash., in which no mention of Defense Department study is made and which maintains position of a residence time of 5 to 10 years, selecting 6 years as the mean residence time of stratospheric fallout. Results of another AEC analysis Project Ash Can which indicated a residence time of 3 years was discounted as being doubtful. No mention was made that the Department of Defense conclusions of residence of half-life of 2 years tended to support results of Project Ash Can.

March 18, 1959: By letter, the Defense Department advised the Joint Committee that only one sentence in the report contained classified information and after identifying it went on to state:

"Although the remainder of the letter is unclassified, the Department recommends that it not be discussed in public because there is not full agreement as to the interpretation of the data that has been obtained so far. We believe it would be far better before the date and conclusions are made public that there be a close agreement amongst the investigators concerned. Therefore, we believe that until the results are more than preliminary, the confidential classification should remain on the letter."

March 20, 1959: Letter received by Joint Committee from the Defense Department advising the report could be made public with deletion of the one classified sentence.

March 21, 1959: Letter received from AEC stating what portion of Dr. Libby's confidential letter of February 27, 1959, to the Department of Defense does not contain classified information.

Letter and report released by Joint Committee after deletion of classified information.

An Analysis of the Farm Situation

EXTENSION OF REMARKS

OF

HON. PAUL C. JONES

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 23, 1959

Mr. JONES of Missouri. Mr. Speaker, under leave to extend my remarks, I am including herewith an address, given last week by the junior Senator from Missouri, the Honorable STUART SYMINGTON, at the annual National Farmers Union convention, held at Springfield, Ill.

Senator SYMINGTON, with a business background and with an illustrious record as a devoted public servant who rendered an outstanding service in many branches of the executive department of our Government, before being elected to the U.S. Senate, has within a very brief period become one of the recognized exponents of a sound agricultural program. He has a faculty of analyzing the problem, and then being capable of expressing this analysis in simple terms that can be understood even by those who have little or no knowledge of what is admittedly one of the more pressing problems of this era.

Mr. Speaker, it is for this reason that I have requested permission for the printing of this speech, which I hope all of the Members of Congress will read. It does point up the problem; it explains why we are in the position we now find ourselves, but more important it suggests some of the things that can be done to alleviate the situation.

It gives hope, as indicated in the very title of his address, which I am informed was enthusiastically received by these in attendance at the Springfield convention.

AN EFFECTIVE FARM PROGRAM POSSIBLE

It is a privilege to be with you at your annual convention—to see farmers here from all over the country, working together.

You have an ambitious schedule ahead for the next 4 days. I know you will be working hard to prepare a program which will meet the common needs of the farmers of America.

I wish I could stay with you all week, to hear your advice on what can be done in Congress to write a constructive program.

We of the Senate Agriculture Committee know that the members of the Farmers Union are dedicated to the service of farm families, first, last and always.

Your president, Jim Patton, and I have been friends for many years.

We served together in the National Security Resources Board. I found out then what we all know, that Jim is an experienced analyst on the farmers' problem, the finest type of leader American farmers could have.

I am also delighted to see your general counsel, my old colleague, Charlie Brannan.

Charlie and I used to work together for a great dirt farmer, a man people respect primarily because he respects people, the No. 1 citizen of my State, Harry S. Truman.

We of the Agriculture Committee also think a great deal of your Washington representative, John Baker.

John gets just about the most done, with the least words of anybody in Washington.

Before coming into Government most of my experience was in business. But my brother and I raised cattle for many years.

During that time I learned that, fundamentally, farming is a business too, involving such matters as inventory, and assets and liabilities, and of course profit and loss.

My State of Missouri is one of the largest farm States in the Nation.

Agriculture is our largest single industry—in fact, our only billion dollar industry.

One-fourth of the people of Missouri live or work on the farm.

When I came to the Senate, my mail proved that no people in our State have greater troubles than the farmers.

So it seemed right for me to work to get on the Agriculture Committee. I have been there now, for some years, watching the incredible approach of this administration toward the problems of the family size farm; and doing my best to correct them.

I try to look at this problem as a businessman; therefore from the standpoint of what we would call good business practice under sound accounting principles.

If any businessman tried to run his plant or office the way the Department of Agriculture has been run in recent years, he would promptly go broke.

Secretary Benson has spent nearly $30 billion of the taxpayers' money on a farm program that hasn't worked.

And they said the Brannan plan was expensive.

Since the Department of Agriculture was created in 1889, there have been 14 Secretaries of Agriculture plus Secretary Benson.

If Mr. Benson continues to operate at the present rate, by the end of the next fiscal year he will have spent more money than all his 14 predecessors combined.

Let some of the figures, his own figures, speak for themselves.

This Administration has raised the cost of administering the price support program from $34 million in 1952, to $364 million in 1958 an increase of 954 percent.

Twenty-two thousand employees have been added to the payroll.

What worries me more than the past, however, is the growing realization that the people now running the Department of Agriculture simply do not know where they are going.

As example, consider the current problem of Government farm inventory.

Any businessman knows that excess inventory can be his Achilles heel.

If a concern is to be successful, inventories have to be moved.

In 1952, the Commodity Credit Corporation owned some $1 billion of farm commodities.

Today, six years later, it owns over $5 billion.

But that is far from the whole story.

According to the President's budget message, by June, 1960, the total CCC investment—inventory and loans—will be over $10 billion.

And let me make this prediction today. Based on the current Government corn support policy, price supports on corn with no controls of any kind whatever—that inventory estimate of the President's is going to turn out to be plenty conservative.

A few weeks ago, when Mr. Benson came before our committee to ask for authorization for more billions, we asked him questions any banker would ask any businessman who requested a loan.

I asked him whether he had any definite plans to move this gigantic inventory out of Government warehouses.

The Secretary said he did not.

I asked him how much inventory he could move this year.

He said he did not know.

I asked him how long it would take to move it.

He said he didn't know that either.

On that basis, if it were your money, would you loan him any more?

But it is your money, and my money, and the money of millions of other Americans.

Maybe the men in charge of our farm policies are not good businessmen but they are very good advertising men.

They plant their propaganda into city newspapers and weekly magazines favorable to their cause. In this and other ways they have been highly successful in influencing city folks who do not have access to the facts.

If these people had been half as successful helping farmers as they have been spreading fairy tales about farmers, we would have a far better farm program today.

One of the stories these bureaucrats try to sell is that the farm problem is the result of the inefficiency of our farmers.

That is just not true.

American farmers are the most efficient and productive farmers in the world.

As illustration, here are a few figures.

Last year, average per acre yields on nearly every major commodity set new records.

We now produce the same amount of food and fiber on 57 acres that in 1940 we produced on 100 acres.

This Nation produces more pounds of meat, with less feed, than ever before.

Since 1944, milk production per cow has increased 39 percent.

And who have reaped the benefits of this great productivity?

Primarily the American consumers, the best-fed and best-clothed people on the face of the earth.

Another misconception, currently cultivated by some, concerns how hard farmers work.

I don't think the average city family has any real idea about the expense, the work, the risk that farmers put into the loaf of bread, or the thick steak, or the quart of milk which shows up so miraculously on the kitchen table.

It takes a lot more than pushing buttons on some automated farm gadget.

It takes hard work, 12, 14, sometimes 16 hours a day.

How many people know how it feels to lose a prize calf, or suffer prolonged drought, or see a whole year's investment destroyed by one June hailstorm, or one late-season frost?

And I am sure few of those city people have any idea what it is like, in terms of trial, tribulation, and heartbreak, to live through 6 years of Ezra Taft Benson.

There is a third misconception which stands in the way of public acceptance of a good farm program. It is that farmers occupy a privileged position in the Federal Government.

That is not true.

They are supported some, but so is every other segment of our economy.

And the supports are not nearly as much as the Department of Agriculture continues to assert and imply.

A study of the budget of this Department was made at the request of your and my good friend, Senator MILT YOUNG, of North Dakota.

This study showed that of the total expenditures of the Department in the fiscal year 1958, considerably less than half went primarily for the benefit of farmers.

The rest—some $2.8 billion—went for programs chargeable to everybody: overseas food programs, defense, milk for school and school lunches, research, meat inspection, forest management, and the like.

Reduced to its actual size then—$2 billion—how does the farm support program compare with supports or subsidies to other parts of our economy?

Since the end of World War II, this Government has allowed tax writeoffs and other tax privileges to mining and manufacturing industries which total $43 billion.

Many billions more have been earned by industry as the result of tariffs imposed against low-cost goods anxious to come in here from foreign lands.

In the last 10 years, this administration has given over $6 billion in subsidies to magazines and newspapers.

We have a minimum wage law.

We have a social security program.

We have unemployment compensation.

We have insured savings.

We have many other Government programs which assist and support other groups in our economy.

We know we can afford these other programs.

Surely therefore we can also afford a program which will give a fair return to those who produce our most important commodity—food.

The trouble with fairy tales is that, if they are retold often enough, people soon get to believe them.

And that is true about the fairy tale that the way to lower farm production is to reduce farm prices.

In fact, that tale has been the basic premise behind the farm programs of the past 6 years.

The programs have failed because this premise is 100 percent false, and here is the reason why.

We all know there are fixed costs connected with farming: payments on notes and mortgages, installment payments on equipment, out of pocket costs for fertilizer, seed, fuel, and such.

In recent years, these costs have been steadily going up.

To meet these fixed and out-of-pocket expenses, and at the same time take care of family expenses, a farmer must have a minimum income.

That income, of course, is derived from price times volume minus costs.

If your price goes down at the same time your costs go up—and that has been the case in recent years—you have only two choices: Increase your volume, or go broke.

In the past 6 years, nearly 4 million farm people have been forced off our farms.

But the rest of our farmers have taken the other course. You have taken advantage of every new technique of farming to vastly increase your production.

Let's look at the record.

During the past 6 years, farm prices have averaged 15 percent below the 1952 level.

But farm production has gone up in each of these 6 years; and is now 15 percent greater than in 1952.

So you can see that efforts to reduce production by reducing prices have failed completely.

The men behind this policy did not appreciate the strength and the determination of the ordinary American farmer to stay in business.

The present program has been bad for the farmer, bad for the consumer, and bad for the Government, because it has caused lower farm prices, higher food prices, and costly surpluses.

It is time this administration got back to sound economic principles.

Only then will we be able to get out of the mess we are in.

A basic principle of farm economics is that a relatively small increase in production and marketing causes a much larger drop in farm prices.

Some of the top farm economists, including Professor Cochrane, who will speak here later this week, tell us that a 1 percent increase in the total marketing of farm products results in a heavy drop in the farmer's price.

This concept has been the backbone of nearly every farm program that has ever worked.

Despite all the sweet talk about freeing the farmer to produce unfettered by controls, experience has proven the following:

For most farm products, price supports, without effective production or marketing controls, just do not make sense.

And we taxpayers now have this $8 billion inventory to prove it.

A good specific example is the corn program.

In 1956 the Department of Agriculture told farmers that in order to get the $1.50 support price, they would have to comply with acreage controls.

Later on they turned around and gave those who did not comply $1.25.

This was the beginning of the end for the corn program.

In 1957, compliers were given $1.50, noncompliers $1.10.

In 1958, compliers got $1.36 a bushel, noncompliers $1.06.

Is it any wonder that last year only 12 percent of our corn was produced under acreage allotment?

Last November 25, there was a corn referendum. To the farmers who had not been complying, the Agriculture Department said:

"Vote for our program and we will raise your price supports at least 6 cents a bushel.

"Vote against us and you won't get any support at all."

To the producers who had complied, the Department said: "If you don't vote for our program, we will cut your acreage and cut your price."

Secretary Benson's program carried, and he reported with pride that he had won a great vote of confidence.

Now Mr. Benson has his corn program.

But what is he going to do with it? If weather conditions are normal this year, he will end up with at least a billion dollars more corn to add to his already gigantic inventory.

My friends, when the American people come out of this farm binge, they are going to have a hangover the likes of which have not been seen.

This surplus hangover is going to be with us long after the present farm policies are buried.

It is going to prove a grave handicap to any new program, no matter how sound and effective.

That is why we should make the control and liquidation of this inventory our first order of business.

To do this, we first need an overall program designed to bring farm production more nearly in line with our needs.

We must begin to use the sound economic principles that have been ignored in recent years.

There are 5 million farms producing over 200 different commodities. Therefore no single, simple program will work.

For some commodities, the direct payment plan offers many advantages.

For other commodities, price supports through nonrecourse loans may still be the best answer.

The continued success in certain commodities of marketing orders, and marketing or bargaining co-ops, provides a base from which a similar approach might be extended to many other commodities.

Used properly and where best adapted, each of these can contribute to the ultimate objective.

What is that objective?

A situation in which farmers are able to compete favorably with the other, more closely organized segments of the economy—and thereby earn a return on their investment, labor and land comparable with the returns in other areas.

Any sound program must also provide for the varied and growing credit needs of farm families.

It must stress improved quality of product and more efficient, effective marketing.

It must deal with the special problems of the chronic underemployed, low income farm families.

These families need more than just the talk, plans, meetings and moral support now being provided under the Department's rural development program.

If time permitted, we could go into many other problem areas; such as the need for improved conservation of our natural resources, greater use of democratically elected county committees.

You members of the Farmers Union are familiar with these areas.

In nearly all cases, the legislative authority for a fair and workable farm program is now on the books.

But this does not guarantee that authority will be used.

The best farm program written into the law does not guarantee a prosperous agriculture.

You must have a sympathetic and understanding administration which believes in

farmers and will fight for the farmer's interests.

But even with a sound, effective farm program we must face up to the problem of moving the current huge and growing inventory.

Here are some suggestions.

Part of it should be set aside as insurance in case this country was ever attacked with modern weapons.

I have introduced a bill to stockpile food, medical supplies and other basic items necessary for survival.

Some of the inventory can be well used to alleviate hunger and malnutrition in our own country.

I was in West Virginia just last week, where conditions are truly tragic.

One hundred thousand children in West Virginia have only one-third of the calories and proteins they need.

We can do far more than we are doing to move our surplus food into our own areas of economic distress.

And last, but not least, we can and should use the productive genius of American farmers to promote our goals in the world.

What do all of us want more than anything?

A just and lasting peace.

We want the kind of world in which we can farm and raise our families, free from the dreaded fear of nuclear war.

We can have that kind of world if we use our national strength in the most effective manner.

This Nation is strong in many things—not only in faith, but also in food.

This food can be used to strengthen our ties with the underdeveloped countries of the world.

It has been suggested that the free nations set up a world food bank, in which storable food could be deposited, withdrawn, or loaned, in order to meet emergencies of member nations.

As long as we are going to be in the righteous business of strengthening countries to resist communism, why not do much of it with food, of which we have plenty, instead of dollars, with which we are having increasing troubles?

This is not only good foreign policy, it is the humane and right thing to do.

It is a sin to waste food when people are hungry.

But it is worse than a sin when this food could have been used to help build a peaceful world.

In closing, let me state my confidence that the farmers of America, with the cooperation of their Government, will develop an effective farm program at a greatly reduced cost to the American taxpayer.

The work you are doing here this week will contribute to that goal, to a strong America, and to a peaceful world.

SENATE

TUESDAY, MARCH 24, 1959

The Chaplain, Rev. Frederick Brown Harris, D.D., offered the following prayer:

Our Father God, save us, we beseech Thee, from regarding this sacred week as a secluded cloister that shuts us away from the noisy, needy world.

By its still waters and green pastures may each of us find the deep and healing springs of inner renewal that will fit us to serve the present age.

Make us persons of brotherly love in an unbrotherly world. To others' faults, make us forgiving, as we would be forgiven. As our lives touch the lives of others, teach us to be gentle in our thoughts, just in our dealing, and generous in our judgments.

May the beauty of the Master of these days of the passion be seen in us, casting out all envy and uncleanness. Lead our minds in the quest of truth—even the truth of eternal life in the midst of our fleeting days.

In fearless dedication to the holy cause of human freedom, make us heralds of hope, even in the dense darkness as sure of victorious morning as we are that birds will sing at dawn and white clouds will grace the blue and children will wake to laughter and men, refreshed, will stride forth with faith to meet the new day.

We ask it in the name of the brightest and best of the sons of the morning. Amen.

THE JOURNAL

On request of Mr. MANSFIELD, and by unanimous consent, the reading of the Journal of the proceedings of Monday, March 23, 1959, was dispensed with.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Maurer, one of its reading clerks, announced that the House had agreed to the concurrent resolution (S. Con Res. 13) to provide additional funds for special study by the Joint Economic Committee.

The message also announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H.R. 137. An act to allow a deduction, for Federal estate tax purposes, in the case of certain transfers to charities which are subjected to foreign death taxes;

H.R. 147. An act to suspend temporarily the tax on the processing of palm oil, palm-kernel oil, and fatty acids, salts, and combinations, or mixtures thereof;

H.R. 213. An act to provide additional time within which certain State agreements under section 218 of the Social Security Act may be modified to secure coverage for nonprofessional school district employees;

H.R. 1219. An act to amend section 2038 of the Internal Revenue Code of 1954 (relating to revocable transfers);

H.R. 2411. An act to amend paragraph 1629 of the Tariff Act of 1930 so as to provide for the free importation of tourist literature;

H.R. 2575. An act to authorize the appropriation of $500,000 to be spent for the purpose of the III Pan American Games to be held in Chicago, Ill.;

H.R. 2906. An act to extend the period for filing claims for credit or refund of overpayments of income taxes arising as a result of renegotiation of Government contracts;

H.R. 3472. An act to repeal section 1505 of the Social Security Act so that in determining eligibility of Federal employees for unemployment compensation their accrued annual leave shall be treated in accordance with State laws, and for other purposes;

H.R. 3681. An act to provide for the free entry of certain chapel bells imported for the use of the Abelard Reynolds School No. 42, Rochester, N.Y.;

H.R. 5247. An act to increase the authorized maximum expenditure for the fiscal year 1959 under the special milk program;

H.R. 5508. An act to provide for the free importation of articles for exhibition at fairs, exhibitions, or expositions, and for other purposes; and

H.R. 5915. An act making appropriations for the Department of the Interior and related agencies for the fiscal year ending June 30, 1960, and for other purposes.

The message further announced that the House had agreed to a concurrent resolution (H. Con. Res. 109) extending the felicitations of the Congress to the Commonwealth of Massachusetts on the 100th anniversary of the establishment of the Superior Court of Massachusetts, in which it requested the concurrence of the Senate.

HOUSE BILLS REFERRED

The following bills were severally read twice by their titles and referred as indicated:

H.R. 137. An act to allow a deduction, for Federal estate tax purposes, in the case of certain transfers to charities which are subjected to foreign death taxes;

H.R. 147. An act to suspend temporarily the tax on the processing of palm oil, palm-kernel oil, and fatty acids, salts, and combinations, or mixtures thereof;

H.R. 213. An act to provide additional time within which certain State agreements under section 218 of the Social Security Act may be modified to secure coverage for nonprofessional school district employees;

H.R. 1219. An act to amend section 2038 of the Internal Revenue Code of 1954 (relating to revocable transfers);

H.R. 2411. An act to amend paragraph 1629 of the Tariff Act of 1930 so as to provide for the free importation of tourist literature;

H.R. 2906. An act to extend the period for filing claims for credit or refund of overpayments of income taxes arising as a result of renegotiation of Government contracts;

H.R. 3472. An act to repeal section 1505 of the Social Security Act so that in determining eligibility of Federal employees for unemployment compensation their accrued annual leave shall be treated in accordance with State laws, and for other purposes;

H.R. 3681. An act to provide for the free entry of certain chapel bells imported for the use of the Abelard Reynolds School No. 42, Rochester, N.Y.; and

H.R. 5508. An act to provide for the free importation of articles for exhibition at fairs, exhibitions, or expositions, and for other purposes; to the Committee on Finance.

H.R. 2575. An act to authorize the appropriation of $500,000 to be spent for the purpose of the III Pan American Games to be held in Chicago, Ill.; to the Committee on Foreign Relations.

H.R. 5247. An act to increase the authorized maximum expenditure for the fiscal year 1959 under the special milk program; to the Committee on Agriculture and Forestry.

H.R. 5915. An act making appropriations for the Department of the Interior and related agencies for the fiscal year ending June 30, 1960, and for other purposes; to the Committee on Appropriations.

COMMITTEE MEETINGS DURING SENATE SESSION

On request of Mr. MANSFIELD, and by unanimous consent, the Subcommittee on Governmental Organization for Space Activities, of the Committee on Aeronautical and Space Sciences, was authorized to meet today during the session of the Senate.

On request of Mr. MANSFIELD, and by unanimous consent, the Committee on Labor and Public Welfare was authorized to meet in executive session today during the session of the Senate.

LIMITATION OF DEBATE DURING MORNING HOUR

Mr. MANSFIELD. Mr. President, under the rule, there will be the usual morning hour for the introduction of bills and the transaction of other routine business. I ask unanimous consent that statements in connection therewith be limited to 3 minutes.

The VICE PRESIDENT. Without objection, it is so ordered.

LEGISLATIVE PROGRAM—ORDER FOR ADJOURNMENT TO 12 O'CLOCK NOON TOMORROW

Mr. MANSFIELD. Mr. President, I wish to announce to the Senate that there will be no yea-and-nay votes today and that the Senate will meet at 12 o'clock noon tomorrow.

Mr. President, in that connection, I ask unanimous consent that when the Senate completes its business today it adjourn to meet at 12 o'clock noon tomorrow.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. MANSFIELD. On tomorrow the Senate will take up Calendar No. 125, H.R. 5640, to extend the time during which certain individuals may continue to receive temporary unemployment compensation.

Furthermore, it is possible that later this afternoon we shall take up noncontroversial bills which have received the clearance of the majority and the minority leadership. However, there will be no yea-and-nay votes, and no controversial legislation will be taken up. This announcement has been cleared with the minority leader.

Mr. JAVITS. Mr. President, may I ask the acting majority leader whether it is expected to hold the Senate in session tomorrow until voting on the bill on unemployment compensation has been completed?

Mr. MANSFIELD. That will depend on developments. The Senate will meet tomorrow and on Thursday. I hope we will finish consideration of the bill tomorrow, so that Members may be able to get away for the Easter recess, a day earlier, if they so desire, to return to their constituencies and find out what their people are thinking.

Mr. JAVITS. I have in mind whether there is likely to be a night session tomorrow. Giving notice on that point is always very useful to Senators.

Mr. MANSFIELD. I hope we will not have a night session. However, I am unable to state anything definitely on that point at this time.

Mr. JAVITS. I thank the Senator.

ORDER FOR MEETING AT 10 A.M. TOMORROW

Mr. MANSFIELD subsequently said: Mr. President, I ask unanimous consent that when the Senate concludes its business it meet tomorrow at 10 o'clock a.m.

The VICE PRESIDENT. Without objection, it is so ordered.

EXECUTIVE COMMUNICATIONS, ETC.

The VICE PRESIDENT laid before the Senate the following letters, which were referred as indicated:

REPORT ON REVIEW OF SELECTED SUPPLY OPERATIONS OF THE NORTHERN AIR MATERIEL AREA, EUROPE

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the review of selected supply operations of the Northern Air Materiel Area, Europe, Burtonwood, England, Air Materiel Force, European Area, Department of the Air Force, dated March 1959 (with an accompanying report); to the Committee on Government Operations.

REPORT ON BACKLOG OF PENDING APPLICATIONS AND HEARING CASES IN FEDERAL COMMUNICATIONS COMMISSION

A letter from the Chairman, Federal Communications Commission, Washington, D.C., transmitting, pursuant to law, a report on backlog of pending applications and hearing cases in that Commission, as of January 31, 1959 (with an accompanying report); to the Committee on Interstate and Foreign Commerce.

AMENDMENT OF TITLE 28, UNITED STATES CODE, RELATING TO LIMIT FOR ADMINISTRATIVE SETTLEMENT OF CERTAIN CLAIMS

A letter from the Acting Postmaster General, transmitting a draft of proposed legislation to amend title 28 of the United States Code to increase the limit for administrative settlement of claims against the United States under the tort claims procedure to $3,000 (with an accompanying paper); to the Committee on the Judiciary.

APPOINTMENT OF ADDITIONAL CIRCUIT AND DISTRICT JUDGES

A letter from the Director, Administrative Office of the U.S. Courts, Washington, D.C., transmitting a draft of proposed legislation to provide for the appointment of additional circuit and district judges, and for other purposes (with accompanying papers); to the Committee on the Judiciary.

INCLUSION OF CERTAIN INFORMATION IN SWORN STATEMENTS RELATING TO ALL PUBLICATIONS

A letter from the Acting Postmaster General, transmitting a draft of proposed legislation to require information concerning the average of the number of copies of each issue sold or distributed to paid subscribers to be included in sworn statements relating to all publications, and for other purposes (with an accompanying paper); to the Committee on Post Office and Civil Service.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the VICE PRESIDENT:

A joint resolution of the Legislature of the State of Washington; to the Committee on Foreign Relations:

"HOUSE JOINT MEMORIAL 1

"To the Honorable Dwight D. Eisenhower, President of the United States, the President of the Senate and Speaker of the House of Representatives, and to the Senate and the House of Representatives of the United States, in Congress assembled:

"We, your memorialists, the Senate and House of Representatives of the State of Washington, in legislative session assembled, most respectfully represent and petition as follows:

"Whereas acts of Japanese exploitation of the salmon on the high seas in the decade between 1930 and 1940 and again in the years 1954 through 1958 have proved to be a wrongful intrusion upon a great and valuable resource that rightfully should remain unmolested on the high seas. The manner and magnitude of these operations violate the laws of nature and unquestionably constitute a threat to the conservation of the North Pacific salmon and a great economic waste in that their harvest during 2 years of the life cycle of the species results in taking a large portion which have not reached maturity; and

"Whereas it is also known that the North Pacific salmon migrate during their growing period to wide areas of the sea; that if North American fishermen followed the same course of action as the Japanese in the ocean harvest of salmon, the stock of both Asia and America would be completely destroyed as a profitable venture within 4 to 10 years; and

"Whereas the taking of salmon at sea in the manner carried out by the Japanese fishermen creates a great economic loss in the taking of immature salmon, a large percentage of which will grow to double their size if left to their natural grazing at sea until they return to the coastal areas of their origin. In addition, a large percentage of salmon so taken with nets at sea in rough weather are lost from the nets, either dead or in a dying condition, to be lost to all fishermen; and

"Whereas these common stocks of fishes are taken by the Japanese on the high seas under conditions forbidden to American fishermen and then distributed to the U.S. domestic market, causing great financial and economic loss to the American fishermen; and

"Whereas the United States is a party to the North Pacific Treaty, with Canada and Japan, which treaty was designed to protect the migratory fishes of all nations in the areas of commingling upon the high seas, and which fixed the areas in which the Japanese would fish; and

"Whereas scientific research and study since the inception of this treaty demonstrates that the Japanese are fishing in waters where the stocks of Asian and North American salmon commingle upon the high seas; and

"Whereas the North Pacific treaty has not resolved the inequities that arise from a Japanese fishery that operates upon the immature salmon in the area of commingling upon the high seas:

"Now, therefore, your memorialists respectfully pray that the State Department take such action as is necessary to preserve and guard the interests of American fishermen through bilateral negotiations between

Japan and the United States to prohibit the taking of anadromous salmon in those waters of the Pacific Ocean where Asian and North American stock commingle, be it

"Resolved, That copies of this memorial be sent to the Honorable Dwight D. Eisenhower, President of the United States, the President of the Senate and Speaker of the House of Representatives of the Congress of the United States, the Senators and Representatives of the State of Washington in Congress, and to the Governors of the States of Alaska, Oregon, and California.

"Passed the house February 3, 1959.

"JOHN L. O'BRIEN,
"Speaker of the House.

"Passed the senate February 26, 1959.

"JOHN A. CHERBERG,
"President of the Senate.

"I hereby certify this to be a true and correct copy of House Joint Memorial 1.

"S. R. HOLCOMB,
"Chief Clerk, House of Representatives."

A joint resolution of the Legislature of the State of Colorado; to the Committee on Interior and Insular Affairs:

"HOUSE JOINT MEMORIAL 8

"Joint memorial memorializing the Congress of the United States to decline passage of legislation creating a national wilderness preservation system or a national wilderness preservation council, as provided for by the various versions of the so-called wilderness bills under consideration by the 86th Congress, and to decline passage of any other legislation which does not carry out the long-established policy of wise multiple use of the federally managed property of the people of the United States

"Whereas there has been proposed in the Congress of the United States, various bills to create a national wilderness preservation system and a National Wilderness Preservation Council, the effect of which would be to establish policies and procedures whereby existing wild, wilderness, primitive, and roadless areas, as now established under administrative regulations, would be made more rigid and inflexible in management, and under which vast acreages of other Federal lands could be added to existing wilderness areas without regard for the necessity or desirability of reserving such large acreages for the single purpose of wilderness use; and

"Whereas the establishment of such inflexible restrictions upon the use of federally owned lands would unjustifiably impede the development of the water resources of the State of Colorado, upon which development the future growth and prosperity of the State of Colorado depends; and

"Whereas the establishment and maintenance of such inflexible restrictions on the use of federally owned lands denies access to vast areas which can and should be made accessible or developed for use by the vast majority of hunters, fisherman, and the vacationing public; and

"Whereas locking up of such vast areas prevents the discovery and development of many potential sources of minerals and other substances which may be vital to the security of the United States in time of international strife and space-age development; and

"Whereas maintenance of such areas as proposed makes protection of these areas against destruction by fire and other natural and man-made hazards difficult and expensive; and

"Whereas any extension of existing wilerness areas, or the establishment of more stringent regulation of existing areas, will unnecessarily and unwisely restrict the development and economic strength of many essential western industries, including the lumbering, mining, agricultural, oil and gas, tourist, and other industries; and

"Whereas there are presently in existence in the State of Colorado, under administrative regulation, wild, wilderness, or primitive areas containing 610,305 acres of land, and no showing has been made that even these areas are necessary or desirable for the single purpose of wilderness preservation, or that such areas have not been adequately administered as wilderness areas under existing policies and regulations; and

"Whereas the creation of another agency to duplicate the functions of existing land-management agencies of the Federal Government can serve no purpose other than to increase unnecessarily Federal expenditures of tax money; Now, therefore, be it

"Resolved by the House of Representatives of the 42d General Assembly of the State of Colorado (the Senate concurring herein), That it is the policy of the people of the State of Colorado, speaking through their elected representatives, to seek the wise and beneficial development of God-given resources for the greatest benefit of all the people, and that in order to carry out this policy, the Congress of the United States should be and it is hereby respectfully memorialized to: (1) decline passage of any of the presently proposed versions of the so-called wilderness bills; (2) decline passage of any legislation which would encourage the extension of, or increase the rigidity of regulation over existing wilderness, wild, or primitive areas; (3) decline passage of any legislation which would establish another Federal agency to duplicate existing functions of Federal land-administering agencies; and (4) decline passage of any legislation which would set aside any area of federally-owned land for a limited and restricted use regardless of the need of such areas for other wise and beneficial uses; and be it further

"Resolved, That copies of this joint memorial be transmitted to the President of the United States, the President of the Senate of the United States, the Speaker of the House of Representatives of the United States, the members of the delegation from Colorado to the 86th Congress of the United States, and all interested agencies and departments of the State of Colorado.

"CHARLES R. CONKLIN
"Speaker of the House of Representatives.

"ROBERT S. EBERHARDT,
"Chief Clerk of the House of Representatives.

"ROBERT L. KNOUS,
"President of the Senate.
"LUCILE L. SHUSTER,
"Secretary of the Senate."

A joint resolution of the Legislature of the Territory of Puerto Rico; to the Committee on Interior and Insular Affairs:

"JOINT RESOLUTION 2

"Resolution to propose to the Congress of the United States of America clarifications and modifications of the Puerto Rican Federal Relations Act

"Whereas the Commonwealth of Puerto Rico is a creative contribution to the American system;

"Whereas it is a basic characteristic of the Commonwealth of Puerto Rico to develop and perfect itself gradually within its new form of permanent association to the Federal Union;

"Whereas the Constitutional Convention of Puerto Rico unanimously approved the following in its Resolution 23: 'The people of Puerto Rico reserve the right to propose and to accept modifications in the terms of its relations with the United States of America, in order that these relations may at all times be the expression of an agreement freely entered into between the people of Puerto Rico and the United States of America.'

"Whereas the Special Commission of this High Body charged with consideration of amendments to the Federal Relations Act and the Constitution has held public hearings at which views about the clarification and modification of the part of the compact constituted by the Federal Relations Act have been amply expressed;

"Whereas such hearings point to the advisability of proposing to the Congress of the United States certain changes in the Federal Relations Act in order to clarify the nature of the Commonwealth and to modify its relationship to the Federal Union to the extent that experience shows is feasible and desirable: Now, therefore, be it

"Resolved by this legislative assembly—

"SECTION 1. To request the Resident Commissioner in the United States to propose to the Congress of the United States of America the following clarifications:

"1. The Commonwealth of Puerto Rico should be adequately described in the Federal Relations Act so that it may in no way be classified as a 'possession' or 'territory.'

"2. Consistent with the fundamental principle of full local self-government for the people of Puerto Rico, it should be made clear that Federal laws applicable in Puerto Rico shall apply in the same way as they may be made applicable in the several States.

"3. The Federal Relations Act should be cleared of all language which may result in any misunderstanding, or which may be confusing, inadequate, obsolete or inapplicable.

"SEC. 2. To request the Resident Commissioner to propose to the Congress the following modifications:

"1. All excise taxes collected in Puerto Rico on articles produced for export to the United States should be imposed by the Commonwealth of Puerto Rico; *Provided,* that if such excises were lower than those imposed by the Federal internal revenue laws on similar articles, the Federal Treasury shall collect the difference at the port of entry, so preserving a competitive equality between such products.

"2. A means should be provided by which the Commonwealth of Puerto Rico may, at its request, be included in or excluded from U.S. commercial treaties.

"3. An adequate formula should be devised by which the Commonwealth of Puerto Rico may gradually assume, as its resources may warrant, such Federal responsibilities as are compatible with the principle of permanent association.

"4. Judgments of the Supreme Court of Puerto Rico should be reviewed by the Supreme Court of the United States in the same manner as are the judgments of the State supreme courts.

"5. The debt margin provision, as proposed to the Congress of the United States of America in Joint Resolution 1 approved by the Governor of the Commonwealth of Puerto Rico on June 23, 1958, should be removed from the Federal Relations Act.

"SEC. 3. Copy of this resolution should be forwarded to the President of the U.S. Senate, the Speaker of the U.S. House of Representatives, and to the Resident Commissioner of Puerto Rico in the United States.

"SEC. 4. This joint resolution shall take effect immediately after its approval.

"Approved March 19, 1959."

A joint resolution of the Legislature of the State of Alaska; to the Committee on Interstate and Foreign Commerce:

"HOUSE JOINT MEMORIAL 13

"To the Honorable Dwight D. Eisenhower, President of the United States; the President of the Senate and Speaker of the House of Representatives; and to the Senate and the House of Representatives of the United States, in Congress assembled:

"Your memorialist, the Legislature of the State of Alaska, in first session assembled, respectfully submits that—

"Whereas in the newly created State of Alaska, the future development of the State will depend upon the orderly development of transportation facilities to, from, and within the State of Alaska; and

"Whereas the Senate Interstate and Foreign Commerce Committee has held several hearings in Alaska concerning the problems of transportation; and

"Whereas in 1957 at the request of the Senate of the United States, the Interstate Commerce Commission made a comprehensive survey and analysis of the regulatory problems affecting transportation to, from, and within Alaska; and

"Whereas certain of the transportation facilities are now operating under the Federal statutes regulating transportation and subject to the jurisdiction of the Interstate Commerce Commission; and

"Whereas the Interstate Commerce Commission in its report to the Senate of the United States has recommended that the Alaska Railroad, a Government corporation, should be subject to the rate and service regulations of the Commission; and

"Whereas other transportation facilities in Alaska are not now subject to the same or similar regulatory procedures and control; and

"Whereas this lack of uniformity of regulation has permitted inequitable and discriminatory rate practices to the detriment of the shippers and receivers of freight in Alaska and such inequities and lack of uniformity will continue to exist until proper amendments to the Interstate Commerce Act have been promulgated by Congress: Now, therefore, be it

"Resolved, That we, the Senate and House of Representatives of the State of Alaska, do hereby respectfully present to the Congress of the United States and particularly to the Senate and House Committees on Foreign and Interstate Commerce that they give due and immediate consideration to the questions involved with relation to the proper amendments to laws governing interstate commerce affecting the broad problems of transportation to, from and within the newly created State of Alaska; and be it further

"Resolved, That copies of this memorial be transmitted to the President of the United States, the President of the U.S. Senate, the Speaker of the U.S. House of Representatives, the Honorable E. L. BARTLETT and the Honorable ERNEST GRUENING, Senators from Alaska, and the Honorable RALPH J. RIVERS, Representative from Alaska, each Senator and Representative in Congress from the State of Washington, and to each member of the Senate and House Committees on Foreign and Interstate Commerce.

"Passed by the House March 6, 1959.

"WARREN A. TAYLOR,
"Speaker of the House.

"Attest:

"ESTHER REED,
"Chief Clerk of the House.

"Passed by the senate March 10, 1959.

"WILLIAM E. BELTZ,
"President of the Senate.

"Attest:

"KATHERINE T. ALEXANDER,
"Secretary of the Senate.

"Certified true, full, and correct.

"ESTHER REED,
"Chief Clerk of the House."

A resolution of the House of Representatives of the State of Washington; to the Joint Committee on Atomic Energy:

"RESOLUTION, HOUSE OF REPRESENTATIVES, STATE OF WASHINGTON

"Whereas Congress, at the request of the Department of Defense, has authorized the construction of a new nuclear reactor for the production of plutonium at the Hanford Atomic Products Operation; and

"Whereas such a reactor generates a tremendous amount of energy which, in previous reactor designs, has been wasted as heat dissipated in the Columbia River; and

"Whereas this waste energy can be converted to usable electricity; and

"Whereas Congress has authorized design and engineering studies for making this new reactor eventually convertible to the production of electricity as a byproduct, but has not provided for the inclusion of these features in the construction of the reactor at the present time; and

"Whereas the immediate future will bring a need for more electrical power in the Northwest; and

"Whereas the Hanford operation itself consumes some 300,000 kilowatts of power from our Northwest power pool; and

"Whereas by the addition of these dual purpose facilities this new reactor could produce up to 700,000 kilowatts of firm power, thereby enabling the Hanford plant not only to release for domestic and industrial purposes the power it now consumes from our local sources, but enabling it also to add almost the equivalent of another Bonneville Dam to the Northwest power pool; and

"Whereas the inclusion of the convertible features in the initial stage of the reactor would save more than $10 million: Now, therefore, be it

"Resolved, That the house of representatives does hereby respectfully request Congress to make provision now for the inclusion of the convertible features during the initial construction of the new atomic reactor at Hanford; and be it further

"Resolved, That a copy of this resolution be transmitted to the President of the U.S. Senate, to the Speaker of the U.S. House of Representatives, and to every Member of the congressional delegation of the State of Washington.

"I hereby certify this to be a true and correct copy of resolution adopted by the house of representatives, March 12, 1959.

"S. R. HOLCOMB,
"Chief Clerk,
"House of Representatives."

A concurrent resolution of the Legislature of the Territory of Hawaii; ordered to lie on the table:

"SENATE CONCURRENT RESOLUTION 46

"Whereas after diligent study of the social, economic and political behavior of the people of Hawaii, the 86th Congress of the United States has in its wisdom seen fit to admit the State of Hawaii into the Union; and

"Whereas by this action the hopes and aspirations of the people of Hawaii for equal rights and privileges with other citizens of the United States have been realized; and

"Whereas it is altogether fitting and proper that the thanks and aloha of the people of Hawaii be given to the Senate of the United States: Now, therefore, be it

"Resolved by the Senate of the 30th Legislature of the Territory of Hawaii (the House of Representatives concurring), That the thanks and aloha of the people of Hawaii be and they are hereby given to the Senate of the United States for its action in approving the bill to admit the State of Hawaii into the Union; and be it further

"Resolved, That a certified copy of this concurrent resolution be forwarded forthwith to the President of the Senate of the United States, the Honorable RICHARD M. NIXON."

A petition signed by sundry members of the various railroad craft organizations and of the Salisbury-Spencer, N.C., Retired Citizens Clubs, praying for the enactment of legislation to increase benefits under the Railroad Retirement Act and Railroad Unemployment Insurance System; to the Committee on Labor and Public Welfare.

A resolution adopted by the Board of Supervisors of the County of Kauai, T.H., expressing appreciation for assistance given in granting statehood to Hawaii; ordered to lie on the table.

A resolution adopted by the Associated Students of the University of Hawaii, Honolulu, T.H., expressing thanks to the 86th Congress for granting statehood to Hawaii; ordered to lie on the table.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. McCLELLAN, from the Committee on Government Operations, without amendment:

S. 900. A bill to amend section 204(b) of the Federal Property and Administrative Services Act of 1949 to extend the authority of the Administrator of General Services to pay direct expenses in connection with the utilization of excess real property and related personalty, and for other purposes (Rept. No. 138);

S. 901. A bill to amend the Federal Property and Administrative Services Act of 1949 to authorize the Administrator of General Services to make contracts for cleaning and custodial services for periods not exceeding 5 years; (Rept. No. 139); and

S. 902. A bill to provide for the receipt and disbursement of funds, and for continuation of accounts when there is a vacancy in the office of the disbursing officer for the Government Printing Office, and for other purposes; (Rept. No. 140).

By Mr. JOHNSTON of South Carolina, from the Committee on Post Office and Civil Service, with an amendment:

S. 96. A bill to govern the salaries and personnel practices applicable to teachers, certain school officers, and other employees of the dependents schools of the Department of Defense in overseas areas, and for other purposes; (Rept. No. 141).

By Mr. CLARK, from the Committee on Post Office and Civil Service, with amendments:

S. 91. A bill to amend the act of September 1, 1954, in order to limit to cases involving the national security the prohibition on payment of annuities and retired pay to officers and employees of the United States, to clarify the application and operation of such act, and for other purposes (Rept. No. 144).

By Mr. JOHNSTON of South Carolina, from the Committee on Agriculture and Forestry, without amendment:

H.R. 5247. An act to increase the authorized maximum expenditure for the fiscal year 1959 under the special milk program (Rept. No. 143).

By Mr. ANDERSON, from the Committee on Interior and Insular Affairs, with amendments:

S. Res. 48. Resolution establishing a committee to study the matter of the development and coordination of water resources (Rept. No. 145); to the Committee on Rules and Administration.

REPORT ENTITLED "JUVENILE DELINQUENCY" (S. REPT. NO. 137)

Mr. HENNINGS, from the Committee on the Judiciary, submitted a report entitled "Juvenile Delinquency," pursuant to Senate Resolution 237, 85th Congress, 2d session, as extended, which was ordered to be printed.

AMENDMENT OF REORGANIZATION PLAN NO. 2 OF 1953—REPORT OF A COMMITTEE—INDIVIDUAL VIEWS

Mr. HUMPHREY. Mr. President, from the Committee on Government Operations, I report favorably, with amendments, the bill (S. 144) to amend

Reorganization Plan No. 2 of 1953, and I submit a report (No. 142) thereon. I ask unanimous consent that the report may be printed, together with the individual views of the Senator from Indiana [Mr. CAPEHART].

The VICE PRESIDENT. The report will be received and printed, as requested by the Senator from Minnesota.

EXECUTIVE REPORTS OF A COMMITTEE

As in executive session,

The following favorable reports of nominations were submitted:

By Mr. JOHNSTON of South Carolina, from the Committee on Post Office and Civil Service:

Twelve postmaster nominations.

BILLS AND JOINT RESOLUTION INTRODUCED

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. KEATING:

S. 1515. A bill to prescribe a method by which the Houses of Congress and their committees may invoke the aid of the courts in compelling the testimony of witnesses; and

S. 1516. A bill to amend section 1621 of title 18 of the United States Code to provide for degrees of perjury and for other purposes; to the Committee on the Judiciary.

(See the remarks of Mr. KEATING when he introduced the above bills, which appear under a separate heading.)

By Mr. LANGER:

S. 1517. A bill to amend the Agricultural Trade Development and Assistance Act of 1954, to extend its operations for 5 years; to the Committee on Agriculture and Forestry.

S. 1518. A bill to exempt musical instruments from Federal excise tax when sold for use by students; to the Committee on Finance.

S. 1519. A bill to amend the Civil Service Retirement Act to increase to 2½ percent the multiplication factor for determining annuities for certain Federal employees engaged in hazardous duties; to the Committee on Post Office and Civil Service.

(See the remarks of Mr. LANGER when he introduced the first above-mentioned bill, which appear under a separate heading.)

By Mr. JOHNSTON of South Carolina (by request):

S. 1520. A bill to provide more adequate numbers of civilian positions required by the Department of Defense to carry out scientific research and development relating to the national defense and to improve the management of the activities of the Department, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. GORE:

S. 1521. A bill to provide for the removal of the restriction on use with respect to a certain tract of land in Cumberland County, Tenn., conveyed to the State of Tennessee in 1938; and

S. 1522. A bill to amend the Commodity Exchange Act, as amended; to the Committee on Agriculture and Forestry.

By Mr. KENNEDY (for himself and Mr. NEUBERGER):

S. 1523. A bill to amend section 212(d) of the Immigration and Nationality Act; to the Committee on the Judiciary.

(See the remarks of Mr. KENNEDY when he introduced the above bill, which appear under a separate heading.)

By Mr. JOHNSTON of South Carolina (for himself and Mr. LANGER):

S. 1524. A bill to provide that the wages, salaries, commissions, or other remunerations for personal services performed by certain employees shall be exempt from garnishment in the District of Columbia; to the Committee on the District of Columbia.

(See the remarks of Mr. JOHNSTON of South Carolina when he introduced the above bill, which appear under a separate heading.)

By Mr. KEATING:

S.J. Res. 81. Joint resolution proposing an amendment to the Constitution of the United States granting to citizens of the United States who have attained the age of 18 the right to vote; to the Committee on the Judiciary.

(See the remarks of Mr. KEATING when he introduced the above joint resolution, which appear under a separate heading.)

RESOLUTION

Mr. HUMPHREY submitted a resolution (S. Res. 94) relating to the recognition of the jurisdiction of the International Court of Justice in certain legal disputes hereafter arising, which was referred to the Committee on Foreign Relations.

(See the above resolution printed in full when submitted by Mr. HUMPHREY, which appears under a separate heading.)

IMPROVEMENT OF CONGRESSIONAL INVESTIGATORY PROCESSES

Mr. KEATING. Mr. President, I introduce, for appropriate reference, two bills designed to improve the effectiveness of congressional investigatory processes. The first would provide expeditious procedures for compelling the testimony of witnesses before congressional committees. The second would broaden the present perjury laws to make it clear that any false swearing before a congressional committee constitutes a crime. Both of these measures are urgently needed to deal with witnesses who take advantage of defects in the present laws to obstruct the work of Congress.

The present procedure for dealing with recalcitrant and contemptuous witnesses is notoriously cumbersome. As the law now stands, if a witness refuses to appear or to testify before an investigating committee, the subcommittee must first report the matter to the full committee, the full committee must then report the matter to the Senate or House, which must then resolve to cite the witness for contempt, after which the President of the Senate or the Speaker of the House, as the case may be, must refer the matter to a U.S. attorney, who in turn must present the case to a Federal grand jury. If an indictment is returned, a full scale trial must follow. Finally, months later—sometimes a year or more later—there may be a conviction and punishment. Meanwhile, more often than not, the original investigation has long since been closed without having obtained the desired testimony or evidence.

My first bill would immensely improve this situation by authorizing immediate resort to the courts for aid in requiring the attendance and testimony of a witness. Under the bill, should a witness refuse to testify, he could be required to appear, not months later, but that very day in the district court in whose jurisdiction the investigation is being conducted. At that point the witness would be subject to the jurisdiction of the court and any further refusal to testify in accordance with the order of the court could be punished forthwith as a contempt of court.

The fact that the witness could immediately be punished for contempt should induce an otherwise defiant witness to appear and testify and thereby expedite the committee hearings. At the same time, the proposed legislation represents a forward step in safeguarding the rights of the witness by leaving it up to the court and not to the committee to finally determine whether certain questions are material or relevant. The net effect of this procedure would be both to restrain unauthorized inquiries and to facilitate compliance with proper demands for information.

My second bill would add a new section to the present perjury law to cover all cases of false swearing. It is modeled after a statute which has been in effect in my own State of New York for more than 20 years. The main purpose of this legislation is to cover situations in which it is not shown that the inquiry satisfied the technical requirements of materiality required under recent interpretations of the present law.

While perjury should be more severely treated when the false testimony goes to a material issue, no person who lies to a congressional committee or other duly constituted tribunal should go completely unpunished. Such conduct cannot be condoned without causing serious injury to the integrity and prestige of our governmental processes. The Nation would do well to borrow from the experience of New York in dealing with this situation.

Mr. President, I have frequently pointed out the necessity for constructive congressional action to correct inadequacies in our laws disclosed by decisions of the courts. The legislation I am now proposing is an example of the general course I have recommended in this regard since there is no doubt that the very restrictive ruling of the Supreme Court in the Watkins case has contributed much to the need for these bills. It makes no difference whether the Court was right or wrong on the facts in that case. The important thing is that a weakness in the effectiveness of our laws has been disclosed which Congress can and must remedy.

I hope that these bills will be given early consideration by the Senate in order to quickly remove the unreasonable obstacles which now impede congressional investigations.

Mr. President, I ask unanimous consent that the two bills be printed in the RECORD.

The PRESIDING OFFICER (Mr. MCCARTHY in the chair). The bills will be

received and appropriately referred; and, without objection, the bills will be printed in the RECORD, as requested.

The bills, introduced by Mr. KEATING, were received, read twice by their titles, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

S. 1515. A bill to prescribe a method by which the Houses of Congress and their committees may invoke the aid of the courts in compelling the testimony of witnesses; and

S. 1516. A bill to amend section 1621 of title 18 of the United States Code to provide for degrees of perjury and for other purposes.

The texts of the above bills are as follows:

S. 1515

A bill to prescribe a method by which the Houses of Congress and their committees may invoke the aid of the courts in compelling the testimony of witnesses

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) either House, any committee or subcommittee of either House, and any joint committee of the two Houses of Congress may, by an affirmative vote of a majority of its actual membership, invoke the aid of the United States districts courts in requiring the attendance and testimony of witnesses and the production of evidence, in furtherance of any inquiry such House, committee, subcommittee, or joint committee is authorized to undertake.

(b) The United States district court for the district within which the inquiry is carried on may, in case of contumacy or refusal to obey a subpena issued to any person by either House, any committee or subcommittee of either House, or any joint committee of the two Houses of Congress, issue an order requiring such person to appear (and to produce evidence if so ordered) and give evidence relating to the matter in question before such House, committee, subcommittee, or joint committee, as the case may be; and any failure to obey such order of the court may be punished by the court as a contempt thereof.

(c) Attorneys of the Department of Justice shall furnish legal assistance in invoking the aid of the United States district courts under subsection (a) to either House, or any committee, subcommittee, or joint committee which requests it.

S. 1516

A bill to amend section 1621 of title 18 of the United States Code to provide for degree of perjury and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 1621 of title 18 of the United States Code is amended to read as follows:

"(a) Whoever, having taken an oath before a competent tribunal, officer, or person, in any case in which a law of the United States authorizes an oath to be administered, that he will testify, declare, depose, or certify truly, or that any written testimony, declaration, deposition, or certificate by him subscribed, is true, willfully and contrary to such oath states or subscribes any material matter which he does not believe to be true, is guilty of perjury in the first degree, and shall, except as otherwise expressly provided by law, be fined not more than $2,000 or imprisoned not more than five years, or both.

"(b) Whoever commits perjury under circumstances not amounting to perjury in the first degree, shall be fined not more than $500 or imprisoned not more than one year, or both."

EXTENSION OF OPERATIONS OF AGRICULTURAL TRADE DEVELOPMENT AND ASSISTANCE ACT OF 1954

Mr. LANGER. Mr. President, I introduce, for appropriate reference, a bill to amend the Agricultural Trade Development and Assistance Act of 1954 to extend its operation for 5 years. This act, known as Public Law 480, permits the sale of farm commodities to countries in need of these agricultural products.

This law is presently operated on a year-to-year basis, and last year the law was allowed to lapse for a period of time, resulting in millions of dollars in surplus sales being lost, which had an unfavorable effect on our national farm economy.

The amendment proposed would assure that this program would operate on a 5-year basis rather than from year to year.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1517) to amend the Agricultural Trade Development and Assistance Act of 1954, to extend its operations for 5 years, introduced by Mr. LANGER, was received, read twice by its title, and referred to the Committee on Agriculture and Forestry.

AMENDMENT OF IMMIGRATION AND NATIONALITY ACT, RELATING TO THE ADMISSION OF CERTAIN ALIENS

Mr. KENNEDY. Mr. President, on behalf of the junior Senator from Oregon [Mr. NEUBERGER] and myself, I introduce for appropriate reference a bill to make eligible for admission as immigrants into the United States husbands, wives, children and parents of residents and citizens, when such immigrants have tuberculosis. The bill would prevent the close relatives of citizens and aliens lawfully admitted for permanent residence from being excluded from the United States solely because they are afflicted with this disease.

This is not a new proposal. It was a part of the bill I introduced in the last Congress which, after enactment, became known as Public Law 85–316. We agreed at that time that the provision should not be made a part of the permanent law until we had an opportunity to observe its operations for a trial period. The trial period expires on June 30 of this year. From every point of view our experience has been completely satisfactory. There is no danger to the public health; the joy and satisfaction which accompanies the reuniting of families commends the perpetuation of the law, and there is no remaining question concerning the practicability or the feasibility of the proposal.

Under the regulations, each immigrant admitted under this provision must submit satisfactory assurances that, first, adequate medical treatment will be supplied to him in this country; second, that all financial arrangements for his care have been made; and third, that he will go directly to the specified hospital and submit to such examination, treatment, isolation and other medical regimen as may be required and will remain under this prescribed treatment until discharged. There have been 1,567 immigrants admitted thus far under this provision. In only six cases was there noncompliance with the regulations.

I am informed that both the Department of Justice and the Public Health Service are in favor of incorporating this provision in the basic immigration and nationality law. Although the provision does not effect a major change in the basic law, it is extremely important to those who will benefit from it. I urge that the bill be speedily considered so that we have no hiatus between the expiration of the old law and the effective date of the new law.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1523) to amend section 212(d) of the Immigration and Nationality Act, introduced by Mr. KENNEDY (for himself and Mr. NEUBERGER), was received, read twice by its title, and referred to the Committee on the Judiciary.

Mr. NEUBERGER subsequently said: Mr. President, I am pleased to join with my good friend, the junior Senator from Massachusetts [Mr. KENNEDY], in sponsoring permanent legislation to admit under safeguards a restricted class of aliens who are suffering from tuberculosis. On the basis of the successful 2-year test of this proposal contained in section 6, Public Law 85–316, I believe this step is well merited.

Our bill is identical to the proposal sponsored by Representative FRANCIS E. WALTER, of Pennsylvania, the distinguished chairman of the Immigration Subcommittee. This proposal would carry out the recommendation of the President as contained in his budget message to Congress on January 19, 1959. The Surgeon General of the United States has written me that the favorable experience under Public Law 85–316 indicates that the public health can be protected if persons suffering from tuberculosis are admitted under safeguards to our country.

Mr. President, I ask unanimous consent to have printed in the RECORD a copy of a letter dated March 23, 1959, from the Surgeon General reporting favorably the experience of the last 2 years under Public Law 85–316; a letter dated March 20, 1959, from the Deputy Attorney General to Hon. EMANUEL CELLAR, chairman, Committee on the Judiciary, House of Representatives, endorsing H.R. 3089, which is identical to our bill; and an article from the Oregonian, dated March 20, 1959, entitled "Waifs Win Over Disease," and explains the successful tuberculosis treatment for Korean orphan

children brought to the United States by Harry Holt at the famed National Jewish Hospital at Denver, Colo.

There being no objection, the letters and article were ordered to be printed in the Record, as follows:

DEPARTMENT OF HEALTH,
EDUCATION, AND WELFARE,
Washington, D.C., March 23, 1959.

Hon. RICHARD L. NEUBERGER,
U.S. Senate,
Washington, D.C.

DEAR SENATOR NEUBERGER: This is in reply to the March 13, 1959, letter from your office requesting information on our experience under section 6 of Public Law 85–316.

Since the passage of this act and as of March 16, 1959, a total of 1,567 persons had been admitted under the terms of this section and the regulations which had been promulgated to implement it.

These regulations, as issued and revised in April 1958, require: (1) That a statement be given by a State, Territorial, or local health officer, or by a director or staff physician of a hospital, that the necessary evaluation and treatment will be supplied; (2) that the alien must go directly to the hospital specified; (3) treatment may be given on an inpatient or outpatient basis in conformity with accepted local standards of medical practice; (4) the hospital or physician in charge of the case may discharge the patient without prior approval by the Public Health Service, but is requested to submit a final report in each case.

The responsibility for paying for any care that may be required must be assumed by either the sponsoring relatives of the alien or other responsible parties. These immigrants, like all others, must give assurance that they will not become public charges.

In those cases where the alien has not fulfilled the assurance he has given, the hospital or physician is expected to report the default to the proper official of the Public Health Service. The Service then attempts to obtain compliance and, if this fails, the case is reported to the Immigration and Naturalization Service.

The effectiveness of the procedures which have been developed is demonstrated by the fact that of these 1,567 persons only 6 are listed as not having complied with the requirements of the regulations. An additional four cases are reported as delinquent and further followup is under way. Based on experience, we expect that most of these four persons will eventually comply.

I believe that this favorable experience is ample assurance that if continuation of the provisions of section 6, Public Law 316, in the form of permanent legislation is effected, it can and will be administered in such a way as to protect the public health.

If there are certain points which you feel are not fully or adequately covered, we would be most pleased to receive your inquiry on those items.

Sincerely yours,

L. E. BURNEY,
Surgeon General.

MARCH 20, 1959.

Hon. EMANUEL CELLER,
Chairman, Committee on the Judiciary,
House of Representatives,
Washington, D.C.

DEAR MR. CHAIRMAN: This is in response to your request for the views of the Department of Justice concerning the bill (H.R. 3089) "To amend section 212(d) of the Immigration and Nationality Act."

The act of September 11, 1957 (Public Law 85–316, 71 Stat. 640) provides that notwithstanding affliction with tuberculosis, an alien who is the spouse or child of a U.S. citizen, or of an alien lawfully admitted for permanent residence, or who has a son or daughter who is a U.S. citizen or an alien lawfully admitted for permanent residence, shall, if otherwise admissible, be issued a visa and admitted for permanent residence in accordance with such terms, conditions, etc., as the Attorney General may impose in his discretion. The Attorney General is required to report to Congress any case in which these provisions are applied. Existing law contains a time limitation, to wit: June 30, 1959, after which the Attorney General may not exercise this discretionary authority to waive affliction with tuberculosis as a ground for exclusion of an immigrant.

The bill would remove the time limitation in existing law and would add the waiver provisions to the Immigration and Nationality Act as a new paragraph to section 212(d)(9) of that act.

This proposal would carry out one of the recommendations made by the President in his budget message to the Congress on January 19, 1959. The provisions of existing law, which would be carried forward by this proposal, have operated satisfactorily and in the interest of the United States, because they are humanitarian in nature and of aid in keeping family units together in meritorious cases. The Department of Justice recommends the enactment of the bill.

The Bureau of the Budget has advised that there is no objection to the submission of this report.

Sincerely yours,

LAWRENCE E. WALSH,
Deputy Attorney General.

[From the Oregonian, Mar. 20, 1959]

WAIFS WIN OVER DISEASE

Every one of the Korean children who were sent to the National Jewish Hospital at Denver for treatment of tuberculosis has recovered. Fifteen have been released in good health and two are to get out shortly. Two Korean tots who arrive Tuesday in the latest Harry Holt baby airlift are to be admitted to the hospital.

This report on the hospitalized Korean babies was made here by Martin Macman, the hospital's director of rehabilitation services. He is speaking on the hospital's famed research in tuberculosis treatment to professional and lay groups on the Pacific coast.

The hospital, which is financed by donations amounting to $3 million a year for treatment and research does not charge for care of the some 325 patients it looks after. These include those suffering from asthma and allergies and heart ailments amenable to surgery.

KOREANS GET AID

Macman said the hospital had staff members and patients who could speak Korean. Among its patients are foreign students who are not eligible to enter State hospitals. Any one who has means to pay for treatment is not accepted. Admission is limited to those for whom there is hope from good treatment.

The U.S. Public Health Service ranks the hospital as the greatest contributor in the country toward improved methods of caring for tuberculosis patients, he said.

In speaking before the Northwest Lions Club here Wednesday, Macman said that the hospital has pioneered active hospital life for patients which makes it possible for the new drugs to be more effective. He said the drugs work better when they have more germs to work on.

RESEARCH CONDUCTED

The Denver hospital is also conducting research in treatment of those patients who reacted unfavorably to taking of the some 10 modern drugs which are used.

Macman cautioned against assumption that tuberculosis is on the decline. He pointed out that the decline indicated may be simply the result of a letdown in early detection. There is no indication, he said, that the incidence is actually down. He pointed at the greater number of cases reported this year in Multnomah County.

PROPOSED AMENDMENT TO CONSTITUTION RELATING TO THE RIGHT TO VOTE AT AGE 18

Mr. KEATING. Mr. President, I introduce for appropriate reference a joint resolution proposing an amendment to the Constitution of the United States granting to citizens of the United States who have attained the age of 18 the right to vote.

The strongest reason for lowering the voting age is the political awareness of our young Americans. A Gallup poll has found that people between 18 and 20 are the best informed of any age group on basic political facts. The proposition that this group be given voting rights is perfectly logical; only hoary custom is against it.

As a veteran, I certainly subscribe to the theory that a man old enough to fight for his country is old enough to be entrusted with the ballot, although I think the most potent argument for reducing the voting age is the one I mentioned earlier, namely, that our young people are now more politically aware at the ages of between 18 and 20 and know what the issues in the country are than was true a generation ago.

The notion that the age of 21 marks the dividing line between immaturity and wisdom goes back to the Middle Ages, when a youth could be knighted only when he could bear the weight of armor and use it.

While I realize that this matter is controversial, it seems to me that the question is, When is a person mature enough to make an intelligent decision at the polls? I know my own daughter knew more about public events at 18 than I did at 21. I believe our young people take an earlier interest in these matters nowadays.

The merit of this resolution has already been proven in the three States where it is currently operating. I urge its early consideration by Congress.

Mr. President, I ask unanimous consent that the text of the joint resolution be printed following my remarks in the RECORD.

The PRESIDING OFFICER. The joint resolution will be received and appropriately referred; and, without objection, the joint resolution will be printed in the RECORD.

The joint resolution (S.J. Res. 81) proposing an amendment to the Constitution of the United States granting to citizens of the United States who have attained the age of 18 the right to vote, introduced by Mr. KEATING, was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

Resolved by the Senate and House of Representatives of the United States of America

in Congress assembled (two-thirds of each House concurring therein), That the following article is hereby proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution when ratified by the legislatures of three-fourths of the several States.

"ARTICLE —

"SECTION 1. The right of citizens of the United States, who have reached the age of eighteen years, to vote shall not be denied or abridged by the United States or by any State on account of age. The Congress shall have power to enforce this article by appropriate legislation.

"SEC. 2. This article shall be inoperative unless it shall have been ratified as an amendment to the Constitution by the legislatures of three-fourths of the several States within seven years from the date of its submission to the States by the Congress."

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. HUMPHREY:

Address on "Human Rights," delivered by him at the Chicago Conference for Brotherhood, on February 22, 1959.

By Mr. KEFAUVER:

Newsletter issued by Representative JOE L. EVINS, Fourth Congressional District of Tennessee, and published in the Johnson City (Tenn.) Chronicle of March 14, 1959.

EXTENSION OF TEMPORARY UNEMPLOYMENT COMPENSATION BENEFITS

Mr. WILEY. Mr. President, as we know, the unemployment problems still, regrettably, continue to plague this country.

According to reports, there are still about 4.7 million unemployed throughout the Nation. In Wisconsin, over 75,000 workers are still out of work. Even though the wheels of industry in many areas are again whirring at prerecession levels, there has not been a proportionate back-to-work movement. Consequently, the Nation faces a real challenge in creating new jobs for those who still are unemployed.

As we know, the Senate Finance Committee on yesterday approved the House-passed measure, House bill 5640, to extend the temporary unemployment compensation benefit measures passed by Congress last year.

We recognize, of course, that extending unemployment benefits will not solve the basic problem of creating new jobs. Nevertheless, it is important to take constructive action to assist the jobless workers and their families who continue to face increasing hardships because of lack of income during out-of-work periods.

Recently I have received a number of messages from individuals, unions, and others in Wisconsin who urge extension of the temporary unemployment compensation program. I request unanimous consent that the communications be printed at this point in the RECORD.

There being no objection, the correspondence was ordered to be printed in the RECORD, as follows:

SHEBOYGAN COUNTY INDEPENDENT UNION COUNCIL,
Sheboygan, Wis., March 16, 1959.

Senator ALEXANDER WILEY,
U.S. Senate Building,
Washington, D.C.

DEAR SENATOR: We are very much concerned about the possibility of the temporary unemployment compensation law expiring.

According to the latest Wisconsin Employment Trends (a monthly bulletin put out by the Wisconsin Industrial Commission and the Bureau of Labor Statistics), there are still 75,000 workers unemployed in the State.

* * * * *

Temporary unemployment compensation is a real necessity in this period, and we strongly urge your support and vote for its continuous protection.

Will you please let us know how you plan to vote on this matter when it comes before the Senate?

Very truly yours,

CARL RIGOTTI,
Secretary, Sheboygan County IUC.

MARCH 11, 1959.

Senator ALEXANDER WILEY,
Senate Office Building,
Washington, D.C.

DEAR SENATOR WILEY: I strongly urge you support action to extend Federal temporary unemployment compensation program.

I am yours very truly.

———, ———.

SUPERIOR, WIS., *March 9, 1959.*

Hon. ALEXANDER WILEY,
Senate Office Building,
Washington, D.C.:

Termination of emergency unemployment compensation April 1 will create intense hardship this area and others. Special action urgently needed.

SUPERIOR FEDERATION OF LABOR,
PAUL AKERS, *Secretary.*

MINNESOTA RECREATIONAL FACILITIES

Mr. HUMPHREY. Mr. President, among the many reasons why we Minnesotans take such pride in our State are its excellent recreational facilities. To those who love the out-of-doors, Minnesota's fields, streams, woods, and lakes are a virtual paradise. We call Minnesota the land of 10,000 lakes. Actually, the number is closer to 30,000 lakes, and 11,007 of them are 25 acres or more in size. I may add that they are well stocked with fine fish.

In the April issue of the American Legion Magazine there is a fine article, by Erwin A. Bauer, entitled "Minnesota—Promised Land for Fishermen." I recommend the article to America's fishermen, but I warn them that after reading it they will not be happy until they, too, have had a chance to come to Minnesota and enjoy our fine natural playground.

I ask unanimous consent that the article be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the American Legion Magazine, April 1959]

MINNESOTA—PROMISED LAND FOR FISHERMEN

(By Erwin A. Bauer)

America's wandering anglers are finding superb sport in every corner of the country nowadays. And ranking with the very best of it is the premium fishing in a certain belt of northern real estate, half land and half water, hardly a day's drive from such Midwestern metropolises as Chicago, Milwaukee, Minneapolis, Omaha, and Des Moines. This, of course, is Minnesota, especially the northern part of it—the land of sky-blue waters, the land of 10,000 lakes. Natives like to call it Paul Bunyan Land.

With 90 percent of her people living within 5 miles of a lake, Minnesota is a promised land for outdoorsmen. Last year 1¼ million residents and their nonresident guests bought fishing licenses to catch 10,000 tons of fish in enough water to cover the whole State of Connecticut with some left to drip over.

When a Minnesota native, in his justifiable pride, says his State has 10,000 lakes he isn't telling the whole truth. Actually, the number is closer to 30,000 lakes, and exactly 11,007 of these cover 25 acres or more apiece. In addition to her wealth of lakes, Minnesota has so many miles of streams that they would reach around the globe if they were placed end to end.

There are two versions of how all this wet land was created, one romantic and one realistic. The romantic version—and the one preferred by chambers of commerce—is that the lake beds are simply the footprints made by Babe, the blue ox, when Paul Bunyan, the legendary Minnesota lumberman, led her across the unbroken wilderness. But a more scholarly version has the lake sites gouged out by the icy fingers of glaciers in prehistoric times. By either method, however, they're filled with sweet, clear water; and the water contains a dozen species of the gamest fresh-water fishes that swim. For the price of one admission—a license—the enterprising angler can enjoy the lot of them.

The Gopher State is more than just a fine fishing hole, although this may be recommendation enough. It's an air-conditioned, pine-scented vacationland, even during dog days. The atmosphere is virtually pollen-free; so much so, in fact, that this is headquarters for the Hay Fever Club of America.

This is a family playground; there are more than 4,700 resorts in the State. But fishing is still the No. 1 attraction of summer in Minnesota. The fishing comes in considerable variety—from deep-sea-type trolling to cane poling for panfish, and from plugging the lily pads to flycasting waist deep in a singing brook.

What fish should you try for in Minnesota? They include large- and smallmouthed bass, northern pike, muskies, walleyes, trout (lake, brown, brook, and rainbow), bluegills, perch, crappies, rock bass, and bullheads. Anyone can catch the walleyes and panfish. The pike, bass, and trout come a little harder. And the muskies are for the most serious anglers alone.

And you may as well relax, for no man, even fishing daily through his entire lifetime, could really cover the waters of northern Minnesota. He could make a career of fishing the 1,000-plus lakes in Ottertail County alone. Fishing headquarters for this region on the west side of the State is Fergus Falls. Here you can get tackle, licenses, bait, and information about the nearby waters.

But in the planning stage of your fishing trip for this area you may want to know of

some of the finest lakes in the area. These include Lida (for walleyes and northern pike), Silent (walleyes, largemouths), Star (walleyes, northerns, panfish), Big MacDonald (walleyes, northerns), Spirit (largemouths), Loon (crappies, northerns), and South Turtle (walleyes). East and West Lost Lakes, near Underwood, are hot spots for bass fishermen; but the truth is that the entire area provides fast enough fishing most of the time.

Just north of Fergus Falls is another county, Becker, full of lakes. No less than 400 of these lakes are within half an hour's drive of Detroit Lakes, the county seat, located on picturesque Big Detroit Lake. There's good fishing for all of the native species in this section. Some of the fastest fishing last year was for walleyes and crappies in Big and Upper Cormorant Lakes; both these lakes (which are connected) are unusually fine crappie producers. Ice Cracking Lake is small, but it has yielded some big northerns. So have Big Toad and Little Toad Lakes along Route 34. And to your list of the best fishing lakes add Island (walleyes), Pelican (crappies, bass), Height-of-Land (walleyes), and White Earth (northerns).

Brainerd, east of Fergus Falls and Detroit Lakes, has always been one of northern Minnesota's best-known fishing regions. And it's no wonder, for annually from these waters (which lie mostly north of Brainerd and the Mississippi River) trophy-size fish come wholesale. A local guide once bragged that his customers either catch fish or pay nothing and that he hadn't been skunked in 20 years of fishing.

Big Pelican Lake, just north of Brainerd, is excellent for walleyes (particularly early in the season) and for northerns, bass, and panfish as well. Just north of that is Upper Whitefish Lake, well known because of better than average walleyes and plenty of northerns. Long and Gull Lakes also have consistently good walleye fishing, but at times the nearby Mississippi River is the best producer of all. It also contains bass and an occasional big musky.

Mille Lacs Lake, about 20 miles east of Brainerd, is Minnesota's second largest lake (200 square miles). It is a vast, almost circular body of water ringed with sandy beaches. State fish biologists consider it to be one of the most fertile lakes in any of the Northern States. It has tens of thousands of acres of potential spawning area because it is generally shallow. It's hard to beat for walleyes and northerns, particularly walleyes. It's also hard to beat for the variety of accommodations for sportsmen and their families around its perimeter. Depending somewhat on the degree of plumbing, you can vacation here on a low budget, or live on a plush scale.

Actually, facilities in the Mille Lacs area are fairly typical of all of northern Minnesota in that they're designed to match any budget. They run from elaborate American-plan resorts with dim cocktail lounges on the side to shiny modern motels or simple housekeeping cabins. Few of the accommodations are pretentious, though. Regardless of how much he's paying for it, a visitor gets plenty of escape, freedom, and relaxation.

Walker is another beautifully located community in northern Minnesota. It's on the edge of the Leech Lake Indian Reservation, and so is handy to practically unlimited fishing. Many serious anglers consider giant Leech Lake the best in the State for muskies. It's also topnotch water for walleyes and northerns, probably because of its vast shallow weedy areas. Around nearby Remer are many other fine fishing lakes—Willow, Thunder, Big Boy, Birch, Upper Trelipe, Big Vermilion, and Inquadona.

It was Woman Lake, also in this vicinity, that once produced one of the alltime jumbo muskies, a 51 pounder. Musky fishing, however, is second here to the splendid pike and walleye fishing.

If you like to fish for walleyes, you'll want to check a number of other fine lakes just north of Leech Lake. The largest of these is Winnibigoshish, which also has muskies. Cass Lake is another good big one in this area. Cut Foot Sioux Lake, which connects to "Winni" is almost as colorful as its name. It's also home for many bragging-size northerns.

The towns of Bemidji (best known for its giant reproduction of Paul Bunyan on the shore of Bemidji Lake) and Park Rapids are also the crossroads of highways that lead into splendid fishing country. Some of the best known waters around Bemidji are Beltrami, Mud, Sugar, Plantaganette, Upper Sucker, and Steamboat Lakes. All have walleyes. Auginash, Bad Boy, Buckboard, and Solid Bottom Creeks contain brookies and brown trout.

Many of the best musky lakes are within easy reach of Park Rapids. Biggest of them is Mantrap. Others in the vicinity are Big and Little Sand, Bottle, Emma, Belle Tain, Boulder, Bad Axe, and Shinbogee. Other Minnesota musky waters (they're fairly widely scattered) are Lake Vermillion near Tower; Deer Lake north of Grand Rapids; the Rum River and the Mississippi near Grand Rapids; Deer Lake east of Effie; Little Fork River near Little Fork; Big Shoepac Lake south of Rainy Lake; and the celebrated Lake of the Woods, which is one of the finest musky lakes in North America. Some of the best musky water is on the Ontario side of the lake, though.

A number of lakes near Grand Rapids, Itasca County, have excellent walleye fishing. They include Pokegama, Shoal, Bass, and Rice Lakes. Accommodations for fishermen are numerous. Among these are a number of well-manicured campgrounds.

Itasca County is practically plastered with small trout streams. Some of the better streams for eastern brookies are Bruce, Hawkins, Matuska, Pancake, Pickerel, Rice, and Spring Creeks. It's best to hit most of them, early in the season. Parts of many of them, and their tributaries, are fairly remote; and it's well worthwhile to obtain a county map and go prospecting cross country. Usually the reward is a limit easily filled.

Northern Minnesota is wonderful country for the cook-out-under-canvas set. There are almost 200 approved and improved camping sites in this evergreen country alone. These include State parks, State forestry campgrounds, and U.S. Forest Service campgrounds. The annual fee for State park usage is $1; otherwise, all these facilities are free.

If there is an inland region anywhere in America made to order for boating and boating fans, it's Minnesota—from the winding Mississippi River (which forms much of the State's eastern boundary) and Lake Minnetonka (14,500 acres of exciting boating water only 20 minutes west of the Twin Cities) all the way north to Canada. Some of the waters are busy and craft of all kinds are numerous, but other waters are lonely and forgotten. In the latter there's high adventure for fresh-water sailors and their families. They can explore new places, enjoy new experiences, and rarely see another person. In other words, Minnesota is a good place to take a boat. It makes no difference whether it's a car top canoe, a runabout for water skiing, or an outboard cruiser towed behind the car on a trailer. There are launching sites or marinas on every lake of any size.

, In a normal year summer weather in northern Minnesota is almost always pleasant. From June 1 to October 1 it's cool enough to be comfortable most of the time, but rarely too cool for pleasant camping. Even after October 1 the Indian summer weather may be of the brand that inspires poetry. There are dreary rain spells in autumn, to be sure, but usually the atmosphere is clear and crisp. No matter what the month, however, it's a wise angler who carries foul-weather gear and at least one outfit of woolen clothing. It's also sensible to carry insecticides, at least until July 15, because in the early summer mosquitoes, black flies, and deer flies can be troublesome.

You'll need no special or expensive tackle for Minnesota fishing. A single medium spinning outfit can do any job or catch any fish, except perhaps the largest of lake trout and muskies. Bait casting will handle these larger fish, and a fly-casting outfit is fine for trout and panfish. Just as it is elsewhere across the land, the jig (or "lead head" or Doll Fly) craze is invading northern Minnesota. Have a supply of them in the tackle box, because they're deadly both for walleyes and smallmouth bass. It's a good idea to have spoons for pike and underwater plugs for bass. An outboard motor is handy, too.

Speaking of smallmouths, one of the best spots for them is in the sprawling system of lakes, bays, channels, and islands known as Rainy Lake and lying along the international border. It is reached mostly by U.S. 53 to International Falls. Here is another more-water-than-land region that couldn't be thoroughly fished in several lifetimes, even though the effort would be pleasant. This is North Woods country at its lovely, magnificent best.

Besides the bass in the Rainy River-Rainy Lake system, there's superlative walleye and northern pike fishing. At times there's also remarkably good yellow perch fishing, and no fish are easier to catch than perch. The Little Fork River and the Rat Root River have pike. Namakan Lake is good for walleyes. Tiny (by comparison) Cruiser Lake contains lake trout and rainbows. Big Shoepac Lake has silver muskies, a musky-northern hybrid. Both of the last-named lakes are reached only by canoe portage or trail from Rainy or Namakan Lakes.

Just south of Rainy Lake and International Falls is Lake Kabetogama. Studded with hundreds of islands and many forgotten bays, it's one of the most scenic places in the whole north country. Take this one seriously if you're out for walleye fishing.

There was once extraordinary lake trout fishing along Minnesota's Lake Superior coast, but the recent invasion of sea lampreys claimed the trout as victims and has eliminated this fishery; anglers should not go there with lakers in mind. But don't skip over this section lightly, because it offers spectacular sport in many of the streams that empty into Superior along the north shore. There are brooks, browns, or rainbows, or some combination of the three.

Some of the best-known trout rivers in this region are: Beaver (at Beaver Bay), Baptism (near Illgen City), Manitou (at Little Marais), Caribou (north of Manitou River), Temperance (between Schroeder and Tofte), Onion (between Tofte and Lutsen), Devil's Track (north of Grand Marais), and Flute Reed (Hovland).

The Superior National Forest in the northeast corner of the State and the Quetico Park just across the border in Ontario together comprise the largest exclusive canoeing country in the world. To reach these thousands of lakes, you go by canoe and by foot. Canoe travel in this peaceful, little-disturbed country is almost a way of life. With paddles or small motors you cross the lakes, and between the lakes you pick up your gear and carry it over the trails. There are no roads or powerlines to guide you, and no airplane is allowed to invade the wilderness bush except in an emergency.

For the angler who wants to escape the hustle of the world of concrete or television, who wants to get away from everything but nature and fishing, this surely is

a paradise. There are few more beautiful wilderness regions in all of North America than this Superior National Forest which joins Quetico Park in Ontario to the north. A combined canoeing-camping-fishing trip in this region becomes a truly relaxing style of outing designed to rebuild a man's outlook on the working world and to strengthen him until he can return.

It's true that once canoe trips were no easy matter for beginners. Equipment was crude and heavy; you had to like it rough. But a canoe trip into the Superior bush today is such a safe and simple expedition that anyone or virtually any family can make a happy holiday of it. The whole community of Ely, Minn., on the edge of the forest, thrives on outfitting anglers and canoe-trippers.

A fisherman and his family can drive up to an outfitter in Ely and set out a few minutes later with all the equipment necessary for anything from a weekend to a 2-week trip—on a rental basis. And it's inexpensive too; figure $5 per person per day. Families can figure less than that per person for the full treatment, which includes rental on everything but toothbrushes and the mixings for a before-dinner martini. A nonresident fishing license will cost $4. Guides are available too, but their services add an extra $15 to $25 a day to the cost. With or without guide though, a wilderness canoe trip is an adventure long to be remembered by anyone who genuinely loves the outdoors.

There's pretty fair fishing in this superior country; and one individual who knows it better than most is Bill Rom, busy proprietor of Canoe Country Outfitters, the largest canoe caterer in Ely. Bill picks the following lakes as the best for fishing, year in and year out:

For walleyes: La Croix, Crooked, Basswood, Big Saganaga, Agnes, White Iron, Three, Gun, Cherry, Shell, Ensign, Alice, Insula, Little Saganaga, Kawishiwi, Ima, and Shagawa.

For northern pike: Basswood, Birch, Ensign, Crooked, Agnes, Fourtown, Knife, Spoon, Alice, Insula, and Adams. Add also the Isabella and Kawishiwi Rivers.

For lake trout: La Croix, Oyster, Knife, Cedar, Gabimichigami, Kekekabic, Wisini, Thomas, Snowbank, Gunflint, Big Saganaga, Little Saganaga, Bear, and Ima.

For bass: Basswood, Cummings, Crab, Knife, Birch, Ensign, Strup, and Wisini. You can pick your fishing spot in Minnesota from the tourist-fringed lakes to the deep wilderness waters. It isn't even necessary to venture far from the Twin Cities, which are completely surrounded by lakes. Here is the land of fine fishing and abundant water; and, try as you will, you'll never, within your allotted time, do more than take a fair sampling of Minnesota's good fishing spots. But don't let this distress you, for the Minnesota native himself can accomplish little more.

FEDERAL PAYMENTS OF TAXES OR IN LIEU OF TAXES

Mr. HUMPHREY. Mr. President, the past week it was my privilege, as a member of the Senate Committee on Government Operations, to preside at the hearings scheduled at the direction of the committee chairman, the Senator from Arkansas [Mr. McCLELLAN], to consider, in general, the important and troublesome problem of Federal payments of taxes or in lieu of taxes to State and local taxing authorities, and, in particular, the provisions of Senate bill 910, which I introduced on February 3, on behalf of myself and 32 other Senators.

As is well known, for many years State and local taxing authorities have been seriously concerned over the increasing acquisition by the Federal Government of various types of property, which acquisition has operated to remove such property from local tax rolls.

From time to time over the years, the Congress has acknowledged responsibility for reducing, to some extent, the adverse effects of these acquisitions by enacting numerous statutes which authorize payment by certain Federal agencies upon certain types of property. However, the great majority of Federal agencies have no general authority to make payments on their properties. Furthermore, existing provisions of law are quite diverse and result in different treatment for similar properties of various agencies. Thus, those provisions of law which do exist fail to present any clearcut uniform policy. On some classes of property, some agencies pay taxes; others make payments in lieu of taxes; and still others make no payments at all.

Senate bill 910 is a very modest attempt to deal with a problem which the Committee on Government Operations and other committees of the Congress have studied and considered for more than 10 years. It is identical to a bill, Senate bill 4184, which was drafted originally by this committee in the 84th Congress and reported favorably in 1956, following extensive hearings on a large number of proposals.

Senate bill 910 represents the culmination of many years of continuing efforts by the committee to develop a program which would afford some measure of relief to local communities which have suffered losses as the result of the presence of Federal tax-immune property in their jurisdictions, but which would not do violence to the principle of Federal tax immunity or constitute an undue burden on the Federal Treasury.

In essence, this bill would do nothing more than establish a 5-year program of payments in lieu of taxes and special assessments on a very limited category of real property which has been removed from the local tax rolls as a result of Federal acquisition. The major category of payments would be at the discretion of a Federal Board which would administer the program, and numerous additional safeguards have been included in order to insure against any undue or unjustifiable payments. It would also require the Federal Board established by the bill to conduct a comprehensive study and make a case-by-case analysis of virtually every phase of fiscal and related problems of local taxing authority arising out of Federal immunity from local real and personal property taxes, including the operation of all existing programs. The Congress would receive semiannual reports from the Board on the operation of the program, and, within 2 years from the date of enactment, a comprehensive report, accompanied by appropriate proposed legislation, detailing its recommendations for the necessity of a continuing policy.

I repeat now what I have said before—through the years, many hundreds of witnesses have been heard; many volumes of testimony have been compiled; and numerous reports have been made by interested groups and carefully studied by the committee.

I believe that the time has come for action. S. 910 satisfies neither the opponents nor the proponents of a Federal payment-in-lieu-of-taxes program. It represents, however, a sincere effort to solve a most perplexing problem and to pave the way, in a realistic fashion, for such improvements as may be needed, based upon the 5 years of experience provided for in this measure.

I believe that this bill represents the best legislation that is possible at this time. It will not authorize a giveaway program, it will not open the gates to unlimited and unrestrained payments by the Federal Government to local communities; and it is not discriminatory. It is my firm conviction, based upon my service as the mayor of a good sized city, as a member of the Committee on Government Operations, and at one time chairman of its Subcommittee on Intergovernmental Relations, and as a member of the Commission on Intergovernmental Relations and its Study Committee on Payments in Lieu of Taxes and Shared Revenue, that this bill is a modest attempt to deal with a very vexing problem.

I ask unanimous consent, Mr. President, that there be inserted in the RECORD at the conclusion of my remarks a Senate Government Operations Staff Memorandum, No. 86–1–11, dated March 17, 1959, which contains detailed information relative to the bill, its background and history. This analysis and report was prepared by one of the members of the fine professional staff of the committee, Eli E. Nobleman.

I hope Members of the Senate will look over this material, because a number of their constituents will be getting in touch with them. This measure has been endorsed by the American Municipal Association, the Conference of County Officers, Commissioners, and Supervisors, and a host of other governmental bodies.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

PURPOSE

S. 910 would establish a temporary program of payments in lieu of taxes and special assessments on a very limited category of real property which has been removed from the tax rolls as the result of Federal acquisition.

The bill would authorize, for a 5-year period, (1) a very limited program of payments in lieu of taxes on industrial or commercial real property acquired by the Federal Government after June 30, 1950; (2) payments of special assessments levied after the effective date of the act in urban or suburban areas, if such assessments were also levied on real property owned by other taxable persons; and (3) payments in lieu of taxes on the interest of the Federal Government in real property leased or sold to private persons under conditional sales contracts, if such property were owned by a taxable person.

The program would be administered by a five-member, bipartisan Federal Board for Payments to Local Governments, appointed by the President, subject to Senate confirmation. A taxing authority would be required to file an appropriate application, specifying

the Federal property involved, the basis of its claim, and the period for which the claim is made (not to include 12 months in any single application). The Board, after determining the existence of a probable basis for the claim, and conducting a hearing, if a basis is found to exist, would be required to determine and certify to the controlling Federal agency the amount of payment to be made to the local taxing authority.

In the case of industrial or commercial real property, however, the applicant would be required to make a showing that Federal acquisition of such property has resulted in a financial hardship to the community in question. The actual payment to be made would be based upon the amount of local taxes which would have been payable had the property been privately owned, increased by additional expenditures incurred by the taxing authority in furnishing services to the Federal property, and diminished by the aggregate amount of local-type governmental services furnished by the controlling Federal agency, further diminished by any additional credit against Federal liability resulting from any exemption, immunity, or reduction in the tax rate or amount, if such are available, under State or local law, to private persons as an inducement to engage in industrial or commercial activities within the territorial jurisdiction of the particular tax authority. The Board's decisions are made final and would be conclusive upon all tax authorities and Federal agencies, and may not be questioned by any court or Government accounting officer.

The bill provides further that payments made by Federal agencies under existing programs authorized by law would not be affected; that Federal property upon which payments are made under an existing program would be excluded from the coverage of this bill and would not be subject to additional payments for the same period; and that Federal payments on industrial or commercial property cannot exceed the amount of the tax which would be payable if such property had been developed and used by a taxable person for a typical private industrial or commercial use, either within the jurisdiction of that tax authority or in nearby comparable communities.

The Board, either on its own motion or upon application by a taxing authority, would be required to make various studies relative to (1) fiscal and other problems of local taxing authorities arising out of Federal immunity from real and personal property taxes; (2) the nature and extent of payments to local taxing authorities under other Federal programs, including grants-in-aid and revenue-sharing programs; and (3) the nature and extent of benefits derived by taxing authorities directly or indirectly through persons residing or employed upon Federal property and for or in connection with any property, trade, business, etc., situated or occurring upon Federal property.

The Board would be required to report semiannually to the President and the Congress with respect to its operations during the preceding period and to file, no later than 2 years after the date of enactment, a comprehensive report, accompanied by appropriate proposed legislation, detailing its recommendations on the necessity for a continuing policy for compensating local taxing authorities for losses sustained incident to the presence of Federal tax-exempt property within their jurisdictions, and with respect to the future treatment of properties for which payments are temporarily authorized by Public Law 388, 84th Congress, as extended by Public Law 85–579 (former RFC properties).

The Board would be authorized to employ personnel and procure the services of consultants at rates not to exceed $50 per day, to conduct hearings or investigations, and to examine witnesses and compel their attendance by subpena. It would be required to maintain an accurate stenographic record of all testimony taken, a transcript of which would be filed in the office of the Board. The Board would cease to exist on December 31, 1966, 2 years after the terminal date for the filing of applications for payment.

Finally, the bill would establish a 12-member advisory committee, composed of representatives of the Federal Government, State governments, and local taxing authorities, appointed by the President, which would be required to conduct studies of the administration of this act, as well as all other Federal legislation authorizing payments of taxes or in lieu thereof, by Federal agencies to local tax authorities, and problems arising in connection therewith. This committee would be required to consult with the Board, upon its request, in an advisory capacity in the solution of such problems, and transmit from time to time to the Board and to the President for transmittal to the Congress, a report summarizing the result of its studies, together with recommendations for administrative or legislative changes considered necessary or desirable for efficient, economical, and equitable administration of such provisions of law.

BACKGROUND

General

State and local taxing authorities have been seriously concerned, particularly since 1939, over the increasing acquisition by the Federal Government of various types of property which has operated to remove such property from local tax rolls. Local governments depend upon property taxes for more than half of their total revenues, so that they are particularly concerned when the Federal Government acquires real estate and thereby removes it from the property tax base while at the same time activities on or associated with the Federal property may impose service burdens upon these local governments.

The seriousness of the general problem appears to have been magnified by the outbreak of the Korean war in 1950, when large-scale Federal acquisitions of defense production facilities throughout the country resulted in the removal of substantial parcels of real property from local tax rolls.

From time to time, the Congress has acknowledged responsibility for reducing, to some extent, the adverse effects of these acquisitions upon local government revenues and fiscal structures by enacting numerous statutory provisions which authorize payments by certain Federal agencies and departments or upon certain types of property. However, the majority of Federal agencies have no general authority to make payments on their properties. Furthermore, existing provisions of law are quite diverse and result in different treatment for similar properties of the various agencies. Thus, those provisions of law which do exist fail to present any clear-cut uniform policy. On some classes of property, some agencies pay taxes; others make payments in lieu of taxes; and still others make no payments at all. At the present time, according to the latest available information, there are presently on the books some 55 laws dealing with Federal payment of taxes or in lieu of taxes, or shared revenue arrangements. Of this number, some 20 provide for a sharing of revenue between Federal and State and local governments; 18 authorize payments in lieu of taxes; and 17 authorize the payment of direct taxes.

STUDIES OF FEDERAL-STATE-LOCAL TAX RELATIONS

During the past 22 years, the fiscal problems of local governments resulting from Federal acquisition and control of real property, and the impact of Federal immunity from State and local taxation have been the subject of almost continuous study by governmental, quasi-governmental and private groups which have filed some 9 reports with recommendations. These efforts have been fully detailed and documented in Senate Report No. 2424, 84th Congress, filed by this committee on July 7, 1956.

The most recent major study was made by the Commission on Intergovernmental Relations which submitted a 311-page report with recommendations, which was accompanied by 15 additional volumes, totaling in all, approximately 2,200 pages. One of these volumes was a 197-page report entitled "Payments in Lieu of Taxes and Shared Revenues", which contained an exhaustive study of the entire subject, with detailed recommendations relative to future Federal policy with respect to payments to State and local governments for Federal property holdings located herein.

COMMITTEE ACTION—80TH–85TH CONGRESS

Since 1947, this committee has had before it various studies and a continuous stream of legislative proposals dealing with Federal-Stat-local relations, in general, and payments of taxes or in lieu of taxes, in particular. Large numbers of complicated bills were processed and numerous hearings were held.

In the 84th Congress, the committee had before it a total of 12 bills dealing with various aspects of payments of taxes or in lieu of taxes by the Federal Government to local taxing authorities. In July 1955, the committeee held a preliminary hearing on 7 bills then pending before it. Further action was deferred pending an opportunity to examine the report and recommendations of the Commission on Intergovernmental Relations and the receipt of the administration's comments on the bills then pending. Following these hearings, the staff prepared an exhaustive analysis of the pending bills and the pertinent findings and recommendations of the Intergovernmental Relations Commission and its Study Committee on Payments in Lieu of Taxes and Shared Revenues.

In 1956, the committee held further hearings on these bills. Following consideration of the testimony contained in the 477-page record of the hearings, the committee concluded that (1) because of the complexities inherent in the subject, the large number of variables involved, it was unable to recommend favorable action on any of the pending bills; (2) since the factual pattern varied in the 16,778 cities and the 3,049 counties in the United States which may possibly be affected by Federal tax immunities, the only approach which would furnish a measure of relief to those local governments which are hard pressed as a result of Federal acquisitions, was through a limited program of payments in lieu of taxes, coupled with a case-by-case consideration by an administrative board of the relative merits of individual cases; (3) any further legislative action would have to await the accumulation by such a board of information concerning specific local needs and situations, compiled on a case-by-case basis, following field studies; and (4) no amount of general study, unrelated to the specific variable factors in each individual case, would serve any useful purpose. In this conclusion, the committee was supported by the Bureau of the Budget and by a number of the sponsors of the major bills pending before the committee, who testified in the hearings that, in their judgment, bills proposing to establish broad comprehensive programs had not received favorable action over the years because such an approach was not feasible.

Accordingly, the committee drafted and reported favorably a committee bill, S. 4183 (S. Rept. No. 2424, 84th Cong.), identical to S. 910, the pending bill, providing for a 5-year program of payments in lieu of taxes and special assessments on a very limited category of real property; and permitting modest payments only to those taxing authorities which are able to show that, after

weighing the benefits resulting from the presence of Federal installations against the burdens imposed on local taxpayers and local taxing authorities, they were still suffering financial hardships. The major feature of this measure was a comprehensive study which the Board would have been required to make and the case-by-case analysis of virtually every phase of fiscal and related problems of local taxing authorities arising out of Federal immunity from local taxation, including the operation of existing programs; and the comprehensive report which was to be made to the Congress after 2 years, accompanied by appropriate proposed legislation, detailing its recommendations on the necessity for a continuing policy.

This measure failed of action on the floor of the Senate, following opposition and its temporary displacement to permit the transaction of further urgent business.

In the 85th Congress, the committee again had before it numerous bills dealing with this subject, including S. 967, identical in every respect to S. 4183, 84th Congress, and to the pending measure, S. 910, 86th Congress.

CONCLUSIONS

As previously indicated, S. 910 is identical in every respect to S. 4183 of the 84th Congress. It represents the culmination of more than 10 years of continuing efforts by the committee to develop a program which would afford some measure of relief to local communities which have suffered losses as the result of the presence of Federal tax-immune property in their jurisdictions, but which would not do violence to the principle of Federal tax immunity or constitute an undue burden on the Federal Treasury. Its provisions are based upon a careful study of the testimony of hundreds of witnesses heard by the committee through the years and upon many volumes of testimony and numerous reports.

S. 910 has the support of all of the major organizations representing State and local governments and taxing authorities, including the National Association of County Officials and the American Municipal Association.

Finally, S. 910 is based upon the conclusions of this committee, contained in its report on the earlier identical committee bill, S. 4183 that (1) there is an urgent need for immediate legislative action to relieve local taxing authorities from unjustified and inequitable burdens and hardships which have been imposed upon them as the result of large-scale Federal acquisition of various types of property which has operated to remove such property from the local tax rolls; (2) because of the extremely complex nature of the subject and the many variables which are involved, it is not possible to devise a comprehensive program which will operate in a fair and equitable manner, and which is not likely to involve high expenditures of Federal funds and possible windfall payments to communities which have actually been benefited rather than harmed by the presence of Federal installations; and (3) the only equitable type of program which is possible is one in which payments are based upon individual cases and situations as they are presented and documented, and as information relative to each situation is compiled, evaluated, and assessed on its merits (S. Rept. No. 2424, 84th Cong.).

The staff has been informed by representatives of the Bureau of the Budget that pending reexamination of the entire field of Federal-State-local fiscal relations, no report on the pending bill will be submitted at this time. However, it is expected that a report embodying their views will be completed early next month.

TEMPORARY UNEMPLOYMENT COMPENSATION ACT

Mr. CLARK. Mr. President, within 2 weeks the Temporary Unemployment Compensation Act which Congress passed last year will expire. The House of Representatives has passed a bill which in effect permits the law to expire. No new person exhausting his regular benefits could be added to the temporary benefit program, yet the unemployment problem is virtually as great as it was when we passed the bill last year. The number of unemployed stands at 4,749,000, which is a recession level. Exhaustions of benefits are almost as high as they were last year, an estimated 200,000 in March of 1959 as compared to 254,000 when we passed the bill last June.

As a result, 18 Senators asked the Finance Committee for a hearing in order to present the case for a better bill than the one passed by the House of Representatives. I ask unanimous consent to have printed in the RECORD at this point as a part of my remarks a copy of the letter which was signed by those 18 Senators and addressed to the eminent chairman of the Committee on Finance [Mr. BYRD of Virginia].

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MARCH 18, 1959.

Hon. HARRY F. BYRD,
Chairman, Committee on Finance,
U.S. Senate.

DEAR MR. CHAIRMAN: With the scheduled expiration of the Temporary Unemployment Compensation Act of 1958 on March 31, the Nation faces an emergency situation in regard to assisting the hundreds of thousands of workers whose regular unemployment benefits will expire after that date.

The latest official figures show 4,749,000 persons unemployed—only 13 percent fewer than last June when the Temporary Unemployment Compensation Act was passed. Unfortunately, there is little evidence that the number of unemployed is likely to drop rapidly after March 31. Industrial production has been rising at the rate of less than 1 percent a month, and employment is lagging behind production.

In short, the recession—as measured by unemployment—is continuing. There is as much reason for an emergency unemployment compensation program now as when the act was passed last year.

Under these circumstances, we feel that the measure passed by the House yesterday is almost totally inadequate. It would bar from the Federal program any worker whose benefits expire after March 31. It would force tens of thousands of self-respecting workers and their families to suffer the humiliation of going on the relief rolls.

We feel that during a national recession, unemployment must be accepted as a national problem. To throw the entire burden of assistance and relief upon the State and local communities at this time will result in hardship, suffering, and privation which it is the responsibility and duty of any civilized society to prevent.

We, therefore, respectfully request that brief hearings be scheduled by your committee, so that those who share our views may have an opportunity to state the case for a more adequate bill than the one passed by the House of Representatives.

JOSEPH S. CLARK, PAT MCNAMARA, PHILIP A. HART, WAYNE MORSE, RICHARD L. NEUBERGER, JOHN F. KENNEDY, THEODORE FRANCIS GREEN, JOHN O. PASTORE, HUBERT H. HUMPHREY, EUGENE J. MCCARTHY, JAMES E. MURRAY, MIKE MANSFIELD, HARRISON A. WILLIAMS, JR., VANCE HARTKE, PAUL H. DOUGLAS, JENNINGS RANDOLPH, ROBERT C. BYRD, ERNEST GRUENING.

Mr. CLARK. At that hearing the 18 Senators agreed upon testimony supporting, as cosponsors, the bill introduced by the distinguished Senator from Michigan [Mr. MCNAMARA], Senate bill 1323. I ask unanimous consent that that testimony be printed in the RECORD at this point as a part of my remarks.

There being no objection, the testimony was ordered to be printed in the RECORD, as follows:

TESTIMONY OF COSPONSORS OF S. 1323 BEFORE THE COMMITTEE ON FINANCE, U.S. SENATE, MARCH 20, 1959

Mr. Chairman and members of the committee, the following statement is submitted on behalf of the 18 Senators who have cosponsored S. 1323: Senators MCNAMARA, CLARK, HART, MURRAY, MANSFIELD, MORSE, NEUBERGER, GREEN, GRUENING, BYRD of West Virginia; RANDOLPH, HUMPHREY, MCCARTHY, DOUGLAS, KENNEDY, WILLIAMS of New Jersey, PASTORE, and HARTKE.

We have sought hearings before this committee because of our concern about the House bill, H.R. 5640, that is before you. H.R. 5640 would extend the present Temporary Unemployment Compensation Act of 1958, due to expire on March 31, 1959, to cover those who have established eligibility as of March 31, 1959. Our objections to this bill are based on two major premises.

First, the high unemployment of 1958, which prompted the enactment of the Temporary Unemployment Compensation Act, has almost been equaled in 1959. Complete unemployment figures are available only for January and February, but they show that unemployment nationally now stands at 4.7 million.

This unemployment figure is only slightly below that of the same date last year. In fact, unemployment in January of this year, 4.7 million, was the highest for any January since before World War II, and the February 1959 total was exceeded in that period only by February 1958.

Civilian unemployment and employment from January 1957 [1]

[Millions]

Second, there is no evidence that this situation is capable of self-improvement. Our experience in 1958 is valid testimony to that fact. All of the blithely optimistic statements that have been uttered about the passing nature of this problem will not restore one single unemployed person to work.

It is true that production in the latter months of 1958 showed some improvement. Unfortunately, this was not accompanied by a comparable increase in employment. Between April of 1958, the low point of last year's recession, and December 1958, 84 percent of the manufacturing production loss was recovered. However, there was only a 26-percent restoration of the manufacturing job loss.

The recession which we now face is one which hits all fields of employment. It is not a phenomenon peculiar to only several.

Unemployment rates for nonfarm wage and salary workers, by major industry group, January 1957 to 1959

[Percent of labor force in industry who were unemployed; not adjusted for seasonality]

Industry group	1959	1958	1957
Total	7.3	7.1	5.2

Public administration	2.8	3.1	3.0

Of the 149 major labor market areas in the United States, 76 of them, more than half, have unemployment of more than 6 percent. The same level of unemployment is present in 183 of the Nation's smaller labor markets.

The economic downturn which has prevailed for a considerable period of time is somewhat unique. Perhaps the best summation of this fact can be found in the document entitled "Current Population Reports—Labor Force," published by the U.S. Department of Commerce. In the March 1959 issue, page 3, the following appears:

"The recent recession differs somewhat from the two earlier postwar downturns in the pattern of decline in unemployment. The recovery in 1958 was largely compressed into a short span of months in the second half of the year, with little change in unemployment since November except for seasonal fluctuations. As a result, some 10 months after the generally accepted turning point in the 1958 downturn, unemployment was just about halfway back to more typical postwar levels, whereas the job recovery was more nearly complete at the corresponding stage of the previous cycles."

It is apparent that the temporary unemployment measure that we passed last year did not solve the basic problem; it only provided welcome relief for those who were most affected by the continuing recession.

We who are before this committee today do not offer our bill, S. 1323, as a permanent solution to the basic problem.

The great majority of us are also cosponsors of a bill which would provide us with an effective attack on this problem of chronic national unemployment. That bill, S. 791, the Kennedy-McCarthy bill, would establish minimum national standards for unemployment insurance considerably more adequate than those standards now in existence throughout the 50 States.

We are of the opinion that the enactment of such legislation is essential. It is the only way to provide realistic protection against the rapid cycle of unemployment which we have experienced in the recent past. Unless we return to the basic philosophy of unemployment insurance that characterized its initiation in 1938—namely, that an unemployed person should receive benefits which equalled roughly one-half of his earnings, for a realistic period of time—we will never fully meet this problem.

That is what is intended under S. 791, and we will urge its enactment when the bill is before the Senate.

But the immediate problem before us is the hardship created by present unemployment. The statistics that we have already cited are not just the handiwork of an electronic computer. They are not digits over which men of good will can shake their heads and utter a few polite "tsk-tsks."

These figures are easily translated, and their translation does not make for easy reading. They represent hunger, illness, and degradation.

Each one of the unemployed who is counted in the total has problems which, fortunately, are unknown to most of us. Few of us have had to sit idle while our children go off to and return from school hungry. There is perhaps no crisis so disastrous as family illness which cannot be tended because of poverty.

Of perhaps equal gravity is the toll that has been taken of the pride and self-respect of millions of American working people. There are only a few alternatives left to a man without work and without unemployment insurance.

He can borrow from his relatives, who in most cases are only a short step away from his own perilous circumstances. He can beg from the local welfare agencies. We submit that begging is an accurate description in most instances, primarily because many State and local welfare funds have already been drained and can give relief only to those in a disaster classification.

He has another alternative, if he has children. He can desert his family and thereby enable his children to become eligible for the joint Federal-State program of aid to dependent children. It is ironic that we have by past action and inaction placed a premium on a father's desertion of his family. Yet in State after State, and in more cases than even the local agencies care to document, this is exactly what is happening.

That these are the several alternatives from which the unemployed can choose is appalling in a nation as wealthy as ours. We believe that we have the resources and the humanity sufficient for the establishment of another adequate alternative, which we discuss below.

We must, of course, face the issue of the budget. All of the Senators for whom I am speaking want to see a balanced budget in the fiscal year 1960. Some of us believe that the money which this bill costs can be met through economies elsewhere in the budget. Some of us believe that additional revenues should be obtained through closing tax loopholes and removing inequities in the tax structure—legislation which would be within the province of your committee. The answer may lie in a combination of the two approaches. But, in any case, all of us believe that we must balance the budget through other means than deserting the unemployed of this country in this time of great and urgent need.

We feel it is anomalous, to say the least, that the position of many persons in responsible positions appears to be that this great and rich country can afford to be humane—or even generous—until an arbitrary date on the calendar, June 30, 1959; and that after that date we must cease to have humanitarian impulses, must harden our hearts, must steel ourselves against the temptation to be compassionate, and must concern ourselves, beginning promptly at 12:01 a.m. on July 1, with reduction of Federal expenditures as the overriding objective of our national existence.

We turn now to the proposal before this distinguished committee.

H.R. 5640 would continue temporary benefits for all those who established their eligibility, under the 1958 TUC Act, before March 31, 1959. It would provide a measure of relief for the approximately 265,000 persons who will be drawing benefits as of March 31, plus those who established eligibility at a prior time, returned to work, and again became unemployed during the period March 31–June 30, 1959. The outside maximum number that would fall into the latter category is estimated to be 140,000 persons.

Thus, a maximum of 405,000 persons would be affected by H.R. 5640, or less than 10 percent of those now unemployed. The total cost, if 405,000 persons were benefited, would be $78 million.

In short, H.R. 5640 would take care of less than one-tenth of the problem that exists.

S. 1323 would provide a uniform 16 weeks of benefits for all persons who had exhausted their unemployment insurance eligibility under existing programs. It would provide similar benefits for all those who had substantial earnings records in the past 2 calendar years and who had not been in covered employment. The main provisions of the bill are, briefly:

1. Sixteen weeks of benefits for all those who exhausted unemployment insurance rights under any and all existing programs, including the TUC Act of 1958.

2. Sixteen weeks of benefits for all those who worked in uncovered employment and who (a) earned a total of $1,000 during either of the 2 calendar years, for which records are available, prior to application for benefits, and who (b) worked a total of four quarters during the 2-calendar-year period.

3. Benefit amounts would be determined as follows: (a) Exhaustees: weekly benefit

would equal that obtained under existing programs; (b) noncovered: weekly benefit would be equal to 1¼ percent of yearly earnings, with a maximum equal to the maximum granted under the State unemployment insurance program.

(These criteria would prevent the imposition of an undue administrative burden on the State agencies. The Bureau of Social Security has earnings records which would provide the necessary data, at a cost of 60 cents per application.)

4. A State would have the option to enter into that part of the program which provides benefits for those in uncovered employment.

5. All recipients must be ready and willing to work, and must accept reasonable employment openings obtained by th State employment agencies.

We estimate that approximately 3½ million people will gain relief under S. 1323. The bill, if enacted, would immediately benefit the 1.9 million who are now unemployed and who have exhausted their rights under existing programs or who have worked in uncovered employment. In addition, another 1.6 million persons who exhaust in the coming year would also receive benefits.

Assuming that recovery continues to lag, the total cost of this program would be $875 million. Of course, if the recession ends as rapidly as we all hope, this expenditure will be considerably reduced.

We would like to point out that an estimated $206 million of the $640 million which Congress appropriated last year for the TUC Act will be unspent as of March 31 of this year. This means that by carrying this money over into the expenditures for S. 1323, the total new money called for would be approximately $670 million.

The enactment of S. 1323 would accomplish two major and worthwhile objectives.

It would, first, provide substantial relief for those who need it most. S. 1323 is in no sense a dole. In fact, it is the opposite of a dole. If it is not enacted we will be faced with even greater public assistance expenditures than now confront us nationally.

S. 1323 will assist only those whose past work record should entitle them to better social insurance than is now provided under inadequate unemployment compensations programs.

I would, secondly, inject a sizable amount of money into an economy which, by all available evidence, could readily benefit by such action. The stimulus that would be provided cannot be statistically demonstrated, of course. But perhaps the main reason why the recession has not deepened has been the several public programs which take up the economic slack in a period of decreased production.

Unemployment insurance, even though inadequate, has been a major factor in maintaining a degree of purchasing power. The highway construction act has given additional impetus. We are hopeful that the airport and housing bills already passed by the Senate this session will help also.

Gentlemen, this Congress will be faced with many problems during the coming 18 months. We will be called upon to make decisions affecting the preservation of freedom itself.

Yet no institution such as ours can effectively deal with these grave issues if the problems of our domestic community remain unsolved. If our system of democratic capitalism is to prevail internationally, it must prove itself at home.

It is trite to demonstrate the past role that the Federal Government has fulfilled in making that system work at home. That fact is overwhelmingly apparent to this body which has been such a part of the creation of that role.

This is not the hour to turn our backs on the lesson of our recent domestic history. We urge your favorable consideration of the proposal we have placed before you—the enactment of S. 1323. We pledge you our support and cooperation in the enactment of a program which will meet this domestic challenge of unemployment.

Mr. CLARK. Mr. President, I ask unanimous consent to have printed in the RECORD at this point as a part of my remarks a tabulation showing insured unemployment for the week ended February 28, 1959, by States.

There being no objection, the tabulation was ordered to be printed in the RECORD, as follows:

Insured unemployment for week ended Feb. 28, 1959 (excluding railroad)

Alabama	41,120
Arizona	10,659
Arkansas	26,360
California	270,180

Wyoming	5,086

Mr. CLARK. Mr. President, I ask also to have printed in the RECORD at this point as a part of my remarks a telegram signed by George Meany, president of the AFL–CIO, which, in effect, states that the House bill is practically meaningless, and urging our support of the bill of the senior Senator from Michigan, Senate bill 1323.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

WASHINGTON, D.C., *March 23, 1959.*

Hon. JOSEPH S. CLARK,
Senate Office Building,
Washington, D.C.:

As reported by finance committee, H.R. 5640 would do absolutely nothing for any person exhausting unemployment compensation benefits after March 31 and for those unprotected by present State laws. Continuing mass unemployment with hundreds of thousands exhaustions monthly requires changes in H.R. 5640 along lines of S. 1323 which will be offered on Senate floor. AFL–CIO urges your support for S. 1323.

GEORGE MEANY,
President, AFL–CIO.

Mr. CLARK. The Governor of Pennsylvania, David L. Lawrence, sent a telegram to me which was presented for the record before the Senate Finance Committee, pointing out the critical situation with respect to unemployment in the Commonwealth of Pennsylvania. I ask unanimous consent that the telegram be printed in the RECORD at this point as a part of my remarks.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

HARRISBURG, PA., *March 19, 1959.*

Hon. JOSEPH S. CLARK,
Chairman, Senate Finance Committee, Senate Office Building, Washington, D.C.:

My I request your good offices in urging immediate passage of Senate bill 1323?

Without such action, 50,000 Pennsylvanians who now are receiving these payments would be arbitrarily dropped from the benefit rolls on April 1. Abrupt termination of this program would increase the already difficult situation in Pennsylvania since persons are not eligible to file claims under the temporary unemployment compensation program unless they have no State benefit entitlement. It would mean the cessation of income to this very sizable group of our unemployed citizens.

Pennsylvania's need is most urgent. As of February 15, 492,000 Pennsylvanians were without jobs. This is over 10 percent of the national unemployment and almost 11 percent of our State's labor force. Over the past 9 months, 237,000 people here have applied for benefits under this program and payments have totaled $66.7 million.

This very appreciable sum has not only served to relieve individual hardships but has been a very real factor in bolstering the purchasing power and the general economy of the State as a whole. This is not a highly restrictive program which benefits one small segment of our population, but a widespread and helpful program which reaches into every corner of our Commonwealth.

We believe it would be most damaging to Pennsylvania and its people if it were to be suddenly terminated while our unemployment total remains at such a high level. I am sure that all of our people who are unemployed, and their families, will be deeply appreciative of any efforts you may exert to extend this most worthwhile program.

Senate bill 1323 would allow new claims for temporary compensation for the more than 200,000 Pennsylvanians who already have exhausted their State benefits. These would not be eligible under the 3-month extension proposed in the bill which recently passed in the House unless they were currently drawing benefits. Provisions should be made for them.

DAVID L. LAWRENCE,
Governor of Pennsylvania.

Mr. CLARK. Finally, four able members of the Committee on Finance signed supplemental views on House bill 5640. I ask unanimous consent that the supplemental views be printed in the RECORD at this point as a part of my remarks.

There being no objection, the supplemental views were ordered to be printed in the RECORD, as follows:

SUPPLEMENTAL VIEWS ON H.R. 5640

The undersigned have voted with the majority of the committee to report H.R. 5640

in order to have before the Senate at the earliest possible time a proposal for some emergency or temporary extension of unemployment compensation.

In our opinion, however, H.R. 5640 falls far short of what is needed today. For the reasons we shall outline, therefore, we hope the Senate will approve the strengthening amendments which the undersigned presented in committee, but which were rejected by the majority.

The simple fact that there are today more than 4.7 million persons unemployed is ample proof that a measure offering scanty assistance to less than 10 percent of that total is wholly inadequate to meet the emergency.

This bill, H.R. 5840, would simply provide a continuation of the temporary unemployment compensation benefits for those who have established their first claim to such benefits prior to April 1, 1959. The new cutoff date would become July 1, 1959.

The bill would, at the very maximum, provide temporary benefits to approximately 405,000 unemployed. However, since this figure includes those who had established eligibility under the 1958 Temporary Unemployment Compensation Act and who have since returned to work, it is unlikely that enactment of H.R. 5640 would benefit more than 300,000 persons, and perhaps only as many as 265,000.

Some of these may be made eligible to draw as little as 1 additional week. Labor Department estimates set the probable average extension of benefits at only about 6 weeks.

There is no provision in H.R. 5640 to assist the 900,000 persons who have already exhausted their rights under existing temporary unemployment compensation programs, or the 1 million persons who were not engaged in covered employment. Nor does it provide any aid for the estimated 1.6 million persons who will exhaust their benefits under State programs during the balance of this year.

Assistance to the unemployed is a problem that must be viewed as a whole and not in such an arbitrary, fractional part as in H.R. 5640.

Results of unemployment—dissipation of savings, forced reliance on community welfare, injury to the overall economy due to decreased purchasing power—are not selective in that they affect only certain groups of jobless workers.

The worker who has exhausted his entitlements under the regular State plan and under TUC, and who is still unemployed through no fault of his own, has as many desperate problems, if not more, than the current TUC recipient whose benefits would be cut off on April 1 if no further action were taken.

Further, there is the too often overlooked fate of the jobless worker whose employment was not covered by regular State unemployment insurance. The hunger of this man and his family is just as great as that of the man who has covered employment; yet, his only recourse is to community welfare.

We think it is vitally necessary to assist the 265,000 to 405,000 persons who could draw meager benefits under the provisions of H.R. 5640. But we also believe that the fate of the several million other workers cannot be ignored.

It is for this reason that we support an emergency program such as is provided in S. 1323 and proposed it as a substitute for H.R. 5640.

This bill would provide up to 16 weeks of additional benefits for all persons who had exhausted their regular or emergency benefits as well as those unemployed who were not in covered employment. In this last category, however, it is important to note that S. 1323 would require such persons to have a substantial work record to be eligible for benefits, and to be ready and willing to work if suitable employment is offered. Benefit amounts would be based on those under existing programs. The extended benefits would be paid only under agreements with the States. The program would run to July 1, 1960.

If the recovery of the national economy does not materialize, and approximately the same number of persons remain unemployed during the year, it is estimated that the program envisioned by S. 1323 would cost $875 million.

However, an estimated $206 million remains under the TUC Act, thus reducing the total of new money needed under S. 1323 to about $670 million.

An emergency program such as this is by no means a "dole." For the administration to characterize it as such is to display a callousness that is shocking in a nation that has a high regard for human life and dignity as does ours.

The "dole" will come only after the Federal Government washes its hands of its responsibility by its failure to enact a truly meaningful emergency unemployment compensation program.

The "dole" will come as already overburdened communities are forced to spread their funds still more thinly to meet the bare living requirements of the unemployed.

This is not a problem that affects only a few isolated areas of our country. More than half of the 149 major labor market areas in the United States today have unemployment of more than 6 percent. Unemployment of the same magnitude also exists in 183 smaller labor markets.

Unemployment today truly is a national problem, begging for national solution.

One part of that solution is the enactment of a temporary program similar to that proposed in S. 1323. This would serve better to meet the current emergency and to provide a form of insurance for the next year as we wait for the long-expected pickup in the national economy.

A second part of that solution, just as vital as and closely related to the first, is the adoption of a program of minimum national standards for unemployment insurance. Only in this way can we effectively prevent the recurrence of the emergency needs encountered in 1958–59.

The preferable solution, of course, would be the adoption of programs of action to promote a full employment national economy. Undoubtedly, the unemployed would prefer jobs to unemployment compensation. So would we, but social justice requires emergency action now.

We urge, therefore, that the Senate consider and approve the objectives of S. 1323, through an amendment in the nature of a substitute. This would provide an emergency program of relief for those most severely affected by the present recession. The Congress, if the proposal in S. 1323 is enacted, will then be able to consider a more permanent improvement of our unemployment compensation laws and the other necessary long-range solutions for the economic problems which confront the Nation, in the assurance that those who now face economic disaster are, in some substantial measure, better provided for.

PAUL H. DOUGLAS.
ALBERT GORE.
EUGENE J. MCCARTHY.
VANCE HARTKE.

Mr. CLARK. Mr. President, this question will come before the Senate tomorrow. A number of the 18 Senators who joined in asking for hearings before the Finance Committee will present for the consideration of their colleagues amendments intended to make the House bill at least meaningful, to some extent, to those of us from States where unemployment is indeed serious. I hope other Members of this body will give these amendments their most earnest consideration tomorrow, and will ponder the documents which I have just placed in the RECORD.

GREEK INDEPENDENCE DAY

Mr. DIRKSEN. Mr. President, tomorrow will be Greek Independence Day. All independence day celebrations have their symbolic significance to each nation, but some mean more to certain peoples, and because of their distant antiquity, certain ones are surrounded with a sublime halo, and their celebrations have become something like sacred national festivities. This is particularly true of Greek Independence Day, for a number of reasons. In the first place, the idea of independence, as understood in the West today, had its birth in Greece, and Greeks were the first to appreciate and enjoy its benefits to the full. It is true that they lost it in the course of their long history, and were subjected to alien rulers for many centuries. Yet they never lost sight of its value, and remained among the first struggling for freedom and national independence.

In the second place, while their oppressors have suffered defeats and loss of prestige in the community of nations, they have maintained, even when subjected to the inhumanly oppressive yoke of their alien masters, their unquenchable yearning for freedom, and have always been ready to sacrifice their all for its attainment. Therein is the true greatness of Greeks against those who have held their sway over them for centuries and administered Greek affairs as that of a conquered province.

In 1821, 138 years ago, when a band of brave and patriotic Greeks staged the revolt against the Ottoman Turks, all Greece was suffering under the heel of its conquerors, and some thought that it was most foolhardy, almost suicidal, to challenge the authority of a powerful and ruthless government. But these Greeks, through their bravery and dauntless courage, proved that their critics were wrong, and they, in their fight for a sacred cause were right. For more than 6 years they carried on the fight for freedom and independence against heavy odds, and with the aid of their friends, they succeeded in attaining their goal. After the Battle of Navarino on October 20, 1827, Greece was assured its independence, and the last of Greece's invaders were finally expelled from Greek soil.

Today Greece still clings to the independence regained 138 years ago, and all Greeks stand guard in their beleaguered homeland against Communist totalitarianism. On the anniversary celebration of their independence day, I wish them power, peace, and prosperity, and firm resolution to fight the forces of evil as manifested by totalitarianism.

LEVYING AND COLLECTION OF TAXES AND ASSESSMENTS

Mr. MANSFIELD. Mr. President, is morning business concluded?

The PRESIDING OFFICER. Morning business is concluded.

Mr. MANSFIELD. Mr. President, what is the unfinished business?

The PRESIDING OFFICER. The unfinished business is S. 643, which, under the rule, will be laid before the Senate at 2 o'clock. However, it can be taken up at this time by unanimous consent.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the unfinished business be laid before the Senate.

The PRESIDING OFFICER. Is there objection? If not, the Chair lays before the Senate the unfinished business, which will be stated by title.

The LEGISLATIVE CLERK. A bill (S. 643) to amend the act entitled "An Act relating to the levying and collecting of taxes and assessments, and for other purposes," approved June 25, 1938.

HOLDING OF 1964 OLYMPIC GAMES AT DETROIT, MICH.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 111, Senate Joint Resolution 73.

The PRESIDING OFFICER. The joint resolution will be stated by title.

The CHIEF CLERK. A joint resolution (S.J. Res. 73) extending an invitation to the International Olympic Committee to hold the 1964 Olympic games at Detroit, Mich.

The PRESIDING OFFICER. Is there objection to the present consideration of the joint resolution?

There being no objection, the Senate proceeded to consider the joint resolution (S.J. Res. 73) extending an invitation to the International Olympic Committee to hold the 1964 Olympic games at Detroit, Mich., which had been reported from the Committee on Foreign Relations, with amendments, on page 1, line 6, after the words "United States", to strike out "joins in the invitation of the United States Olympic Association to the International Olympic Committee to hold" and insert "would welcome the holding of", and, at the beginning of line 10, to strike out "at Detroit, Michigan;", so as to make the joint resolution read:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That, whereas the United States Olympic Association will invite the International Olympic Committee to hold the Olympic games in the United States at Detroit, Michigan, in 1964, the Government of the United States would welcome the holding of the 1964 Olympic games in the United States and expresses the sincere hope that the United States will be selected as the site for this great enterprise in international good will.

SEC. 2. The Secretary of State is directed to transmit a copy of this joint resolution to the International Olympic Committee.

The amendments were agreed to.

Mr. HART. Mr. President, unanimous support of this invitation to hold the 1964 Olympic games in the United States will be helpful to those who have spent much time and energy in the effort to obtain the invitation.

In these very troubled days, when it is sometimes difficult to make plans for the future, it is nevertheless well to look forward to the holding of the 1964 Olympic games at Detroit, Mich. One cannot guess what the world situation will be in 1964, but we hope that the Olympic games will be held in the United States then, and we in Michigan will be proud to act as host.

The PRESIDING OFFICER. The question is on the engrossment and third reading of the joint resolution.

The joint resolution (S.J. Res. 73) was ordered to be engrossed for a third reading, read the third time, and passed.

The title was amended, so as to read: "Joint resolution extending an invitation to the International Olympic Committee to hold the 1964 Olympic games in the United States."

ONE HUNDREDTH ANNIVERSARY OF ESTABLISHMENT OF SUPERIOR COURT OF MASSACHUSETTS

Mr. SALTONSTALL. Mr. President, after consultation with the minority and majority leaders, I ask unanimous consent to have the Senate consider at this time, without reference to committee, House Concurrent Resolution 109, commemorating the 100th anniversary of the establishment of the Superior Court of Massachusetts. I do so in the name of the junior Senator from Massachusetts [Mr. KENNEDY] and myself. The House agreed to the resolution yesterday.

The PRESIDING OFFICER. The Chair lays the concurrent resolution before the Senate. Is there objection to its present consideration?

There being no objection, the concurrent resolution (H. Con. Res. 109) was considered and agreed to as follows:

Resolved by the House of Representatives (the Senate concurring), That the Congress extends its greetings and felicitations to the Commonwealth of Massachusetts upon the occasion of the one hundredth anniversary of the establishment and existence of the Superior Court of Massachusetts, and expresses the appreciation of the American people for its outstanding leadership in the never-ending struggle to achieve the ideal of liberty and justice for all.

The preamble was agreed to.

INTERNATIONAL COURT OF JUSTICE

Mr. HUMPHREY. Mr. President, as I understand, morning business has been concluded and the Senate is now proceeding to the consideration of regular legislative business. Is that correct?

The PRESIDING OFFICER. The Senator from Minnesota is correct.

Mr. HUMPHREY. Mr. President, I desire to speak today on the need for strengthening the United Nations as an effective instrument of world peace, and to propose a way in which the United States may contribute to this end.

In these days of great world crisis and strife, with nations armed with deadly weapons of mass destruction, our attention must be focused on the peaceful means of settlement of international disputes.

I believe that the United Nations represents our greatest hope for a just and lasting peace and a world in which the rights of mankind are protected and nations will work together to elevate the living standards of the people.

The United Nations, since its chartering in 1945, has achieved a record of significant accomplishments. I have spoken on the fine record of the United Nations many times in the past several years, and I shall not review this record here today.

Rather, I wish to discuss one of the most disappointing aspects of the work of the United Nations. I refer to the United Nation's Court—the International Court of Justice. This Court, established as a forum whereby international disputes would be resolved by law, has had all too little opportunity to fulfill this function. In the 13 years since it was established, the International Court of Justice has in fact decided only 10 cases. I repeat, 10 cases in 13 years.

By any standard, this is somewhat less than an impressive record of accomplishment. Here is a court made up of 15 judges who are each paid $20,000 a year, and yet it has decided less than one case a year.

Of all the United Nations organs, the International Court of Justice has by far the least impressive record. To me this is indeed tragic. For in this day and age the rule of law in international affairs should be looked upon as one of the main ways of peacefully settling disputes between nations.

More and more people are coming to the realization that the terrible alternative to the settlement of international disputes by law is suicidal warfare.

The words of the President of the United States in his state of the Union message of this year deserve our careful and thoughtful consideration:

All peoples are sorely tired of the fear, destruction and the waste of war. As never before, the world knows the human and material costs of war and seeks to replace force with a genuine rule of law among nations.

It is my purpose to intensify efforts during the coming 2 years in seeking ways to supplement the procedures of the United Nations and other bodies with similar objectives, to the end that the rule of law may replace the rule of force in the affairs of nations. Measures toward this end will be proposed later, including a reexamination of our own relation to the International Court of Justice.

It is this rule of law and examination of our own relation to the International Court of Justice which I wish to discuss today.

As the leader of the free world nations, the United States has a major responsibility to give its full support to the United Nations. Indeed, without such support, the United Nations would be severely weakened as an effective instrument for the advancement of international peace, justice and cooperation.

That this is true is evidenced by the dismal record to date of the International Court of Justice to which I have already referred. A record due in large measure to the United States refusal to give full backing and support to the Court. The damage was done, I regret to say, by the U.S. Senate when in 1946 it added to the so-called Morse resolution, Senate Resolution 196, which

declared our acceptance of the compulsory jurisdiction of the International Court of Justice, six words—"as determined by the United States."

I want the RECORD to be quite clear, Mr. President, that the Morse resolution, the resolution for which the Senator from Oregon [Mr. MORSE] worked, did not contain those six words "as determined by the United States," so my reference to the Morse resolution is not to be considered in any way critical of that particular resolution, but rather of the amendment which was affixed thereto during the discussion on the floor of the Senate.

Before discussing in detail this 1946 resolution and the reservation clause, I believe it would be well to very briefly give some background information on the International Court of Justice.

The first court to settle international disputes on a worldwide basis was the Permanent Court of International Justice as established by the League of Nations. Forty-two nations accepted this Court's compulsory jurisdiction. Unfortunately, the U.S. Senate refused to accept such jurisdiction, thereby severely crippling the effectiveness of the Court in settling of international disputes.

Mr. President, it goes without saying that if an international instrument is to be effective, it must have the support of the great powers, and indeed it must have the support of the leader of the free nations, the United States of America.

In 1945, the United Nations Charter was approved. Chapter XIV of the charter provided for establishment of the International Court of Justice to replace the Permanent Court of International Justice. Under article 93 all members of the United Nations are ipso facto parties to the statute of the International Court of Justice. However, no member nation is bound by compulsory jurisdiction of the Court without a specific declaration accepting such jurisdiction.

Less than half of the 81 member nations of the United Nations have by declaration accepted compulsory jurisdiction of the Court in specified areas of international law stated in the statute of the Court. It is of interest to note that none of the Communist nations in the United Nations, including the Soviet Union, has accepted compulsory jurisdiction of the Court.

Senate Resolution 196, which gave the consent of the Senate to the United States accepting compulsory jurisdiction of the court, was introduced by the distinguished senior Senator from Oregon [Mr. MORSE], in November of 1945; it was cosponsored by 14 other Senators from both parties. On December 17, 1945, our present Under Secretary of State, Christian Herter, then a Member of the House of Representatives, introduced a joint resolution, House Joint Resolution 291, under which the President would be authorized and requested by the Congress to deposit a declaration with the United Nations accepting the jurisdiction of the Court as outlined in article 36 of the statute. The limitations imposed upon the grant of jurisdiction were in essence the same as those provided for in the Senate resolution offered by the Senator from Oregon [Mr. MORSE].

Hearings were held on Senate Resolution 196 in July of 1946 by a subcommittee of the Foreign Relations Committee. Not a single witness appeared before the subcommittee to oppose the resolution. Moreover, not a single letter or telegram was received in opposition to the resolution.

Strong support for the Morse resolution came from such organizations as the American Bar Association, the American Society of International Law, the Federal Bar Association, the Federal Council of Churches, the General Federation of Women's Clubs, the National Education Association, the National League of Women Voters, the American Association of University Women, the National Council of Catholic Women, and the National Council of Jewish Women.

It was against this backdrop of overwhelming public support that the subcommittee decided to report the resolution favorably to the full Foreign Relations Committee with only one minor amendment. On July 24, 1946, by a unanimous vote, the committee reported the resolution to the Senate for favorable action in exactly the form recommended by the subcommittee.

The resolution was considered by the Senate on August 1 and 2; it was approved August 2 by a vote of 62 to 2 and the Senate adjourned sine die some 2 hours later. During consideration of the resolution three amendments were adopted. The resolution as adopted by the Senate reads as follows:

Resolved (two-thirds of the Senators present concurring therein), That the Senate advise and consent to the deposit by the President of the United States with the Secretary General of the United Nations of a declaration under paragraph 2 of article 36 of the Statute of the International Court of Justice recognizing as compulsory ipso facto and without special agreement, in relation to any other state accepting the same obligation, the jurisdiction of the International Court of Justice in all legal disputes hereafter arising concerning—

(a) The interpretation of a treaty;

(b) Any question of international law;

(c) The existence of any fact which, if established, would constitute a breach of an international obligation;

(d) The nature or extent of the reparation to be made for the breach of an international obligation: *Provided*, That such declaration shall not apply to—

(a) disputes the solution of which the parties shall entrust to other tribunals by virtue of agreements already in existence or which may be concluded in the future;

(b) disputes with regard to matters which are essentially within the domestic jurisdiction of the United States as determined by the United States; or

(c) disputes arising under a multilateral treaty, unless (1) all parties to the treaty affected by the decision are also parties to the case before the Court, or (2) the United States specially agrees to jurisdiction: *Provided further*, That such declaration shall remain in force for a period of 5 years and thereafter until the expiration of 6 months after notice may be given to terminate the declaration.

The most controversial amendment, offered by former Senator Connally, added to paragraph (b) the words "as determined by the United States" to the language of the resolution which excluded from cases on which compulsory jurisdiction would be accepted "matters which are essentially within the domestic jurisdiction of the United States." This amendment was adopted by a vote of 51 to 12.

Referring to the action of the Senate in 1946 on the so-called Morse resolution, many observers at the time felt that this amendment, by reserving to the United States the right to decide whether or not a matter is essentially domestic, rather than having the Court make such determination, demonstrated a lack of confidence on our part in the competence and integrity of the new Court.

The Committee on Foreign Relations in its report on the Morse resolution, stated the argument against any such restrictive clauses as follows:

> The question of what is properly a matter of international law is, in case of dispute, appropriate for decision by the Court itself, since, if it were left to the decision of each individual state, it would be possible to withhold any case from adjudication on the plea that it is a matter of domestic jurisdiction. It is plainly the intention of the statute that such questions should be decided by the Court, since article 36, paragraph 6, provides:
>
> "In the event of a dispute as to whether the Court has jurisdiction, the matter shall be settled by the decision of the Court.
>
> * * * A reservation of the right of decision as to what are matters essentially within domestic jurisdiction would tend to defeat the purposes which it is hoped to achieve by means of the proposed declaration as well as the purpose of article 36, paragraphs 2 and 6, of the statute of the Court."

Mr. Dean Acheson, who was then Under Secretary of State, in testifying on this resolution expressed the same conviction when he said:

> The rule of law becomes effective to the extent that states agree to submit themselves to the decision of the Court in all cases involving questions of law. It cannot become effective if states may reserve this decision to themselves, regardless of the degree of good faith by which they govern their actions.

At the time it was predicted by some that the U.S. Senate by accepting the Connally amendment was setting an undesirable precedent. Our present Assistant Secretary of State for International Organization Affairs, Francis O. Wilcox, made just such a prediction in an article entitled "The United States Accepts Compulsory Jurisdiction," which appeared in the October 1946 issue of the American Journal of International Law. Here is what he said on this point:

> It is, of course, one thing for a state to accept the compulsory jurisdiction of the Court and exclude from the grant of authority those disputes which relate to domestic issues. But it is a horse of an entirely different color when a state reserves to itself the right to decide whether or not a matter is essentially domestic. For in such an event it may, by the simple expedient of labeling a dispute "domestic," set itself up as judge in its own case and successfully deny the jurisdiction of the Court.
>
> Particularly impressive to some is the argument that the United States—avowedly desirous of encouraging a regime of law and order in the world—has set an undesirable precedent. Now that the ice is broken other states no doubt will want to accept article 36 under much the same conditions. Or, if we may change the figure of speech, the pebble the United States dropped into the pond may

result in an ever-widening circle of states each claiming the right to determine for itself whether the Court has jurisdiction over cases in which it is involved. And it will be difficult indeed to establish a regime of law and order in the international community so long as each state reserves to itself the right to decide what the law is. Thus it may be said that the declaration of the United States has introduced a new political element into the concept of compulsory jurisdiction—an element which may tend to weaken the authority of the Court.

It should also be pointed out that the United States will be barred in any event from proceeding against other states in cases which they consider within their domestic jurisdiction. This result stems from the reciprocal nature of article 36 which has been discussed above.

Mr. Wilcox's dire prediction has, unfortunately, been fulfilled. Other nations followed our example and have gone on record with similar reservations.

The effect of such reserve clauses has been to seriously limit the role of the International Court of Justice in settling international disputes. As I have stated, the Court has decided only 10 cases in 13 years.

I hasten to add that this sorry record is not due to any fault of the Court itself. The 15 judges are competent and qualified men. The Court is ready and willing to aid in the settlement of international disputes. The reason for the ineffectiveness of the Court lies principally in the various reservation clauses contained in the declarations of nations which have accepted the jurisdiction of the Court.

The United States, and in particular the U.S. Senate, cannot escape responsibility for the Court's ineffectiveness.

The distinguished lawyer, Charles S. Rhyne, past president of the American Bar Association, and presently chairman of the committee on world peace through law of the American Bar Association, in an address delivered on March 10, assessed the blame quite candidly when he said:

I am therefore firmly convinced that one of the major causes for the empty court room of the United Nations Court is the Connally reservation which was created by the U.S. Senate, is maintained by the U.S. Senate, and can be removed by the U.S. Senate. * * * Every report I have seen by the many experts who have studied this situation agrees that the Connally reservation has emasculated the usefulness of the Court and rendered it impotent as an instrument for world peace. The cancerous effect of the Senate's action has spread as other nations have copied it; it has an everwidening scope. The tremendous responsibility of the U.S. Senate for continuing through this reservation to stifle use of the United Nations Court is a most serious one when one considers the value of and need for any mechanism which can aid in preventing war under present world circumstances. The Connally reservation is unsound in principle and effect and should be eliminated.

Mr. President, this is a strong statement indeed. A statement of a highly respected and learned lawyer—a man not given to making reckless or rash statements. Mr. Rhyne is a sound and realistic student of international affairs, and his views cannot be casually dismissed. Mr. Rhyne's forceful address indicates a realization of the peril we face in view of the lethal weapons of mass destruction, and the absolute necessity, in the name of self preservation, that we bolster the available means of settling disputes by means of law rather than force.

Mr. KEATING. Mr. President, will the Senator yield?

Mr. HUMPHREY. I yield.

Mr. KEATING. I appreciate very much the courtesy of the Senator from Minnesota in yielding to me. I have been listening to his remarks with great interest. I think he is making an excellent presentation of a very important problem which we face.

I am obliged to leave the Chamber to attend another meeting. Therefore I very much appreciate the courtesy of the Senator from Minnesota in yielding to me for the purpose of introducing two bills.

(Mr. KEATING introduced two bills, which, together with remarks thereon, appear elsewhere under the appropriate heading.)

RECOGNITION OF JURISDICTION OF INTERNATIONAL COURT OF JUSTICE IN CERTAIN CASES

Mr. HUMPHREY. Mr. President, it is indeed unfortunate that our great Nation, which is genuinely dedicated to furthering understanding between nations and working toward a just and lasting peace, should bear responsibility for having created one of the major roadblocks to an effective International Court of Justice.

I believe that the time is long overdue for the Senate to remove this reserve clause in the Morse resolution, Senate Joint Resolution 196 of the 79th Congress, 2d session. I introduce at this time a resolution to amend the Morse resolution by deleting from paragraph (b) the words "as determined by the United States."

I do not claim that by eliminating this restrictive clause from the Morse resolution we will be assured of a peaceful world. There is no "cure all" remedy in today's troubled world. I do believe, however, that we cannot afford to leave a single stone unturned in our effort to develop the means for advancing international cooperation, understanding and peace. One of these means is through the strengthening of the international law through the International Court of Justice.

Mr. President, I believe that a nation which is based on the principle of law and on the rule of law, rather than the rule of men, surely should take the lead in establishing an International Court of Justice with the power of law.

In the absence of such action by the Senate, I fear that the International Court of Justice will remain an ineffective instrument of world peace without authority to dispose of certain disputes between nations by way of peaceful judicial determination.

It is time that we in the United States Senate acted to remove the shackles which restrict the United Nations Court. I hope most earnestly that prompt consideration will be given to this resolution I offer today.

I say most respectfully that I hope the administration will support my resolution. I hope that the State Department will come before the Committee on Foreign Relations and in its testimony offer its support to the resolution.

The resolution is submitted within the spirit of the state of the Union message of the President and is also submitted within the context of the words which the President spoke concerning the improvement of international law.

I ask unanimous consent that the resolution which I am submitting, along with the address of Charles S. Rhyne, delivered before the Ninth Annual Conference of National Organizations called by the American Association for the United Nations, on March 10, 1959, at the Statler Hotel in Washington, D.C., be inserted at this point in the RECORD.

The PRESIDING OFFICER. The resolution will be received and appropriately referred; and, without objection, the resolution and address will be printed in the RECORD.

The resolution (S. Res. 94) was referred to the Committee on Foreign Relations, as follows:

Resolved (two-thirds of the Senators present concurring therein), That Senate Resolution 196 of the 79th Congress, 2d session, agreed to August 2, 1946, is hereby amended to read as follows:

"*Resolved (two-thirds of the Senators present concurring therein)*, That the Senate advise and consent to the deposit by the President of the United States with the Secretary General of the United Nations, of a declaration under paragraph 2 of article 36 of the Statute of the International Court of Justice recognizing as compulsory ipso facto and without special agreement, in relation to any other state accepting the same obligation, the jurisdiction of the International Court of Justice in all legal disputes hereafter arising concerning—

"a. The interpretation of a treaty;

"b. any question of international law;

"c. the existence of any fact which, if established, would constitute a breach of an international obligation;

"d. the nature or extent of the reparation to be made for the breach of an international obligation.

"*Provided*, That such declaration shall not apply to—

"a. disputes the solution of which the parties shall entrust to other tribunals by virtue of agreements already in existence or which may be concluded in the future; or

"b. disputes with regard to matters which are essentially within the domestic jurisdiction of the United States; or

"c. disputes arising under a multilateral treaty, unless (1) all parties to the treaty affected by the decision are also parties to the case before the Court, or (2) the United States specially agrees to jurisdiction.

"*Provided further*, That such declaration shall remain in force until the expiration of 6 months after notice may be given to terminate the declaration."

The address presented by Mr. HUMPHREY is as follows:

THE CASE OF THE EMPTY COURTROOM: THE EFFECT OF THE CONNALLY RESERVATION ON THE INTERNATIONAL COURT OF JUSTICE

(Address by Charles S. Rhyne, chairman, Committee on World Peace Through Law, American Bar Association, before the ninth annual conference of national organizations called by American Association for the United Nations, Statler Hotel, Washington, D.C., March 10, 1959)

Being asked to address this Ninth Annual Conference of National Organizations called by the American Association for the United Nations is an honor I greatly appreciate. Your discussion of the opportunities for

U.S. leadership in the United Nations in 1959 is most timely and highly important to every American. U.S. leadership never has been more greatly challenged; for today the issue of war or peace depends in large part upon that leadership.

The United Nations has performed magnificently as the most meaningful organization of its kind in the history of mankind. *Though* never envisioned as an absolute tranquilizer for all world frictions, the United Nations still is man's best existing hope for a peaceful world. But the world of 1959 has somewhat outrun the United Nations Charter of 1945. This informed audience knows of the areas in which the United Nations has functioned well and those in which it is inadequate and outdated. Drastic revision and strengthening are required when so many crises—Berlin, for example—are being handled outside the United Nations. Today I should like to express one lawyer's view of the most frustrating and exasperating of all United Nations experiences, that is, the United Nations Court—the International Court of Justice—the Court with the empty courtroom.

Of all the organs of the United Nations, the International Court of Justice has—through no fault of its own—the poorest record. Conceived as a forum where law would be applied to resolve international disputes, it has had little opportunity to function as such.

When a Court of 15 judges—each paid $20,000 yearly plus certain expenses—decides only 10 cases in 13 years, something is wrong, and badly wrong. Any one of our own district judges often decides that many cases—and more—in 13 hours. Admittedly United Nations Court cases are sometimes complicated, yet in that 13-year period more than 13,000 cases—many of extreme complexity—have been docketed and disposed of by the nine judges of our Supreme Court. And they have heard oral argument in more than 1,300 of those cases.

There are many ways of advancing international cooperation and peace but none is more certain to achieve abiding success in the long run than the method of able and dispassionate judicial determination. A judicial determination creates a widespread sense of confidence and trust, for it connotes fairmindedness to all men. Despite almost universal agreement on this, United Nations members have not inclined toward use of the rule of law in the International Court of Justice.

Although the rule of law has played an almost insignificant part in the deliberations and actions of the agencies of the United Nations, it is the best method yet developed to bring order and stability to the affairs of man. This truth was long in realization by man. In the beginning of human history disputes between man and man were decided by brute force. Back through the unnumbered centuries fists, sticks, stones, and finally guns constituted the mechanism for decision. But in civilized nations today thousands of courts resolve disputes between man and man under the rule of law. Millions of cases are decided yearly by courts, local, State, and national. But internationally there is only the International Court of Justice, and it stands empty 99 percent of the time. Between nations brute force still prevails as the ultimate resolver of disputes. The International Court of Justice is the most unused instrumentality for peace that exists in today's world. The stark tragedy of this empty court, and its causes, and what should be done, are my story today.

Let me first sketch for you in outline form the history of international courts. We begin with arbitration courts, which at one time seemed to offer great promise. In 1794 England and the United States signed the Jay Treaty providing for arbitration of disputes arising under the treaty which ended the Revolutionary War. In the next 100 years arbitration as a method for peaceful settlement of disputes received worldwide acclaim and impetus, and 177 international disputes were thus resolved. In 1899 a Permanent Court of Arbitration was created at the Hague. It is not actually a court but a panel of 150 persons available for selection as arbiters to decide a particular dispute. In 1905 the Hay Treaties to implement this advance toward the rule of law were submitted to the U.S. Senate. The Senate refused to ratify the treaties without including a reservation requiring the submission to it for its advice and consent of the final agreement for each arbitration. Despite efforts of successive Presidents of the United States to persuade the Senate to give up this crippling requirement, the Senate adamantly refused. The Senate's action stultified the movement toward the use of arbitration and that movement has withered and almost died. Since 1899 the Arbitration Court has handled only 24 cases, and only 4 of these since 1931.

In 1920 the League of Nations established the Permanent Court of International Justice. This was the first judicial body with even putative jurisdiction over international disputes on a worldwide basis. Forty-two nations accepted this court's compulsory jurisdiction, but the U.S. Senate refused to accept the court's jurisdiction in any respect. This action of the U.S. Senate was an almost fatal blow to the court's prestige and usefulness. Service as judges on this court by Charles Evans Hughes, Frank B. Kellogg, John Bassett Moore, and Manley O. Hudson made up in part for the action of the U.S. Senate. This league court rendered 32 judgments and 25 advisory opinions.

In 1945 the International Court of Justice replaced the Permanent Court of International Justice. All United Nations members are automatically parties to the Statute of this Court. But only 33 nations, including the United States, are at present bound by declarations accepting compulsory jurisdiction of the Court in specified areas of international law stated in the Statute of the Court. The U.S. declaration, however, contains the important Connally reservation, which was attached to our declaration by the Senate. It excepts from the Court's jurisdiction disputes with regard to matters which are essentially within the domestic jurisdiction of the United States as determined by the United States of America. The Senate amendment thus reserves to the United States the right to determine unilaterally what is a domestic issue.

No one for one moment has ever urged, or ever should urge, United Nations Court jurisdiction over domestic questions. Under the terms of the United Nations Charter the Court has no jurisdiction over domestic matters. The Court itself would summarily decline jurisdiction over any domestic subject. It is the distrust of the Court implied in the U.S. Senate's words "as determined by the United States" which destroys the prestige of, and confidence in, that Court. There is an old maxim that "no man should judge his own case." Surely we can trust the United Nations Court to decide what is domestic and what is international rather than ourselves judging each case to which we are a party.

The United Nations Court, through its procedures and in its decisions, compares most favorably with the best national courts. The emptiness of the courthouse at The Hague is not, therefore, due to a lack of an adequate and competent court, nor can it be due to a lack of international disputes. Every day the page-one headlines of every newspaper demonstrate the existence of the latter. Nations avoid the United Nations Court not because they really prefer war to resolution of disputes in that Court, but because they lack confidence in their ability to get a decision there even if they file a complaint. This brings me back to the Connally reservation:

President Truman, in urging Senate ratification of the United Nations Charter, including the Statute of the International Court of Justice, said:

"When Kansas and Colorado have a quarrel over the water in the Arkansas River they don't call out the National Guard in each State and go to war over it. They bring a suit in the Supreme Court of the United States and abide by the decision. There isn't a reason in the world why we cannot do that internationally."

Kansas would hardly file a complaint against Colorado in the Supreme Court if Colorado could kill the complaint by advising the Court that Colorado had decided not to allow the Court to pass upon the issue. Yet, this is exactly the kind of thing for which the Connally reservation provides, and under the United Nations Court's statute this reservation is a two-way street. Any time any other nation is sued by the United States in the United Nations Court all the defendant nation need do is to notify the Court that it considers the complaint to be within its domestic jurisdiction, and the Court must dismiss the complaint. The most recent illustration was the complaint for $1,300,000 in damages filed by the United States in the United Nations Court against Russia for shooting down one of our unarmed airplanes over the Sea of Japan. Russia filed an answer saying this shooting was within her domestic jurisdiction. The U.S. complaint was then summarily dismissed by the Court. It is obvious that this boomerang effect of the Connally reservation is disastrous to the rule of law internationally. The crippling and blighting effect on the United Nations Court of this reservation is clear.

I am therefore firmly convinced that one of the major causes for the empty courtroom of the United Nations Court is the Connally reservation which was created by the U.S. Senate, is maintained by the U.S. Senate, and can be removed by the U.S. Senate. Such removal has been recommended by the American Bar Association and the Attorney General of the United States. Soon, I hope, the President of the United States, as promised in his state of the Union message, will send a similar recommendation to the Senate on this subject. Every report I have seen by the many experts who have studied this situation agrees that the Connally reservation has emasculated the usefulness of the Court and rendered it impotent as an instrument for world peace. The cancerous effect of the Senate's action has spread as other nations have copied it; it has an ever-widening scope. The tremendous responsibility of the U.S. Senate for continuing through this reservation to stifle use of the United Nations Court is a most serious one when one considers the value of and need for any mechanisms which can aid in preventing war under present world circumstances. The Connally reservation is unsound in principle and effect and should be eliminated.

No one can dispute the fact that as presently operated the United Nations Court does not live up to its full potential. Changes are essential to make it more acceptable, effective and useful. And there are reasons for its present situation other than the Connally reservation. These are chiefly things the Court itself could remedy.

The statute creating the Court allows it to sit—in its discretion—anywhere in the world, and in chambers of three or more judges. So far it has sat only at The Hague. The inaccessibility of the United Nations Court causes great expense for nations litigating at a distance. An informed estimate of at least $200,000 each was given recently as the probable cost for two Latin American countries to send lawyers, witnesses, etc., to The Hague. Lack of knowledge of the

jurisdiction, procedure, and precedents of the Court are also reasons why it is not used by nations to settle their disputes.

The Court should make known its willingness to sit elsewhere than at The Hague. The entire Court, or even a chamber of the Court, should sit more or less constantly at United Nations headquarters in New York. Its advisory jurisdiction would be used then more than it is now, and law would move more to the forefront in the deliberations of the United Nations. To save expense the Court should also announce that cases will be heard henceforth in or near the place where they arise.

The movement toward a true international rule of law, like other movements, will realize its objective only through the pressure of public opinion. Just think of the possibilities for calm and considerate use of law in the United Nations Court in disputes such as the Suez crisis, the border incident between Spain and Morocco, the fishing rights controversy off Iceland, and similar differences now fought out in the arena of power politics and backstage diplomacy or by armed might. The focused power of world opinion which forced an end to the use of arms at Suez could—if properly and justifiably directed—so crystallize as to force reluctant nations to take their disagreements to the United Nations Court for decision. The spotlight of public opinion must be cast upon the Court's potential so that people will cry out "Go to Court, not to war," when war-causing disputes flare up. At present, the public at large does not even realize that the Court exists. That situation must end.

Our world of today has outgrown many concepts of the past in the fields of science and technology, and so it is with law and court machinery. They too can grow to meet modern needs. In a world of disorder law can provide security. Law cannot be remote from reality. We must burst the bounds within which law has been applied in the past and thereby put bounds around war in a gradual way until it is erased. To put the rule of law above nations internationally is essential to peace in the world.

Making the United Nations Court more effective would be a giant step forward toward world peace. As the Court proves its usefulness in resolving disputes in the world community this experience will have an irresistible pull on the neutral and uncommitted nations of the world to take part in such an application of the rule of law. Substituting law in the Court for war's bloodbath is an idea that all men everywhere can comprehend and applaud. Underdeveloped nations want peace as they know war would obliterate their plans and hopes for quick economic and other progress. These nations will be greatly drawn to any system that can achieve and maintain peace, thus insuring the order and stability they need.

What about Russia? As a nation which operates under the rule of force, Russia has never welcomed application to her international disputes of the rule of law in courts. She has violated nearly every international agreement to which she is a party but never agreed to have the United Nations Court or any impartial body pass upon her violations. She relies upon a system of force, subversion, and blackmail threats of war. That system the application of the rule of law would destroy and she knows it. Russia constantly seeks prestige and respectability in the eyes of the world. If Russia failed to use international law courts when others were doing so, this failure would prevent Russia from achieving and maintaining that much desired status of respectability—and Russia knows that it would.

In visits with lawyers of Asia and Africa this January, I learned that Russia's propaganda aimed at these nations is being blunted and destroyed by the appeal of the rule of law. Law to these realists stands in stark contrast to what communism offers. These lawyers emphasize their recognition of the fact that Russia's plan to end war is to make the world 100 percent Communist. They scorn communism as a system built upon constant and continuous domestic and international conflict. Law to them means individual freedom, order, peace, and stability for all men who live under its rules. Communism offers slavery and constant turmoil. We must highlight this message in every possible way. One way is to spotlight the rule of law as our plan for peace.

Russia can, indeed, be stripped naked of friends by the powerful appeal of an effective plan for world peace through law. In fact this plan might even shrink or make a few holes in the Iron Curtain itself. When in Yugoslavia last summer we were led to believe that lawyers there respect and want to expand the rule of law, and increase use of the United Nations Court. While Russian lawyers and judges advised us during our visit there last July and August of their interest in exploring an expanded role for the U.N. Court they hardly spoke for the Kremlin. Lawyer influence is now small in the U.S.S.R. By snuffing our war-causing disputes among our friends and allies, by its pull on the neutrals and uncommitted, and by its undoubted adverse effect on the international Communist conspiracy an expanded role for the U.N. Court would be a success despite the Kremlin's opposition.

Nations which have been accustomed to settling their disputes by hard bargaining with little regard for justice or law must be made to realize that it is to their advantage in the long run to submit their disputes for decision by impartial judges under the rule of law. The idea of the supremacy of law over physical violence must ultimately be decisively accepted and put into practice by mankind.

The U.N. operates now as an alliance of sovereign nations with each nation maintaining its sovereign right to do exactly as it pleases. Nations by adopting the rule of law as the standard of conduct for nations internationally would not give up their cherished sovereignty but would exercise it affirmatively for the benefit of mankind. Sovereignty is therefore not a bar to the application of law in the U.N. Court to international disputes. In our shrunken world, unlawful action igniting war by any nation is something we can no longer afford.

Of all the ideas advanced for a peaceful world none has greater promise than the rule of law. Secretary of State Dulles, on January 31, 1959, in the last speech he made before his illness, called for "the substitution of justice and law for force," saying: "This is a relatively recent concept and even today many do not accept it." But the Secretary and many of the world's great men are urging acceptance of this concept to save the world from nuclear annihilation.

Mr. Henry R. Luce recently told the fellows of the American Bar Foundation:

"The people of the world feel—and feel deeply—that today's sinister balance of power, this peace-by-mutual-terror in which we live, is a dead end. Literally a dead end. And what question is more urgently asked—from New York to New Delhi, from Akron to Accra—than: Is there no way out?

"The rudely realistic answer, of course, is: No; there is no way out. The invention of the most horrible weapons of destruction is that fateful aspect of human ingenuity which is irreversible. The secrets unlocked can never be sealed again.

"But if there is no way out, there must be something else; a way forward. This must be a way that leads toward mastery and control, in the name of justice and liberty, over the new forces unleashed by science.

"This is the way of the law."

Mr. Luce's statement echoes the words of one of America's most revered lawyer-statesmen, Elihu Root, who in 1915 said:

"It was during the appalling crimes of the Thirty Years War that Grotius wrote his De Jure Belli et Pacis and the science of international law first took form and authority. The moral standards of the Thirty Years War have returned again to Europe with the same intolerable consequences. We may hope that there will be again a great new departure to escape destruction by subjecting the nations to the rule of law."

President Woodrow Wilson put our task well when he said:

"What we seek is the reign of law based upon the consent of the governed and sustained by the organized opinion of mankind."

President Eisenhower, in his state of the Union message of this year, said:

"All peoples are sorely tired of the fear, destruction, and the waste of war. As never before, the world knows the human and material costs of war and seeks to replace force with a genuine rule of law among nations.

"It is my purpose to intensify efforts during the coming 2 years in seeking ways to supplement the procedures of the United Nations and other bodies with similar objectives, to the end that the rule of law may replace the rule of force in the affairs of nations. Measures toward this end will be proposed later, including a reexamination of our own relation to the International Court of Justice."

Earlier the President, in a message to the International Law Association, said:

"The world no longer has a choice between force and law; if civilization is to survive, it must choose the rule of law."

We pride ourselves in the United States on being a nation which operates under the rule of law, a nation where law is supreme over government. We also pride ourselves on looking forward, not backward. If the world is to move forward from operation under the rule of force (that is, operation under the threat of nuclear extinction) to operation of governments of nations under the rule of law, the United States must take the lead. No other leader appears on the horizon to take up President Eisenhower's challenge and lead nations to a choice of the rule of law, rather than extinction of civilization through continuing to choose the rule of force. Certain it is that the Kremlin will never assume such leadership, as the rule of law and communism are antitheses. If the United States is unwilling to operate under the rule of law internationally, how can we persuade others to do so? Our promise of leadership must not be that we will keep on building more and more dreadful weapons to destroy the world. Our promise of leadership must be that we will develop the formula to place nations internationally under the rule of law.

This is said with full realization that we must keep on winning the arms race until something replaces arms as a preventive of world conflict. As Mr. Luce has said so well, law can be that preventive by providing mastery and control in the world community in the name of justice and liberty and humanity. Mankind yearns overwhelmingly for something more than even more horrible weapons for his destruction. Let us answer this yearning by concrete plans for world peace through law. And actions speak louder than words. One place for quick, meaningful action which will lead toward law and away from force is for the U.S. Senate to tell the world that at long last it has eliminated the Connally reservation. That would be a message to the people of the world that we are now willing to put our Nation under law both nationally and internationally. Other nations who sincerely desire peace, who have copied the Connally reservation,

would surely be inspired by our example to eliminate it, and law would begin to replace weapons before the current arms race ends—as have all such races—in the explosive holocaust of war.

The lawyers of the world are now engaged in the greatest concentrated effort in world history to formulate a program of substantive action to achieve world peace through law. No such worldwide marshaling of lawyer brainpower and manpower to put nations under law internationally has ever before been attempted. The American Bar Association's Committee on World Peace Through Law is cooperating with the legal profession of other countries in this great effort. Experts on language, literature, religion, education, architecture, art, science, and medicine have thought universally for many years. Lawyers are now doing the same. The meaning of this movement to mankind's future is incalculable.

The program to put nations under the rule of law internationally involves many more steps beyond the proposed first step, which is removal by the U.S. Senate of the Connally reservation as a barrier to the door of the U.N. Court. The world's lawyers are putting together a whole program of procedures and institutions which in sum total should enable nations to so exercise their sovereignty as to create a lawful world. We of the legal profession are wholeheartedly dedicated to this big push for peace through law. A concentration of technological and medical brains brought a cure for polio, split the atom, put satellites aloft, and accomplished many of the great scientific advances of our day. Who can say that the same technique in the field of law will not now achieve a breakthrough in man's age-old quest for peace?

I urge as a program for our 1959 U.N. leadership with respect to the International Court of Justice that:

1. The U.S. Senate be urged to remove from the Connally reservation the words "as determined by the United States."

2. The U.N. Court be urged to move to U.N. headquarters in New York.

3. The U.N. Court be urged to announce that henceforth all complaints will be heard in or near the country or countries where they arise.

Supremacy of the rule of law within nations has transferred sovereignty from ruler to the ruled and has created man's most cherished possession, individual freedom under law. Supremacy of the rule of law between nations—placing supremacy of law over supremacy of capacity to destroy internationally—can be a most meaningful exercise of national sovereignty to achieve freedom from the scourge of war. Let us hope and pray and work together for the arrival of a law day for the world—a day when law will replace weapons in the control of the fate of humanity.

Mr. JAVITS. Mr. President, I compliment my colleague from Minnesota on the speech he has just made and on the resolution he is submitting. I know Mr. Rhyne, former president of the American Bar Association. He has been for a long time a spokesman for the idea of rule of law in the world rather than the rule of force.

There are tremendous possibilities in juridical action in settling questions of dispute which perplex the world. Interestingly enough, the Russians themselves have a considerable interest in juridical matters and in the way in which courts determine controversies. There may be possibilities in that connection, even with them, which yet remain unexplored.

I am therefore delighted to note that my distinguished colleague from Minnesota, who occupies such an important place on the Committee on Foreign Relations, should raise this very important and interesting question. I hope we may all have an opportunity to cooperate and to help him in this effort.

Mr. HUMPHREY. It is my understanding that the State Department has demonstrated considerable interest in this kind of proposal. I believe it is a proposal which will receive vast public support in the United States.

At a time when the Soviet Union seems literally to be blackmailing its way with threats and forces in central Europe, it would be a good time to invoke the rule of law and obedience to law and justice through law.

That is exactly what Mr. Rhyne is attempting to do. I am deeply grateful to the distinguished Senator from New York, who is an outstanding attorney, for his very helpful and friendly contribution.

Mr. JAVITS. I thank the Senator from Minnesota.

Mr. HRUSKA. Mr. President, I should like to join with the Senator from New York in his words of commendation just spoken concerning the article and the viewpoint of Mr. Rhyne. When Mr. Rhyne was president of the American Bar Association, he carried this message of the rule of law to many bar associations, including that of Nebraska, incidentally, where I first heard him speak on this subject. It is heartening to know that he, and others with him, are taking this step into international spheres, where there is so much need for the type of philosophy he espouses and action based upon it.

HOW TO GET ELECTED TO CONGRESS

Mr. HUMPHREY. Mr. President, there were a good many highly interesting political campaigns last fall. One in particular was that of KEN HECHLER, who was elected to Congress from West Virginia's Fourth District. KEN HECHLER, in winning, had to overcome the distinct handicap of having lived in the State for little more than a year when he announced as a candidate in the Democratic primary against two native-born sons.

The story of KEN HECHLER's campaign to victory appears in the April issue of Pageant magazine. It is fascinating reading and should give encouragement to others who have wanted to take an active role in politics.

Last Saturday it was my privilege to address the Democratic Women's Day program in Charleston, W. Va. I always enjoy visiting the Mountain State. It is truly a lovely part of our country, and its people are warm and generous. West Virginia can be proud of the men and women who have represented the State in the Congress throughout the years. They can take special pride in our colleagues, Senator BYRD and Senator RANDOLPH, and of men in the House such as Representative KEN HECHLER.

I ask unanimous consent, Mr. President, that the article from Pageant magazine entitled "How To Get Elected to Congress" be inserted at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW TO GET ELECTED TO CONGRESS

(By Howard Cohn)

There is a theory that college teachers are cloistered, impractical men. Like theatrical critics who write no plays and book reviewers who write no books, they are suspected of being head-in-the-clouds idealists who could never successfully practice what they preach.

It is easy to visualize, then, the smiles that creased the faces of seasoned politicians in West Virginia early last spring when a lanky, effervescent political science professor named KEN HECHLER, who had lived in the area only a year and had never run for office in his life, boldly declared himself a candidate for the Democratic nomination for Congress in the State's Fourth Congressional District.

The skeptical smiles have since disappeared. For the professor is Representative HECHLER now, as the result of what one veteran newsman called "the shrewdest personal electioneering I've seen in 23 years of campaign coverage."

Mr. HECHLER went to Washington, where he is now starting his 2-year term, despite the absence of many of the qualifications practical politicians clutch closest to their hearts. He was a stranger in a section of the State where residents take deep pride in local ancestry. He was a plain-looking, bespectacled bachelor of 44 with no pretty wife or adoring children to parade before the television screens. He entered the primary against two native-born sons without the backing of any local politician and lacking the support of organized labor, which is a power in West Virginia Democratic circles.

Opposing HECHLER in the general election was a two-time Republican Congressman who was also a distinguished obstetrician. Dr. Will E. Neal had been bringing West Virginia babies into the world for more than 50 years. "I delivered the voters," the incumbent Representative would remind his campaign audiences. "It is up to you to deliver the votes."

Because HECHLER overcame all of these handicaps—and even managed to turn some into assets—it is safe to say that if he ever finds time to teach another class in political science, the front-row seats will be filled with hard-bitten politicians anxious to absorb knowledge from a person who proved that his theories about winning elections are as valid as their rules ever were.

KEN HECHLER—he never uses his baptismal name of KENNETH—says that the incredible idea of his running for Congress probably took root in the give and take of teacher-student discussions that have always featured his college classes.

He had come in January 1957 to Marshall College in Huntington, W. Va., as a substitute for a political science professor who was taking a one-semester leave of absence. HECHLER's arrival was greeted with interest because he already had a sturdy and rather picturesque reputation in academic circles.

Born in Roslyn, N.Y., of parents who were and are stanch Republicans, HECHLER received his bachelor's degree from Swarthmore College in 1935, and a master's the following year from Columbia University in New York. His master's thesis, titled "Will Roosevelt Be Re-elected?" is remembered at Columbia both for its great over-all length—350 typewritten pages—and the brevity of its final chapter, which contained the single word: "Yes."

In 1937 HECHLER became an instructor in political science at Columbia. A friendly, informal man, he made a practice—which

he continued throughout his teaching career—of developing unusual stunts to enliven his subject matter. One of his most popular gimmicks was making phone calls to leading political figures which his classes could overhear by means of an amplifier hooked onto the telephone.

While teaching at Columbia, the young instructor earned a Ph. D., making him Dr. HECHLER, and went on to aid Judge Samuel Rosenman, Franklin Roosevelt's principal speech writer, in compiling several long volumes of F.D.R.'s public papers and addresses. HECHLER already had left the party of his parents to become a confirmed Democrat.

HECHLER entered the Army as a private at the outbreak of World War II, earned a commission in the tank forces, and eventually became a major and combat historian in the European Theater of Operations. After the war he taught at Princeton where, again, his classes were tremendously popular. There followed, in succession, jobs as a researcher-writer on President Truman's White House staff, associate director of the American Political Science Association, and research director for Adlai Stevenson's 1956 Presidential campaign.

It was with this varied and impressive scholarly background that HECHLER accepted his temporary assignment at Marshall, a medium-sized, State-supported college in southwestern West Virginia. When surprised friends asked why, HECHLER replied that he had wanted for a long time to savor life in a small community. In his White House job, he had prepared briefs on every area the President planned to visit. West Virginia, with its mountainous scenery and natural resources, had struck him as a State with an undeveloped, potentially great future.

HECHLER quickly became a student favorite at Marshall. Though Dr. HECHLER in class, he was usually "KEN" outside.

"He was," says a fellow faculty member, "the type of professor students consider a regular guy. But while he may have won some of his popularity with gimmicks—once he served breakfast in class—he never forgot his role as a teacher. The students really worked for him."

HECHLER'S cardinal principle as a political science instructor was to try to make his students active participants in the processes of government, regardless of which party they supported. "You are in politics whether you like it or not," he'd say. "If you sit it out on the sidelines, you are throwing your influence on the side of corruption, mismanagement, and the forces of evil."

"But as I urged my students to become active politically, my conscience started to bother me because I was not participating very directly myself," HECHLER says. "I liked Huntington and its people and had decided to settle in the city permanently. When a few students started suggesting—some laughingly and some seriously—that I should run for Congress, I brushed off the idea. Actually, though, I began to find the notion pretty appealing.

"I had been on the fringes of politics, except for the war interval, for almost 20 years without ever once experiencing the excitement that only a candidate for elective office can have. I felt I knew the congressional ropes because of my work in Washington, I had firm political ideas, and I frankly thought that I could be a valuable servant to the people of West Virginia if given the opportunity. Besides, I was intrigued by the possibility of seeing how well some of the theories I stressed as a teacher would work in a real campaign."

But under the pressure of earning a living, these thoughts almost faded from HECHLER'S mind in the autumn following the end of his teaching semester at Marshall. Settling down in Huntington as he had said he would, he served as a public affairs commentator on a local weekly television program. More important financially, he completed a book he had been writing about the dramatic crossing of the Ludendorf Bridge at Remagen, Germany, which gave Allied troops their first foothold on the east side of the Rhine in World War II.

"The Bridge at Remagen," published late in 1957, was an immediate success. A movie option was taken on it and it was sold to network television. With money coming along in sizable amounts, HECHLER began thinking again about politics. West Virginia was slated to be an important State nationally in the 1958 elections. There were two Senate seats at stake, in addition to the State's six seats in the House of Representatives.

HECHLER began suggesting to friends and local politicians that he might want to run for a House seat. They said the idea was crazy. Then, late in March 1958, with the primaries 4 months off and election day more than 7 months away, the Huntington Advertiser listed him as a possibility for the race.

HECHLER reviewed the situation briefly. He had lived in West Virginia only 14 months. He was barely known outside Huntington. No one, except for a few students, had shown any interest in seeing him run.

The day after the newspaper speculation appeared he gave the Advertiser a statement. "I never sat on the fence on any issue in my life and don't intend to start now," he said. "Sure I plan to run for Congress. That is definite. I will file for the Democratic nomination in the August primary."

The Fourth Congressional District of West Virginia sprawls over 10 counties in the western part of the State and touches both the Ohio and Kentucky borders. It is a diversified region of heavy and light industrial plants and a large farm population. Huntington, with some 90,000 residents, is by far its largest city and generally favors the Democratic line, but the district as a whole usually has gone Republican.

No sooner did he announce his intention to make the race than HECHLER proceeded to startle the district again by displaying the tireless energy of a professional basketball player. He was up every morning at dawn, rarely went to bed before midnight. In the long hours between, he toured every cranny of the 10 counties, ringing doorbells and stopping at stores, plants, on street corners to introduce himself to voters.

"Like everyone else," says Robert Burford, Democratic chairman of Cabell County, where Huntington is located, "I hadn't given KEN a chance for the nomination. Then one day in Charleston, I dropped in to chat with one of our candidates for State office. "Who in hell is this HECHLER?" he asked me. He went on to say the KEN had been dropping into creeks and hollows of his home county that no candidate for anything had bothered to visit in years. For the first time it dawned on me that he might win."

In some respects HECHLER was the prototype of the old-fashioned political campaigner. He toured the district in an attention-getting, red-and-white convertible covered with bold lettering announcing his name and candidacy. He had a campaign song to the tune of "Sugar in the Morning" that was as delightfully corny as campaign songs have been for generations. Sung usually by four Marshall coeds, it went in part:

"Put your 'X' on the ballot,
And if you do your part,
You'll have a darned good Congressman.
Who's for the young at heart."

There was no sense of conformity, however, in other HECHLER maneuvers. "I had always felt from my studies," he says, "that a candidate could win a good many more votes by stressing his own virtues than by leveling personal attacks on the opposition's character."

HECHLER not only refrained from attacking his opponents personally—he praised them. He described his two foes in the primary as "good, fine Democrats." In the general election HECHLER termed Republican Dr. Neal "an honest man of conviction. I respect him for his principles, even if I may not always agree with what he stands for."

HECHLER also took pains to stress his virtues in unique ways. By passing out hundreds of free copies of his book, "The Bridge at Remagen," he emphasized that he was an author of note. He ran newspaper ads carrying letters of praise from Harry Truman and former members of the White House staff to indicate his familiarity with national affairs. He referred again and again to his primary campaign as "the lonely battle" to point up the fact that he was running without any organized support, to win the sympathy he figured would be given an underdog. He produced character references showing that he had compiled a splendid war record and was an assiduous churchgoer.

The college professor who had launched his campaign without a prayer of success won the Democratic primary by carrying 7 of the district's 10 counties.

"And you know what he did the next morning?" says one surprised Huntington politician. "Why, he was standing outside a factory at 5 o'clock in the morning, thanking men who were reporting for work for voting for him and asking for support in the general election."

By winning the primary, HECHLER now had the backing of the regular Democratic organization and organized labor. He responded by forgetting his "lonely battle" to go straight down the line for the entire Democratic ticket.

Politically, HECHLER was a professed liberal Roosevelt-Truman Democrat who spoke frequently on the need to elect Democrats to cure "the Republican recession." And he still had a number of new tricks to unveil. He had campaign cards printed on the cheapest stock available. Printed under his name was the notation: "The recession makes it tough to print a better card."

When campaign funds ran low, he bought 10-second television spots instead of the 5-minute shows Dr. Neal was putting on. "We can't afford more television time," HECHLER would tell audiences solemnly in the few seconds at his disposal, "but I hope you'll vote for me anyhow."

The maneuvers brought appreciative smiles from the electorate. They also brought the kind of retaliation HECHLER expected and almost welcomed.

Early digs that he was a Johnny-come-lately, suitcase politician became more strident. In contrast to HECHLER'S courteous references to Dr. Neal, the Republicans made it a point to misspell his name at times as "Heckler," and one GOP campaign song ran in part:

"Visitor Heckler, we've been thinking,
What a State we'd really be,
If all the New York office seekers
Came to save us just like thee."

Replied HECHLER sweetly: "Isn't it wonderful that we live in a country where we are able to circulate such poems about our present and prospective public officials?"

Late in October, a Republican woman member of the State legislature leveled the bitterest attack yet. Asserting in a statement "that New York already has 43 Congressmen; why should we give them another one?" She charged that HECHLER had been sent to West Virginia by Americans for Democratic Action, the extreme left wing of the Democratic Party, to run for Congress.

HECHLER answered with a paid newspaper advertisement. He was not, he said, a member of ADA, and no individual or group had sent him to the State to run for Congress or any other purpose. Moreover, he expressed deep regret that the lady, "who was not herself born in West Virginia," had seen fit "to make statements which becloud the real issues." He also managed to weave in the Biblical commandment: "Thou shalt not bear false witness against thy neighbor."

HECHLER believes that his statement caused the attack against him to backfire into one of the most effective issues of his campaign.

Undaunted, the Republican leadership saved their heaviest ammunition until 4 days before the election. Now it was the Governor himself, Republican Cecil Underwood, who called a press conference to cut HECHLER down to size.

An investigation had shown, said the Governor, that campaign literature for HECHLER and copies of his book had been stuffed into surplus food packages the State distributed to the needy. Calling this "the most despicable display of political chicanery I've ever seen," the Governor said that "anybody who would play on the hardship of our people for his own benefit isn't worthy of West Virginia citizenship."

HECHLER still feels badly about this particular attack. He thinks it was pretty rough politics of the sort that keeps too many capable people from seeking public office. But publicly, the would-be Congressman again treated observers to the value of the nice-guy, high-level reply.

First of all, HECHLER disclaimed responsibility for putting campaign literature in food packages. Then he said that the Governor was a very fine gentleman who unfortunately had stooped to using words thrust in his hands by mud-slinging ghost writers. Finally, he brought out an autographed picture Underwood had given him before he entered the congressional race. "To Dr. HECHLER," read the inscription, "with appreciation for intellectual leadership you are giving to West Virginia—Cecil H. Underwood, Governor."

HECHLER spent most of election night and morning sweating out the returns at the Democratic county headquarters in Huntington. For several hours the race seesawed, but around midnight HECHLER forged into the lead. The professor from New York who had launched his campaign with little more than his own ballot to count had received more than 60,000 votes and won by 3,500.

After the election, HECHLER was back on the road again. Now the signs on his convertible had been changed to read: "Dr. KEN HECHLER—Your Servant in Congress," and he was busy thanking voters and asking them about their problems. "He's the only successful candidate I know who spent as much time seeking out people after the election as he did during the campaign," says County Chairman Burford.

Excluding money he would have earned if he had been working rather than campaigning, HECHLER figures the election cost him about $5,000–$6,500 for the primary in which he did not receive a single financial contribution, and another $1,500 in personal expenses for his battle against Dr. Neal.

He considers that the money was well spent for what he terms "the most exciting adventure of my life." And now that he has won his seat in Congress, he says that the campaign taught him nothing that differed very greatly from what he had observed in his years as a political science professor.

"Sure you need luck to win an election, and I had my share of it," he says. "But I believe more strongly than ever that, whatever the odds against him, a candidate has his best chance of winning by waging a clean campaign; by anticipating and taking advantage of attacks which are made by the opposition and by remaining honest to himself and his personality."

HECHLER says his goal now is to be an effective representative for the people of West Virginia's Fourth District. "After what he showed us as a candidate," says Burford, "we're expecting he'll prove to be quite a Congressman."

KEN HECHLER'S 10 RULES FOR CAMPAIGNERS

1. Pay attention to the average person.
2. Be true to your own personality.
3. Be constructive and campaign cleanly.
4. Turn every attack on you into an asset. Couple an immediate answer with your own constructive approach to the problem.
5. Remember—your most effective workers are under 20 (they're enthusiastic) and over 60 (their word is respected).
6. Avoid "strategy meetings" that cause dissension, waste time.
7. Venture forth around the district every day. Don't be "deskbound."
8. Don't tie your hands with job promises.
9. Don't promise the moon to pressure groups.
10. Be able to laugh at yourself and enjoy it.

Mr. KEFAUVER. Mr. President, I join with the distinguished Senator from Minnesota [Mr. HUMPHREY] in congratulating Representative KEN HECHLER and to commend the fine article about him published in Pageant magazine. It was most fitting that Mr. HECHLER be recognized in this fashion, because he represents what a real citizen should be in this country of ours. KEN HECHLER, before he was elected to Congress from West Virginia, gained widespread recognition as a stimulating and outstanding professor in the field of political science.

Throughout his teaching career, he used the vivid device of making phone calls to leading political figures which his classes could overhear by means of an amplifier hooked onto the telephone. This was an effective method of breathing life into issues of the day and bringing political leaders and students into close contact.

Time and again, he pounded home the basic lesson of good citizenship to his students in many classes:

You are in politics, whether you like it or not. If you sit it out on the sidelines, you are throwing your influence on the side of corruption, mismanagement, and the forces of evil.

Then KEN HECHLER took his own advice and ran for office himself. His honest and forthright campaign won the respect of the voters in his district—and won him the seat he now holds. I have known KEN HECHLER personally for many years. His is an example of citizenship that is well worth the praise of his constituents, his fellow citizens all over America, and of his colleagues in Congress.

THE BUDGET

Mr. BUSH. Mr. President, I ask unanimous consent that there may be printed in the RECORD following my remarks an editorial from the Washington Post of March 24 entitled "Stop the Games—Now."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STOP THE GAMES—NOW

The obvious Democratic attempt to unbalance President Eisenhower's 1960 budget by deferring various supplemental appropriations for the current year does the party little credit. Superficially, this strategy would enable the majority to say, "We're not the 'spenders'—look at all the cuts we made in the 1959 program." Later on, with the 1960 budget unbalanced, the same politicians could say, "It's not our fault. All we did was appropriate what the President asked for."

This is all very clever but much too clever and too tricky to be good politics. The fact that the President invited such monkeybusiness by his tortuously contrived balanced budget proposal— which depends in part upon similar bookkeeping legerdemain—is no excuse. The way to have dealt with this was to expose it forthrightly, and to vote the funds—and the taxes—that are needed.

As might be expected, the appropriation items that lack a "constituency" are taking the biggest beating. Thus the District of Columbia is faced with an early school closing and a cutback in such essential services as police protection if the irresponsible House Appropriations Committee actions are not reversed. Of much broader importance, the Development Loan Fund which is charged with carrying forward a vital aspect of foreign policy in many critical areas of the world, is threatened with a virtual shutdown for half a year or more—and a probable loss of momentum that would take much longer to regain.

Similarly, the Senate's decision to charge the new American subscription to the International Monetary Fund to the 1960 budget rather than the 1959 budget, as proposed, reeks with shortsighted political motivation. To time this important move, which is to be taken in concert with other IMF member nations, for narrow partisan purposes is demeaning to the whole fabric of American foreign policy.

When the House takes up the badly butchered supplemental appropriations bill today it ought to be aware of the exceptional and questionable procedures by which it was prepared. Instead of obtaining the judgment of the various regular expert subcommittees on these requests, the usual practice, the Appropriations Committee rigged up a special subcommittee to handle all of them—apparently to insure that the aforementioned political strategy would be carried out without fail.

The result is a most unrealistic bill based on gross misconceptions and distortions. For example, much is made of the fact that the Development Loan Fund has not actually expended much of its present $700 million fund and that a third of it is not even technically "obligated." But many Federal programs, like this one, have a long leadtime built into them. The fact is that virtually every penny of the Fund's money is firmly committed and that applications, carefully screened, are on hand for many times the $225 million in new authority sought for the current year.

Some liberal Democrats who would ordinarily be expected to support economic development assistance apparently seek to "teach the President a lesson" by slashing foreign aid in retribution for budget cutbacks in certain domestic programs. This would be bad politics, too, for it bespeaks an all-around insincerity of purpose and unstable judgment. Speaker RAYBURN'S agreement of yesterday to seek elimination by the House of some of the Appropriations Committee's cuts is welcome—if sadly belated.

At best the sponsors of this political maneuver have succeeded in thoroughly confusing the public at large, while they have disgusted those who follow these matters in some detail. Although it is late to undertake a graceful retreat, the congressional majority has an obligation to the country that it can sidetrack no longer. It ought to

begin today to vote funds on a basis of what is required, program by program, and after due appraisal of the economic outlook, consider revenue measures to match. The country is in no mood for bookkeeping games.

Mr. HUMPHREY. I wish to say that I, too, have read the editorial, and that I think it makes a great deal of sense.

Mr. BUSH. I am delighted to hear the Senator say that.

FEDERAL COMMUNICATIONS COMMISSION DELAY IN BOOSTER INQUIRY

Mr. McGEE. Mr. President, on February 11 the Federal Communications Commission asked their staff to prepare proposals for a modified rulemaking which would look toward the licensing of low-power VHF booster and translator systems. The February 11 ruling also called for proposals to modify sections 318 and 319a of the Communications Act by further legislation if this proved necessary.

Six weeks have passed since this announcement was promulgated. Thousands of people throughout the Rocky Mountain West are waiting for action. When is it going to be undertaken?

I ask unanimous consent that the report of Commissioner T. A. M. Craven, submitted to the FCC on November 4, 1957, be printed in the RECORD so as to demonstrate that the Commission has for some time been aware of the inequity of their policy of making all booster systems illegal.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

FEDERAL COMMUNICATIONS COMMISSION
INTEROFFICE MEMORANDUM

For: TV agenda.
To: The Commission.
From: Commissioner T. A. M. Craven.
Subject: Television boosters.
Recommended action: Adopt suggestions contained herein.

1. This memorandum summarizes the oral statement made by me to the Commission at its meeting on Wednesday, October 30, 1957, at which time, based on information obtained during my recent trip to Denver, Colo., for the purpose of investigating the situation with respect to television boosters allegedly being operated in the State on an illegal basis, I made certain procedural and rulemaking recommendations.

2. I should state at the outset that this memorandum does not treat of those forms of boosters which are installed by station licensees or by entrepreneurs for the purpose of extending existing service or for providing service for hire. Rather, it deals specifically with so-called boosters which are utilized in mountainous country to bring television programs to those areas which are denied reception because of the rugged terrain.

3. In the company of Mr. Bruce Longfellow, Chief of the Commission's Technical and Allocations Branch, I conferred on the subject of television boosters with Governor McNichols, ex-Governor Ed Johnson, Colorado Television Broadcasters, representatives of television broadcasters from the States of Wyoming and Montana, the president of a community antenna association, and the Commission's resident engineers in the Denver Office. All of those persons and groups are vitally concerned, in one way or another, in this electronic device which has become so important to many areas of the West in the past 2 years, during which time the Commission has used all the means at its disposal to put these boosters off the air.

4. In the course of its drive to achieve this end, the Commission has plagued outstanding residents of many Western States with legal action and threats thereof, instead of recognizing the dire necessity which has inspired them to use their ingenuity to bring television to outlying areas, and instead of taking constructive steps to assist them in their endeavor.

5. The Commission's activities in this connection have aroused such resentment throughout 12 Western States that the Governors thereof have conferred in Denver and stamped the Commission's course of action in this regard as grievous error. The situation in Colorado has become so critical that its Governor has been driven to challenge the Commission's jurisdiction in this matter. Rightly or wrongly, he has asserted State jurisdiction and is now licensing these boosters.

6. Based upon my observations and conferences in Colorado, it is my opinion that the Commission's first approach to this problem was precipitous, unduly rigorous, unrealistic, and was based upon a narrow interpretation of the Communications Act. Unfortunately, even its present proposals for correcting the situation fall far short of the mark. I am forced to agree with the Colorado television broadcasters and their engineers whose opinion it is that the stringent rules proposed by the Commission, after it belatedly recognized the absolute need for television boosters in certain rugged terrain, are infeasible, unrealistic, and totally unacceptable to the public. In fact, as I see it, the present proposals are so unrealistic that they will do nothing toward solving the problem.

7. Because the Commission failed to recognize promptly the overwhelming public interest factor involved in providing practicable procedures for establishing television service to small communities in the mountainous areas of the West, it is my opinion that this agency has failed thus far to discharge its statutory obligation to make available, insofar as possible, to all the people in the United States, a rapid, efficient, nationwide radio system. Apparently, the Commission did not recognize soon enough that these low-power boosters are the only practicable way in which the people residing in these isolated areas can secure any television service whatsoever. We have been shortsighted in this connection, as remedial steps could have been and should have been taken long ago. If necessary, changes in legislation should be requested.

8. The Commission has approached the solution to this problem by insisting that these boosters be classified as television broadcast stations rather than essential elements of the receiving system. Actually, these boosters are of such low power that they approach (without quite achieving it) a restricted radiation device classification. It is true that, while the low-power television booster has interference capabilities in terms of a very few miles, the restricted radiation device permitted by the Commission has interference capabilities in terms of only a few hundred feet. However, properly installed and operated, the low-power booster should not cause harmful interference to interstate radio communications. It seems appropriate, therefore, to classify them as limited radiation devices.

9. Accordingly, I submit the following recommendations:

RECOMMENDATIONS

(1) Reclassify small power boosters into a special category of "limited radiation devices."

(2) The rules should confine the use of these limited radiation devices to mountainous areas and to the localities therein which do not receive direct radio service.

(3) The rules should provide for a simplified application form and for a certificate of authorization which is not classified as a "station license."

(4) The application form should require a certified statement from the broadcast station licensee whose programs are utilized by the limited radiation device that he has investigated the location, is familiar with the type of equipment proposed, and definitely is of the opinion that the proposed operation will not cause objectionable interference to the service provided by the licensee station.

(5) The station licensee of (4) above should state that he will designate a qualified engineer to make periodical inspections to the limited radiation devices authorized pursuant to the requests passed upon by each licensee.

(6) The proposed rules should provide for type acceptance for this equipment. The standards for these types of equipment should be moderate and should include only those restrictions which are deemed essential to insure safeguards against out-of-hand interference and to insure limited radiation.

(7) The proposed rules should recognize only cochannel limited radiation devices.

10. If the Commission is unable to construe the Communications Act of 1934 as I suggest, it is recommended that the Commission seek immediate remedial legislative action, and at the same time issue a press release informing the public of its action.

T. A. M. CRAVEN,
Commissioner.

THE ARAB REFUGEES—A KEY TO SOLUTION OF MIDEAST TURMOIL

Mr. JAVITS. Mr. President, following the visit of so distinguished a person as Prime Minister Macmillan, we have a new face in Washington, that of young King Hussein, of Jordan. It gives us an opportunity to welcome this colorful young king and also to consider Mid-East policy, which I think has been sort of blacked out in this country as a result of our preoccupations with Berlin. Indeed, there is some opinion that Berlin is a Communist diversion to distract us from the Mid-East. I must say I do not agree with that opinion. I think it is a very critical and intense issue on its own; nevertheless, it is an indication of the fact that we have not been considering Mid-East policy, while the Mid-East remains just as explosive, just as much a tinderbox, as it has been for a very long time.

The visit of King Hussein to the United States affords us one very important opportunity for a discussion of the Arab refugee question.

Arab refugees constitute about half the population of Jordan, some 517,388 being there now, and constituting the most volatile portion of the population of that strife-torn land.

Mr. President, I have a report of an investigation by a subcommittee of the Senate Committee on the Judiciary dated March 16, 1959. It was a special subcommittee to investigate the problems connected with refugees and escapees. I ask unanimous consent to have printed as a part of my remarks the reference in the report to the Arab refugee situation.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

The refugee situation in the Middle East is the most critical in the world today. Mr. Henry Labouisse, the Director General of the Arab refugee program, has recently made a study and according to his figures, nearly 1 million uprooted Arabs are condemned to the grim death-in-life existence in refugee camps. These refugees from Palestine are distributed as follows:

Gaza	221,058
Jordan	517,388
Lebanon	102,586
Syria	92,524
Total	933,556

Mr. JAVITS. Mr. President, King Hussein has proved himself truly a monarch in his own land, but his enemies continue to endeavor to exploit the unrest among the Arab refugees as a means to subvert the Hussein regime. The best aid we can give this young king is to seek with him an early solution to the Arab refugee problem, which continues to be a most vexing question in the Mid-East.

The United States, as everyone knows, continues to have a prime interest in Mid-East peace.

We are beginning to understand a little better the picture which has surrounded the matter of peace in the Mid-East. President Nasser, in a speech broadcast from Damascus only the other day, chided the Iraqi regime of Premier Kassim for not joining with Nasser's armies to wage war against Israel late last year. This certainly contradicts the repeated propaganda contention of President Nasser that it is Israel which threatens the peace of the Mid-East.

Here we see President Nasser talking about plotting war itself in respect of this very area. This revelation follows closely on the heels of President Nasser's announced refusal to allow neutral ships passage through the Suez Canal in instances where they carry cargoes from or to an Israeli port, in violation of the principle of free passage through the Suez Canal.

The continued pressure by President Nasser on his brother Arabs in other states has confirmed that the Arab-Israel dispute is not the major issue which is the basis for Mid-East unrest. It rests, perhaps, on the ambitions of President Nasser himself. The Tunisians, the Sudanese, and the Jordanians have most recently, for example, rebuffed Egypt's own strong man.

The United Nations General Assembly will next meet in September of this year. It is expected that the General Assembly will at that time have in hand the study authorized by the Secretary General last year on the Arab refugee question in anticipation of the expiration of the United Nations Works and Relief Agency, now handling the Arab refugees, which expires on June 30, 1960. So the consideration of the Arab refugee question is most critical and most timely right now. Also, such consideration will be in keeping with the World Refugee Year, beginning in June 1959, which was established by a resolution of the United Nations General Assembly last December.

We should not avoid the consideration of the nettling problem of the Arab refugees simply by awaiting the results of studies and the fall meeting of the United Nations General Assembly. The intervening 6-month period allows too much time for the Communists to make further mischief in a sensitive area, as they have done in the past. The visit by King Hussein to the United States offers an excellent opportunity for a discussion of the problem. The fact that Congress is now in session, as it probably will not be in September, affords an excellent opportunity for the development of policy and for the enactment of legislation.

Settlement of the Arab refugee question is a step which can be achieved, and any step representing the initiative is important to us. Our great problem in international affairs is to take the initiative and act rather than to react to Communist pressure when it comes. By seizing the initiative in the Mid-East now, we can hope to overcome the handicap attributable to the Communist capability to strike with the totalitarian weapons of speed and surprise.

What is the situation with respect to Arab refugees? As I have said before, the United Nations Works and Relief Agency now handles Arab refugees. I am urging that the United States take the initiative and sponsor a resolution in the United Nations General Assembly calling for a resettlement agency to succeed the Works and Relief Agency when that agency expires on June 30, 1960; and that the maintenance of the Arab refugees thereafter, other than for resettlement, be made the responsibility of the Arab States in which the refugees are now located. I do not speak of the payments for maintenance. Payments for such maintenance, if any, would be made to these states by the new United Nations Resettlement Agency. The United States should make its contribution, as it has done before, to their maintenance. We are not talking about money; we are talking about responsibility. The reason for talking about responsibility is that that is the way in which to bring about a resettlement primarily in the Arab lands, where there is plenty of room, and where resettlement is not only practical but also constructive in economic terms.

I hasten to add that I believe, and believe very strongly, that Israel will need to make room for a fair portion of the Arab refugees. But not all the Arab refugees can continue to be sent to Israel now, as the Arabs have been contending all along.

A resettlement plan should have the following parts: First, it should require the Arab States to assume responsibility. Second, it should require Israel to assume responsibility. Third, it should require the world to take some responsibility.

Mr. President, it seems to me that just as heretofore we have tried to resettle refugees throughout the world by having various nations take their fair share, certainly we should try again in respect of the present situation, because that is the way in which we have successfully brought about resettlement in other cases—notably, in the case of the European displaced persons. I point with pride to the fact that in the Refugee Relief Act which we passed a few years ago we provided for the admission to the United States of several thousand Arab refugees from Palestine. So that inherent plan would also be the basis for some worldwide action, just as we acted in respect of the displaced persons of Europe.

Whatever may be the objections of Arab spokesmen to the proposition that the Arab refugees were made to leave what is now Israel by exhortations of the Arab leaders, who in 1948 asked them to get out of the way of the invading Arab armies in preparation for a triumphant return after the Jews had been pushed into the sea,—and that is a grim and ugly fact in connection with the 1948 exodus of the Arabs from Israel, who were induced to leave by the statement to which I have just referred—the unfortunate fact is that for 10 years there has been no Arab cooperation in their resettlement, and they have been used largely as a political dagger pointed at the heart of Israel. Recent reports indicate that 1,400 jobs for refugees went unfilled when exit permits were denied them by Arab host governments—host governments which also have rejected plans for extensive development programs for resettlement. Mr. President, there are other cases of embarrassment of the United Nations' agency—UNWRA—which is charged with the administration of this matter—for instance, when it was compelled by Syria and Lebanon to transport supplies for the refugees by railroad, rather than by the less expensive truck method—all directed toward making the work of the agency somewhat more difficult.

Mr. President, I believe it very proper that we recognize that a very much changed attitude is needed on the part of certain of the Arab governments. I repeat that the presence in the United States of King Hussein, who has aroused so much interest in our country, gives us an opportunity for discussion and reorientation in connection with this very important question. Such consideration and reorientation could be extremely valuable for us.

As I have stated, Arab refugees constitute almost half the population in Jordan, about 512,388 being there, with 221,058 in the Gaza strip, 102,586 in Lebanon and 92,524 in Syria, with an annual net increment of 25 to 30 thousand due to a continuing high birth rate. It is clear that the problem must be settled now.

The second most likely point of exploitation by the Communists in the Mideast is the shutting off of the vital oil supplies from that area which furnishes 80 percent of free Europe's imports. The West has had one dramatic lesson in this regard when the Suez Canal was blocked for 5 months; minor crises occurred when the oil pipeline was temporarily disrupted during the revolutions last July in Iraq and Lebanon. It is clear that establishment of alternative oil supply routes is absolutely necessary if we are to be free from the policy shifts

of President Nasser or the ferment stirred up by the Communists in the Near East area.

Israel has evidenced willingness to negotiate compensation for Arab properties, notwithstanding its heavy counterclaims against the Arab states which ejected 300,000 Jews since 1948 and deprived them of their property.

The problem of land could be quickly settled by the Arab governments, particularly Iraq, which has the resources in land and water and is underpopulated, and whose new revolutionary regime we have just recognized. A major effort by the United Nations and the United States to enlist its participation could prove most fruitful at this time.

Mr. President, let us consider, in turn, the various parts of the plan I have mentioned—first, in the case of the Arab countries themselves.

The problem of land could be quickly settled by the Arab Governments—particularly I may say, by Iraq, which has resources of land and water, and is underpopulated; and its new revolutionary regime has an opportunity to do new things in that country—things which perhaps the previous regime did not have an opportunity to do. A major effort by the United Nations, including the United States, to enlist the participation of the new regime in Iraq could prove most helpful at this time.

Also, in Jordan itself there are opportunities for public works, irrigation, and reclamation which can provide a basis for a fundamental resettlement of a very substantial number of the Arab refugees who are there.

Mr. President, I may say that all our efforts with respect of working out a suitably adapted and adequately financed Mid-East economic plan based on self-help and mutual cooperation can very well be tied into the whole matter of Palestine-Arab resettlement. For example, an Arab development corporation has been under discussion for a considerable period of time. It has not yet come to fruition. It seems to me that we cannot wait for that forever; and it may be necessary to start a new initiative in that regard and to cooperate with the Arab States which wish to cooperate in this effort, leaving the others, who did not wish to cooperate, out of any economic effort of this character. Somehow or other, the work must be gotten off the ground; and it is necessary to make a start with what we have.

As to Israel's position in this matter, I believe that Israel will take a reasonable number of Arab refugees suitable for repatriation, giving due consideration to the danger to its security by a possible fifth column.

Furthermore, it is estimated that as many as 100,000 former Arab refugees have, in one way or another, found their way back into Israel.

While we are on that subject, let me say that Israel has also evidenced its willingness to negotiate compensation for Arab properties, notwithstanding Israel's heavy counterclaims against the Arab States which have ejected 300,000 Jews since 1948, and have deprived them of their property.

Also Israel has already repatriated 25 to 30 thousand Arabs and in reuniting Arab families and by other means it is estimated as many as 100,000 former Arab refugees are now located in Israel.

Obviously the resettlement of the Arab refugees and providing alternate oil supply routes is not a complete policy for the Mid-East, but it is a key to unlock the door. It represents an initiative upon which the other elements of a policy even if more important can be built. The other elements of this policy should include the following:

First. A clear guarantee of Mid-East borders against direct or indirect aggression, preferably under U.N. auspices implemented by a U.N. peace maintenance force.

Second. A suitably adapted and adequately financed Mid-East regional economic plan based on self-help and mutual cooperation, and started with those who choose to cooperate even if this does not include all the Arab States.

Third. Special efforts to deal with the problem created by the nonviability of Jordan and by internal instability in Lebanon.

Fourth. Recognition of Israel as a strong Mid-East ally of the free world through an agreement under the Mutual Security Act allowing it to receive military assistance.

Fifth. Broad-scale activities in person-to-person exchanges and the establishment of technical training institutes and other institutions of higher education in the Mid-East.

One of the primary aspects of an initiative by the United States would be in respect of a regional economic plan for the area if this is taken up and implemented. There is every assurance that other governments will cooperate in the financing of such a plan. Notably, the United Kingdom, Italy, and Germany have already indicated their interest; and so has the International Bank for Reconstruction and Development.

It would also be essential to bring into Mid-East economic development and the resettlement of the Arab refugees the oil revenues of the Mid-East and the oil companies which pay them. These oil revenues aggregated $1.026 billion in 1957, and are an indispensable element of any Mid-East program.

Mr. President, it is argued, in conclusion, that the Arab States might not work with us, due to Arab nationalist pressure. However, in efforts to bring about regional economic development, and to settle the Arab refugees, we are not confined to the Arab States alone, but we should include the economic region involved, which would also bring in the cooperation of Iran, Libya, the Sudan, Tunisia, and Turkey, leaving the problems of an economic bridge to Israel to be solved for the present through the United Nations. Mr. President, I point out that the leaders of those other countries—Iran, Libya, the Sudan, Tunisia, and Turkey, which are outside the Arab bloc—have also led their peoples out of colonial status, yet with acceptance of their responsibilities in the civilized world, and without seeking to build personal power hegemonies.

Mr. President, I think that in connection with the present visit of King Hussein to the United States, the initiative which can be stimulated in respect of the resettlement of the Arab refugees—thus giving us a head start in connection with the situation which in September will be considered by the United Nations—is very valuable and very important; and not only do I hope very much that this matter will interest the administration, which will be conferring with the young King and his advisers; but I also hope it will again stimulate in our country an awareness and a discussion of our policy in the Mid-East, which still remains the tinderbox of the world and still is in a very serious condition. Mr. President, I trust very much that we shall not overlook it in our preoccupation with the real crisis which exists in Berlin or with other crises which the Communists may endeavor to foist upon the world.

CURRENT ECONOMIC POLICY

Mr. BENNETT. Mr. President, on March 18, the Senator from Tennessee [Mr. GORE] delivered a long and what I considered to be a very significant speech on the floor of the Senate. In the speech he indicated that he intended to have other things to say on the general subject of current economic policy; and he encouraged other Members of the Senate to make speeches in regard to this subject.

The speech of the Senator from Tennessee appears on pages 4440–4450 of the CONGRESSIONAL RECORD. Obviously his speech was very long. It covered a great many phases of our economic, fiscal, and monetary problems.

I am responding, in part, to his invitation to join in the discussion, and, in part, to my feeling that many of the things the Senator from Tennessee said in the course of his speech need amplification, and that as to many of them there are obviously differences of opinion.

The Senator from Tennessee indicated that he was anxious to have the problem discussed objectively. Certainly that is my basic approach.

As I read the 10 pages of the speech made by the Senator from Tennessee, I was impressed by the tremendous scope of subjects which is opened up by it. From reading the speech, it is understandable that the Senator from Tennessee did not have time for anything except generalities.

So I hope that in the weeks and months ahead the Senator from Tennessee will amplify and document his speech and, when necessary, will submit offers of proof for the material he presented.

Today, as I analyze the speech, it seems to me that it had three parts. Two related to each other, and the third was a kind of partisan political interlude. The first part of the speech was a statement of economic goals for our country as the Senator conceived them. The second part was a program he proposed for each of those goals.

Mr. President, I am happy to observe at this point that my friend from

Tennessee has come into the Chamber. I told him I was going to make this speech, and invited him to be present. I am happy he is here.

As I started to say, as I analyze the speech, part one was a statement of economic goals. Part two was a program to reach those goals. In between was material which, from my point of view as a Republican, was a more or less typical Democratic folk tale or fable. It was performed by a ballet, with chorus, with several other colleagues of the Senator joining in. As I get the plot of the fable, it is that the Republican "bad guys" used high interest rates to injure the little "good guys," whom the Democrats promised to rescue. That is particularly in character with the modern rage for "westerns" which separate the "good guys" from the "bad guys."

In making these observations, I should like to discuss first the objectives, then the proposed program to reach them, and, in the end, I wish to rewrite the folk tale and present my characterization of the "good guys" and the "bad guys."

The Senator listed three goals, with which I am in essential agreement. I quote from his own words. When I quote the remarks the Senator made during his statement, I shall not attempt to identify the page in the RECORD from which the quotation comes, since I have already identified the pages which contain the whole speech. The Senator stated as his first goal:

> A rate of economic growth sufficient to meet the requirements of national security and to provide full employment for our people.
>
> Second. The maximum degree of price stabilization and overall inflation control.
>
> Third. Efficient and equitable distribution of goods, income, and wealth.

In general, I think all Members of the Senate, and all officials of Government, and all private citizens would agree that these goals are significant, important, and worthy of the finest efforts of everyone who can make a contribution to them—growth, price stabilization, distribution of wealth—but I am sure the Senator from Tennessee will pardon me if I note that there are some significant omissions in these goals.

In goal 3, the distribution of wealth, there was no inclusion of the distribution of responsibility, the cost of government, the burden of production, and the general responsibility for creating the wealth which is to be distributed. I think those items belong properly in this general goal of distribution.

And more important than that, I feel the list of goals is incomplete without the addition of a fourth—the preservation of the American economic system, based on freedom and private capital, and on free markets, responding, to the greatest possible extent, to the law of supply and demand.

The only reference in the speech to free enterprise is toward the end, and comes in the Senator's comment on some remarks of the Senator from Minnesota [Mr. HUMPHREY] and the Senator from Alaska [Mr. GRUENING], who were among those who interrupted.

In making this comment, the Senator from Tennessee [Mr. GORE] could be interpreted as having contradicted himself. He said:

> And while it (Government) is hampering the potential of the great free enterprise economy of our country, which, if released from such artificial and restrictive policies—

I underline the words "artificial and restrictive policies"—

> could grow and afford employment opportunities to our people.

On the one hand the Senator from Tennessee asks us to free the economy so it can grow, and on the other hand, as I shall show in other references to his speech, he proposes programs which would have the effect of putting more restrictions on the economy.

I realize that in a speech of this type, which again I say is an introductory speech, to be followed by others in a series, it is impossible for one to cover the whole waterfront; but I hope, if my friend is to make more speeches, he will consider my interest in the preservation of the free enterprise system as one of the fundamental goals of our economy, along with growth, stabilization, and distribution.

I should like to turn now to the eight-point program which the Senator from Tennessee suggests should be adopted to assure success in meeting these goals.

The first point of his eight-point program calls for the Government to "unequivocally assert its sovereignty in the monetary field."

Point 6 asks for Government regulation of the prices of basic metals.

In fact, every point of his program calls for increased Government intervention—at least, that is the way I read it. If I have misinterpreted the speech of the Senator from Tennessee, I shall be happy to correct my statement.

So I say to the Senator from Tennessee, on the one hand he wants the removal of governmental intervention, and on the other the interposition of more Government intervention. Or perhaps he wants a reshuffling of the areas and weight of intervention.

I think it is especially important that these points be cleared up. In the first place, the American people love freedom and want it preserved. Certainly, it is one of their basic goals.

Second, some of the things the Senator from Tennessee has said in connection with other ideas might, unless corrected, leave the wrong impression. For instance, in talking about the ideas of Government economists to fight inflation, the Senator from Tennessee mentioned direct credit, wage and price controls, and commodity allocations. I read the statement carefully, and the Senator from Tennessee did not openly endorse such a program. He was not clear as to whether he was advocating it. So I am somewhat puzzled as to whether the Senator from Tennessee supports this approach or whether he opposes it, as I do.

It is interesting that on the same date, on page 4408 of the RECORD, appears the introduction of a bill by the junior Senator from Oregon [Mr. NEUBERGER] to give the President standby controls over prices, wages, and rents. So perhaps before the session is over we shall be able to have an opportunity to vote on that issue.

I referred a moment ago to the statement the Senator from Tennessee made with respect to ideas of some persons whom the Senator identified simply as economists. As I said, the Senator from Tennessee did not advocate or indicate his lack of interest in these proposals.

The Senator from Tennessee said:

> A second method of fighting inflation, according to the economists, is by imposition of direct controls on credit, wages, prices, and commodity allocations. Some of these, such as regulation of installment credit, have proven effective but to some extent unpopular. For various reasons, including its unpopularity, the direct controls approach is not being tried.

I hope it will never be tried in peacetime, but there is a nebulous area which I hope the Senator from Tennessee in the future will attempt to clear up. The Senator does not say he agrees with and advocates these things, nor does he say he opposes them. The very fact that the Senator brought them up and did not include freedom and free markets among his goals leaves him wide open to the suspicion that perhaps these are a part of the program.

I am sure the people have not forgotten the evils which grew out of the hated controls when we moved from wartime to peacetime. I believe the people will oppose them, and in fact reject any attempt to impose them again, particularly in peacetime.

With respect to the three basic goals which the Senator does include in his proposal, there are no specifics. I hope the Senator will tell us, for instance, what he considers to be an adequate rate of growth in this country, both vis-a-vis Russia and also with respect to the needs of our growing population and our hope for maintaining an increasing standard of living.

One of the phrases which is kicked around a great deal these days is the concept of "full employment." I think that should be spelled out, if the Senator can do so, so that we can relate it to the problem of growth.

Another question which occurred to me is, how does the Senator rate these goals in order of importance? It is obvious there must be some contradiction among them. Which does the Senator consider to be paramount? There are many other questions.

I should like to move on now to the questions which have been raised in my mind by the Senator's program. I should like to read the eight points which were contained in the statement and then discuss the points separately.

The Senator from Tennessee first said:

> To begin with, the Government of the United States—and I mean here the legislative branch, the executive branch, and independent agencies—must unequivocably assert the sovereignty, the prerogatives and the constitutional responsibility of the U.S. Government in the monetary field. So long as the Government itself proclaims its helplessness, we can expect to be victimized.

The Senator then said:

There is no such thing as a free money market, and there cannot be so long as the Federal Government is faced with the problem of financing and refinancing a public debt of the present magnitude.

That is the first step. The second is that the Government can stabilize interest rates.

Next, it is absolutely necessary for the Government, the whole Government, not just one agency of Government, to adopt a policy of interest rate stabilization and to let it be known far and wide that this policy will be vigorously prosecuted. A firm policy for stabilization will, in itself, have a stabilizing influence. This, in itself, might be sufficient. Without it, nothing will suffice.

The third step in the Senator's program is: All Government agencies must cooperate and coordinate on interest rate policies.

Third. The interest rate on Government bonds cannot be considered in isolation. All Government agencies must cooperate; and Government policies, economic and monetary, must be coordinated toward the goal of stabilization.

* * * * *

When obligations of the U.S. Government, not only those connected with the FHA and veterans' home loan programs, but others also—and a number of Federal agencies issue interest-bearing securities or guarantee payment of securities—compete with one another rather than cooperate with one another toward a national goal, then we have instability instead of stability.

The fourth step is the reasonable control and regulation of credit.

Fourth. To avoid undue pressure on the monetary system while interest rates are being stabilized, some reasonable control and regulation of credit, particularly consumer credit, would, in my view, be a helpful, if not necessary, part of a program for monetary stabilization.

The fifth suggestion is a new direction for Federal Reserve Board powers.

Fifth. It may be necessary to establish new machinery for the implementation of the policy I have outlined. At the very least, it will be desirable to modify and give new direction to the exercise of the broad, sweeping, regulatory powers which the Federal Reserve Board has arrogated to itself in the general field of attempted economic regulation through monetary controls. Nothing short of this will properly satisfy the constitutional responsibility of Congress in the monetary field.

At this point let me say that I am very much interested in the use of the word "arrogated," because I am sure the officials of the Federal Reserve Board will contend they are doing nothing which is not within the powers and responsibilities conferred on them by the Congress. As I shall try to develop in a little greater detail later, if this situation needs a change we in the Congress should change it. This is not a matter within the whim of the present members of the Board.

The sixth idea is the utility regulation of basic metals iron and steel—

Sixth. The Congress should promptly consider the application of utility-type governmental regulation of the price of basic heavy metals. I refer particularly to iron and steel. I am not today prepared to suggest the details of procedure and guidelines of such a utility-type regulation of basic metals or to reach a final conclusion as to its advisability. Only a careful committee study of such a legislative undertaking could properly develop such guidelines and final conclusions. I do suggest that we have found such utility-type regulation of railroads, airlines, trucklines, and electrictiy in the national interest and that this might be an effective means of stopping the inflationary rise of administered prices in the field of basic metals.

Seventh, the Senator proposes to establish a Monetary Commission.

Seventh, I suggest the creation of Monetary Commission, composed of the best minds available, from the Congress, from the executive branch of the Government, and from various walks of life. Such a commission could, in due course, present recommendations for other or additional steps and procedures.

Finally, the Senator presented a proposal for tax revision.

Mr. President, now I come to the eighth suggestion, which concerns action which Congress should take—and take soon. The Congress should promptly consider appropriate tax revision, to assure sufficient revenue for essential Government expenditures.

Mr. President, I should like to comment on these proposals not exactly in the order in which the Senator from Tennessee suggested them, because many of them are so related to each other, covering the broad problem of monetary policy, that I think they should be considered together.

Nos. 1 to 5 and No. 7 all refer to monetary policy. No. 6 refers to the utility type regulation. No. 8 refers to tax revision.

No part of the proposed program is directly related to the goal of growth, or the efficient distribution of goods. I am sure the Senator from Tennessee may feel that, indirectly, all these factors impinge on growth; and I agree with him. But I hope that since growth was the No. 1 goal, in his later presentations he will consider the economic climate and the economic policies which are necessary to produce the most desirable rate of growth, in the light of other considerations.

Since the Senator from Tennessee did not mention the goal of the preservation of the typically American free economic system, obviously he had nothing directly bearing on that subject. I hope that subject also will be discussed later.

Having presumed to suggest that the goals needed amplification, I venture to suggest that the Senator's program might well have further amplification. Even in that part of the program which refers to the goal of price stabilization, which absorbs most of the program, I feel that there is a very important omission.

All economists seem to agree that Government fiscal policy affects inflation, just as monetary policy does. The proposed program makes no mention of Government fiscal policy, except that in part 8 the necessity of tax revision is referred to.

In another part of the speech, as a passing comment, the Senator from Tennessee suggests the need for tax increases to reduce spending and/or produce price depressing budget surpluses.

Then he proceeds to discuss—and, from my point of view, attacks—the President's balanced budget goal. This is a problem on which there has been, is currently, and will continue to be, a great deal of discussion. I know that balanced budgets are politically vulnerable, perhaps, and to some extent politically distasteful to some of our Democratic colleagues, because the President continually refers to them. I note, too, that it is more pleasant to borrow and spend than it is to save and pay back on the account.

Within the past 10 days the senior Senator from Illinois [Mr. DOUGLAS] and I had the privilege of appearing on an hour-long television program, in which we found ourselves discussing the question of balanced budgets. We did not agree as to the pattern in which the balance should be achieved, but we did agree that, over a period of time, the budget must be balanced, and that it must be balanced on the average. In other words, we cannot continue going downhill forever.

It is interesting to observe that only 5 times since 1932 has our Federal budget been in balance. If we leave out the actual war years of World War II, our average annual deficits for this period have been about $3 billion. That figure is arrived at after accounting for the surpluses, after the peacetime surpluses are figured in. The question which bothers me is, How long can we continue on that basis?

The budget has been balanced five times in 27 years, five times in 20 peacetime years. I think the American people realize that, while we can occasionally live beyond our income, the day of reckoning cannot be forever postponed. Sooner or later it will confront us. I hope that in a later speech the Senator from Tennessee will make clear to us what his feeling is as to how often, or over what period of time, or in what pattern, the budget of the Federal Government should be balanced.

I should like to discuss briefly the ideas of the Senator from Tennessee with respect to monetary policies. They are involved in parts 1 to 5, and 7 of his program. First I should like to discuss part 7. That suggests the establishment of a Monetary Commission, which I assume to mean a bipartisan commission.

I am sure the Senator from Tennessee knows that the President has been suggesting such a procedure for several years, and he has attempted to persuade Congress to follow his suggestion. The Senator from Tennessee and the Senator from Utah are members of the Finance Committee, and for parts of 2 years, we engaged in an investigation by that committee which evolved in part from the unwillingness of Congress to establish the kind of bipartisan commission which I think we both have in mind.

This is what the President said in his economic state of the Union message in January 1957:

Essential to the stable economic growth we seek is a system of well-adapted financial institutions. I believe that the time has come to conduct a broad national inquiry

into the nature, performance, and adequacy of our financial system, both in terms of its direct service to the whole economy and in terms of its function as the mechanism through which monetary and credit policy takes effect. I believe the Congress should authorize the creation of a commission of able and qualified citizens to undertake this vital inquiry. Out of their findings and recommendations the administration would develop and present to the Congress any legislative proposals that might be indicated for the purpose of improving our financial machinery.

At the moment the Joint Committee on the Economic Report is beginning an inquiry. But I assume that that does not meet the standards of the Senator's suggestion; nor does it meet mine. I think we may well have reached the point in our economic history where we need the kind of broad study which was conducted in the first decade of this century and which eventuated in the creation of the Federal Reserve System and some other changes.

I turn now to the first part of the Senator's program and reread this much of it:

To begin with, the Government of the United States—and I mean here the legislative branch, the executive branch, and independent agencies—must unequivocally assert the sovereignty, the prerogatives, and the constitutional responsibility of the U.S. Government in the monetary field.

I am one of those who feel that each of the respective agencies or parts of Government—the legislative, the executive, and the independent agencies, where they are involved—is trying to carry out the responsibilities given to it, either by the Congress or by the Constitution.

I believe that the executive department is sincerely trying to live up to its responsibility for the management of the debt, and for the balancing of the budget. I assume the Senator from Tennessee may not agree with me, but I am sure that if the situation were reversed and we had a Republican Congress and a Democrat in the White House, the Republicans would probably be critical of the manner in which the Democrats were managing our program.

It is my point of view that the Federal Reserve is also living up to its responsibility.

I am a little disturbed by the use of the word "arrogate." I am surprised that it would be recommended that we scrap the mechanism of the Federal Reserve System for one more responsive to public pressure.

It has always been a matter of regret to me that the Senator's party, which properly takes the major share of the credit for the judgment and foresight which went into the Federal Reserve Act, should now be so critical of it. I have no knowledge that the Federal Reserve Board has arrogated to itself any responsibilities not provided in the Federal Reserve Act.

Testifying before the Committee on Finance on August 13, 1957, Chairman William McChesney Martin stated:

Broadly, the Reserve System may be likened to a trusteeship created by Congress to administer the Nation's credit and monetary affairs—a trusteeship dedicated to helping safeguard the integrity of the currency. Confidence in the value of the dollar is vital to continued economic progress and to the preservation of the social values at the heart of free institutions.

The Federal Reserve Act is, so to speak, a trust indenture that the Congress can alter or amend as it thinks best. The existing System is by no means perfect, but experience prior to 1914 suggests that either it or something closely approximating it is indispensable. * * *

That is the point of view of the Chairman of the Board of Governors. I am sure he considers himself a member of a group who are in favor of those principles, and I am sure that he is very careful to live within the responsibilities imposed by Congress. If new powers should be assigned, or a new pattern should be developed, that is the responsibility of Congress.

I should like to turn now to points 2 and 5 of the Senator's proposed program. Point 2 is that the Government must stabilize interest rates. Point 5 is that there must be a new direction for Federal Reserve power.

As I read the speech of the Senator from Tennessee the question which kept forcing itself into my mind was the one which I believe was very obvious during the hearings of the Committee on Finance: Have we reached the point where we should consider taking away the present independence of the Federal Reserve System and making it again subservient to the Treasury?

Between 1941 and 1951 it was subservient to the Treasury. This action was taken voluntarily by the members of the Board of Governors of the Federal Reserve System on Pearl Harbor Day, in order to make completely sure that the Government would be able to finance the war at the lowest possible cost, and that the time would never arrive when a Government bond issue could go without full subscription.

It took about 5 years after the war ended for the Federal Reserve to regain its independence. That was a long fight, and the man who led it, so far as the Senate is concerned, is our colleague from Illinois [Mr. DOUGLAS]. I am mentioning his name now, not to involve him in any debate, but to acknowledge his activity in that important undertaking.

If the Senator from Tennessee or anyone else feels that the time has come to go back to the relationship which existed in those 10 years, then I believe someone should introduce a bill providing for it; that we should discuss the bill in the Committee on Banking and Currency, and that the Senate should then face the challenge. Such action would repudiate Woodrow Wilson, the great Senator from Virginia, Carter Glass, and the lessons of many other countries that have taken what seems to me to be a fatal step in making their central banks subservient to the temporary fiscal policies of the party or government in power.

The second proposal of the Senator from Tennessee is that the Government must stabilize interest rates. As I read the speech, it seemed to me that this was the most striking, and that probably it could be described as the newest and most daring, idea in the speech.

Instead of stabilizing the value of the purchasing power of the money, the Senator from Tennessee proposes to stabilize its rent cost, that is, its interest. Because of the tone of the whole speech, I assume that in stabilizing the interest rate the Senator from Tennessee would stabilize it, if he could, at a rate lower than the present rate. That is borne out by what I called the folk tale or the fable. This raises a great many questions. This is, as I have said, the most startling and most challenging of the Senator's suggestions, and the one on which my mind has dwelt more than on anything else.

I should like to raise these questions and place them in the RECORD, with the thought that the Senator might wish to study his idea in opposition to them. The first is: How could the rates be stabilized? The only idea I could suggest is that the Federal Reserve be again required to support Government issues at par, which would make it possible for the Federal Government, the administration in power, to fix the interest rate on any of its offerings at any point at which it wished to fix it, with the assurance that the central bank would take them if the private market did not.

My second question is: At what rate would interest rates be stabilized? If we review the wartime experience, we find rates substantially lower than the present ones.

If political pressure—and I am not now pointing the finger at anyone—can be used to support the idea that rates of interest should be stabilized, then no matter at what point the rates are fixed the same pressure could be used to lower them beyond the initial point. It would become, in my opinion, a rather open target. A man could run for election by saying, "I support a rate of 2 percent interest for Government bonds." His opponent could say, "I support an interest rate of 1½ percent. I will save one-half percent on the interest charges." That is the problem, and I think it could be expected to arise.

If such a program were adopted, what would the effects be during the transition period? At the present time, many Government bonds are selling below par and thus matching the current interest rates. If under the proposed program of interest rates the new offerings were stabilized at 2 percent, for example, it would automatically increase the value of all bonds outstanding with 4-percent coupons. Such a suggestion could make a very substantial profit possibility for the holders of many Government bonds. If the change were made abruptly, it might completely disrupt the pattern of our trading in bonds. If it were desired to spread it out, how could it be spread out?

Can we find one or more examples in recent history of other nations stepping in and setting their interest rates at a particular point? What can we learn from our wartime experience with interest rates kept low deliberately by the arrangement with the Federal Reserve System?

Finally, are stabilized interest rates the same as stabilized purchsing power of currency. It is my opinion that stabi-

lized interest rates would produce exactly the opposite effect and would greatly unstabilize the pattern of the purchasing power of our currency. I believe that if interest rates were stabilized at a point substantially below the free market point, they would produce tremendous inflationary pressures.

Here is another list of questions. If this proposal were adopted, what effect would it have on the principle of free markets? The Senator from Tennessee has stated that he doubts we have a free market for money. What would this proposal do to the whole concept of a free market, both for money and for commodities? What would it do to commodity prices? What effect would it have on consumer inflation? What would it do to the market value of other bonds—industrial, State, and municipal?

I am wondering, especially if we embarked on a permanent program of pegged bond prices, which I think would be necessary to make stabilized interest rates, if it would be necessary to peg prices for municipal and State bonds? Such bonds have an advantage because they are tax free. The lower the rate at which interest rate on Federal borrowing would be stabilized the less significant would become the tax-free privileges.

What would happen to real estate mortgages? In fact, what would happen to the whole housing program? These questions intrigue me very much.

What would happen to our foreign exchange, our foreign trade, and the foreign investment of American capital? There is already what is to me rather disturbing and alarming evidence that American capital is being exported to manufacturers in other countries; that goods designed and developed by American research brains, are being priced out of world markets because of high costs and inflation. Some day I hope someone will make a study of the relationship between the increased price of American automobiles and the impact of foreign importations. From such a study, it would be interesting to learn what proportion of the foreign importations were actually made through the investment of American capital abroad. I think it is substantial.

What effect would the proposal of the Senator from Tennessee have on the business cycle? What effect would it have on taxation and spending in the Government fiscal policies? What effect would it have on the savings programs of individuals?

I was an officer of a small savings bank during the 1930's and through the war years. We reached the point, as the Senator from Tennessee may remember, where savings banks paid no interest on savings. They could not earn enough to pay any interest. If that situation should come about again—in fact, if it should threaten to become permanent—what would happen to life insurance programs, pension systems, savings banks, and building and loan associations? What would happen on that basis to the formation of new capital for expansion? Who will make capital available at low rate for the private market, if and when private savers are persuaded that there is no profit in saving?

I mention economic growth again in this list, because that was the Senator's first goal. I would be interested to know what effect it might have on labor-management relations.

The Senator discussed the problem of agricultural surpluses in his statement. I wonder what effect this kind of program would have on our agricultural program.

I repeat: I think the proposal to stabilize interest rates is the most important one the Senator from Tennessee makes. I hope he will have opportunities later, even involving one or two lengthy speeches, to develop the question. I have suggested areas in which I hope he can provide satisfying answers.

I shall read his proposal No. 3:

> All Government agencies must cooperate; and Government policies, economic and monetary, must be coordinated toward the goal of stabilization.

I am glad to see that the Senator has come out so strongly in favor of coordination in the matter of Federal monetary policies. Some financial legislation by Congress is inconsistent with other legislation. Under some circumstances bills are passed which have the effect of increasing the inflationary pressures on our program. Then Congress turns around and passes other bills which are intended to control such pressures. I think that is one of the problems which belongs to the Monetary Commission which the Senator has suggested should be established. So long as we operate in an atmosphere of catch-as-catch-can legislation, without any overall, long-range program into which we try to fit particular bits of legislation, then I think it is important that some agency undertake to develop that kind of program. Until that is done, I do not think it will be possible to eliminate the inconsistencies or the lack of coordination among the various functions of Government.

The Senator's fourth proposal suggests "some reasonable control and regulation of credit." I assume that must mean the passing of laws which would have the effect, under certain circumstances, of limiting the extension of credit. It seems to me that the Senator faces the task of resolving a contradiction, because if a permanent low interest rate monetary policy is adopted, it can only be maintained by making credit easier. Then if Congress turns around and adopts programs to control credit, we shall be working at cross-purposes.

At present a mechanism is provided in the Federal Reserve System, which is supposed to control credit by its power to restrain or to permit expansion of the volume of money. I should be very much interested to learn the Senator's reasons for abandoning the present program, if that should be what he proposes, and for adopting a new one.

I certainly recognize that if the program to stabilize interest is to be adopted, there will be a period of great unsettlement. In that period rather carefully worked out controls would be needed; otherwise I think there would be chaos.

It has been said that it is easy to get into the market. Anyone can do that. The smart person is the one who knows when to get out. I should think that would apply to the question of credit controls. It is easy to apply them, but it difficult to get rid of them. I remember how hard it was to get rid of the price, wage, and rent controls at the end of World War II. In fact, we did not get rid of them until the administration changed.

In another proposal, the Senator from Tennessee [Mr. GORE] has suggested a reshuffling of the makeup of the Federal Reserve Board—in other words, a new direction in the selection of the membership of the Federal Reserve Board.

For the record, Mr. President, let me say that the present Board of Governors of the Federal Reserve has seven members. They are recommended by the Chairman, and are appointed by the President, subject to confirmation of the Senate.

Section 10 of the Federal Reserve Act requires that in choosing the members, the President must give due regard to a fair representation of the financial, agricultural, industrial, and commercial interests, as well as the geographical divisions of the country. The Board members are appointed for 14 years, putting them beyond the reach of reappointment by the same President. The Chairman and the Vice Chairman are chosen for 4 years, but still keep their 14-year Board membership.

I would be interested to know how the Senator from Tennessee would change that set of specifications. That is not spelled out in his speech, and I assume it will come later.

Mr. LONG. Mr. President, will the Senator from Utah yield?

The PRESIDING OFFICER (Mr. MCGEE in the chair). Does the Senator from Utah yield to the Senator from Louisiana?

Mr. BENNETT. I yield.

Mr. LONG. Does the Senator from Utah have any knowledge of a time when the Federal Reserve Board has actually pursued policies diametrically opposed to those of the administration, during the administration of any President in recent times?

Mr. BENNETT. I think all through the period from 1946 to 1951 the Federal Reserve Board could be said in general to have been in opposition to the administration, because it was fighting as hard as it could to get its independence. In those days, the policy of the administration was to require the Board to continue in the relationship which the Board had voluntarily assumed at the beginning of World War II. So for those 5 years, in general, I think it fair to say that the Board was opposing the policy of the administration.

Mr. LONG. But I believe the Senator from Utah will agree that during that period the Board was following the policies of the Truman administration, although the Board, or certainly certain members of the Board, might have disagreed with those policies. Nevertheless, the Board was following the policies laid down by that administration.

Mr. BENNETT. It had no choice; it was bound by an agreement which the Board itself had voluntarily made. But it was doing the best it could to put itself in a position where it would no longer have to follow those policies.

Mr. LONG. But certainly the Senator from Utah will agree that the period 1946–51 was one in which the Board was, nevertheless, following the policies of the then President.

Does the Senator from Utah know of a period during which the Board has actually pursued a policy at variance with the policy of the occupant of the White House?

Mr. BENNETT. Obviously, I did not come here prepared to answer that question today. I shall be very happy to explore the answer to it, and to give the Senator from Louisiana whatever information I can obtain regarding it.

But I am quite confident in my own mind that we can find specific examples of divergencies between the policy of the administration and the policy of the Board.

Mr. LONG. I raise this question because of my own view of the matter. Frankly, it is my view that the Board should be responsive to someone other than its own members.

Mr. BENNETT. It is responsive to the Congress.

Mr. LONG. Personally, I have yet to see the Congress assert itself in this field. Perhaps the Congress will do so. But without leadership from the executive, I have not seen it during the 10 years that I have served in the Senate. The Congress has done some investigating, as the Senator from Utah knows. But I imagine that even at this moment the policies pursued by the Board are not in accord with the views of a majority of the Members of Congress.

I do believe the policies of the Board are in accord with the policies of the Executive.

In view of the enormity of this problem and the tremendous consequences of the Board's decisions upon the economy and the people of the country, I believe that the Board should be responsible to someone. Personally, I would like to see the Board responsive to Congress, if the Congress will accept that responsibility and will act upon it; otherwise the Board should be responsive to the Executive.

If the Board is pursuing a policy which is contrary to the views of the Executive who appoints the Board, and contrary to the views of a majority of the Members of the Congress, then it is the duty either of those who created the Board or of the one who appointed it to take the responsibility for the program, so we shall know where the responsibility lies.

At this point let me say——

Mr. BENNETT. Mr. President, I have been happy to yield for a question. But I have a long and rather involved text which, in part, is a sort of comment by me on the speech made by the Senator from Tennessee [Mr. GORE]. Although I have no wish to be rude, I hope the Senator from Louisiana will permit me to develop my material. If at the end of my presentation he wishes to present his own point of view, certainly I shall be glad to have him do so.

I believe the Senator from Louisiana was not in the Chamber earlier today when I tried to make plain my feeling in regard to this matter. I am sure it is clear that under the law the Federal Reserve Board was created by the Congress and is responsible to the Congress; and the Banking and Currency Committees of the two Houses have jurisdiction over the activities of the Federal Reserve Board.

I suggested to the Senator from Tennessee—and I am happy to include the Senator from Louisiana—that I am sure our Banking and Currency Committee will immediately go to work on any proposed legislation calling for a change in the basic law under which the Federal Reserve operates.

But I do not think it is possible for the Federal Reserve to do its work properly if, every time there is a meeting of the Board, it has to report to these two congressional committees, and to ask them, "Is this decision all right with you, today?" The members of the Board must work under established rules, as laid down by Congress. Congress has the power to change the rules. Congress can change them at this session or at any other session.

Furthermore, I would say to my friend from Louisiana that if any Senator feels that the Federal Reserve Board is exceeding its authority, and if such Senator can show the Banking and Currency Committee—after pointing out, by chapter and verse, what the authority of the Board is—how the Board is violating its authority, I am sure the committee will take immediate cognizance of the problem and will go to work on it.

Mr. LONG. But it seems to me that during the 10 years that I have served in the Senate the Federal Reserve Board has adopted policies consistent with the views of the President. I believe that has been the case through the years. If that has not been the case, I should like to know it.

Frankly, it seems to me that has been the situation. I do not quarrel that it has been the situation or that it should be. I only say that if that is the situation, the Executive should assume his share of the responsibility in connection with those policies.

Mr. BENNETT. Mr. President, the Senator from Louisiana is again raising the question which the Senator from Tennessee raised, namely, whether the relationship of the Federal Reserve Board to the Congress and to the Executive needs reexamining, or whether what the chairman calls the trust indenture under which he operates should be rewritten.

I am one of those who think it need not be rewritten. But I recognize that many take the opposite point of view.

Since the Federal Reserve Board is a creature of the Congress, it is possible to require a review of the situation by the enactment of a bill to make specific changes in the Federal Reserve program.

Mr. LONG. It seems to me that the issue involving interest rates and the availability of credit generally is rapidly developing divergent views as between the two parties, the prevailing view of the Democratic Party being one in favor of lower interest rates and easier credit, and the generally prevailing view in the Republican Party being one in favor of the existing policies, with stringent credit and higher interest rates.

Mr. BENNETT. But I am sure the Senator from Louisiana will find that many of the Members on his side of the aisle are not sold on the idea of the controlled interest rates which the Senator from Tennessee suggested in his speech. Again, that could be brought out into the open, and we could ascertain just what the temper of Congress is, by means of a proposal to take away from the Federal Reserve Board its power to act independently with respect to the purchase of Government bonds.

Mr. LONG. If the Senator will yield further, there is one other way, it occurs to me, whereby we might get a decision. That would be by the election of a President who favors a policy of keeping interest rates lower, as was true prior to 1953, in contrast to the policy, now being pursued, of keeping interest rates high.

I am of the opinion that someone is going to control the general level of interest rates. It is either going to be controlled by the Goverment, for the general welfare of the economy, or by someone speaking for the investing interests, in New York or elsewhere, who want to benefit themselves by a higher general level of interest rates.

Mr. BENNETT. I am sure that is the Senator's view. I have some other comments to make on that question before I conclude.

Perhaps I should not say what I am about to say, but I am tempted. One of the colleagues of the Senator from Tennessee, in the discussion with the Senator last week, said, "We are going to put the monkey of high interest rates bang on the back of the administration." Perhaps if in 1960 we get a Democratic President, and on his back is laid the responsibility of financing the cost of the Government, he may find that monkey a burden, and that the position he has to take, having that responsibility, is different from the position which one who has no responsibility in the matter can take in discussing the question.

Mr. LONG. The general attitude of the junior Senator from Louisiana on that subject is that, whatever administration may be in power, it should have and should accept the responsibility for the general level of interest rates and all results which flow therefrom.

Mr. BENNETT. There is a simple way to do that. If the administration wishes to take independence away from its central bank in this country, as has been done in other countries, and say it is going to fix the interest rates for bonds—and the bonds are in sufficient volume so that the interest rates on them will affect interest rates on other securities—that is the way to do it.

Mr. LONG. The attitude of some persons is that if credit were made more freely available, a situation which the Federal Reserve Board certainly has the power to bring about, and if the Federal

Reserve Board used its power and its open market operations to make credit more freely available, the desired result would be attained. Some persons think such action is undesirable. But the administration does have a tremendous amount of influence, and is using it today, at least, to permit interest rates to go to the level to which they have ascended; and the administration has, and should have, the power to bring the interest rates lower.

In my judgment, it is a matter of either one group or the other controlling interest rates. Either the President, or the Congress, speaking for the Government, can and should use its power to hold interest rates down. They can stand aside and let others do what they please. There is no question that the others, if left free to do it, would make interest rates as high as the traffic would bear. That is what they have been doing.

Mr. BENNETT. I suggest that when the Senator from Tennessee made his speech he was not interrupted, except by his friends on his side of the aisle. I am trying to develop what I consider to be a reasonable analysis of the speech of the Senator from Tennessee. I hope the Senator from Louisiana will allow me to go back to it. There was much I had to say that the Senator from Louisiana did not hear, and I have some other things to say that bear on the subject on which the Senator is commenting.

Mr. LONG. I shall be most happy to accede to the Senator's wishes. I hope I have not trespassed on his time unduly. I shall endeavor to read the remainder of his speech tomorrow.

Mr. BENNETT. I may say to the Senator, and to all who will listen, that my speech is being made in response to an invitation by the junior Senator from Tennessee, who wanted the subject opened up and discussed. I hope my reaction to the speech of the Senator from Tennessee will cause many Senators to be led to try to develop their views on the particular questions he discussed. But I would appreciate the opportunity to go forward with my material.

Mr. President, this discussion came up at approximately the time I had completed my discussion of the six points among the proposed program of the Senator from Tennessee which have to do with monetary policy. I should like to move on to proposal No. 6, which had to do with utility type regulation of basic metals, iron and steel.

I shall not reread the statement of the Senator. I have read it once. I ask unanimous consent that the statement of the Senator from Tennessee appear in the RECORD at this point in my remarks.

There being no objection, the extract was ordered to be printed in the RECORD, as follows:

Sixth, the Congress should promptly consider the application of utility type governmental regulation of the price of basic heavy metals. I refer particularly to iron and steel. I am not today prepared to suggest the details of procedure and guidelines of such a utility type regulation of basic metals or to reach a final conclusion as to its advisability. Only a careful committee study of such a legislative undertaking could properly develop such guidelines and final conclusions. I do suggest that we have found such utility type regulation of railroads, airlines, trucklines, and electricity in the national interest and that this might be an effective means of stopping the inflationary rise of administered prices in the field of basic metals.

Mr. BENNETT. Mr. President, the Senator from Tennessee was discussing two completely different types of regulation. Utilities producing electricity are regulated because they are monopolies. Such regulation is generally handled at the State level. The regulation has some interesting facets. A utility is a monopoly. As a part of the pattern of regulation, utility companies are permitted to make a profit, and the rates they charge can be changed if a profit is not made. That can be done in the course of the regulation of a monopoly utility. On the other hand, the railroads are not subject to that kind of regulation. The Interstate Commerce Commission over the years has built up a pattern intended to regulate rates which has helped create a situation under which many railroads in the country today are going broke financially, because their competitors have an opportunity to adjust their rates competitively, whereas such an opportunity is not available to the railroads.

I hope the Senator from Tennessee will have time to study this proposal in greater detail. He admitted in his speech he had not examined the exact form that regulation should take. I think it is going to be very difficult to develop a form of Federal regulation which will apply to basic metals.

The Senator from Tennessee mentioned iron and steel. Two questions occur to me. There are companies, such as United States Steel and Bethlehem, whose chief products are iron and steel. The manufacture of iron and steel could be isolated and studied and, I suppose, a regulatory program could be established; but there are some companies which make iron and steel as a part of their overall production. How would the Senator regulate such companies, because they do not sell the iron and steel they make; they sell the finished product, which contains iron or steel? How would the Senator regulate competitive products of iron and steel, such as plastics, glass, and aluminum? In other words, when the Senator from Tennessee starts to pick out a particular product and says, "This is basic and must be regulated," what is going to happen to a product which, at the beginning, may not seem to compete, but which may be left free to compete with regulated products?

Where does one stop? The Senator from Tennessee quoted Woodlief Thomas, economist of the Federal Reserve Board. The Senator noted the problem of administered prices, which led to the suggestion about regulating prices. I assume it did, for at least it seemed to be a confirmation of if not the motivation for the suggestion. I do not think the Senator went all the way with Mr. Thomas. I should like to read the entire quotation the Senator put into the RECORD:

Mr. Woodlief Thomas, chief economist of the Federal Reserve Board, in a letter to the Washington Post and Times Herald which was published on March 12 of this year, acknowledged that there were "unstabilizing forces in pricing actions of the private economy—on the part of both management and labor—that cannot be effectively controlled or corrected by governmental actions in the area of fiscal and monetary policies."

The Senator from Tennessee has proposed a program to regulate and control the prices of products, but I do not find anywhere in his statement anything to do with the other half of the parallel, to regulate the prices of labor. I shall not open up that question today, but I suggest that, since the Senator quoted Mr. Thomas, the program will not be complete until the Senator deals with that problem.

I should like to sum up this part of the speech. In the beginning the Senator from Tennessee mentioned three goals: growth, stability, and distribution of wealth. I suggested that freedom, as a part of our American economic system, is to many, a goal of equal importance.

To reach these goals the Senator suggested an eight-part program. In that eight-part program there was no suggestion of a program aimed specifically at growth. To me this is a conspicuous omission, because in his speech the Senator not only listed growth first but he began his speech with a reference to the Russian threat and our need to maintain high levels of growth to combat it.

There is only one proposal affecting the distribution of wealth, which is the proposal for tax revision. The other proposals refer to stability, and I have been discussing them at great length.

Frankly, I will say to the Senator from Tennessee, I am delighted that he made the speech. I think we need a starting point in this session from which to discuss these fundamental problems, and I am grateful to the Senator for providing the starting point. I hope the Senator understands that I am trying to be reasonably objective in suggesting the things which I think need amplification and the areas which I think need to be added.

Fortunately, all the problems the Senator has suggested have been problems of all governments for a long time. Many ideas for solving the problems have been tried in one form or another. Therefore, as the program is spelled out in greater detail I think it will be possible for us to examine it in terms of experience which we or other countries have had.

In the beginning I said that as I analyzed the speech there were two main parts and what I called a little partisan political folklore. In the best of humor now, I should like to turn to that.

This is the plot of the little folk story, as I read it: The Eisenhower administration, the big bad guy, is conspiring with the Federal Reserve Board, now bad but capable of being reformed and capable of repenting. The bad guy uses high

interest rate policies to hurt the little good guys—the farmers, the small businessmen, the home buyers, State and municipal governments—all for the benefit of an evil accomplice or accomplices identified as corporations, banks, financial institutions and moneylenders.

I will say to the Senator, I am disappointed that Wall Street did not get into the list. I hope the Senator does not mind if I put Wall Street on the list, because traditionally that is one of the characters.

Mr. GORE. I accept the amendment.

Mr. BENNETT. I thank the Senator.

It goes without saying—or at least it did when the Senator made the speech—that only Democrats can rescue the little good guys from the big bad Republicans.

To quote the Senator from Minnesota [Mr. HUMPHREY] accurately—I tried to quote him from memory a little while ago—

> It is about time we put the monkey of inflation smack bang on the back of the Eisenhower Republican administration.

That is the plot. I hope Senators can understand that to me this seems like a kind of fairytale. I should like to look into it, to see if perhaps it does not need correcting.

Let us consider the high interest rates. Are interest rates really high? What is high and what is low with respect to interest?

There are two ways to consider interest, I think. One way is to go back over the history of our own country to observe how the present interest rates compare with rates at other periods in our history when we were not at war.

Mr. President, I ask unanimous consent to insert in the RECORD at this point two tables. One shows the trend of discount rates at the New York Reserve Bank 1914–58. The other shows yields on long-term U.S. Government bonds, by months, 1919–58.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

Source: Federal Reserve Board.

Long-term series consist of average of yields on all outstanding partially tax-exempt Government bonds due or callable after 8 years, from 1919 to 1925; after 12 years, from 1926 to 1934; after 15 years, January 1935 to March 1942; 15 years and over fully taxable bonds, April 1942 to March 1952; after 12 years, April 1952–March 1953; and in 10 years or more beginning April 1953.

Mr. BENNETT. I think interest rates are high or low in comparison, and it is not accurate to say that 4 percent or 2 percent or 6 percent is the dividing line and that any higher or lower rate is high or low. The above tables show that we are still well below some earlier rates, and if longer comparisons were available the picture would be even more clear that current rates are not out of line.

There is another basis of comparison. Are American interest rates higher or lower than the interest rates being paid today in other countries, under today's circumstances?

Mr. President, I ask unanimous consent to have printed in the RECORD at this point the table from which I am about to read.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

International interest rate comparisons

	Rediscount rates (as of Mar. 23, 1959)	Treasury bills (as of January 1959)	Long-term bond rates (as of December 1959)
United States	3.0	2.82	3.80
Belgium	3.25	----------	4.29
Canada	4.47	3.34	4.76
France	4.25	[1] 6.07	----------
Germany	2.75	2.25	3.83
Italy	3.5	----------	----------
Japan	6.94	----------	----------
Netherlands	2.75	2.04	4.31
Sweden	4.5	----------	4.27
Switzerland [2]	2.0	2.50	3.00
United Kingdom	4.0	3.12	4.89
Average	[3] 3.8	[4] 3.16	[5] 4.14

[1] France recently involved in heavy inflation.
[2] Switzerland has a fantastic surplus of capital—serves as a haven for foreign funds.
[3] 11 countries.
[4] 7 countries.
[5] 8 countries.
Source: Federal Reserve Board.

Mr. BENNETT. Mr. President, this is a table with three columns. The first column refers to the central bank rediscount rates. I list the United States, Belgium, Canada, France, Germany, Italy, Japan, the Netherlands, Sweden, Switzerland, and the United Kingdom, the largest of the countries outside the Iron Curtain.

In that list there are three countries whose rediscount rates are lower than ours. There are 10 other countries, 3 of which have a lower rediscount rate, and 7 of which have a higher rediscount rate.

As of the 23d of March, our rediscount rate was 3 percent. The lower ones are: Germany, 2.75; the Netherlands, 2.75; and Switzerland, 2. The highest rate is for Japan, 6.94. Canada's rate is 4.47, and the United Kingdom's rate is 4.

The next column is the rate being paid for Treasury bills in January 1959. In that list, three countries are shown to have lower rates than the United States. They are Germany, the Netherlands, and—we can guess the third—Switzerland. Our rate was 2.82. Germany's rate was 2.25. The Netherlands' rate was 2.04. The Switzerland rate was 2.5, not much below ours.

The third list is a list of long-term bond rates as of December 1958. In this list there was only one country with a rate lower than ours, namely, Switzerland. Our rate was 3.8. The highest rate was 4.89, for the United Kingdom. So I think it would be well, before we get lost in the discussions about high interest rates or lower interest rates, to satisfy ourselves on these two points: First, are they higher or lower in relation to our historical pattern? Second, are they higher or lower in relation to present rates abroad?

Is the Eisenhower administration really the high interest rate bad guy? Or if all those who pay high interest rates are good guys is not the Eisenhower administration a big good guy?

In the Senator's speech he made the statement which is repeated very frequently among some other members of his party, to the effect that the administration is responsible for the present high interest rate program, and that what is done is done as a deliberate matter of policy.

For may weeks in the Finance Committee this question was pursued with the Secretary of the Treasury, the Under Secretary of the Treasury, and the Chairman of the Federal Reserve Board. I cannot find any point in those hearings at which those responsible members of the administration made the statement that they were embarked on a deliberate policy of high interest rates.

If there is a villain, it seems to me it must be the Federal Reserve Board, which is doing its duty to regulate the supply of money. I believe that any changes in interest, up or down, are results, and not causes. They are the effect of policy, and not the policy itself. We have already gone at great length into the question of the relationship of the Federal Reserve Board to interest rates. I should like to quote very briefly from the statement of Ralph Young, of

the Federal Reserve Board staff, in his testimony before the Kefauver committee. This is what he said:

If monetary policy should undertake to finance whatever demands for credit are made upon the banking system, or permit itself to be used to justify all decisions made by producers, whether correct or faulty, it would become an engine of inflation, not a force for stability and sustainable growth.

Monetary policy must be concerned with the interests of all the people, consumers as well as producers, not with particular interests or industries.

Obviously, monetary and credit policy cannot do everything needed to attain stable growth; it must be supported by appropriate fiscal and other public policies, as well as by prudent private policies. During periods of expanding demands, accompanied by speculative psychology and expectations of creeping inflation, monetary policy has no option but to assume a restrictive posture. If it did not assume such a posture, widespread expectations that prices and costs would be steadily raised might indeed lead to further spiraling of costs and prices. Individual or group efforts then to hedge against or by escalation to protect against inflation would tend to aggravate inflationary forces rather than to bring them into balance.

I am quoting Mr. Young because the Senator from Wisconsin [Mr. PROXMIRE] referred to him, and I have great respect for Mr. Young's responsibility, both as an economist and as a member of the Federal Reserve Board staff.

The other Federal Reserve Board economist quoted by the Senator from Tennessee was Mr. Woodlief Thomas. He had this to say in a letter to the Washington Post and Times Herald of March 12 of this year. This is the last paragraph in Mr. Thomas' letter:

In conclusion, the objection to administered prices and wages is not so much that they create inflation, but that they tend to retard growth and to increase unemployment. Inflation might be created if monetary and fiscal policies attempt to validate such prices, but eventually these attempts will only make the inevitable collapse more disastrous.

Interest is a two-way deal. Interest is one man's cost and another's income. Are banks, corporations, and financial institutions the real and only money lenders? I was interested to see corporations in the list, because my experience is that most corporations are money borrowers. Corporations which lend money are banks, insurance companies, building and loan associations, and other similar financial organizations; but most corporations organized for production and distribution are borrowers. It should be emphasized that bankers and building and loan associations mostly loan their depositors' money, not their own. They, as brokers, may benefit temporarily from changes in interest rates, but what about the little fellows who buy life insurance, or who put money in savings and loan associations which the home buyer borrows? What about those who live on pension funds? They benefit when interest rates rise. Are they bad guys? I do not think they are—certainly not to us Republicans, and I do not think they are to Democrats.

So I think this little folk tale needs some correction; and I believe that during the remainder of the session we can have a continuing "story conference," so to speak, in an effort to hammer out a new plot. There is a real need for objective discussion on the level of economic principle.

I congratulate the Senator from Tennessee for his contribution, and have charity in my heart for his descent to the political fleshpots. I thank him for the basic outline of his speech. It suggests a number of important economic areas which all of us can and should explore. I thank him for it, and eagerly await his future, more definite statements. I assure him that it is my intention, as opportunities develop, to make some further detailed and amplified statements of my own. I expect to adopt for myself the suggestion which I have been trying to make to my friend, namely, further work.

Mr. GORE. Mr. President, will the distinguished Senator yield?

Mr. BENNETT. I am delighted to yield.

Mr. GORE. It is extremely gratifying that the remarks of the junior Senator from Tennessee have provoked this scholarly analysis by the senior Senator from Utah. It is the kind of discussion which I had hoped might ensue from the initiation of this debate.

It is further gratifying that the able Senator finds himself in agreement with the three goals which I fixed as my personal goals in the development of a program for economic governmental policy.

I assure the Senator that the very heart of the policies which I have undertaken to advocate is the achievement of an equitable, fruitful, dynamic operation of our free enterprise economy, the preservation of which the distinguished Senator lists as a fourth goal.

The able Senator has raised a considerable number of important questions, some of which are not within my power to answer at the moment, some of which may always escape my limited grasp of this great and important field, and some of which perhaps can be developed only by careful committee study and inquiry. However, the fact that he has engaged in a scholarly discussion, backed by erudition which springs from his experience and his training and ability, is a source of gratification. I am glad that he has accepted my invitation to debate the question. In turn, I shall accept his invitation in due course to give further amplification to my views in this field which, I take it, he and I agree to be one of the most important.

I wish to conclude my remarks with these few words. The Senator asked what in my opinion would be a desirable rate of national growth. I say to him in all candor that I do not know. However, I am disturbed, and convinced that the rate of growth we have experienced since the period of the Korean war has been wholly inadequate for our national security and for the promotion of a full employment economy.

Again I thank the able Senator for his very generous remarks and for the provocation which his analysis of my own humble efforts has occasioned.

Mr. BENNETT. I appreciate the Senator's response. I assured him before I began my discussion that it was going to be carried on in an atmosphere of complete friendliness, and, to the extent possible in this kind of forum, objectively.

I repeat that the Senator's speech has started me to thinking in many directions. But I shall try to follow up the ideas his speech suggests, as well as those which I have suggested in responding. I hope that in the months ahead we can have many more repetitions of this kind of objective discussion.

Mr. President, before I close my remarks, I ask unanimous consent to have printed in the RECORD, for the information of the Senate, the first half of the Whaley-Eaton Service's American Letter of March 21, 1959, on problems facing the American economic system.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

DEAR SIR: The American economic system is being attacked with growing violence by leftwing economists, pseudo-economists and other liberals. The same faces reappear constantly on the Washington scene. The group includes convincing speakers and forceful writers. Their preachments in favor of the developing system of state-welfarism are no longer even thinly veiled.

Washington is the forum from which these messiahs can speak to the widest possible audience. Congress, press, and the airwaves are being bombarded with tirades against neglect of the jobless, inadequate defenses, overemphasis on budget balance, ruthless credit policies, favoritism to big business, and retarded economic expansion.

Particular targets vary from day to day as these opportunists see new weaknesses to probe. No longer is this now merely the gabble of the do-gooders. It has become an all-out attack on the free-enterprise system, and the attackers are using every weapon at their command.

The new offensive against the Federal Reserve is symptomatic of their tactics. The U.S. credit-control mechanism is one of the last remaining obstacles to the new economics. The administration of monetary policy is a complex art. Opportunities for error are infinite. Federal Reserve action when taken is invariably subject to criticism as too early or too late, as excessive or as inadequate. Consequently, the Board's independence is equated with callous disregard for the public welfare.

The American inflation problem is an immediate and urgent one, though liberals make it appear as only a worry for the indefinite future. This is the essence of the argument Eisenhower seeks to get across to Congress and the people, and it is the essence of monetary policy. Three economic-political forces are at work to keep the budget permanently unbalanced:

1. Welfarism: Congress appears both ready and anxious to swallow the spend-for-expansion argument at face value. A constant rise in welfare costs is thereby assured, with resulting disregard for fiscal integrity.

2. Defense: Costs—now at $46 billion—are only beginning to reflect accurately the rising curve of outlays scheduled for many years ahead. Expenditures for missiles alone are set to reach fantastic amounts.

3. Taxation: Congress is completely unwilling to face up to the need for higher revenues to keep pace with rising outlays. The old rationale was that deficits incurred in the recessions would be wiped out in good times. With taxes already too high, Congress backs away from this.

Eisenhower fails to make headway meeting the liberal challenge because the issue is difficult to explain. Utopian promises are more glamorous.

The easy way out of inflation is to give the Government direct authority to control it, liberals are declaring. Rather than impose restraint on Federal spending or credit expansion, they argue, Washington should be prepared to clamp on wage-price-rent controls whenever things seem to be getting out of hand. Senators GORE, Democrat of Tennessee, and NEUBERGER, Democrat of Oregon, have made these proposals in various ways, and so have liberal economists.

How seriously any of these spokesmen take their own proclamations is an open question. There is little doubt that Congress as a whole is most unlikely to make any such moves. Yet this is no ground for ignoring the implications of the leftwing assault on economic orthodoxy.

The freedom of the marketplace is a myth, these thinkers argue, and the Government ought to stop pretending otherwise. Supply and demand no longer establish price in major industries; prices are administered. A greater and greater share of the economy is under Government domination. Farm prices, for example, are determined largely by Washington. Subsidies, open and concealed, have become an integral factor for most of industry.

Even the Federal Reserve accepts a limited version of the administered price thesis to help explain the fact that prices in steel and autos either rose or at least held steady in the face of the recession. It also is trying to show why its own moves have less than blanket effect.

The overall impact of this theorizing is twofold: It diverts attention from the central problem of Federal fiscal sanity toward makeshift solutions. It also helps load the onus of inflation onto management and away from labor. And that sets the stage for this year's round of wage demands (as in steel). Unions will insist company earnings provide for liberal boosts without price increases. Proving otherwise will not be easy.

The longterm effect is to weaken support for free-enterprise capitalism and to enlist backing for socialistic theories. Thus, Government deficits would be covered by expanding the money supply (the Federal Reserve becoming an instrument of inflation instead of regulator). Political economists in Washington would dictate wage-price levels.

Termites in the woodwork of the U.S. economic system nibble at other sectors. Examples are the current effort to push through a national fair trade bill and the halfhearted revival of good-faith price discrimination legislation. The former is justified as a means of protecting small retailers from cut-throat price competition. Its effect is to put Government into a producer-marketer-retailer conspiracy to stifle discounting.

The antidiscrimination bill, a perennial favorite of Senator KEFAUVER, Democrat of Tennessee, would virtually ban spot price-cutting as a means of meeting competition. Neither measure is given much chance of passage.

Meanwhile, New England Congressmen are voicing their genuine fears of oil price increases as a result of Eisenhower's import-quota system.

Business as a whole weakens itself against the onslaughts of leftwing thinking when it plumps for fractional self-interest protections of this kind. To sum up the theme of this discussion, Washington is just as confused as the country over how to fight inflation. But leftwingers have a clear-cut goal: Substitute Government control for the market economy.

The planners and spenders will continue to dominate the headlines in forthcoming Washington studies. Administered prices of the steel and auto industries, as we point out on the previous page, already have been singled out as a principal villain in the battle against inflation. Carefully chosen witnesses can always slant the tone of any survey. Administration efforts to emphasize conservative views may be snowed under.

The Joint Economic Committee is virtually committed by its chairman, Senator DOUGLAS, Democrat, Illinois, to espousing the liberal argument. Preliminary hearings assign the lead-off positions to such advocates as Harvard Economist Slichter and former Washington Official Keyserling.

The conservative viewpoint will be reflected when Vice President NIXON gets his special Cabinet Committee on Price Stability for Economic Growth in operation. The committee will (1) look into U.S. prices in relation to world markets, (2) make productivity studies of specific industries, and (3) go into both wage policies of labor and pricing policies of management.

NIXON'S group will have a political-economic ax of its own to grind, but he will not have the same sort of rostrum congressional liberals have. His operation will be largely White House staffed and dominated.

THE GARNISHMENT LAW OF THE DISTRICT OF COLUMBIA

Mr. LANGER. Mr. President, I see on the floor my distinguished colleague from South Carolina [Mr. JOHNSTON]. I understand that he will today introduce a bill to abolish the garnishment law of the District of Columbia. I know of no Senator who is better fitted by experience than the senior Senator from South Carolina to deal with this important subject. I hope he will get many cosponsors on his bill. I am delighted to be one of them, and I have assured him I would be one of them. I hope his bill will lie on the table so that a great many other Senators may also join in cosponsoring the bill if they wish to do so.

Mr. President, the antiquated and unworkable garnishment law of the District of Columbia must be repealed.

Mr. President, as acting chairman of the subcommittee of the Senate Subcommittee on Antitrust and Monopoly, I conducted investigations into the rackets conducted by the small loan sharks who charged outlandishly usurious interest rates and forced the borrowers to buy credit life and credit health and accident policies at exorbitant rates in order to get the small loans.

On March 5, I made a speech on the Senate floor pointing out the tremendous profits that some of these credit life and credit health and accident insurance companies earned, which insurance companies are subsidies of the finance companies.

Two years ago when we were in Montgomery, Ala., holding hearings on the small loan sharks, the U.S. Attorney Hartwell Davis was telling me, what was worse than the small loan rackets in his area, was the practice of these easy credit clothing stores in Montgomery, Ala., which charged the poor and unsuspecting public—mostly poor and illiterate negroes—exceeding high prices for the products that they purchased and on top of that charged them usurious rates forcing the debtor to be constantly indebted to these easy credit concerns.

Recently I have been noting the hearings that have been conducted by the House District Committee on a proposed amendment to the garnishment law of the District of Columbia.

Mr. President, last month Mr. Morton Mintz, a staff reporter of the Washington Post, ran a series of articles on easy credit extended by seven clothing stores on Seventh Street and the tremendous amount of garnishments filed against debtors, the unbelievable practices of persuasion exercised against the purchasers, the hardships resulting to the debtors and their guarantors, the burden placed upon employers by repeated garnishments, and the tremendous strain placed upon the municipal court clerk's office and the U.S. marshal's office. For example, one headline used by Mr. Morton Mintz is, "Debtors Dilemma: 47,877 Garnisheed Under Antique Law."

Mr. President, I reiterate that the antique garnishment law of the District of Columbia must be repealed. I compliment Mr. Morton Mintz for a rather thorough job of getting the facts on this easy credit clothing store racket.

Congressman JOHN L. MCMILLAN, a Democrat of South Carolina, has introduced a bill amending the garnishment law which is supported by the District Bar Association, after an investigation and study by the bar's municipal court committee. I fully realize that a lot of study has been made on this problem by the bar committee and by the Senate and House District Committees. The Senate District Committee held hearings in 1957 but without much success in retarding these unbelievable practices by these easy credit business places.

Senator JOHN MARSHALL BUTLER in a statement to the subcommittee referred to this handful of easy credit operators as "credit racketeers—they are nothing more." Municipal Court Judge Milton S. Kronheim, Jr., said the handful of easy credit retail merchants have made a garnishment mill out of the court.

Chief Judge Leonard P. Walsh, of the municipal court and recently nominated to the U.S. district court says the garnishment law breeds this disrespect because the court is "used as a collection agency. Rightly or wrongly, the employer and employee receive mandatory demands on them in the name of the court. The court appears to be in cahoots with the seller." Senator JOSEPH S. CLARK in commenting on the garnishment law exemptions states:

> It is unworkable and economically unsound in that the majority of defendants never take advantage of it and it promotes a coercive influence on defendants due to the holdup of the defendant's salary until the litigation is determined.

Mr. President, I ask unanimous consent that the entire seven series of articles by Mr. Morton Mintz, which are so descriptive and which amount to a condensation of testimony that would be received in a hearing on this subject, be placed in the CONGRESSIONAL RECORD at the completion of my remarks.

Mr. President, I believe that if Congress should repeal the District of Columbia garnishment law, it would be doing great service for the many poor and needy people in this community who

are at the mercy of easy credit racketeers. This is far worse than the loan sharks that I investigated and reported to the U.S. Senate. Some will say that by repealing this law, we will be giving aid to some deadbeats who will be avoiding payment of honest debts. The answer to that is, are we to permit 50,000 garnishments a year which torment the debtor, his guarantor, and his employer and at the same time is costly to the District and Federal Government and places undue and excessive burden upon the court, the clerk's office, and U.S. marshal's office.

It should be pointed out with emphasis here that under existing law, the employees of the District and Federal Governments cannot have their wages garnished. If the business people and the creditors of the District of Columbia can survive without garnishment law being applicable to Federal and city employees, they can adjust their collection practices to protect themselves from extending credit to people who do not pay their debts.

The court's record substantiates the fact that the garnishment law is a law for the protection of these easy-credit racketeer business houses and I mince no words in calling them that. Let me cite, from the articles by Mr. Mintz, this illustration to point out what is happening to these poor purchasers:

Thousands of writs served on employees of one person (a maid, for example) up to those who have thousands working for them—have their roots in a few—not all—easy-credit stores in the 700 block of Seventh Street NW. A Washington resident who shopped but did not buy in these stores reports some of these sights, sound, and practices:

Temptations: "Credit as you like it." "No money down." "One dollar for each new account you bring in." "Free shoes for all the children." "Free, big, juicy, delicious ham for your Easter dinner with every purchase amounting to $15 or more, when opening a new account or reopening an old one."

A prospect looks in the window and a man grabs him by the arm and whisks him inside. "What can I show you?"

"An overcoat."

"Where do you work? Not a Government employee? OK, we'll fix you up. Do you have an account here? No? That's all right, we'll fix you up. Let's open an account first; we have what you want."

"What's the price on this coat?"

"Don't worry about prices; we have what you want to pay. Let me show you this one at $59."

TEN DOLLARS DOWN, MONTHS TO PAY

So saying, he unbuttons the prospect's coat.

"I know you'll like this one—just sold one like it to the famous orchestra leader," so-and-so.

"I saw the same one at ——— for $45."

"How much can you pay down? About $10? Fine. Pay $2 or $3 a week for 6 months, mind you, not 6 weeks."

"That would come to $82."

"But we're not charging you any interest. Can you pay $2.50 a week? You look like a person who could pay $2.50 a week. If you can pay cash you can have it for $40. Let's go back and talk to the gentleman back here."

The gentleman back here: "All right, step right up—$10 down, $2.50 a week for 6 months."

"That would be $70."

"Well, look, we gotta have some interest. * * * We can work this thing out, any way you want to do it."

The prospect starts to leave but is hailed at the door by a third man: "You like the coat, you want the coat, don't be ridiculous; we can work this out to suit you. We're in business to make a profit, but still we're willing to practically give it away to you."

The prospect gets away and goes to another store.

Mr. President, in conclusion, I join Senator JOHNSTON in a bill to repeal the garnishment law of the District of Columbia for the reasons cited above. Mr. President, I shall speak from time to time on this subject.

Mr. JOHNSTON of South Carolina. Mr. President, will the Senator yield?

Mr. LANGER. I yield to my distinguished friend from South Carolina.

Mr. JOHNSTON of South Carolina. I thank the Senator from North Dakota for what he has had to say about me. I can truthfully say even more about him in reference to his activities on behalf of the people whom we call underdogs.

I believe the kind of bill I am introducing is much needed in the District. When I was Governor of the State of South Carolina, on several occasions I said that if the legislature sent to me proposed legislation dealing with this subject, of the type which is on the statute books and which affects Washington, D.C., I would veto it.

Only a few days ago my wife was insulted because someone working for us had not made prompt payments. She was threatened. I did not tell the man involved, but certainly that experience has awakened me to what is going on in the District of Columbia.

I hope something can be done to relieve the situation. There are many instances in which milk is literally taken out of babies' mouths through the operation of the garnishment law which is now on the statute books in the District of Columbia.

Mr. President, I send the bill to the desk and I ask that it be held open until Thursday of the next week the Senate shall be in session, so that other Senators may join as cosponsors if they wish to do so.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will lie on the desk, as requested by the Senator from South Carolina.

The bill (S. 1524) to provide that the wages, salaries, commissions, or other remunerations for personal services performed by certain employees shall be exempt from garnishment in the District of Columbia, introduced by Mr. JOHNSTON of South Carolina (for himself and Mr. LANGER), was received, read twice by its title, and referred to the Committee on the District of Columbia.

Mr. LANGER. Mr. President, as acting chairman of the Subcommittee on Antitrust and Monopoly, I conducted investigations into rackets. Among them was an investigation of the small loan sharks and the outlandishly high interest rates they charge.

The Washington Post, through one of its writers, Mr. Morton Mintz, has conducted a full investigation of the garnishment law in the city of Washington. I ask unanimous consent that Mr. Mintz' articles be printed in the RECORD at this point in my remarks.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post, Feb. 1, 1959]

EASY CREDIT IS WRIT LARGE ON SEVENTH STREET

(By Morton Mintz)

(First of a series)

About 190 times every working day, a deputy U.S. marshal hands a District employer a writ of attachment—a municipal court paper ordering him to freeze the wages owed an employee and turn them over to a creditor.

Some of these writs are the last resort of creditors who have acted in good faith and exhausted every other means of collection from deadbeats. But a huge share originates with a few easy credit stores.

Most of the easy credit stores' customers are such poor risks that they cannot get ordinary credit. At least 9 out of 10 wage attachments are against poor Negroes (earning roughly $30 to $60 a week), uneducated and unequal to both the inner and outer pressures to buy more than they can possibly afford. And when their pay is attached, they often are left with nothing for necessities.

NO CASH, PLEASE

The easy credit stores, unlike other merchants who extend credit, balk at selling for cash, and extremely few of their customers can pay cash. A common denominator of their operation is interest charges concealed in the sales price and little or no concern with whether the buyer is a reasonable credit risk.

What these operators are concerned with is that the customers, or another person whose name gets on the account as a guarantor, is privately employed. This is because they can and do, under the District's bad-debt or garnishment law, use the municipal court and private employers as their collection agents. The pay of Federal and District employees cannot be attached.

The District's garnishment law, which will be detailed in later articles, permits a creditor to get successive attachments for the same debt, to attach every cent of wages a man has coming to him, to have a man's wages frozen while he seeks an exemption, to give their demands priority over a court order for support of a man's family. If a head of a household earned more than $400 in the preceding 2 months, some judges understand the law to direct that not a penny of this shall be exempt for food, shelter or anything else.

Thousands of writs served on employers of one person (a maid, for example) up to those who have thousands working for them—have their roots in a few—not all—easy credit stores in the 700 block of Seventh Street NW. A Washington resident who shopped but did not buy in these stores reports some of these sights, sound and practices:

Temptations: "Credit as you like it." "No money down." "One dollar for each new account you bring in." "Free shoes for all the children." "Free—big, juicy, delicious ham for your Easter dinner with every purchase amounting to $15 or more, when opening a new account or reopening an old one."

A prospect looks in the window and a man grabs him by the arm and whisks him inside. "What can I show you?"

"An overcoat."

"Where do you work? Not a Government employee? OK, we'll fix you up. Do you have an account here? No? That's all right, we'll fix you up. Let's open an account first; we have what you want."

"What's the price on this coat?"

"Don't worry about prices; we have what you want to pay. Let me show you this one at $59."

TEN DOLLARS DOWN, MONTHS TO PAY

So saying, he unbuttons the prospect's coat.

"I know you'll like this one—just sold one like it to the famous orchestra leader" so-and-so.

"I saw the same one at ——— for $45."

"How much can you pay down? About $10? Fine. Pay $2 or $3 a week for 6 months. 6 months, mind you, not 6 weeks."

"That would come to $82."

"But we're not charging you any interest. Can you pay $2.50 a week? You look like a person who could pay $2.50 a week. If you can pay cash you can have it for $40. Let's go back and talk to the gentleman back here."

The gentleman back here: "All right, step right up. $10 down, $2.50 a week for 6 months."

"That would be $70."

"Well, look, we gotta have some interest * * * we can work this thing out, any way you want to do it."

The prospect starts to leave but is hailed at the door by a third man: "You like the coat, you want the coat, don't be ridiculous; we can work this out to suit you. We're in business to make a profit, but still we're willing to practically give it away to you."

The prospect gets away and goes to another store.

"What are your prices?"

"Forget about prices. We've got a coat you can buy. We don't sell prices. Do you have an account?"

"No."

"We can open one up for you. Where do you work? A private outfit? Good."

The salesman shows a coat he says is priced (there is no price tag) at $69.50.

"I can't pay that," the prospect says.

"You can have it for $60."

"Is it wool?"

"All wool. Pure wool, wool."

The prospect cannot find a label certifying the fabric is all wool.

The salesman whispers secretively: "Look, you want the coat? I'll let you have my profit. I'll let you have it for $55, but for heaven's sake, don't go out on the street and tell other people."

The prospect still balks.

"You look like an intelligent, clean-cut young man, and I want you to have a break."

"I saw a gray tweed I like at ——— for $45."

"Gray tweed? That's an old man's coat."

"But this one is dark blue."

"There's a difference between an old man's coat and a conservative coat. This is conservative. How much money do you have on you? Can you pay $15 down?"

"Maybe $10."

"Ten dollars, OK, fine."

Instantly someone nearby starts filling out a sales contract, but the prospect is still hesitant.

The owner approaches; his tone is harsh: "You like the coat, take the coat, take the coat, fellow, for heaven's sakes."

The salesman: "Oh, come on, come on, come on."

The owner, as the prospect leaves: "We just want to talk to you. Nobody's going to hold a gun to you. We'll work out whatever terms you want to work out."

Prices: A conservative estimate is that such stores average on clothing about 50 percent more than for the same or comparable articles elsewhere. However elastic, they include provision for interest and intricate bookkeeping. The merchandise is often shoddy.

From the bag of tricks:

A customer on the phone: "I can't make my payment this week. I'll pay next week."

An employee who calls himself "Jack" replies: "Perfectly all right."

The next day a suit is filed against the customer which could lead to garnishment of his wages. He goes to the store to find out who gave the oral assurance.

"I'm Oscar, he's Joe, she's Wilma. There's no Jack here."

A customer goes to an easy credit store to complain that he is "paying and paying, and I can't seem to see the end." He asks for a copy of his account. This brings on laughter—and a refusal.

A person opens an account. Another name, usually the husband's or wife's, is put on the account as a guarantor.

The purchaser becomes delinquent. A suit is filed. The summons, under rule 4 of the municipal court, is served on an adult on the premises. It happens that the summons is served on the very person who made the purchase, and he tears it up.

Twenty days pass, and no answer is made in court. The court therefore declares a default judgment.

The innocent party—the guarantor—gets his first knowledge of all this when his pay is attached. If the creditor has waited 90 days after the default judgment, it cannot be attacked. Even if it asks more than what is owed, even if otherwise there would have been no legal liability. The guarantor is stuck, and that's it.

The actual purchaser—or one of those innocent guarantors—pleads with the easy credit store not to attach his wages because if it does he will be fired. He promises to pay, say $2 a week.

A garnishment is filed despite assurances that none would be. He tries to find out who gave him the assurance. Again, "There's no 'Jack' here."

A $35-a-week maid, the sole support of her daughter and four grandchildren, picks out an Easter topper. She is told not to worry about the price.

After it is entered on her account, that is, after it's too late, she finds the price is exorbitant—$109. The store refuses to cancel the sale or give her other, more needed merchandise in exchange.

The store tries to attach her wages, but fails because she has no wages owed her—as a matter fact, she is in debt to her employer. Finally she arranges to pay $2 a week.

"As soon as I get in there," she said, "they follow me all the way back to the door, trying to get me to buy something more, but I just won't do it."

Municipal Court Judge Milton S. Kronheim, Jr., testifying before a Senate District Subcommittee June 19, 1957, said of the handful of retail easy credit merchants who have made a garnishment mill out of the court:

"Their floor personnel and credit manager are instructed to extend credit to working men and their families far beyond their ability to pay. Poor people without luxuries are easy prey to a fast-talking salesman who tells them that all they have to do is sign now and pay later. The storekeeper has learned to rely on the garnishment statute to collect his money and some retailers in Washington have lawyers who devote their entire day, every day, to garnishment of wages."

In a statement to the same Judiciary Subcommittee, Senator JOHN MARSHALL BUTLER, Republican, Maryland, referred to this handful of easy credit operators as "credit racketeers * * * they are nothing more."

[From the Washington Post, Feb. 2, 1959]

DEBTOR'S DILEMMA: 47,877 GARNISHEED UNDER ANTIQUE LAW

(By Morton Mintz)

(Second in a series)

The District's bad debt law will be 58 years old March 3. No birthday parties are planned.

The garnishment law may someday, perhaps this year, undergo radical surgery in Congress. Meanwhile its get-up-and-go is positively youthful.

Last year, for example, it kept a couple of platoons of deputy U.S. marshals hopping around the city with 47,877 writs of attachment to be served on employers.

Because March 3 happens to fall on a Tuesday, municipal court judge will find himself marking the law's birthday by spending hours hearing, granting, and denying requests for exemption.

Joining in this observance, a solemn one, will be numerous victims of garnishment, busy executives who have left their jobs to bring in payroll records, and many lawyers. It's really just another day—nothing special.

Let it be said that the law does have a band of devoted friends, the easy credit operators. The reason for their devotion, of course, is that their friend the law lets them use the court as their collector.

The clerical staffs of the municipal court's small claims (up to $50) and "M" ($50 to $3,000) divisions compiled the following figures at the request of the Washington Post. They are for the year 1957, the last for which complete information is available:

Suits asking judgment against debtors filed by—	In small claims	In "M" division	Total
Hollywood Credit Clothing Co., 703 7th St. NW	1,471	2,311	3,882
Marvins Credit, Inc., 734 7th St. NW., and the same firm trading as Eiseman's, 7th at F Sts. NW	429	1,976	2,405
Crown Co., Inc., 827 7th St. NW	669	760	1,429
Bernard and Bertha Goldberg, copartners trading as Long's Clothiers, 731 7th St. NW	481	839	1,320
Leon A. Tashof, trading as New York Jewelry Co., 719 7th St. NW	342	927	1,269
Union Clothiers, Inc., 415 7th St. NW	652	526	1,178

USERS OF SYSTEM

These seven firms lead the list. No one else sought so many judgments against debtors.

There is one exception, but it only emphasizes the point: The Chesapeake & Potomac Telephone Co. But the phone company, unlike the other firms, a spokesman said, has almost never used a judgment as a springboard for garnishment; almost invariably it has negotiated settlements.

The phone company, as a public utility, must give service to all applicants, except where a customer's credit has not been established (in that case, it requires a deposit).

A total of 58,225 cases were filed in the 2 court branches. The 7 easy credit firms filed 12,507 of these, or roughly 1 out of 5. Hollywood alone filed about 1 in 15. Each suit can lead to one or more wage attachments.

The combined business volume of the seven firms is known to be well into the millions. Hollywood's president, Herbert Kapiloff, in an appearance in municipal court on July 18, 1949, was told by Judge Milton S. Kronheim, Jr.:

"You are the owner of the business; you set the policy."

Kapiloff replied:

"Yes, sir; I am the owner, but we have 45,000 accounts, and I cannot watch each of them."

In a letter to the editor published in the Washington Post on July 23 of that year, Kapiloff said, "We file suit only as a last resort, after there has been a clear default in payment and the debtor by his conduct indicates no intention to pay."

LAW IN OPERATION

Yesterday's article illustrated some faults in the garnishment law; today's will take a closer look.

Who gets the bill? Persons who had nothing to do with an easy credit purchase frequently find their wages attached to pay for it. Usually the unknowing guarantor is the husband or wife of the customer, but sometimes the name entered on the account is that of a relative. And there are cases in which an unrelated person's name has been used, for example, a landlady-customer's roomer.

If the supposed guarantor establishes that he is not liable for the debt he is in the clear. But if he should have the misfortune not to get the summons (it can be served on another adult on the premises, even on the purchaser who may wish to keep him in ignorance); if a default judgment is declared against him, and if the creditor sits tight for 90 days before attaching his wages—then the judgment is almost invulnerable to attack, and the guarantor must pay.

LOSS OF TWO CASES

Hollywood Credit recently lost two cases in this area:

A relative bought $100 worth of household goods under the name of Mrs. Blanche Wright, 2651 Nichols Avenue SE. The firm discovered the misrepresentation and sued the relative and then Mrs. Wright. Her first knowledge of the entire matter came when her wages were attached (the attachment was later set aside). She filed suit charging Hollywood with malicious abuse of the legal process. The store's lawyers said the attachment was made "in the regular course of collecting" and without malice. A $1,000 verdict in her favor was returned by a municipal court jury last December 9.

Harston Hall bought $91.25 worth of clothing in 1953. His wife Eula, 1327 U Street SE., said she had nothing to do with the purchase. The Halls later separated. The store sued her for the sum in 1957 and obtained a judgment. The municipal court vacated the judgment and stopped the attachment. Despite this, she contended, the store went ahead and attached her wages, and the court upheld its action. But she appealed, and last Monday the municipal court of appeals upheld her. Judge Thomas D. Quinn said the store had abused its garnishment powers. Further, he added, "the existence of an ulterior motive may be inferred from this action which appellee is alleged to have done with full knowledge of the situation."

NO PROTECTION

Nonresidents of the District: However weak the exemption provisions are for District residents, they offer no protection at all for residents of Maryland, Virginia, and other areas outside the District. The key point under the law is not where the purchase was made, but whether the customer's employer has an office in the District. If the employer does, the debtor's wages can be attached even if he made the purchase in Timbuktu, lives and works in Timbuktu, and never set foot outside of Timbuktu.

Exemptions: The law says that 2-months' earnings, "not to exceed $200 each month," shall be exempt from attachment if the debtor is head of a household ($60 if he is single). However reasonable this might sound, it is so vague and weak that it breeds these troubles:

If the head of a household has earned less than $400 in the 2 months immediately preceding issuance of the attachment and wants an exemption, he must ask the court for a hearing to certify that he is head of a household. His employer must bring in pay records to prove the debtor's earnings.

Pending the court determination, his wages are frozen for a week to 10 days.

If he does not apply for an exemption he cannot get it; his wages will be attached. At least three out of five debtors do not apply.

Successive attachments may be obtained on a debt until it is satisfied. An exemption does not carry over from one attachment to another. Therefore, the debtor, if he wants an exemption, must go through the court process each time his wages are garnisheed.

A man may get one exemption. But, by an accident of the calendar, there comes a month in which he has five instead of four paydays, putting him over the $400 mark for 2 months.

CONFUSION CAUSED

This is one of the instances in which the vagueness of the law causes major confusion. For some judges interpret it to mean that only the sum in excess of $400 can be attached, while others say the entire sum can be attached and there is no exemption. It depends on which judge is on the bench. No case testing the interpretation of the judges in either group has ever been taken to the municipal court of appeals.

Senator JOSEPH S. CLARK, Democrat, of Pennsylvania, put the case against the law's exemption provision this way:

It "is unworkable and economically unsound in that the majority of defendants never take advantage of it, and it promotes a coercive influence on defendants due to the holdup of the defendant's salary until the litigation is determined."

Disrespect for judicial process: Chief Judge Leonard P. Walsh, of the municipal court, says the garnishment law breeds this disrespect, because the court is "used as a collection agency * * * rightly or wrongly, the employer and employee receive mandatory demands on them in the name of the court * * * the court appears to be in cahoots with the seller."

CREDIT FOR BANKRUPT

As the law now operates, even a bankrupt can get credit.

There is one case in which a mentally ill woman made some purchases at three easy credit stores. Her husband did not know he was being made responsible for the debt. The upshot was that his pay was attached so many times that he lost his job, and he was declared a bankrupt. Despite all this and the additional fact that he himself was a financial incompetent, two of these same stores again sold to him on credit.

A member of a District bar association group that studied the laws of 48 States says there are "probably more garnishments per capita here than anywhere else."

There were almost 48,000 of them here last year. And each of them, Municipal Court Judge Kronheim told a Senate District subcommittee, "is a tragedy, not a tragedy in a theater, but a tragedy for people consisting of flesh and blood."

[From the Washington Post, Feb. 3, 1959]

DEBTORS' DILEMMA: BAD RISKS IN EASY CREDIT SYSTEM PROVE COSTLY TO DISTRICT TAXPAYERS

(By Morton Mintz)

(Third in a series)

District taxpayers foot a hidden part of the bill when an easy credit operator sells something to a poor credit risk and the debt goes bad.

The costs to the pubic are largely incurred in both tax- and charity-supported welfare programs, the municipal court, and crime.

Richard D. Gibbs, secretary of Peoples Drug Stores, was one of two witnesses who touched on the crime aspect in testimony on May 27, 1957. He told a House District Subcommittee hearing on proposed reforms of the District's garnishment or bad debt law:

"We cannot tolerate these (employees) who are bad credit risks where we are deaing in open merchandise and cash, and we have found them to start stealing in a great many cases * * *. When they do not draw a salary, they are going to eat, and they will get it any way they can."

Most authorities believe only an insignificant amount of crime stems from attachment of wages. Some observers, however, make these points:

An employer who would unhesitatingly seek the arrest and prosecution of a thief who is unknown to him is less likely to do the same to an employee caught stealing. He may only fire him, being aware that garnishment has left the employee, a human being he knows, without funds for food or shelter.

It is hard to detect some thefts, especially those from a cafeteria or restaurant.

Authorities do not make a special point of looking for garnishment as a root of crime. University of Maryland Criminologist Peter P. Lejins said he knows of no study of the question but added that one should be made.

Previous articles have pointed out the inner and outer pressures on poor persons to buy on easy credit, the tricks used on them and the calamities that frequently follow for themselves and their families. Here are more costs to the public relating to the same source of trouble, the District's garnishment statute:

Department of Public Welfare: The Washington Post pointed out in 1956 that under the garnishment law the head of a household could be stripped of every cent he earns, even if it means his children will go hungry. Members of the Juvenile Court Advisory Committee heard a father plead he was unable to meet support payments because he had to pay other bills. If his wages were attached, he said, he would be fired and unable to support his family or pay his debts. The then juvenile court judge later said this situation is fairly common.

A man fired because of garnishment, legally remains employable, and so he and his family are ineligible for relief. A man who deliberately deserts his family so it can get a support order—and Welfare Director Gerard M. Shea agrees the statute provides an incentive to do this—becomes liable to a year's imprisonment and/or a $200 fine.

But in doing so he makes sure, once the court order is issued, that his children will eat. Authorities say there are many such cases, but no one knows how many. The Department of Public Welfare makes varying welfare payments; an adult with 4 children gets a maximum of $195 a month.

United Givers Fund Agencies: The Salvation Army estimates it spends at least $3,750 of UGF funds for direct relief—food and rent—to families impoverished by garnishment. Also affected are Family and Children's Service and Catholic Charities.

On a bookkeeping basis, the Legal Aid Bureau, in representing about 500 garnishment defendants a year, accounts for about $1,300 of UGF funds.

The municipal court: Last year, deputy U.S. marshals set out to serve 47,877 writs of attachment on employers. There were countless court hearings on requests for exemptions. Just how much waste of both litigants' and taxpayers' funds is involved in all this no one can say for certain.

However, one estimate from a most reliable—and cautious—source is that a more reasonable garnishment statute would save the taxpayers several thousands dollars a year.

DEBTORS' DILEMMA: EMPLOYERS DENOUNCE GARNISHMENT AS DISRUPTING FUNCTION OF PERSONNEL

(By Morton Mintz)

(Fourth in a series)

"I object to the fact that three or four firms in the city of Washington are causing

this hearing. It (garnishment of wages) is causing my firm to use one clerk's time some 3 hours a week, and it is expensive. My time is also involved."

This was Richard D. Gibbs, secretary of Peoples Drug Stores, testifying before the House District Judiciary Subcommittee on May 27, 1957. He continued:

"Most of the people think that Peoples Drug Stores are doing something to them by holding their salaries, and they think we influence these garnishments, whereas we do everything to discourage them."

The grief caused easy credit customers and the public under the District's bad debt or garnishment law has been set out in preceding articles. But employers have a host of complaints, too. More of these were placed before the House subcommittee by Victor Ottenstein, representing the District News Co.

He spoke of the many times easy credit stores and small loan companies phone his firm, learn that an employee who wants to buy from them is being garnisheed—and sell to him anyway.

"I feel," he testified, "that it is a promiscuous extension of credit when they know that the employee will probably default, and it is a nuisance to the employer.

"We train our employees and it takes a while before they catch onto the work, and then they get a garnishment and they might leave the job and go somewhere else, which means we have to go to the trouble of employing someone else to replace them.

"A new person makes mistakes which cause us annoyance. Some employees who might have their salaries attached this week will have them attached next week by another firm. A person with a family has to pay rent and has to buy food and they cannot exist without some sort of income, and in some cases it makes thieves out of these employees. * * *

"Now, it is not only a nuisance at our place of business, because it takes executive timeout to handle these matters, or to see the employee about these situations, and to train new employees, but when we have to appear in court to say that the employee earns only so much and should get an exemption, it takes the whole day, and we just cannot afford to spend that time."

Ottenstein then went into the effects of the bar on attaching wages of Federal and District Government employees. He said it is "unfair to non-Government commercial establishments * * * to have employees threatened with garnishment because it is difficult to hire employees. There is a scarcity in the labor market, and these employees figure, 'Well, I'll get a job with the Government, and they cannot attach me'."

Here are illustrations, based on interviews with employers, of points made by Ottenstein and others:

One large employer, Government Services, Inc., had to handle 531 attachments last year. The source of more than 100 of these was 2 easy-credit stores, which stresses once again that a huge share of the garnishments originates with a very few firms.

This employer, at the request of the Washington Post, made a detailed study of its cost of handling these attachments. The estimate: $10 each.

The pay of one valued GSI employee was attached for 2 consecutive months. "It just doesn't make any sense working here and not getting a paycheck," he said. He quit.

Another major employer, Washington Terminal Co., had to process 623 garnishments last year. The estimated average amount: $150. This company estimated a smaller cost of handling, $4 each.

One employer of fewer than 150 persons made a study for the Washington Post of the cost of training replacements for five employees who, heavily in debt, began to steal, were caught and were fired. His estimate: $460 in direct payroll costs.

From a letter to Municipal Judge Milton S. Kronheim, Jr., from Nicholas Costin, a restaurant operator: "Some of these garnishments are granted against people who have never been in my employ or who have left my employ many months ago. This only proves that sales are made without any check upon the purchaser's credit. We who are employers are obliged to answer a garnishment and often find ourselves obligated to these unscrupulous creditors when such an answer has gone astray."

Many employers end up making loans, often out of their own pockets, to garnished employees. If an employer advances wages to an employee whose pay has been attached, he can be sued by the creditor.

The creditor's right to sue is effective under the garnishment law for a 6-month period or until the debt is paid, even if the garnishment itself expires. Such a suit was filed against a real estate firm in 1957 by Hollywood Credit Clothing Co., Inc., 703 Seventh Street NW. Municipal Court Judge Milton S. Kronheim, Jr., dismissed the case, ruling the realty firm, in advancing wages to a $50-a-month janitor after it received a Hollywood attachment, was not trying to help the janitor evade the judgment, but only to help him exist.

[From the Washington Post, Feb. 5, 1959]

DEBTORS' DILEMMA: SPENDING SPREE PRODUCES REAL WOE

(By Morton Mintz)

(Fifth in a series)

In the spring of 1953, a 50-year-old woman went on a spending spree. She ran up bills totaling almost $1,500.

She bought appliances, a television set, and clothing for herself and her seven children. About half of the total was spent in seven easy credit stores.

Her husband had known for some years that his wife was mentally disturbed and put faith in soothsayers. He said, however, that he was unaware that she was making the purchases and that he was being made responsible for the debts.

The creditors presumably established that the husband was employed, so that his wages could be attached in event the debts were not satisfied. It is not known if the wife's condition was evident to any of the sales personnel.

FROM THE RECORD

Here is the story that comes out of employer, hospital, and municipal court, and bankruptcy court records and from conversations with the husband and others directly involved:

On June 18, 1953, the woman got into a taxicab. She did not make clear where she wished to go and she spoke incoherently. The cab driver took her to the sixth precinct; police sent her to D.C. General Hospital and, on June 29, she was committed to St. Elizabeths Hospital. She was diagnosed as a psychotic.

The husband made a few trifling payments on the debts. Late in 1953, three easy credit stores sued him; the other along with other creditors, apparently wrote off his debts as hopeless. He made no answer to the suits, so judgments were declared by default.

The way was open for attachment of his wages. On February 19, 1954, writs from all three stores landed almost at once. The employer noted on the last one, "Wages $127.24 (for 2 weeks) all of which has been answered for on previous writs of attachments" from the other two stores.

On March 19, the husband filed a debtors' petition in U.S. Bankruptcy Court. It said his debts, all contracted in 1953, totaled $1,426.79 and his assets $462.71.

STATES HIS PREDICAMENT

The petition said the husband "states upon his oath" that "his wife * * * incurred heavy indebtedness during the past year"; that his salary has been attached three times recently; that if another attachment is placed against his salary, he will lose his job according to the policy of the company, and will be without means to support his family.

On March 22, the husband was adjudged to be legally bankrupt. (He was discharged from bankruptcy on November 24, 1954.) On March 26 he asked the municipal court to quash the attachment of the store that arrived last, Marvin's Credit, Inc., 734 Seventh Street NW., but this move failed. His motion said his creditors "are constantly attaching (my) salary * * * the entire family is without proper food."

In a statement of affairs filed in Bankruptcy Court on April 24, the husband said Marvins, which had a balance due of $160.56, attached March 17, 1954, and there is now $173.95 held by (the employer) on attachment, of which $158.56 was condemned by Marvins.

The second store, due $71.26, cleared the books with a long-delayed attachment effected in October 1955.

Records indicate that Hollywood Credit Clothing Co., Inc., 703 Seventh Street NW, obtained $140.23 by attachments and $78 by payments, leaving a balance of $101.90. Just when this debt was lifted is not clearly indicated.

The employer's records, however, show that the husband's paychecks were attached a total of eight times between February 16, 1954, and June 1, 1956, leaving him without pay for 16 weeks' work in 15½ months.

Then, at least by normal credit standards, a strange thing happened. Here was a man who had been ruled bankrupt; who himself lacked the slightest understanding of how to handle money, and who presented extreme collection problems. Yet Hollywood sold him more on its "credit that is different" and Marvins on its "magic credit."

Hollywood filed suit on April 20, 1955, charging that he had become delinquent again. He confessed a debt of $320.13, and the store attached his wages. With his payments, Hollywood netted about $250 prior to the fourth attachment, served on August 29, 1956. The employer noted on the writ, "The defendant has left the service of the company."

PATIENCE EXHAUSTED

Employed there 17 years, he was fired by an employer whose patience was exhausted and who could see no end to the costs and trouble of handling the garnishments.

For about a year the husband had only off-and-on employment. Finally a firm hired him as a janitor, at $34 a week. His old job, which benefited by union standards, paid $80.

The new employer's turn came on February 19, 1958, when he was served a writ that said the husband still owed Hollywood $30 (he had paid $290.13) plus court costs of $13 plus 6 percent interest. His $34 wage was attached; the employer lent him the balance, and the debt was paid off.

Marvins obtained a default judgment in 1957 on a balance of $164. But it was unable to attach the husband's wages because in this instance he got an exemption. The garnishment law permits the income of a head of a household to be exempted from attachment if it does not exceed $400 in the 2 months prior to issuance of the writ. His wages were, however, frozen for more than a week, until the court could determine his eligibility.

JUST COULDN'T DO IT

The husband said in a recent interview that he had tried to pay off his debts "$5–$6 a week, but there were so many bills; try to pay the rent, $40; try to eat—got so I couldn't take care of it."

Recalling his dismissal from his first job, he said, "One night I went to get my time card; didn't have no time card."

There was a 2-month period in which the Department of Public Welfare paid his rent. He is in easy credit debt even today for about $130, some of it for clothing he bought the children now at home. He is paying it off at about $2 a week.

Since February 1956, St. Elizabeths has permitted his wife to come home several times a week. "When she comes out now," her husband said, "she says, 'Don't make any more bills'."

IT DOES HAPPEN HERE

This is not a typical garnishment case, if there is such. It is, however, not unusual in the trail of grief it left or in its individual aspects. Its importance lies in its disclosure of things that happen under the District's 58-year-old garnishment law:

The municipal court and employers become collectors, chiefly for a few easy credit operators.

Such firms as these thus have an inducement to sell to persons who buy much more than they can afford and who are unable to pay except when attachments deprive them of necessities.

The employee's entire paycheck can be attached, and attachments on the same bills can keep coming.

Employees are fired after multiple attachments, often after only two.

Exemption of a person's wages from attachment, so as to leave something for food and rent, is not automatic. Even if an exemption is won, wages are tied up for 7 to 10 days.

The public is burdened with relief costs and the difference between the nominal and actual court costs.

Court costs, even if nominal, and interest inflate the defendant's original debt.

The debt can be charged to a person who does not know of the purchases or that he is being made responsible.

DEBTOR'S DILEMMA: NEW BILL WOULD ENABLE MAN TO PAY DEBTS, FEED FAMILY

(By Morton Mintz)

(Sixth in a series)

In cookery the word "garnish" has a gentle, pleasant ring. In District law the same word is like the screech of a braked tire.

The District Bar Association is trying to take the terror and tragedy out of garnishment and put it under the wing of justice.

The bar proposal for reform has been introduced in the House, by Representative JOHN L. MCMILLAN, Democrat, South Carolina.

A bar director, James A. Willey, is leading the fight for adoption. He is a member and past chairman of the bar's municipal court committee.

The bar proposal recognizes the principle of ability to pay. It sets a sliding scale of garnishments based on a debtor's earnings, as follows: on gross pay up to $200 a month, 10 percent could be attached; $200 to $500, 20 percent; more than $500, 50 percent.

The bar measure would allow only one attachment to be effective at one time. Only after one creditor's debt is satisfied could other attachments take effect, in the order received. The employer would forward the creditor's money once a month.

CALLS FOR CLOSE LOOK

These two provisions say to the easy creditor: Collection from bad risks via attachment can take you a long, long time, and you have an incentive to withhold credit from persons who are bad risks.

It is chiefly in this way that the bar proposal attacks a root trouble in the present situation, the indiscriminate extension of credit. The message of the existing law is caveat emptor—let the buyer beware. The bar proposal would add a large dose of caveat venditor—let the seller beware.

The bar says that if its proposal becomes law, the seller might well beware, for example, of the man whose pay is already being attached.

The proposal would make it impossible for attachment to strip a man of his entire pay.

Neither he nor his employer would have to go to municipal court to prove his eligibility for exemption, for he would get an exemption automatically. The trip to municipal court now must be made for each attachment on which an exemption is sought. Debtors sometimes get worn down by this procedure and lose vital time from work. So they accept a settlement under which they agree to buy more.

Because an employed debtor could not be left penniless by attachments, the incentive (in the present law) for an impoverished husband to desert his family would be removed. As explained in Tuesday's article, he risks imprisonment and/or a fine when he deserts. However he also assures that, once a court support order is issued, his family will be able to eat and pay the rent.

SEE LESS OPPORTUNITY

Willey says the delayed-collection provisions would curb the present practice of making innocent persons responsible for easy credit debts they did not incur. He says there would be fewer of them because they would be less inviting targets, and they would not be hit so hard.

Other major features of the bar proposal provide that:

A court order to a man to support his wife, former wife and/or children would have priority over any attachment. There is more caveat venditor here, for a debt for clothing, jewelry or a car, for example, could not come ahead of family needs.

Wage exemptions would be extended to nonresidents of the District on the same basis as to District residents—automatically. Nonresidents get no exemption under existing law.

Last year the House passed an earlier bill sponsored by the bar that would have limited attachments to a flat 10 percent of gross pay, and MCMILLAN has reintroduced a similar bill. Also in 1958, the Senate passed a bill which, while setting a sliding scale of attachments based on earnings, flatly exempted the first $50 of weekly income. Both bills were passed so late in the session that a House-Senate compromise could not be worked out.

Backers of the Senate bill contend the flat $50 exemption is both necessary and a more potent caveat venditor. They also argue that the bar bill and the other measure reintroduced in the House by MCMILLAN would take away from the debtor the exemption he can claim now, forcing him to pay 10 percent of his income though he can ill afford it.

Backers of the two House bills center their rebuttal on these points:

1. The present exemption provision, however reasonable it sounds, does not work most of the time in the way Congress intended. (The reasons for this have been explained previously.)

2. A flat-amount exemption leaves no recourse for collection of legitimate debts from a large segment of the population, and payment of debts is a responsibility that all citizens should bear.

3. Garnishment should be continued as a legitimate, last-resort method of collection from "dead beats."

The Senate bill would have forbidden attachment of a nonresident's pay unless he incurred the debt in the District or unless a judgment was rendered against him elsewhere. The two House bills would allow partial attachments of a nonresident's pay if his employer has an office in the District, no matter where he lives, works, or buys.

Some employers object to the procedure in the bar bill requiring them to forward to the creditor each month a fraction of an attached person's wage until the debt is satisfied. This, they fear, would make their garnishment handling costs even greater than at present.

Willey disagrees. His contention is that there would be so many fewer garnishments that overall employer costs would be lower.

Another employer group strongly favors the bar bill. Agreeing with Willey, these employers foresee lower personnel turnover and replacement training costs, fewer demands on executive time, and an end to the nuisance of multiple attachments. At present, many employers fire a man when he has been attached two or more times.

NOT SEEN AS CURE-ALL

The bar does not claim its proposal is a cure-all. Its position is that it would wipe out intolerable evils, and that every contingency cannot possibly be provided for.

The bar bill, or a measure like it, is considered to have the best chance of enactment. It has the unanimous support of the District Merchants and Manufacturers' Association with its membership of 400 leading retail merchants, and it is expected to have the backing of the District Commissioners.

So far as the municipal court is concerned, Chief Judge Leonard P. Walsh said the major abuses of the court as a collection agency for a few easy credit firms would be ended by the bar bill, by the other bill introduced by MCMILLAN, by the expected Senate bill or by the Dowdy bill.

Other pending garnishment legislation:

The Dowdy bill: Representative JOHN DOWDY, Democrat, Texas, has reintroduced a measure to prohibit attachment of earnings.

The Curtis bill: Representative THOMAS B. CURTIS, Republican, Missouri, has reintroduced his bill to permit attachment of the wages of all Federal employees.

The Curtis bill would exempt from attachment $200 earned in a 2-month period by a head of a household and $120 by a single person.

[From the Washington Post, Feb. 8, 1959]

DEBTOR'S DILEMMA: ADVICE FOR BUYERS ON EASY CREDIT

(By Morton Mintz)

(Last in a series)

Here is some hard advice about easy credit—the kind offered by a troublesome few of the many firms in the field.

It is meant for you, if you are that bedeviled lowest man on the credit totem pole: You have little or no cash or savings and a small income, and you can't get normal credit. Garnishment or attachment of your wages, or even a freeze on them for a week to 10 days, would be a disaster.

The advice comes from municipal court judges and lawyers who have tried to help others like yourself learn that easy credit can be the hardest credit there is—when it is dispensed by the tiny minority of District businesses that exploit you and the law.

You want to buy a suit, say, or a TV set, or a car. These things aren't absolute necessities, but you want them, and the only people who will sell them to you are the easy credit operators.

In many States you couldn't buy those things because the seller couldn't afford to take a chance on you. In those States, the law says in effect: This person can't afford these things; he needs the money for necessities; if the seller takes a chance on such a bad credit risk, the law is not going to help him collect.

But you are in the District. Here you might fall into the hands of the few easy credit firms that will try to sell you far more than you wanted in the first place. Short of a new law that would put a damper on selling like this, selling done in full knowledge

that you cannot afford to pay, there's nothing to stop you from buying but you yourself.

The great majority of merchants, whether they offer regular or easy credit, will discourage you from buying more than you can afford. An unscrupulous few will do the opposite, because they know that if you do not pay they are ready to grab your wages with a court order to your employer.

But you find yourself in front of the store operated by one of the few. You do not know it, but the man who takes you graciously by the arm and pulls you inside is paid to do just that.

You pick out a winter suit. The salesman says it is all wool, but it would be wise for you to look for a label certifying that.

You are told the price is $60 (there may be no price tag). If you had saved the money to buy the same suit for cash, you could have gotten it for perhaps $40. There is a major reason why you should expect the price to be higher: Easy credit is expensive to the seller. His price must take into account, for example, interest, costly bookkeeping and debts that are never collected, even by wage attachment

But you do not have $40 with which to buy the suit for cash. You agree to easy credit, say, $10 down and $2.50 a week for 6 months. If you figure out the final price, you will find that it is $75. So, right off the bat, that suit may be costing you $35 extra.

WATCH THAT CONTRACT

You will be asked to open an account—to sign a sales contract. This is vital: Do not sign until:

1. You are certain you will be given an identical copy.

2. You are aware that the name of another person on it may make him responsible for the debt if you do not pay.

3. You are aware your wages can be attached if you do not pay—sometimes if you miss only one payment.

4. You know the contract is completely filled in and shows a complete total for your purchase and the exact amount of the payments and just when you are to make them.

5. You get an agreement in writing that you can return any merchandise that you may find you do not want within a reasonable time.

Let us say you still owe $53. Something goes wrong—perhaps you are out of work unexpectedly—and you miss some payments. You go to the seller and ask for more time. Do not buy more. Do not relax if you are told not to worry; get an agreement in writing. But the creditor will not give you a written paper of this kind, you find, and he files a complaint against you.

DON'T GIVE UP

Within a few days, a summons will be served by a deputy U.S. marshal. Be sure that you get it, for it can be served on any adult on the premises.

You will do yourself the most harm at this point if you do nothing, if you just give up. The best thing to do is to get a lawyer. Persons without funds can get free legal help from the District Bar Association's Legal Assistance Bureau and the Legal Aid Office, which both the DBA and the United Givers Fund support.

The bureau has an office in room 201 of the Municipal Court Building at 4th and E Streets NW. It is open from 9:30 a.m. to 12:30 p.m., Monday through Friday. Legal Aid's office, at 805 G Street NW., is open from 10 a.m. to 4 p.m., Monday through Friday, and 10 a.m. to noon, Saturday.

A lawyer will check the complaint against you to see if it is valid. If he gets assurances from the creditor, the chances are good that they will be in writing. He may be able to work out a plan with the creditor that will avoid garnishment of your wages. He will advise you on how to avoid going still deeper into debt. Most of the time it is necessary that an answer to the creditor's suit be filed, and the lawyer will do it within the 20-day deadline.

TREADMILL OF DISASTER

If you do not get legal help—and at least three out of five garnishment victims do not—you may well be on a treadmill to disaster because:

If no answer is filed to the creditor's complaint within 20 days, the court hands down a default judgment against you. The creditor now can move to attach your wages.

If the creditor, however, waits 90 days after the default judgment to serve a writ of attachment on your employer, the judgment can only rarely be attacked—even if it asks more than you owe, even if you did not buy the merchandise in the first place, even if the statute of limitations has expired on the debt. The full force of the law is now behind the creditor and, one way or the other, you are going to pay the bill.

You may not know that you may be eligible for an exemption, but your lawyer does, and he will seek it for you if you are entitled to it. This is an especially tricky field, especially for a layman.

The law seems, at least to a layman, to say that your income is exempt from attachment if it totaled $400 or less in the 2 months before the attachment was issued. The idea is that you need $50 a week for food and shelter, and this sum therefore should be exempt from attachment. In actual practice, however:

Some municipal court judges agree that the first $400 is exempt and that only income in excess of that can be garnisheed.

Others interpret the law to mean that nothing is exempt if your 2-month earnings topped $400 even by a nickel. Your fate may well depend on which judge is on the bench when your case comes up.

That suit of clothes—remember it?—cost perhaps $35 extra to start with. You may lose time off from work trying to escape the garnishment mess. Your wages may be attached, not only for the $53 balance but for court costs and 6 percent interest.

You may lose your job if your wages are attached more than once.

You may be evicted from your home because you have no money for rent.

Your children may go hungry because you have no money for food.

Even if you are entitled to an exemption, your wages will be frozen for 7 to 10 days until the court decides that you are eligible.

The question for you, then, is, how easy is such easy credit?

Mr. LANGER. Mr. President, I thank the distinguished Senator from South Carolina for introducing the bill. I hope it may have the attention of all Senators, because I know of no other piece of legislation, involving not only employees but also employers, which would be of greater benefit than a measure wiping out 48,000 garnishments in 1 year, which have blocked the orderly progress of our courts and have sent U.S. marshals all over the city. If we pass the proposed legislation it will save the courts and U.S. enforcement officials thousands of dollars.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. PROXMIRE in the chair). The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

PRINTING OF "CODE OF ETHICS FOR GOVERNMENT SERVICE" AS HOUSE DOCUMENT

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the unfinished business be temporarily laid aside and that the Senate proceed to the consideration of Calendar No. 108, House Concurrent Resolution 15.

The PRESIDING OFFICER. The concurent resolution will be stated by title for the information of the Senate.

The LEGISLATIVE CLERK. A resolution (H. Con. Res. 15) providing for the printing of the "Code of Ethics for Government Service" as a House document.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Montana?

There being no objection, the Senate proceeded to consider the concurrent resolution.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed at this point in the consideration of the resolution some remarks concerning its scope and intent.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

House Concurrent Resolution 15 provides for the printing, as a House document of the "Code of Ethics for Government Service," as that code was adopted by the Congress as House Concurrent Resolution 175 of the 85th Congress.

I am informed that in addition to the regular distribution provided for a House document, 25 additional copies will be made available to each Member of the Congress. The estimated printing cost to be incurred under this resolution is $2,976.61.

Mr. MANSFIELD. Mr. President, I ask that the text of the concurrent resolution be printed at this point in my remarks.

There being no objection, the concurrent resolution (H. Con. Res. 15) was ordered to be printed in the RECORD, as follows:

Resolved by the House of Representatives (the Senate concurring), That there shall be printed as a House document the "Code of Ethics for Government Service" as adopted by the Congress in H. Con. Res. 175, Eighty-fifth Congress. Such code shall be run in two colors and gold from letterpress plates reproducing engrossed artwork, hand lettered and appropriate for framing and office wall display. Stock for prints shall be one hundred and sixty pound white, size twelve and one-quarter inches by sixteen and one-quarter inches flat. Prints shall be inserted in white envelopes inside mailing brown envelopes of twenty-eight pound brown kraft, flaps sealed or tucked in with one corrugated board protector. In addition to the usual number, there shall be printed a sufficient number of extra copies to provide twenty-five copies for use and distribution by each Senator and each Representative. For the purposes of this resolution, the Delegate from Hawaii and the Resident Commissioner from Puerto Rico shall be considered as Representatives.

The PRESIDING OFFICER. The question is on agreeing to the concurrent resolution.

The concurrent resolution (H. Con. Res. 15) was agreed to.

Mr. ALLOTT subsequently said: Mr. President, I wish to take this occasion to

congratulate Representative BENNETT of Florida for having originally submitted House Concurrent Resolution 15, which is Calendar No. 108. In my opinion, he has contributed to our Government service something which has been very greatly and very badly needed. I, for one, am very happy to support the concurrent resolution and to be here at the time of its adoption.

WELCOME TO THE INTER-AMERICAN BAR ASSOCIATION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar 112, Senate Concurrent Resolution 9.

The PRESIDING OFFICER. The concurrent resolution will be stated by title for the information of the Senate.

The LEGISLATIVE CLERK. A concurrent resolution (S. Con. Res. 9) extending a welcome to the Inter-American Bar Association.

The PRESIDING OFFICER. Is there objection to the present consideration of the concurrent resolution?

There being no objection, the concurrent resolution (S. Con. Res. 9) was considered and agreed to, as follows:

Whereas the Inter-American Bar Association will hold its eleventh conference at Miami, Florida, during the month of April 1959; and

Whereas the purposes of the association as stated in its constitution are to establish and maintain relations between associations and organizations of lawyers, national and local, in the various countries of the Americas, to provide a forum for exchange of views, and to encourage cordial relations among the lawyers of the Western Hemisphere; and

Whereas the high character of this international association, its deliberations and its members can do much to encourage cordial relations among the countries of the Western Hemisphere: Now, therefore, be it

Resolved by the Senate (the House of Representatives concurring), That the Congress of the United States welcomes the Inter-American Bar Association to the United States, and wishes the association unparalleled success in its eleventh conference: And be it further

Resolved, That a copy of this resolution be transmitted to the Secretary General of the Inter-American Bar Association.

The preamble was agreed to.

JUNIOR ENGINEERS AND SCIENTISTS PROGRAM IN OREGON

Mr. NEUBERGER. Mr. President, during the past few years increasing public concern has been shown regarding the need of the United States for engineers and scientists. Statistics have been offered indicating that the Soviet Union is far outproducing us in this area and that the United States will suffer from a severe shortage of such personnel in the not distant future unless the rate of training is substantially raised.

A resident of my home city, Portland, Oreg., has played a key role in helping to interest young people in careers in science and engineering. He is Mr. Stanley Shirk, executive director of the nonprofit corporation, Scientists for Tomorrow. During the past 4 years Mr. Shirk has been instrumental in establishing summer institutes at American colleges and universities for high school boys and girls with an aptitude in these two fields. He has received wide praise for his efforts in this area.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD: First, an article published recently in the Medford Mail Tribune, of Medford, Oreg., and which describes the fourth annual Junior Engineers and Scientists Summer Institute to be held at Oregon State College at Corvallis, Oreg., this year; second, the text of an announcement issued by Scientists of Tomorrow explaining the scope and nature of the 1959 JESSI program; and third, an editorial published in the December 8, 1958, issue of the Oregonian, of Portland, Oreg., discussing the value of the JESSI approach in connection with our efforts to encourage expansion of science education.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the Medford (Oreg.) Mail-Tribune]

JESSI PROGRAM AT OREGON STATE SCHEDULED IN JUNE

CORVALLIS.—The fourth annual Junior Engineers and Scientists Summer Institute for high-school boys interested in careers in the two fields has been scheduled for June 14 to 27 at Oregon State College.

The JESSI program has received wide praise and adoption in other areas of the country since it was launched at OSC in 1956 with 129 boys and 1 girl.

This year's program is expected to attract some 200 selected high-school boys from Oregon and adjoining areas of Washington, California and Nevada. A separate program for girls will be held at the same time at Linfield College.

To qualify for selection, students must have demonstrated high scholarship, have completed at least three courses in science and mathematics, and be recommended by their high school. Sophomores and juniors are given preference.

COVERS ALL FIELDS

The 2-week program covers all fields of engineering, mathematics, physics, chemistry, zoology, geology, bacteriology, botany, and modern languages. OSC professors are instructors and classes are kept small to permit individual discussion and training.

Students also have an opportunity to visit college research laboratories and observe operation of specialized science and engineering instruments, including the cyclotron, nuclear reactor, electron microscope, high-voltage laboratory, and electronic computers.

Sponsor of the program, in cooperation with the college, is Scientists of Tomorrow, a nonprofit Portland corporation formed in 1955 to promote interest in science. Stanley H. Shirk is executive director. At Oregon State College, F. A. Gilfillan, dean of science, and George Gleeson, dean of engineering, are in charge of planning the course of study.

Industries and organizations of Oregon, Washington, and California assist by providing scholarship funds for students who would not be able to attend otherwise.

FOURTH ANNUAL PROGRAM, 1959, JUNIOR ENGINEERS' AND SCIENTISTS' SUMMER INSTITUTE (JESSI)

What is the Junior Engineers' and Scientists' Summer Institute (JESSI) program?

JESSI is a 2-week exploratory-orientation session in the areas of science and engineering. In class size groups, which adhere to the instructional program planned by the host authorities, the students are in the hands of the faculties (experts) of the host institution learning:

(a) What science and engineering are about.

(b) What is included in the various branches of these areas.

(c) Something about the college program of studies and the study demands leading to graduation in these areas.

(d) That they must adopt sound study practices and procedures.

(e) That they must master the high school basics in mathematics, the sciences, and English if they wish to be prepared for the scientific and technical studies at the college level.

Because of the sequential nature of the subject matter and the rigorous study demands of the scientific and technical areas of learning, and because of the current propaganda and the need for top quality science and engineering recruits, an exploration in these areas, under the tutelage of the experts in their respective fields, is an invaluable aid to the student.

Students should present themselves as freshmen in the scientific and technical schools prepared both scholastically and psychologically for the job ahead. JESSI has been activated to fulfill a great need for exploration and orientation under circumstances which result in maximum receptivity by the student.

Who may apply for admission to JESSI?

Students who will enter the 11th or the 12th grade in September 1958; who have successfully pursued at least three courses (by the end of the 10th grade) to 4 courses (by the end of the 11th grade) of high school science and/or mathematics; whose teachers are certain that they can successfully pursue college studies in the science and engineering areas when the time comes; who are undecided about their college and/or vocational careers, or who plan to enter the engineering, medical, scientific, or teaching professions and are in need of scholastic and/or vocational guidance, or who, having made their career decision, wish to enjoy full confidence that they have chosen wisely.

How are the applicants selected?

(a) On the recommendation of the high school principal.

(b) On the basis of their high school scholastic record, especially in English, mathematics, and science. Final screening is done by the host authorities.

(c) On the availability of money in the JESSI student assistance fund for aid to those who are in financial need.

(d) On the basis of capacity enrollment. Capacity is determined by the host.

(e) A student residing in one JESSI area may not apply for admission to a JESSI in another local without special permission from Scientists of Tomorrow.

How many JESSI sessions have been held to date?

	1956	1957	1958
Brigham Young University, Provo, Utah	------	[1]	[1]
Clemson A. & M College, Clemson, S.C.	------	------	[1]
Kansas State College, Manhattan, Kans.	------	------	[1]
Linfield College, McMinnville, Oreg.	------	------	[2]
Montana State College, Bozeman, Mont.	------	[3]	[3]
University of Nevada, Reno, Nev.	------	[3]	------
New Mexico College of A. & M.A., Las Cruces, N. Mex.	------	------	[3]
North Dakota Agricultural College, Fargo, N. Dak.	------	------	[1]
Oregon State College, Corvallis, Oreg.	[1]	[3]	[1]
Total	1	4	8

[1] Boys.
[2] Girls.
[3] Boys and girls.

Does JESSI conflict with or duplicate the work of the schools?

No. JESSI supplements the guidance program and offers a service to the student which the schools are not prepared to give. JESSI is not an instructional program and will not conflict with that of the schools; it is a program of exploration and orientation.

The schools have warmly welcomed JESSI as a means of fulfilling a great and felt need by the schools, the students, and their parents, and have cooperated in getting the JESSI message before those students who are qualified to pursue college studies.

What is the per student cost in a JESSI session?

Per capita costs vary with enrollment and local campus costs. The average total coverage cost is $120 per student for the 2 weeks on campus, in an enrollment of 125, for the projected 1959 program of 15 sessions.

How much of this cost must the student pay?

There is no mandatory fee in any JESSI session. A mandatory fee sets up a barrier to admission, and many highly qualified students from the lower economic brackets are automatically eliminated. However, applicants are encouraged to pay as much of the per capita cost as they can afford. The student pays the cost of transportation from home to the campus and return.

[From the Oregonian, Portland, Oreg., Dec. 8, 1958]

JESSI AT STAKE

Among the National Science Foundation programs designed to accelerate education in the sciences is one that raises fears as well as hopes. This is the proposal of the NSF to finance at cooperating colleges a number of summer study sessions to provide opportunities for high-ability high school students "to study and work with experienced scientists and mathematicians.

On its face, the program appears highly desirable. It could, however, result in the loss of valuable ground in the very cause it seeks to serve. For there is already a promising, privately sponsored summer program for young scientists, and its existence is directly threatened by the Government program.

Scientists of Tomorrow, a nonprofit corporation with headquarters in Portland, conducted its first annual Junior Engineers' and Scientists' Summer Institute (JESSI) in 1956, with Oregon State College acting as host. Since that time there have been 13 JESSI sessions on 9 campuses in 8 States. Students spend 2 weeks exploring pure and applied sciences under the guidance of the faculty of the host institution. Students pay their own tuition or are supported from grants by interested industries.

OSC President A. L. Strand points out that if the Government-supported sessions force JESSI out of operation the contributions and interest of industries will be lost.

The summer sessions sponsored by Scientists of Tomorrow began, incidentally, long before sputnik. They should not be allowed to die for lack of a fair chance to compete with Government dollars. There is no apparent reason why the NSF program should not cooperate in the maintenance of the JESSI sessions at Oregon State College and other institutions where they have been so successful.

THE SHORTAGE OF PROFESSIONAL NURSES

Mr. NEUBERGER. Mr. President, the New York Times, which is one of the leading newspapers in the United States, if not in the world, on March 23 published a most timely and pertinent editorial about the shortage of nurses. This particular problem applies not only to New York City, but also to the entire Nation.

I am very much pleased that the distinguished senior Senator from Minnesota [Mr. HUMPHREY] is the sponsor of a bill to provide Federal aid for the education of nurses. The bill sponsored by the Senator from Minnesota is the counterpart of a measure which is under consideration in the House, and which is sponsored by Representative EDITH S. GREEN, who represents the Third Congressional District of Oregon, where Mrs. Neuberger and I make our home.

The editorial in the New York Times strongly emphasizes the need for some form of Federal assistance of this kind, so that more outstanding young women in our country can be educated as nurses. Nursing is practically the only form of education in which the participant has to work almost exclusively in order to pay for her tuition and training. She must take care of the sick, prepare meals, empty bedpans, and perform exceedingly difficult work, both day and night, in hospital wards, laboratories, and in other services.

Until recently virtually no assistance has been given by the U.S. Government to make certain that the country has a sufficient number of registered professional nurses. In order to call the attention of all Members of Congress to this very lucid editorial entitled "Wanted: More Nurses," I ask that it be printed at this point in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WANTED: MORE NURSES

The critical shortage of professional nurses reported here by Dorothy Weddige, director of nursing services, is a problem not confined to New York. Most of the same conditions exist at many other points in the country. But this report, supported by the commissioner of hospitals, puts some aspects of the question in a dramatic light.

At present, fewer than 29 percent of the staff or general duty positions are filled. Less than half of the posts that require registered nurse degrees are occupied. With extra work, practical nurses, aids, and volunteers in some categories the nurses have tried to keep up the standard of service. But the community is asking more of them than it should.

There are several reasons for the shortage, here and elsewhere. First, obviously, is the enormous expansion of hospital care. The whole function of the hospital in relation to the community has changed. The change requires increases in personnel that have simply not been made.

The reason for this, in turn, is partly economic. Because all costs have been rising steadily, hospitalization has also become increasingly expensive. Our hospitals, both public and voluntary, simply have to have more money—a great deal more money—if they are to do the job we expect them to do. For those already in service, nurses and others, better compensation is a matter of justice.

The other aspect is that the compensation for nurses must be made higher if more persons are to be attracted to the service and kept in it. Similarly, the workload must be reduced. The old stereotype of the immaculate and beautiful nurse sitting at the bedside and smoothing the fevered brow is nonsense. Nursing is mostly hard work and often very dirty work. Its rewards, in the economic sense, have been virtually nonexistent in proportion to the services rendered.

Because of this, most of the persons who go into nursing do so with a sense of dedication and devotion. In few professions, indeed, is there a greater degree of real vocation. The public should recognize this and reward it, rather than penalize it and profit by it. It is hard to imagine how, in most cases, we could get better nurses. But we need many more of them.

REFERRAL OF PRESIDENT'S MESSAGE ON FORESTRY

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the President's message on forestry be referred both to the Committee on Interior and Insular Affairs and to the Committee on Agriculture and Forestry.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. NEUBERGER. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. NEUBERGER. I thank the distinguished junior Senator from Montana for making it possible for both the Committee on Interior and Insular Affairs and the Committee on Agriculture and Forestry to consider the President's message on forestry.

The Senator's colleague, the distinguished senior Senator from Montana [Mr. MURRAY], has long been active in the consideration of national forest problems, such as access roads, recreation, watershed protection, and similar problems which arise in Montana, Oregon, and all the other States of the West.

I think the dual disposition of the President's message on forestry by having it referred to both committees is in the public interest.

Mr. MANSFIELD. I thank the distinguished Senator from Oregon. He also has shown great interest in this particular field, and has had much to do with the accomplishments in it.

Mr. MANSFIELD subsequently said: Mr. President, in line with the request previously made, let me inquire whether the forestry message has been received from the President.

The PRESIDING OFFICER (Mr. PROXMIRE in the chair). No; the message has not yet been received.

Mr. MANSFIELD. Mr. President, I understand that the President's message on forestry is now on its way to the Congress. I ask unanimous consent that the Secretary of the Senate be authorized to receive the message, and that it be referred to the Committee on Interior and Insular Affairs and the Committee on Agriculture and Forestry.

The PRESIDING OFFICER. Without objection, it is so ordered.

EXTENSION OF TIME FOR RECEIPT OF TEMPORARY UNEMPLOYMENT COMPENSATION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the unfinished business be temporarily laid aside, and that the Senate proceed to the consideration of Calendar No. 125, House bill 5640.

The PRESIDING OFFICER. The bill will be stated by title, for the information of the Senate.

The LEGISLATIVE CLERK. A bill (H.R. 5640) to extend the time during which certain individuals may continue to receive temporary unemployment compensation.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Montana?

There being no objection, the Senate proceeded to consider the bill (H.R. 5640) to extend the time during which certain individuals may continue to receive temporary unemployment compensation, which had been reported from the Committee on Finance with an amendment.

ADJOURNMENT UNTIL 10 A.M. TOMORROW

Mr. MANSFIELD. Mr. President, in accordance with the order previously entered, I move that the Senate now stand in adjournment until tomorrow, at 10 o'clock a.m.

The motion was agreed to; and, at 3 o'clock and 2 minutes p.m., the Senate adjourned, the adjournment being under the order previously entered, until tomorrow, Wednesday, March 25, 1959, at 10 o'clock a.m.

HOUSE OF REPRESENTATIVES

TUESDAY, MARCH 24, 1959

The House met at 12 o'clock noon.

Rev. Charles W. Holland, Jr., Fountain Memorial Baptist Church, Washington, D.C., offered the following prayer:

The Psalmist has said, Psalms 55: 22: *Cast thy burden upon the Lord, and He shall sustain thee: He shall never suffer the righteous to be moved.*

Gracious, eternal, and merciful God, our Father, we thank Thee for the promise we have just read from Thy Holy Guide, the Bible. We know that this promise is made on the premise that men have experienced regeneration.

We realize, dear Heavenly Father, that sometimes we become so engrossed about our own spiritual poverty that we forget that our Representatives have anxieties, personal problems in the home, and spiritual needs.

Help each person in this great body to place himself in position to receive the promise made in the Psalm we read.

This we ask in Thy name. Amen.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. McGown, one of its clerks, announced that the Senate had passed a bill of the following title, in which the concurrence of the House is requested:

S. 722. An act to establish an effective program to alleviate conditions of substantial and persistent unemployment and underemployment in certain economically depressed areas.

CALL OF THE HOUSE

Mr. HOFFMAN of Michigan. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. McCORMACK. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 23]

Aspinall	Flood	Polk
Bass, Tenn.	Flynt	Porter
Breeding	Frelinghuysen	Powell
Broyhill	Hall	Riley
Buckley	Hosmer	St. George
Carnahan	Johnson, Colo.	Short
Carter	Keith	Taylor
Celler	Lafore	Vinson
Clark	McDonough	Weis
Coffin	Martin	Willis
Dawson	Multer	Withrow
Dingell	Osmers	
Fino	Philbin	

The SPEAKER. On this rollcall 386 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

SECOND SUPPLEMENTAL APPROPRIATION BILL, 1959

Mr. THOMAS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 5916) making supplemental appropriations for the fiscal year ending June 30, 1959, and for other purposes; and pending that motion, Mr. Speaker, I ask unanimous consent that general debate be limited to 3 hours, one-half of that time to be controlled by the gentleman from Iowa, Mr. JENSEN, and one-half by myself.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

The SPEAKER. The question is on the motion offered by the gentleman from Texas.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 5916, with Mr. BOGGS in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

Mr. THOMAS. Mr. Chairman, I yield 20 minutes to the gentleman from Missouri [Mr. CANNON].

Mr. CANNON. Mr. Chairman, I do not believe there will be a war over the pending Berlin controversy, but no one can be certain about it. Khrushchev has issued an ultimatum. He has given us until May 27 to get out of Berlin and to stand not on the order of our going. President Eisenhower has told the American public and the world that we will not yield an inch on the fundamental principles involved. There we are.

This impasse is tempered, perhaps, by the prospect of a summit conference, but conference or no conference, back of it all is the implacable situation in which Khrushchev finds himself in East Berlin and East Germany.

The humiliating contrast between the economies of East and West Berlin and East and West Germany is graphically and mercilessly demonstrating the failure of communism in actual practice and is weakening the hold of the Kremlin on the other Russian satellites.

The rapidly growing divergence between the free economy of West Berlin and the communistic paralysis of East Berlin is now becoming so obvious that it can no longer be concealed or explained, and Khrushchev is under the desperate necessity of bringing it to an end at almost any cost, even at the cost of war or the risk of war.

On the other hand, West Berlin has become a symbol of freedom all over the world and cannot be abandoned by the allies without conceding utter defeat. And the President has announced unequivocally that we have no intention of deserting a free people.

Even a summit conference will prove futile to Khrushchev unless he succeeds in getting West Germany out of NATO and unless he gets American troops off the European Continent. He must get rid of the American troops or he must concede before the world the utter failure and defeat of communism. So eventually it comes back where it started.

Always we have stood irrevocably for a united Germany; always we have insisted that all Russian satellites must be free. And as late as last November the Department of State resolutely resisted overtures for basic negotiation.

The President himself has been opposing a summit conference and the recognition which such a meeting implies. Much of this we may relinquish if we grant Khrushchev the summit conference he has so long coveted and with it we grant recognition establishing him in the eyes of the world as the recognized head of a world power of the first magnitude.

Mr. Chairman, what has brought to this humilating position the great American Nation which in 1945 dictated terms of peace to the world and compelled Germany and Japan, the greatest military powers of all time, to sign on the dotted line without the change of a single word in the terms of surrender? From the commanding position we have dropped to where we may have to compromise with the demands of the dictator. We are in a position strikingly similar to that of the British Government when Prime Minister Chamberlain was compelled to sign the disgraceful treaty of Munich because Hitler had developed modern weapons—while England slept.

Russia likewise has developed modern weapons, while we were preparing to fight the next war with the weapons of the last war. Russia is now conceded by witnesses appearing before our committees to be 2 or 3 years ahead of us, especially in missiles, just as Hitler was ahead of England in air power.

It comes as a shock to the American people to suddenly awake to the fact that after we originated the submarine, the airplane, the atomic bomb, nuclear

power, and nuclear warheads; after we originated them Russia has taken them out of our hands and is now holding them over our heads with brusque orders to us to get out of Berlin and abandon every principle for which our Nation has stood for nearly 200 years. If this conference brings war as the conference of Munich brought war, there is also a shock in store for the Members of Congress. Attack would come suddenly from the air as it came to Rotterdam and as it came to Hiroshima.

Washington would be in the first list of cities to be bombed. With possibly a 15-minute alert, or less, every Member of this House would die. Not at some disputed barricade, or on some scarred slope of battered hill, but here at midnight in this flaming town; each of us has a rendezvous with death.

Some time ago the Navy printed a secret report, excerpts from which were published in the CONGRESSIONAL RECORD of the last Congress. It stated that enemy submarines firing missiles at the comparatively short range of 250 miles—and they now have missiles with a range of 5,000 miles—Russian submarines firing missiles at the comparatively short range of 250 miles could devastate most of the major cities of the United States. And up to this time no defense has yet been devised that is effective against the ballistic missile. Last week the magazines carried a statement by Rear Admiral Thach to the effect that 12 submarines deployed off coast could decimate 70 percent of the Nation's economy at one blow. And Russia has over 600 submarines. And of course, bases in Northern Russia would supplement the attack with planes over the North Pole. In fact, so complete is the potential coverage that military authorities have questioned whether our policy of massive retaliation after the first blow is now practical.

To help meet this attack the Generals prescribe an army of 900,000 men. Last year the President tried to make a slight reduction in that number. He urged that the force be reduced to 870,000 men. He said he had no use for more than 870,000 men. He said he actually had no place to put them, but the Pentagon was adamant and, of course, the House and the Senate stood by the generals. I ask you frankly and in utmost sincerity, my friends, if we had an army of 1 million men what help would it be when these missiles come from the sea and the sky? If we had not 1 million but 10 million men—what could they do? What help could they render? What defense could they offer?

Modern warfare no longer needs masses of troops or trenches or Maginot lines. There is no longer a no man's land. The remotest village is subject to attack. War today is a matter of machinery and chemistry. It requires small forces made up of technicians and expert mechanics who make a life career of the service, and should be paid accordingly. And yet, this House, at the behest of the generals, demands that we draft every boy in the land, bring them in from the fields and the shops. And the generals drill them. "Hayfoot, strawfoot; hayfoot, strawfoot."

Effort has been made to leave the impression that "when the nuclear war is over" the surviving ground forces can take over. How absurd. When we lose control of the air we are through. That is the end—the end of everything.

During the Second World War when the German Army of occupation was moving into France—and you will recall that at that time that the French had one of the top armies of the world—the French Army repeatedly held the line and launched counterattacks which drove the enemy back. But in each instance, a German plane would drift down and drop a bomb at the head of the French column, and the victorious German offense would surge forward again. The French commanders telegraphed back frantically to Paris: "Send us planes, for God's sake, send us planes!" But there were no planes to send. Modern equipment overwhelmed the great French Army.

And under like circumstances we also may have occasion to feel the same need of modern defense measures which overwhelmed France.

We will never again send an American expeditionary force to Europe, or anywhere else. Russia's 175 divisions will sweep to the English Channel practically without interruption anytime the Kremlin issues the order.

Khrushchev tells us the next war will be fought in the United States. And General White said the other day it would require only 2 to 4 days to conclude the decisive phase of a nuclear war. The war would be over in less than a week.

So what would we do with our footsloggers?

Why has America dropped behind the Russians? We invented and built the first submarines, the first atomic reactors, and we first applied nuclear propulsion to naval vessels.

We have the finest scientists, the best electronic engineers, and the most expert technicians in the world. By every rule of reason we should have maintained the undisputed lead in missiles, nuclear-propelled submarines, and all the war material with which Russia today threatens us.

The CHAIRMAN. The time of the gentleman from Missouri has expired.

Mr. THOMAS. Mr. Chairman, I yield the gentleman 5 additional minutes.

Mr. CANNON. But the admirals, and the committees of the Congress which they persuasively influence, concentrated attention on carriers. Russia has copied everything we have produced that was worthwhile, but they have never been silly enough to waste either time or money on carriers.

The admirals have devoted every resource to carriers. They have monopolized the time and service of our best engineers, scientists and skilled workmen, and the most valuable of our strategic materials and a few Saturdays ago they launched a carrier that is the most intricate and most expensive single piece of machinery ever built. It travels at a snail's pace, in this age of supersonic speed, surrounded by fleets of service ships, destroyers, and submarines. It is vulnerable from below and above. It could not be hidden in the widest ocean on the darkest night. Into it and its sister carriers have gone the time and attention and work that should have gone into missiles and submarines. And the loss of America's leadership and destiny of a free world.

The one redeeming feature of the whole dismaying debacle is Admiral Rickover. But for him the Navy would today lie naked to the enemy.

Admiral Rickover was the Billy Mitchell of the Navy. Despite every obstacle the naval hierarchy could throw in his way, he built the Nautilus, and to that extent redeemed the Navy's otherwise barren record.

But it had to be carried to the President himself and not until the President said, "Let him try it" did he have the opportunity to develop the one weapon which can take the place of the SAC—the Strategic Air Command—when that great organization, in the inevitable processes of time is eventually outmoded.

Too much cannot be said in recognition of President Eisenhower's knowledge and understanding of the situation. He is by training, capacity, and experience the most eminent military authority in the world today. He ranked high at West Point, commanded the Allied forces in the Second World War and has served for 6 years as Commander in Chief. He cannot and would not succeed himself. There is no public position to which he could or would aspire. He is in the last stages of his administration. He can have no possible motive except to serve his country.

The President insists that national defense involves not only military defense but economic defense.

Efforts have been made to leave the impression that he is willing to sacrifice security for a balanced budget. Nothing could be further from the facts. And he has repeatedly made that plain to the Congress, to the press, and to the Nation.

He emphasized the importance of living within our means. And here again a mistaken impression is being disseminated. There are those who would have us believe that the excessive spending which is throwing the budget out of balance, is for defense. The spending which is unbalancing the budget is for nondefense purposes, as is evidenced by the table at the close of remarks following the receipt of the President's budget message on January 19, 1959.

It is nondefense expenses which are throwing national estimates out of balance and not defense expenditures.

Under excessive spending the cost of government has risen out of all proportion to our increase in wealth. The current year deficit of over $12 billion exceeds, in time of peace, the entire expenditure of the Federal Government two decades ago.

We have had 23 deficit years out of the last 28 years. Although the 6 or 7 years have produced the largest national revenues ever enjoyed by any nation in any period of time, we have in that period added some $19 billion to the national debt and for the first time since World War I, we have raised the debt ceiling twice in 1 year.

We are collecting the highest taxes ever exacted from the American citizen. Interest on the public debt is taking approximately one-tenth of all taxes collected.

So heavy have been the appropriations urged by the President and passed by Congress that the Treasury faces a crisis today in refunding Government bonds, and rates of interest paid by Government have risen above anything recorded since the Civil War.

Hardly anybody wants Government bonds. People are turning away from Government securities and inflation is the result.

The dollar is now worth 48 cents in terms of what it was worth in 1939 and the cost of food at the corner grocery has tripled in that time.

And again the Russians are waiting just around the corner. You will recall that Lenin, the progenitor of modern Russia said: "Germany will arm herself out of existence; England will expand herself out of existence; and the United States will spend herself out of existence." The first two predictions have at times come close to consummation and the third is awaiting the decision of this Congress.

There are men here in Congress who consciously or unconsciously are waging a determined battle against a stable dollar.

They are urging the expenditure of money we do not have for things we can get along without. Lenin could not do a better job of it if he were on the floor. If they dictate Federal expenditures it is only a question of time until instead of a 48-cent dollar we will have a 10-cent dollar.

May I add my voice to those who are now earnestly urging that we listen to the President and secure a balanced budget. Cut the waste out of the Army and the Navy; reduce nondefense expenditures. This we must do because under the best of circumstances defense outlays will necessarily continue to be heavy and burdensome.

There is not too much basis for hope about what is going to come out of the summit conference. Khrushchev must have Berlin, and we cannot surrender it. We must be prepared for what may come by maintaining our economic defenses as well as our military defenses.

Mr. JENSEN. Mr. Chairman, I yield myself 5 minutes.

Mr. Chairman, whenever we read or listen to these self-styled military experts and military strategists such as we have just listened to, as to how ill-prepared the United States of America is today, we could become greatly alarmed and, in fact, really scared were it not for the fact that like almost every Member of Congress and every well-informed American, I know, as a member of the Subcommittee on Appropriations for the Atomic Energy Commission, the committee that initiates appropriations for the Atomic Energy Commission and all its activities, that we are well prepared in every field of our military defenses to meet any enemy on land, sea, or air. Of course, part of their justifications are classified, which means highly secret. But without divulging any secrets I must say that never do I leave that hearing room after listening to our great scientists, engineers, and nuclear experts, that I do not feel a wonderful sense of security. The members of that committee who listen to those experts, those able devoted patriotic Americans, cannot help but feel, after we know all the facts relative to our atomic energy and nuclear science development and abilities, that we should be truly thankful for those great men.

Mr. Chairman, there is another fact that always gives me a further sense of security. Recorded history proves that the forces of the devil have never been the ultimate victors over the soldiers of the cross. And they never will be so long as God is in his heaven. And He will be there a long, long time.

Mr. Chairman, I yield 10 minutes to the gentleman from North Carolina [Mr. JONAS].

Mr. JONAS. Mr. Chairman, I am sorry the distinguished chairman of our committee concluded his remarks and withdrew from the well of the chamber before I had an opportunity to ask him a question. I wanted to associate myself with his remarks and to congratulate him on what I consider to be a very important and significant statement.

Then I wanted to ask him to confirm the fact that in this bill we are considering today there is provided $2.4 billions in supplemental appropriations, but we do not have a dime of that money. The Federal Treasury is already empty, and we face a prospective deficit at the end of this fiscal year of perhaps $12 billions.

I am answering some of the telegrams I have received from people in all walks of life asking me to vote to increase appropriations by saying to them, "Where do you expect to get the money? Where do you propose that taxes be increased? Is there not a limit to the amount of money we ought to appropriate? How long can we continue a policy of appropriating more money than we have and stay solvent?"

I am concerned about the situation. Other members of this committee are concerned about it. The chairman is concerned, and he and the ranking minority member have repeatedly come to this well and urged the members of this committee to be prudent in the voting of more appropriations.

I remember a great man once said when he was running for the presidency for the first time that a government is like an individual or a business, it can spend more money than it takes in for a few years, but if it continues that policy indefinitely it ultimately means the poorhouse or bankruptcy.

Of course, the Federal Government cannot go bankrupt as long as we own printing presses. But what is the difference between being bankrupt and utterly destroying the value of our money? I am sure there is not a Member of this body who would like to see us relegated to the position Germany was in a few years ago when a housewife had to take a wheelbarrow to carry enough money downtown to buy a loaf of bread.

We on this committee are going to be subjected to a lot of criticism for the bill presented to you for your consideration here today. I already have a stack of telegrams and letters in my office more than a foot high. They come from Governors, mayors, doctors, lawyers, welfare workers, school superintendents, school boards, Indians, members of the armed services—they come from people of every walk of life, all urging that I vote to increase appropriations. Not a single message that I have received since this bill came under consideration has indicated where we might find the money to pay the bills. I have not had a single communication this year urging that taxes be increased. I have not had a telegram from a constituent or from any other person in the United States urging that taxes be increased or that spending be curtailed. They all are insisting, urging, and pressing for increased appropriations.

Those of us who feel that a government ought to be run prudently or run the way a prudent businessman runs his affairs are going to be subject to a lot of criticism on this floor, as has already been the case in the press, and elsewhere, because we have made some cuts in this bill.

I did not volunteer for service on this committee. Frankly, I was a little surprised when I was assigned to it. I do not know yet why I was assigned to it. But from the experience I have had in serving on this committee, I frankly state that I would not recommend it as a place to win friends or develop popularity. This bill runs the entire gamut of Government operations, from every agency in the Department of Agriculture to every office and agency in the Department of State. It extends from the White House to the legislative branch—and as you are all aware since last Friday, it includes the District of Columbia. Every sensitive program in Government is included in this bill.

Do you know this bill covers more than 300 separate appropriation items? Our hearings began in the middle of February and were concluded only a few days ago. They are incorporated in a volume containing more than 900 pages, and we heard more than 250 witnesses—all asking for more money. Now you can become brainwashed after you listen to so much of that. It is all very one sided. I wish some time we would have a request come from a Member of Congress or from a taxpayer or a citizen for the privilege of being heard to request that we live within our means and stop spending money that we do not have for current expenses. That would be an interesting and novel experience.

Now I do not intend to stand here today and argue that everything the committee did was right. Who knows? But what I do say is that the committee seriously and earnestly considered all of these proposals for additional spending against the background of the money that is available. We made some cuts all along the way—not because we are not in favor of children having an education—not because we are indifferent to the need for improving our educational system in the United States—

not because we are not in favor of better health conditions—not because we want to deprive the Capital City of the United States or any other community of essential services—but, simply because we are, to my way of thinking at least, trustees of the tax revenues of this Government. I think the time has long passed when Members of the Congress ought to seriously consider the financial condition of our country and discontinue the fatal habit of spending year after year more money than we have.

I anticipate that some of the programs financed in this bill will be increased. I do not pretend that the committee has the last word on this subject or with respect to any of them; all I ask is that in the course of the debate those of us who will resist some of the efforts to increase the bill be credited with being motivated by good faith. We have taken the position that there is a limit to the amount of money we can appropriate.

I would like to close these few minutes of general discussion by repeating what I said at the beginning, and that is that every dollar we finally include in the bill here today will be money we will have to borrow. Uncle Sam simply does not have any of this money to spend. Just remember this—every dollar you vote to appropriate in this bill will have to be borrowed and some future generation will have to repay it.

Mr. THOMAS. Mr. Chairman, I yield 10 minutes to the gentleman from Massachusetts [Mr. BOLAND].

Mr. BOLAND. Mr. Chairman, this bill that is before the Committee of the Whole today is the second supplemental bill making appropriations for 1959. It is based on recommendations of the Bureau of the Budget totaling $2,844,954,526. This committee has reduced that amout by $385,432,032.

Just as the distinguished gentleman from North Carolina mentioned a moment ago, this is an opportunity for the Congress itself to work its will. As he indicated, this is the kind of committee that makes no friends; it is the kind of committee, however, that is necessary if we are to meet the obligations and responsibilities that fall on the Congress with regard to the financing of various departments and agencies.

Let me by way of diversion try to answer the question the distinguished gentleman from North Carolina asked when he said he did not know why he was placed on this committee. I think his very wonderful statement a few moments ago indicates quite clearly why the minority placed him on the full Appropriations Committee, and why his services were sought on this deficiency and supplemental Committee on Appropriations.

I take the time also to commend the distinguished gentleman from Texas who is chairman of this committee. I serve on another subcommittee, that of independent offices, of which he is chairman. This is my fifth year under his wing, and I say without reservation that there is no man in the Congress who devotes himself as thoroughly to the job than he does with reference to appropriation bills. He, indeed, is a very great Member of this Congress; he is a great asset to the United States of America.

This committee over the past couple of days has been subjected to a considerable bit of criticism. That is to be expected, as the gentleman from North Carolina [Mr. JONAS] indicated. We are dealing with 300 agencies; you cannot satisfy them all. As a matter of fact, a long time ago I learned one of the great axioms of politics; that no one satisfies everyone, and that if you try to you do not survive. This committee has been subjected to pressures, people coming into our offices, telegrams, telephone calls, employees of about every department of the Government of the United States, but that is all well and good, it is as it should be; it is the way to learn things even though sometimes we make mistakes.

The reduction of $385 million was accomplished by specific reductions in some programs.

It was met by the elimination of some programs. It was also done by reducing, which to my mind was one of the most controversial of the issues which faced the committee, expenditures which were necessitated by the increase caused by the pay raise of last year. All that we did in respect to that particular item was to try to apply a yardstick to the number of vacancies which occur in each department. We determined that there was a department that had a specific number of vacancies, unfilled jobs, as of the date this bill was heard, and we determined the amount of money for which appropriations had been made for fiscal 1959. So we reduced in many instances the amount of requests that the specific department made for the particular pay increase occasioned by the law of last year.

I do not agree with all of the recommendations of this committee. I so stated within the subcommittee and I so stated with the full Appropriations Committee. I dissent from some of the actions of that subcommittee and the full Appropriations Committee. I think that some of the cuts went too deep and some of the programs that were eliminated ought to be restored.

Many amendments will be offered to this bill today. I intend to support some of those motions to amend the bill. Specifically, I favored within the subcommittee and within the full committee, efforts to appropriate sufficient funds to keep the National Defense Education Act alive for the remainder of the fiscal year in most of the programs for which the Office of Education asked for funds.

The National Defense Education Act imposed upon the Office of Education a number of obligations. I take this opportunity to commend the Commissioner of Education, Mr. Derthick, and his staff for the manner in which they have worked to get this vast program under way. It has been a difficult task and it has required long hours of study, planning and programing. The employees have worked night and day, and sometimes 7 days a week, to get the program started with a minimum of delay and friction. The testimony indicates that this has been done but its full realization cannot be accomplished without giving the funds—at least some of the funds anyway—requested by the Department of Health, Education, and Welfare and approved by the Bureau of the Budget.

Mr. Chairman, any effort to implement the other activities of the Office of Education under the National Defense Education law by appropriating the funds requested will have my support.

The Office of Education requested money to implement six defense educational activities in an amount totaling $75,300,000. The committee has approved the full amount for Activity No. 1, $25 million for student loans, but it disallowed $50 million for the remaining five activities. I disagreed with some parts of the committee's action and indicated that I could not support it with reference to the activities embracing, first, science, mathematics, and foreign language instruction; second, national defense fellowships; third, advanced training in foreign areas and languages; fourth, educational media research; and fifth, grants to States for statistical services.

The remaining program, listed as Activity No. 5, guidance, counseling and testing, requesting $2 million for grants to States and $1 million for institutes for counseling personnel is a program that I have little stomach for. I joined with the committee in eliminating all funds for this activity. I am convinced that this burden ought to be carried by the States and the local communities. As a matter of fact, a great number of local school departments and school districts have been engaged in this kind of program for a good number of years. This is a field that the Federal Governmen ought to stay out of, and the most effective way to guarantee this is to eliminate the money.

I am not impressed by the argument that these grants will stimulate all school areas to get into the guidance and testing business. Common sense and community pride in their students ought to jog these areas, lacking this kind of a program, to insure that the boys and girls of their school districts are entitled to the great advantages that this program offers. But it ought to be done on their own and with their own money.

I am deeply concerned over the action of the full Appropriations Committee in striking out of the supplemental bill the entire amount of $225 million requested under the mutual security program and approved by the Bureau of the Budget.

The subcommittee recommended $100 million, and this approval came after wrestling with this problem for many hours, many times, and many days. The $100 million figure was a compromise. I asked consideration for and I personally preferred a larger amount. An amendment to restore the amount of $100 million that the full committee eliminated will be offered a little later. I sincerely believe that it would be little short of tragedy not to restore at least this amount. The chairman of the full Committee on Appropriations in this

well a few moments ago indicated that Khrushchev said that when we fight the next war, it will be fought in the United States. The elimination of this program, cutting this particular program back, or scuttling the program entirely—and this is what we will do if we fail to appropriate some money for the Development Loan Fund—will guarantee the fact that the next war might well be fought in the United States. For we will have no friends anywhere to help us carry the burden.

I disagree to some extent with the way in which funds were handled for the District of Columbia, and I specifically disagree with reference to the Federal payment for the District of Columbia. Federal payments in varying amounts have been made to the District of Columbia ever since the Nation's Capital was established here. In 1921 the Congress discontinued the practice of picking up the tab for 50 percent of the cost of operating the District of Columbia, and since that time the percentage has fluctuated markedly, 39.5 in 1924 down to some 12 percent in 1954 and recently about 16 percent. When the officials of the District of Columbia appeared before our committee they indicated that there were a number of unfilled jobs in all of the departments in the District of Columbia. There are 24,000 employees in the District of Columbia. There are some 900 or 1,000 vacancies, so with respect to the pay increase which was occasioned by the legislation last year we reduced that amount by considering vacancies. I think when we reduced the request for Federal payment of $9 million to $2.5 million, we made a serious mistake, and this is the area in which I hope that the committee will accept an amendment which will grant a substantial number of millions more dollars so that the cost of the pay increases, the cost of running the fire, police, health, and a myriad of other agencies that are in this great city will not be impaired.

I know that this has been a difficult job for the chairman and the other members of the committee. And, just as our colleague, the gentleman from North Carolina [Mr. JONAS], indicated, I hope that the Members will give very deep and careful consideration and attention to the amendment which will be offered here. I trust, in most instances, the action of the committee will be supported by the great majority of the Members of this Committee.

Mr. JENSEN. Mr. Chairman, I yield 15 minutes to the gentleman from Michigan [Mr. FORD].

Mr. FORD. Mr. Chairman, I take the floor at this time to speak primarily, in fact exclusively, to the reduction which was made in the President's program as far as the Development Loan Fund is concerned. As has been stated here before, the President recommended in the supplement $225 million. The Deficiency Subcommittee proposed $100 million, and in the full committee last Friday the $100 million amount was stricken from the bill. It is my understanding that a proposal will be forthcoming during the consideration of the bill for a restoration of the $100 million.

I think it would be helpful to the Members if a bit of history was recalled concerning this item in the last session of the Congress. I speak now as a member of the Foreign Operations Subcommittee of the House Committee on Appropriations. This is my seventh year on that subcommittee and, of course, in the last session of the Congress, I participated in the consideration of the bill from its inception.

The House of Representatives in the appropriation bill last year for the Development Loan Corporation recommended $300 million for the program. This was in contrast to the $625 million that the President recommended. The bill went to the Senate, and the Senate restored the amount up to $580 million. In conference we had the difference between $300 million and $580 million.

As I recall, that was one of five or six items that were before the conference committee. Actually there was a difference of about $420 million in total between the House version and the Senate version overall. The House had approved a total of $3,078,092,500. The proposal as it passed the other body was in the amount of $3,518 million. There were about five items in disagreement. The conference report was finally approved by the 85th Congress on the last day of the session. It was agreed by the conferees we should take approximately $200 million of the difference and distribute it in about four areas. This meant we would not be anywhere near the full Senate figure in the Development Loan Fund area. As far as the Development Loan Fund is concerned this statement appeared in the conference committee report on page 4:

> The amounts contained in the bill agreed to by the conferees were too small in the view of some of the conferees, especially in the Development Loan Fund. It is understood that if additional funds are needed next January for the purposes contained in this bill, the Appropriations Committees of the House and Senate will give earnest consideration to the recommendations of the Executive in view of the importance of maintaining our friendly relations with countries with whom we have undertakings.

This conference report was signed by all members of the House conference committee. The chairman, of course, was our distinguished friend from Louisiana, OTTO E. PASSMAN. His name heads the list of those who signed this conference report.

As a result of that statement the President submitted to the Congress this supplemental or deficiency request for $225 million. The Deficiency Subcommittee held hearings on the President's recommendations for the $225 million, and after due deliberation recommended to the full Committee on Appropriations $100 million. They did—and when I say "they" I mean the Deficiency Subcommitee—consider the President's views and their official recommendation to the full Committee on Appropriations was $100 million. It is my hope that an amendment will be offered to restore the $100 million, and I, for one, intend to support it.

I am not so sure that it is adequate, but it is in accord with the views of the members of the Deficiency Subcommittee for whom I have great respect, and consequently I shall abide by their initial views or recommendations.

Now, what is the story as to the Development Loan Fund in and of itself? If it has not already been said, I am sure it will be said that the program has too much money. What are the facts? The program was initiated in the fiscal year 1958 at which time the Congress made available $300 million.

In fiscal year 1959 President Eisenhower recommended $700 million for Development Loan Fund. The Congress made available $400 million. The House had recommended in its version of the bill $300 million, and the Senate $580 million. We struck a balance of $400 million in the final version of the bill. So in the 2 fiscal years 1958 and 1959 the Development Loan Fund has had $700 million available for the various projects that have come before it.

What is the obligation picture? As of March 20, 1959, this is the exact situation: Loan and guarantee agreements signed—those are firm obligations of this Government with those who are seeking to benefit from this program—$474.3 million. Loans approved on the basis of letters of advice pending, $18.4 million. Project commitments on letters of advice already issued, $159 million. Other project commitments, and these are limited to the Philippines and Turkey, $46.2 million. This makes a total of $697.9 million either obligated or committed by letters of advice, leaving a balance of $844,000 for the remainder of this current fiscal year, slightly over 3 months until June 30.

Some people are bound to raise the question, and I think it is a legitimate one, that these letters of advice are not really obligations. I like to use this analogy, and I think it is apropos. I guess all of us during our lifetimes have gone to a bank to borrow money on a house or a business. We submit a proposal. We tell the bank that we will do this. The bank looks over our project and normally writes us back that "If you meet these conditions, we will lend the money for your home or for your business."

When I have that letter from the bank, the lending institution, I have the personal feeling that if I meet their stipulations I have a firm commitment from the bank to get money for my home or for my project. Believe me, if I meet those criteria and then they, the bank, back out, I do not feel very sympathetic to the lending institution, and my attitude toward bankers goes down correspondingly.

The situation here is quite similar as far as the letters of advice are concerned. The individual group in a certain country submit to the Development Loan Fund a project. The Development Loan Fund Board of Directors look over the project. They determine that it is either feasible or not feasible. If they think it is sound, they issue a letter of advice. When the prospective borrower receives that letter of advice he has the feeling,

and it is a legitimate feeling, that if he meets the established criteria, in effect the Development Loan Fund has made a commitment by the letter of advice.

Let me read to you a letter of advice. This is one dated February 20, 1959.

This letter is written to Fred H. Sherwood, secretary, Productos de Kenaf, Guatemala. This is a Guatemala project. The letter is as follows:

DEAR SIR: I am pleased to inform you that on the basis of the proposal previously submitted by your firm and the discussions between our respective representatives related thereto, the board of directors of the Development Loan Fund has authorized the establishment of a loan to this particular project in the amount not to exceed $400,000 or its equivalent to assist in financing the foreign exchange cost of machinery, materials and services in the Kenaf bag manufacturing factory.

The loan will be established by and expended under the terms and conditions specified in a loan agreement which we shall transmit to you at an early date for consideration and execution. The loan agreement will describe more fully the purpose and method and the utilization of the loan and will include the following terms, some of which have already been discussed informally with your representatives.

1. Interest shall accrue, from the dates of the respective disbursements under the loan, at the rate of 5¾ percent per annum.

Then it describes the manner of payment of interest:

2. The principal amount of the loan shall be repayable in 10 successive semiannual installments, the first of which shall be due and payable on a date, to be specified in the loan agreement, no later than 1 year from the date of the first disbursement under the loan agreement.

Then there are some other terms set forth in this particular paragraph.

3. Provision shall be made for repayment of principal and payment of interest in U.S. dollars.

4. The applicant shall furnish evidence of paid-in capital equaling or exceeding the equivalent of $500,000.

5. The loan shall be subject to other terms and conditions set out in the loan agreement.

The final paragraph:

The DLF expects to make a public announcement of this loan on March 2.

Then there is a final sentence or two that I do not think is particularly pertinent. This letter is signed by the Acting Managing Director of that particular Development Loan Fund.

Mr. ROONEY. Mr. Chairman, will the gentleman from Michigan yield?

Mr. FORD. I yield.

Mr. ROONEY. The gentleman from Michigan did not wholly read the last paragraph of the letter. In that paragraph appears what I consider to be one of the most important aspects of this discussion. It refers to the public announcement of the letter of intent in the press and in various news media not only in the United States but in the borrowing country. As soon as that announcement is made, the negotiations constitute a firm loan. Would the gentleman not agree?

Mr. FORD. I would wholeheartedly agree and we are trying to indicate the reasons this is a firm commitment even though it may not qualify as an unequivocal obligation according to our established rules and regulations.

Mr. ROONEY. Will the gentleman yield further at this point in order to keep the discussion of this matter in proper sequence?

Mr. FORD. I yield.

Mr. ROONEY. I should like to announce that I have an amendment at the clerk's desk which I intend to offer when the bill is read for amendment under the 5 minute rule which would restore the $100 million approved by the subcommittee which heard the testimony with regard to the Development Loan Fund. I concur in the remarks of the gentleman from Michigan here this afternoon.

Mr. FORD. I am glad to hear that the gentleman from New York is sponsoring that amendment. I will support it. He is on the Subcommittee on Foreign Operations with me. We went through this difficult process last year when the mutual security program appropriation bill was before the Congress. I am sure the gentleman would agree with me that the President was carrying out our suggestion by his recommendations to the Congress of this amount of $225 million for this fiscal year supplemental.

Mr. JONAS. Mr. Chairman, will the gentleman yield?

Mr. FORD. I yield.

Mr. JONAS. I certainly agree with the gentleman that when a letter of advice is issued, the loan is actually committed and the money is not available for any other loan. That is clear, but now I think the record ought to show that we do not have any outstanding letters of advice that will exceed the actual appropriations. The money requested in the gentleman's amendment, the $100 million, is simply additional capital to go into the fund for future use, but is not needed to take care of any outstanding commitments.

Mr. FORD. That is right. Of the obligational authority previously made available they have committed, according to law, all but $844,000. They have not gone above the $700 million made available in the 2 fiscal years.

Mr. JONAS. I agree, but if they were to carry out all the letters of advice it would not exceed the money they have in hand.

Mr. FORD. Is it not also true, however, to say that they have obligations pending for loans far in excess of $100 million?

Mr. JONAS. Yes; at least $1½ billion.

Mr. SCHERER. Mr. Chairman, will the gentleman yield?

Mr. FORD. I yield.

Mr. SCHERER. Do I understand that our Government will have to borrow money with which to make these loans? Did I understand the gentleman from North Carolina, a member of the committee, to make that statement?

Mr. FORD. This is obligational authority which will generate spending in future fiscal years; depending on the status of the Federal Treasury when the loan by Development Loan Fund is made and expenditures generated, our Government may or may not have to borrow.

Mr. SCHERER. Is it not a fact that we would have to borrow money to make these loans?

Mr. FORD. At the present time, yes; but it is the hope that in fiscal year 1960 we will be in the black rather than in the red.

Mr. ROONEY. Mr. Chairman, will the gentleman yield?

Mr. FORD. I yield.

Mr. ROONEY. I personally believe that we should appropriate $225 million which would bring the amount of the program up to the $625 million authorized by Congress for fiscal year 1959.

Mr. JENSEN. Mr. Chairman, will the gentleman yield?

Mr. FORD. I yield.

Mr. JENSEN. Is it not a fact that the foreign nations who receive these loans under the Loan Development Act may pay the loans in their own currency?

Mr. FORD. I think the practice is that it can be paid back either in their own currency or in U.S. dollars. However, I must be perfectly frank about this. I believe the record to date is that the vast majority of the loans will be repaid in local currency. I cannot give the precise breakdown, but I think it is around 75 or 80 percent in local currencies and the remainder in U.S. dollars.

Mr. JENSEN. And the value of the local currency is a very small percentage of the value of the American dollar.

Mr. FORD. Let me just say this, regardless of how soft or hard the loans by Development Loan Fund are, undoubtedly the development loan program is infinitely superior to the former program of grants, where we simply gave the money and expected no return either in dollars or in soft currency.

Mr. BOW. Mr. Chairman, will the gentleman yield?

Mr. FORD. I yield to the gentleman from Ohio.

Mr. BOW. I say to the gentleman from Michigan regarding the percentage of these loans to be paid back, the testimony before the deficiency subcommittee was that 19 percent of these loans are paid back to the Treasury in hard dollars.

Mr. FORD. Then my guess of 75 or 80 percent was not far wrong.

Mr. BOW. The gentleman is about right when he says 19 percent is paid back in hard dollars. The balance of the payments in soft currency may be reinvested in those countries which would necessitate other dollars going to them at a later date.

Mr. FORD. I thank the gentleman for his contribution.

Regardless of how much is paid back in hard currency, this program is, on the whole, greatly superior to the grants program which we have had over the years, consequently I think it was beneficial to the United States to break away

from grants for economic assistance and initiate this loan program.

Mr. JONAS. Mr. Chairman, will the gentleman yield?

Mr. FORD. I yield.

Mr. JONAS. It is also better from this standpoint, is it not? We have had a lot of concern about how people around the world look upon outright gifts. They think it is something strange for a country to make an outright gift.

Since this is a loan, it should remove some of that suspicion.

Mr. FORD. It is no doubt true we have better country-to-country relations when we make loans. In addition to that, may I point out we are charging an interest rate on this particular loan I mentioned of 5¾ percent. It is repayable in hard money.

Mr. CURTIS of Missouri. Mr. Chairman, will the gentleman yield?

Mr. FORD. I yield to the gentleman from Missouri.

Mr. CURTIS of Missouri. Can the gentleman state that as this loan fund has gone along we have been cutting back on the grants?

Mr. FORD. We have. The overall program for fiscal 1959 is about $3,098,000,000. Compare that, if you will, with programs of 4 or 5 years ago when it was five or six billion dollars annually. I think in fiscal year 1952 it was something like $7 billion. Now it is about half of what it was before.

The CHAIRMAN. The time of the gentleman from Michigan has again expired.

Mr. JENSEN. Mr. Chairman, I yield the gentleman 3 additional minutes.

Mr. TABER. Mr. Chairman, will the gentleman yield?

Mr. FORD. I yield to the gentleman from New York.

Mr. TABER. Is it not a fact that the major part of all loans which can be handed out as a gift have practically been eliminated?

Mr. FORD. I think that is true, outside of the straight military assistance items.

Mr. TABER. The gift of those things and to support them, and the materiel that goes into them; but as far as giving them money or anything like that is concerned, there is nothing in the way of economic aid at all in here. Is that true?

Mr. FORD. That is correct. The Development Loan Fund is practically taking the place of the outright grants for economic aid and assistance.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. FORD. I yield to the gentleman from Iowa.

Mr. GROSS. What leads the gentleman to think we are going to collect on these loans? The gentleman talked about private banking operations. Does he find in this country any bank with two windows in it, one for hard loans and one for soft loans?

Mr. FORD. We make some loans ourselves as a Government through the Small Business Administration.

Mr. GROSS. I am talking about private banks.

Mr. FORD. Some people say Small Business Administration loans are in effect soft loans because the prospective borrower cannot get a commitment from a regular lending institution. My experience has been that most of those small business loans have been repaid. I think it is a good program. Nevertheless, they are not hard loans in the banking fraternity or they would have been made by a regular lending institution.

Mr. BROWN of Missouri. Mr. Chairman, will the gentleman yield?

Mr. FORD. I yield to the gentleman from Missouri.

Mr. BROWN of Missouri. Did the gentleman agree with the gentleman from North Carolina when he said this is $100 million worth of new money?

Mr. FORD. One hundred million dollars in new funds for the Development Loan Corporation for the remainder of fiscal 1959.

Mr. BROWN of Missouri. The gentleman was just beginning to state a moment ago that the reason for this is that the backlog of requests is getting so great that there is additional money necessary.

Mr. FORD. As I understand the situation, there are over a billion dollars in prospective loans on file with the Development Loan Fund. Of course some of these would not qualify, but there are bound to be those which are eligible for whatever money Congress makes available.

Mr. BROWN of Missouri. With due respect to the gentleman, recently we had another instance where the GI's in this country have a blacklog of requests in rural areas for funds that have far exceeded anything we have made available to take care of them. Has the gentleman come before the Congress with a request for funds to take care of this tremendous backlog of requests for GI housing loans?

Mr. FORD. I may say that in my congressional district the Veterans' Administration has never seen fit to make my district eligible for direct loans, so it is academic as far as my district is concerned. We tried hard, but the Veterans' Administration thought our lending institutions were doing an adequate job. In some areas in the two counties I believe there is a need but the VA feels otherwise.

Mr. BROWN of Missouri. We were told that we did not have the money.

Mr. GROSS. Are there any foreign areas in the gentleman's district?

The CHAIRMAN. The time of the gentleman from Michigan has expired.

Mr. THOMAS. Mr. Chairman, I yield 5 minutes to the gentleman from Ohio [Mr. KIRWAN.].

Mr. KIRWAN. Mr. Chairman, I never thought in my 23 years that I would come down in the well here twice in succession. I would not have come down here yesterday and presented a bill if I was not a member of that committee.

Mr. Chairman, first I would like to say this: During my 20 years it was my privilege to sit in a room twice—I mean, sit in it twice—and hear two great men testify. The first to testify was a man by the name of Dwight Eisenhower. It was his first appearance on Capitol Hill after the Second World War. I happened to be on the Military Appropriations Committee at the time he was testifying. Judge Kerr was chairman of the committee. And, I remember the questions that he asked. And, if ever a thing came to pass, it came to pass like he said that morning in the room. Three months after the Second World War was over he told us what was going to happen to us and where we were going. It was my privilege 2 years after that to sit in a room with 13 members of 2 House committees, the military and the naval. We unified the forces. In 1946 we voted to unify them, and it took place in 1947. There were four speakers that day. And, they gave a luncheon. The first speaker was Jimmy Forrestal, the first Secretary of Defense. The next was a great admiral, Nimitz, who was commander in chief in all of the Pacific when we only had eight airplanes the day after Pearl Harbor. The next was Vandergrift, who led the Marines. And, the scientists of the Navy said on that day, which was shortly after the war, that unless you do this, we are so sure of our ground that 10 years from today—which would be 1957—it will cost you $300 billion and God knows how many lives. It cost us $400 billion and we lost 30,000 kids in Korea and wounded 100,000. Now, only three of us stayed in the room that day. The other 10 walked out. What I am trying to tell you today are facts.

I told you yesterday that we are hooked up with six allies, the largest, over in Europe. They all led the world at one time, like we lead at this time, and we are supposed to be the leader since World War I. The first was Greece. Take a look at Greece today. I visited that country some years ago. It is now one of the poorest. The next is Rome; very poor. Then came the wealthiest nation of them all, Spain, when they were carrying gold from South and Central American countries, Cuba, Puerto Rica, Santo Domingo. Sure, she was wealthy because the gold was carried there by the boatload. But, she became careless. Then came France, England, and Germany, and now the United States. Now I cannot tell you what was said on that occasion, but Ike did say that we are going down that road twice faster than any other nation. Some of those nations led the world for 200 years. We are only leading it 14 years. And, look where we are. We owe more money than all the world put together.

I remember a few years ago—and I am old; I am one of the oldest here—I remember a few years ago I was tossing stones at youngsters because they could not speak the English language. And, excuse the expression, we called them hunkies and called them something else, too, and told these kids, "If you can't speak English, get out of this country." Now we are going down the road to spend money to teach these kids various languages. Why, there are more people that can speak two or three or four foreign languages in New York and

other cities than in all the rest of the world. There are millions of kids in New York that can speak half a dozen languages. But, we have to rush in there and give them money so that they can speak another language. I want to congratulate the gentleman from North Carolina for the way he spoke about this bill, and when he told about the great chairman there, he never told anything wrong. But, this is the time and place to take stock and give a good report of our stewardship. I mean that, because those that do not believe in history better be prepared to face it. And, we are not prepared, and one reason why we are not prepared is the way we have been dumping money out like no humans on the face of the earth ever dumped it out.

One of the things they are going to ask you today probably is why do we set out the recreation plans. My God, we have a war on one side, and we want to find out how we can go and play on the other. That is going to be the question they are going to ask here today. I hope you will back up the chairman today.

Mr. BOW. Mr. Chairman, I yield 10 minutes to the gentleman from Massachusetts [Mr. CONTE].

Mr. CONTE. Mr. Chairman, at the outset I want to commend the gentleman from Texas [Mr. THOMAS] and the members of his subcommittee for the outstanding job they have done with this very distasteful subject of deficiency appropriations.

Mr. Chairman, I rise here today as a member of the Subcommittee on Appropriations for Foreign Operations. I rise in opposition to the cut in the supplemental appropriation for the Development Loan Fund. I feel, Mr. Chairman, that it is vital to our Nation's security and the future of the free world that we carry on this important foreign aid program.

Mr. Chairman, able criticism of the foreign aid program of the United States was made yesterday, and many other times, by the distinguished gentleman from Louisiana [Mr. PASSMAN]. Mr. Chairman, I have the greatest respect and I have the greatest admiration for the gentleman from Lousiana. When he speaks, Mr. Chairman, I listen closely. He has long years of experience in appropriations work. He has saved this Nation of ours millions and millions of dollars of wasteful spending. And when he tells us today that there have been abuses in our foreign aid program I am compelled to agree with him. There are abuses in all governmental agencies. There are abuses in the veterans' program. There are abuses in farm subsidies. There are abuses in the Federal regulatory agencies. Yet we continue these services trying to find ways to correct the abuses. There are also abuses, Mr. Chairman, in the congressional staffs here in Congress, but that does not mean, Mr. Chairman, that the Congress will abolish its staffs or will abolish itself.

We need to maintain a sense of balance in these matters, eliminating inefficiency, waste, and other types of abuses, but still protecting and nurturing programs so essential to our entire future. It is for this reason that I favor a supplemental appropriation of at least $100 million for the Development Loan Fund for the remainder of the fiscal year 1959, which amendment I understand will be offered here this afternoon. I feel that we would be making a grave error if we failed to vote this supplemental appropriation. I do not maintain that the $100 million is adequate. It is my own feeling that the administration was justified in asking $225 million for the remainder of this fiscal year, but the barest minimum is $100 million unless the entire foreign aid program is to encounter the most serious difficulties in the months ahead.

At the close of business March 20, Mr. Chairman, the Development Loan Fund had only $844,000 left in uncommitted funds. If the Congress now fails to make a supplemental appropriation for this fund it will be impossible for the Fund to go ahead making loan commitments between now and the beginning of the fiscal year 1960. What will the world say if we refuse now to appropriate these vitally needed funds? I think it is clear what the global reaction will be. America has shown, in the midst of one of the most serious world crises since World War II, that she shrinks back from her free world responsibilities. She is afraid to wear the mantle of leadership which history has given her. America has lost her self-confidence, her courage. Now in the moment of decision she turns her back on the world and seeks to withdraw into herself.

Let us recognize clearly what are the funds the administration asks for today. These are not funds for military assistance to our allies or for bolstering up their economies on an immediate basis. These funds go only to the so-called underdeveloped countries. They are on a loan basis exclusively. They are for projects of long-term economic development. They supplement existing public and private lending institutions and investors. These loans will stimulate private investment and enterprise. About 19 percent of the loans are repayable in dollars or other hard currencies, the remainder in local currencies.

Mr. Chairman, I believe this program is an absolutely essential part of our national effort to maintain peace and security for our country and the entire free world. In the long tier of nations stretching along the underbelly of the Sino-Soviet Empire, in Africa, and in Latin America, a new age is dawning. The underdeveloped nations are awakening to their potentialities in this modern world. The question is, Will they develop into stable, mature, democratic nations, or will they be sucked up into the slave system of the Communist empire?

It has sometimes been charged that programs of this nature are giveaways. I would point out that the Development Loan Fund is based on the best principles of free enterprise as it seeks to stimulate economic progress through sound loans. I would point out further that if we weaken now in our determination and slacken our pace in helping these underdeveloped nations to prepare for a new era of prosperity and freedom, we will indeed give away to communism, within the next few years, the control of countless nations with enough people and resources to change the balance of power irretrievably against the United States.

It has sometimes been charged that our foreign aid is expensive. Surely these programs are expensive, and they will continue to be expensive just as long as the threat of international communism exists. But they are not nearly as expensive as war. We must keep the expense in its proper perspective. Let us remember that the initial cost of World War II to the United States was $350 billion, with battle dead and wounded of 961,000 Americans. The Korean war cost us $18 billions, with 143,000 American casualties.

I freely admit that the Development Loan Fund may be expensive, but I consider its cost insignificant when compared to the staggering cost of wars in terms of dollars and the cost of wars in the most tragic equation of all, in terms of human life.

If these foreign-aid funds help even in small part to create stable, healthy economic conditions which will help to prevent future wars, they are surely a sound investment in terms of dollars. If they save the life of even a single American boy who might otherwise fall in battle, they are the most precious investment, in human terms, that our Nation could possibly make.

Mr. LINDSAY. Mr. Chairman, will the gentleman yield?

Mr. CONTE. I yield to the gentleman from New York.

Mr. LINDSAY. I should like to commend my colleague, the gentleman from Massachusetts [Mr. CONTE], on the strength of his remarks in support of a supplemental appropriation, which I understand will be offered by my colleague the gentleman from New York [Mr. ROONEY] to the extent of $100 million for the Development Loan Fund.

May I ask just one question: A question was asked earlier as to whether or not any of these loans have been paid back in the short period of time this program has been functioning. Can the gentleman tell me whether or not some or any of these loans have been paid back with interest?

Mr. CONTE. The Development Loan Fund Board estimated by the end of fiscal year 1959, they are expected to receive $2.4 million in interest and principal.

Mr. LINDSAY. I thank the gentleman. Now the statement has also been made that we are, in fact, loaned out. Do you support the statement made by the gentleman from Michigan [Mr. FORD] that we are loaned out at this point and that this supplemental appropriation is needed at this point?

Mr. CONTE. Definitely. We have about $884,000, as I said in my discussion here today, that is uncommitted. There is about $1,500 million asked for by many countries throughout the world.

Mr. THOMAS. Mr. Chairman, I yield 10 minutes to the gentleman from Tennessee [Mr. EVINS].

Mr. EVINS. Mr. Chairman, with reference to putting this matter into proper perspective, I think it is well that another point of view be stated with reference to putting the foreign aid program in an overall proper perspective. This program has been going on for 12 years. I was here when it was initiated in the 80th Congress. It was started at that time as a measure to assist our allies and some six countries who were then supposed to be going Communist unless we provided some aid and assistance to those countries. Today, it is spread over some 59 nations all over the world. I think as one who has supported this program in the past that there are other matters that we should consider with reference to the growth and extent of the full implications of foreign aid.

Mr. Chairman, a great hue and cry is being raised that the failure of this House to make an appropriation for the Development Loan Fund will somehow endanger our relations with and our reputation with the rest of the world. Mr. Chairman, the fact is that there already are five agencies which are supplying money in whole or in part for economic development abroad. Let me list these.

First. There is mutual security which, since we began to make appropriations for this purpose, has had appropriations of more than $75 billion.

Second. There is the Export-Import Bank which has made loans in excess of $5 billion and a good portion of these funds has been used for development abroad.

Third. There is the International Bank for Reconstruction and Development. Our Government has committed more than $3 billion to this Bank and has actually paid in some $650 million.

The World Bank is actively making economic development loans. It has made such loans totaling almost $3 billion—of which the United States has contributed as I said some $650 million.

Fourth. There is the International Monetary Fund to which we have contributed to date $2,000,750,000.

Fifth. There is the International Finance Corporation into which we have put $35 million.

Altogether the United States has put into all of these agencies a total of $82 billions since the war ended.

Mr. Chairman, it certainly does not seem that the world will come to an end if we now refuse to appropriate funds for this latest of a series of agencies to develop other countries.

Mr. Chairman, it seems that any other country in the world can obtain funds to create or expand economic enterprises but not the United States. We make loans to foreign governments, to foreign corporations and to foreign nationals to help them build businesses in some 59 different countries of the world. We also make loans to U.S. corporations or their foreign subsidiaries to help them expand their businesses in these other countries abroad.

We can make loans for a steel mill in Argentina, a fertilizer plant in Egypt, a cement plant in Mexico, a coal-washing plant in Turkey, a railroad in Indonesia, or a dam or canal system in Afghanistan. In fact there appears to be no limit to the kind of economic enterprise for which the dollars of the American taxpayer can be lent in 59 foreign countries. But, Mr. Chairman, there is no agency authorized to make such loans for economic enterprises within the United States. We can make loans to somebody just across the line in Canada or in Mexico for a new business, or a business of almost any kind but not in the United States.

Mr. Chairman, it appears that when these agencies loan money abroad there is very little appraisal of the soundness of these projects or of the benefit ratios. Furthermore, many of these transactions are hidden in secrecy and the Congress not provided with full information.

Mr. Chairman, I am sure that the people of this Nation have in the past demonstrated their willingness to assist all nations, but Mr. Chairman there is a limit. A time comes when we should stop and examine both the value and the effectiveness of these expenditures. That time I believe is now. We have heard stories of waste and corruption in the disposition of these various funds. Before we throw additional billions into this field I believe it is pertinent that we stop and inquire whether we are using them wisely and efficiently. I think also that when we are asked not to spend funds for the development of our own Nation, we have every right also to ask whether we should continue to appropriate billions blindly for further foreign expenditures. The requests that have come in are for soft loans. These can wait and be considered later. The regular appropriation bill asks for $700 million beginning July 1 next.

Mr. BAILEY. Mr. Chairman, will the gentleman yield?

Mr. EVINS. I yield to the gentleman from West Virginia.

Mr. BAILEY. Does the gentleman see any difference in this loan provision of our economic aid program and the revolving fund in the distressed area legislation which the President vetoed except, that this money goes outside the United States instead of being used for the benefit of our own citizens?

Mr. EVINS. I believe I pointed out that there is no cost-benefit ratio study with respect to projects overseas, but very close scrutiny with respect to cost in this country. The President vetoed the bill for guaranteed loans for our own country. These would be repaid by the municipalities and cities in this country.

Mrs. KELLY. Mr. Chairman, will the gentleman yield?

Mr. EVINS. I yield to the gentlewoman from New York.

Mrs. KELLY. I thank the gentleman from Tennessee [Mr. EVINS]. I want to bring to the attention of the Members of the House that I think the remarks of the previous speaker, the gentleman from Massachusetts [Mr. CONTE], should be corrected at this point with reference to the amount to be repaid under the Development Loan Fund. The testimony this morning showed it has only been $225,000 to date and might possibly reach a million by the end of this year. According to testimony before the Committee on Foreign Affairs regarding this money, the Honorable Dempster McIntosh, who is Managing Director of the Development Loan Fund, made the following statement on this very point. I quote:

> Loan repayments and guarantee fees are now beginning to accrue. To date these total the equivalent of $241,000 in both dollars and local currency. By the end of fiscal year 1960 we estimate, based on our assumptions of disbursements, that collections of interest will total about $9 million and principal repayments under $1 million. These dollar and local currency funds become a part of the Development Loan Fund's capital available for relending for economic development. In addition, as Secretary Dillon has mentioned, authority is being requested to make available to the Development Loan Fund, after the administrative needs of other agencies are met, the local currency repayments under mutual security loans concluded since 1954. It is now estimated that in fiscal year 1960 such repayments will total about $10 million. Being local currency proceeds, however, these accruals and our own earnings, also mostly in local currency, cannot be used as a substitute for foreign exchange loans. For such loans we must rely on additions by the Congress to our capital. Fiscal year 1960, however, should see us well on the road to effective utilization of the earnings from our earlier loans and the initiation of the first phase of the Development Loan Fund becoming a revolving loan fund.

Mr. EVINS. I thank the gentlewoman for her usual fine contribution.

Mr. JENSEN. Mr. Chairman, I yield 2 minutes to the gentlewoman from Massachusetts [Mrs. ROGERS].

Mrs. ROGERS of Massachusetts. Mr. Chairman, it seems passing strange to me that there were no cuts in the hospital program of Health, Education, and Welfare, and no cuts in the program for the health of Indians, but there was a very substantial cut for the veterans being cared for under the Veterans' Administration.

I understand the gentleman from Texas [Mr. TEAGUE], the chairman of the Veterans' Affairs Committee, will offer an amendment to restore the cuts in the Veterans' Administration to provide that aid to veterans. I will do so if he does not. The veterans cannot get adequate or at times really decent care when cuts are made in their appropriations.

I wish to read a list of some of the things the Veterans' Administration tells me will be cut out if the item goes through as it presently is contained in the bill:

The reductions made by the House Appropriations Committee from the supplemental request will have their greatest impact in the following areas:

First. General operating expenses: Reduction made, $1,258,000. This appropriation finances the activities of the regional offices under the Department of Veterans Benefits, the insurance offices under the Department of Insurance,

and all the staff offices in the central office.

Second. In-patient care: Reduction made, $4,306,500. This appropriation finances the operations of all VA hospitals and domiciliaries.

Third. Out-patient care: Reduction made, $554,000. This appropriation finances the operations of all out-patient clinics which render medical and dental services to service-connected veterans.

In order to bring the financial obligations of the VA into line with the funds being made available, the following action is being directed to all affected offices:

First. Freeze all employment. No vacancies that arise will be filled unless there will be a showing of dire need for the position. This will have the effect of reducing the employment in regional offices, insurance offices, hospitals, and clinics.

Second. Defer equipment purchases. This will delay the purchase, installation and use of new equipment until after the beginning of the next fiscal year on July 1.

Third. Defer maintenance and repair projects in our hospitals. This action will serve to delay the necessary normal maintenance projects until after July 1. Such action will have the effect of increasing the backlog of maintenance work that needs to be done in our hospitals.

Mr. Chairman, I would like to say that no vacancies will be filled in the hospitals or elsewhere if these cuts go through, and I defy any person on the floor of the Congress to take care of sick people without nurses and doctors, other medical personnel and proper medicines. We should not allow this cut.

Mr. Omar Ketchum of the Veterans of Foreign Wars told me over the telephone of the organization's anxiety to have the hospital appropriation restored.

I include the following statement sent to me from the DAV and telegram from the American Legion and telegram from the VFW:

STATEMENT OF DAV NATIONAL COMMANDER DAVID B. WILLIAMS OF MASSACHUSETTS RE VA CUTS

The Congress has just dealt the veterans of America one of the severest blows that has struck the hospital system of the Nation in recent years.

Over four and one-half million dollars have been meat-cleavered out of the impatient fund. It is too late to fire employees: the terminal leave pay necessary upon such dismissal would more than eat up any savings that have to be made in this last quarter of the fiscal year, even if there were any sense to firing such people, and there is not.

Indeed, we had begun to feel that the additional staffing so essential in our hospitals was just beginning to be permitted and now again the freeze is on * * * a severe restriction on the employment of essential doctors and nurses.

The cut cannot be made up by cutting staff. It will have to be made up by cutting medicines and drugs. It will be made up by lowering the amount of steaks and meats on the menus in the hospitals.

These are the service-connected veterans as well as the non-service-connected who are being affected—the paraplegic, the tubercular, the mental patients, the general medical and surgical. Is this the answer of Congress to the Nation's promise to its fighting men that they would have the finest medical care in the world?

No new equipment can be purchased in the hospitals as a result of this heavy slash. Yet it has been just this area where the cuts have been made repeatedly until the hospitals and their managers from one end of America to the other desperately need good equipment. Is this the finest medical care in the world? Or are we to treat our hospitalized service-connected as second-class citizens.

I appeared just last week requesting more money for hospital maintenance and repair. I pointed out clearly and emphatically that in this area above all others funds had been handed out on too stringent a scale, that buildings were in need of repair, that it was penny wise and pound foolish not to make repairs when they were essential, that in the long run the cost would be far greater, that many of the VA hospitals were ancient and I cannot understand a kind of economy that saves pennies at the expense of veterans service connected in the hospital beds of VA institutions. It is neither logical nor sympathetic. Indeed it is cruel and illogical. This is the most unkind cut of all. A cut at the expense of America's disabled veterans.

But outpatient clinics where there has already been a starving of funds now take another slash. Congress cut $400,000 from outpatient clinics a year ago and caused great distress. The DAV in Detroit protested bitterly and its spokesmen recently met with the congressional delegation—the answer to our protest has been a greater cut. I want to point out that this cut is all on the service-connected disabled veterans, for they are the only ones entitled to care in the outpatient clinics.

If the blow at the hospital system was a heavy one over one and a quarter millions has been taken in addition from the veterans services department, insurance, and the medical staff at the Washington office.

Just a year ago a congressional cut nearly eliminated the blind program in central office. Only the intercession of Father Carroll, the dedicated priest from Massachusetts saved that program. Now again the ax has fallen on the doctors who run the program. What portions of the medical program will be removed in Washington this time?

How will the cuts in all the other programs affect the service to veterans? Does it mean that checks for service-connected compensation recipients will be delayed? Does it mean a delay in insurance amounts paid to beneficiaries? These are questions in which the Disabled American Veterans takes a deep interest when Congress begins recklessly wielding the economy scythe upon the disabled, the hospitalized, and the needy.

WASHINGTON, D.C., *March 24, 1959.*

Hon. EDITH NOURSE ROGERS,
House of Representatives,
House Office Building:

The American Legion is concerned over severe cuts in H.R. 5916 as they apply to Veterans' Administration supplemental funds for 1959. The $6 million reduction may seem small but it is important to the efficient operation of VA hospital and medical program. We urge you and your colleagues to restore funds to equal VA's request.

MILES D. KENNEDY,
Director, National Legislative Committee.

WASHINGTON, D.C., *March 24, 1959.*

Hon. EDITH N. ROGERS,
House Office Building,
Washington, D.C.:

Veterans of Foreign Wars greatly disturbed over proposed cuts in second supplemental appropriations which will vitally affect important services to veterans through the Veterans' Administration, the Veterans' Employment Service, and the Bureau of Veterans' Reemployment Rights. May I strongly urge through you that the House of Representatives approve an amendment to the second supplemental which will restore these proposed cuts involving services to veterans.

OMAR B. KETCHUM,
VFW Legislative and Rehabilitation Director.

Mr. THOMAS. Mr. Chairman, I yield 10 minutes to the gentleman from Louisiana [Mr. PASSMAN].

Mr. JENSEN. Mr. Chairman, I yield 7 minutes also to the gentleman from Louisiana [Mr. PASSMAN].

Mr. PASSMAN. Mr. Chairman, I am going to the RECORD in order to present a substantial case. As I said before, you only make one mistake on the floor of this House and you are finished. I am going to try now not to make that mistake.

I can understand why some of our Members act in this matter as they do, because I know something about the type of pressure that the White House and the President's aides can exert in their efforts to get what they want.

Let me cite to you a mild sample of the type of pressure and misrepresentation that is brought to bear. On February 2 for some reason unknown to me, a story was leaked to the great New York Times and published on February 3. This erroneous news story follows:

FOREIGN AID UNIT BLOCKED ON FUNDS—HOUSE FOE OF HELP OVERSEAS DELAYS HEARING ON LOAN AGENCY'S PLEA FOR CASH

WASHINGTON, February 2.—The administration has run into a serious congressional roadblock in its effort to get an emergency $225 million appropriation for the Development Loan Fund.

The Fund, now down to its $20 million, is the Government's chief agency for lending to underdeveloped countries.

The roadblock to the emergency appropriation lies in the subcommittee of the House Appropriations Committee that handles foreign aid funds. This group is headed by Representative OTTO E. PASSMAN, Democrat of Louisiana, long an opponent of foreign aid.

The immediate issue is the superficially unimportant one of when hearings can be scheduled on the administration's request for a supplemental appropriation. However, if the hearings are postponed long enough—until consideration of the regular foreign aid bill, with its $700 million request for the Fund—Congress may presume that the need for the supplemental appropriation no longer existed.

DECLINES TO SET HEARING

Up to now Mr. PASSMAN has declined to schedule a hearing on the request for a $225 million supplemental appropriation. It is understood that he contends that the members of his subcommittee, many of whom are chairmen of other subcommittees, are too busy handling emergency supplemental requests from other departments.

The administration asked for hearings by February 11. Mr. PASSMAN has indicated he may not be able to get around to this matter until May or June. By that time it may well have been academic.

A request for a supplemental appropriation in the foreign aid field is highly unusual. Normally the administration gets along as best it can with the amount voted in each session of Congress.

The special foreign aid request arose this year because of a development in the last day of Congress last year. The House had cut the request for the Fund from $625 million to $400 million. The Senate insisted on the full $625 million.

In a last-minute compromise, the Senate accepted the House figure but won a concession from Mr. PASSMAN. The concession, embodied in the conference report on the bill, invited the President to apply for a supplemental bill to make up the difference if the need arose.

The administration's position is that the need has arisen. Demands on the Fund have been very large and loans approved have almost exhausted available funds.

Activity of the Fund now will come to a near stop, pending action on the supplemental request. If action on the request continues to be delayed, the Fund may have to await passage of the regular aid bill, which usually does not happen until July.

It is understood that the administration will appeal to Representative CLARENCE CANNON, Democrat of Missouri, chairman of the full Appropriations Committee, in an effort to get an early hearing.

It was after this story was leaked that they found out the gentleman from Missouri [Mr. CANNON] had not even organized his committees. They did not know, and had not seen fit to inquire, before making such an unfounded charge, that there was a Deficiency Subcommittee to handle the supplemental requests. But I must say that Secretary Dillon was nice enough to write me a letter of apology. I will read only the closing paragraph:

The article was, to say the least, untimely since the President had not at that time officially transmitted his request for the funds involved. It is my sincere hope that there will be no repetition of such an occurrence.

That gives a mild idea as to how far they will go to exert pressure.

It has been indicated here today that this huge development loan program has taken over all of the other grants, which, of course, is not a fact. I want to say to you that in addition to the Development Loan Fund, the mutual security program had in excess of $1 billion in last year's bill floating around for complete and outright grants. There is, for example, the defense support category, which is economic support, $750 million. Then, special assistance, $200 million. Also, the President's contingency fund, $155 million. And to practically all of the categories, add the carryovers. There are actually 28 different items in the MSA funds bill; and the Development Loan is largely another device by which they start another program, under a different name. I challenge anyone to successfully disprove what I have just said.

Mr. Chairman, therefore, I rise in opposition to the anticipated amendment. I hope the Members fully understand that the Development Loan Fund is just one of many parts of this mammoth foreign aid program. There are other funds in the program from which both loans and grants are abundantly available.

Those who have had an opportunity to analyze the foreign aid bill, and the ever-changing names of items in the bill, recognize that the Development Loan item is actually very little more than an actual grant. This is true because a great majority of the loans are made to countries which, if they repay at all, repay the loans with their local currencies, for which this Nation has very little use and cannot spend. In fact, we have more than $2 billion in such currencies on hand or to our credit at the present time.

And, many of the recipients of these so-called loans are the nations who have already received hundreds of millions of dollars out of other funds in the foreign aid program.

Many Members have been forewarned of the type of pressure to which they would be subjected on requests for foreign aid. I addressed the Members of the House to that effect last year, and now you painfully experience my prediction coming true.

It has been my privilege to serve as chairman of the subcommittee handling the foreign-aid funds for 4 years; and without exception, when the committee attempted to reduce the bill because of lack of justification for funds, then the protests from Pennsylvania Avenue, and elsewhere, were enough to frighten those without information as to what was behind the pressure.

In fact, during the past 4 years, the Congress, in its wisdom, has lowered the President's requests by approximately $3 billion; and finally, last year, Mr. Sprague, one of the Assistant Secretaries of Defense, said, and I quote:

The reductions that the Congress has effectuated in the program have assisted the executive branch in administering the program in a more efficient manner. There is no question about that.

You understand, of course, that the foreign-aid program is the only sacred spending program that will come before the Congress so far as Pennsylvania Avenue is concerned. In fact, the Director of the Budget allows the full request for foreign aid. How many other programs do you know of in which a situation as this exists?

Furthermore, you can cut every program and every department in Government, including the military, and there is no howl from downtown; but reduce any item in the foreign-aid program, and you are accused of being almost a traitor.

Last year, the House, in its wisdom, passed a bill providing new funds for MSA in the amount of $3,078,092,500. This bill went to the other body and was increased by $440 million. For reasons that time will not now permit me to discuss, the other body did not grant the House a conference to resolve the differences on the bill until the night we adjourned sine die.

They almost established a record for holding a committee off until just a few hours before we were ready to sound the gavel.

Upon our arrival at the conference, were were told to accept the Senate bill or there would be no bill. We did, however, finally agree to split the difference in the amount added by the other body, and the House was rolled for $220 million. The Senate was permitted to apply the amount on which the House receded to any section of the bill. What a trap we walked into. They increased the Development Loan Fund out of the House's concession by $100 million, so that the bill the Congress finally approved was $100 million more than the sum to which the House agreed originally for that particular Fund.

It was suggested in the conference that we also agree to consider a possible supplemental request this year, not necessarily to the Development Loan Fund, but to the mutual security program as such. The committee handling the bill has not had an opportunity to consider the supplemental; but the Deficiency Subcommittee considered the item and, according to press reports, allowed $150 million of the request. Later they voted again and reduced the amount to $50 million; then on even another vote, they moved it to $100 million. The full Committee on Appropriations disallowed the supplemental request altogether. The distinguished gentleman from Iowa [Mr. JENSEN] had a rather remarkable report on what transpired in the subcommittee.

I hope he repeats it today for the enlightenment of the committee.

Mr. Chairman, the International Cooperation Administration is the sponsor and coordinator of the entire mutual security program. As I have indicated before, in my candid opinion, based upon on-the-spot checks and other information and reports, there is more dishonesty and payoffs in this program than in any other program which this country has ever undertaken, involving, of course, individuals of recipient nations. But now it is beginning to leak out that some of our own personnel have enriched their fortunes out of this program, which is presently operating without an Administrator.

On yesterday, a former official of the ICA admitted under oath that he accepted $25,000 from U.S. contractors in Laos. On March 14, Mr. Robert F. Keller, GAO General Counsel, said, and I quote:

The International Cooperation Administration has refused to let the GAO see the evaluation reports by ICA officials in eight programs to China, Laos, Pakistan, India, Bolivia, Brazil, and Guatemala.

These revelations are not intended as an indictment of our own public officials; but certainly they indicate what can happen when an administration blindly applies the pressure for an amount of money for a complex foreign aid program that is out from under control, operating all over the world in 70 nations with 42,000 personnel.

Please understand that the item we are considering today is for a supplemental appropriation; and the main reason for the request at this time is that the authorization under which this money can be obtained will expire on June 30, and the giveaway boys just hate to see it go. Thus, the present fight.

Furthermore, there is a request now before the Congress for new funds approximating $4 billion, and $700 million

of this total is for the very program now under discussion.

Mr. Chairman, in practically all agencies of the Government there are two types of funds on hand—obligated and unobligated. But this practice is not applied to the, shall we say, sacred foreign aid program. In the military phase of the program in fact, for good reason, in part, if they cannot spend the funds, they reserve them and such is respected as an obligation.

The Development Loan phase of the program has a similar catch-all. If they cannot obligate the funds, then they say they have issued letters of intent or letters of commitment; but my experience with these people has demonstrated that you have to get up early every morning in order to match wits with them. It is a part of their business to endeavor to think ahead and stay ahead of the Congress. And they have met with some success. However, the searching questions being asked by the Foreign Operations Subcommittee, and other important committees of the Congress, are becoming very painful to them.

It is not unusual for this agency to enter into obligations, then de-obligate, or amend the obligation so as to keep alive large unrealistic obligations year after year.

One example would be in the case of grain storage elevators for Pakistan. For this, $500,000 of 1952 funds was obligated; sufficient 1953 funds were obligated to bring the total to $1,480,000; and an obligation of this magnitude was carried on the books until 1958.

On yesterday, I spoke to the Controller of the ICA and asked that he verify a statement made to me earlier that he would not obligate, and had not contemplated obligating, any of the funds in the supplemental request. And it is now a question of only a few weeks until new funds will be approved for this program. I should like to point out here that on February 28 a total of $290 million was unobligated in the Development Loan Fund, and that figure cannot be disproved. Therefore, this supplemental request could be denied completely, and, in my opinion, should be denied, without any damage to the fund, especially when it is taken into account hundreds of millions of dollars are available in other funds, under different names, but in the same program, through which they can make either loans or grants.

I wonder how many spenders and how many savers we have in this body, and just how far we will go in mismanaging the country's business. The Treasury statement as of March 18 shows that we have collected more revenue thus far in fiscal 1959 than we did for the same period in fiscal 1958. But the same Treasury statement reveals that we have already spent during this fiscal year $8 billion more than we had spent during the corresponding period of the last fiscal year. Our deficit now stands at about $14 billion. Not one dollar in the bill before you can be paid out of current revenues; it is money that we will have to borrow. Furthermore, the total requests for supplemental funds, applicable to the present fiscal year, will amount to $8,700 million. How many of you know that they are pulling out of fiscal 1958 something like $9 billion and putting it over into fiscal 1959?

Mr. Chairman, I hope the amendment will be voted down so that the regular subcommittee handling the money requests for the mutual security program, including the Development Loan Fund, can establish, with your cooperation, the actual needs. I say respectfully that we are fortified with 4 years of active experience with this committee, and we have not yet misled you, and we will not do so in the future if you will give us the opportunity to function.

We assure you that our record will be just as sound this year, if you will defer action and permit the regular committee to consider the request that will be before it for this same item within just a matter of weeks.

In all the many different, complex categories of foreign aid, there was available during the present fiscal year $15,600,000,000. Undoubtedly, you will agree that with such a vast sum available it would indicate wisdom on our part to deny this supplemental request; and maybe before we report the regular bill to the House we can ascertain, among our other findings, why the ICA is denying the General Accounting Office access to its evaluation reports. It may be that the Hardy committee will have more information such as that revealed in the press this morning.

Mr. Chairman, in conclusion, I say without fear of successful contradiction that no valid and substantial case can be made for this supplemental appropriation on the basis of the record, and not according to a lot of bureaucratic recent facts and figures presented from downtown. I hope that if the amendment is offered you will vote it down.

Mr. CONTE. Mr. Chairman, will the gentleman yield?

Mr. PASSMAN. I yield.

Mr. CONTE. I would like to ask the gentleman from Louisiana if he was a member of the conference committee on August 23, 1958, and whether or not he was chairman of that conference committee which signed this report which reads as follows:

> The amounts contained in the bill agreed by the conferees were too small in the view of some of the conferees, especially in the Development Loan Fund. It is understood that if additional funds are needed next January for the purposes contained in this bill, the Appropriations Committees of the House and Senate will give earnest consideration to the recommendations of the Executive in view of the importance of maintaining our friendly relations with countries with whom we have undertakings.

The CHAIRMAN. The time of the gentleman from Louisiana has expired.

Mr. PASSMAN. I should like the opportunity to answer the gentleman.

The CHAIRMAN. The time of the gentleman from Louisiana has expired.

Mr. JENSEN. Mr. Chairman, I yield the gentleman 1 additional minute.

Mr. PASSMAN. What would you do if you were chairman of a committee and had passed your bill, and then for the next 53 days action on the bill was delayed by the other body, with a conference to resolve the differences not possible until right before adjourning sine die? Along about midnight, or just before midnight, the pressure was on the leaders on either side, and by that I mean on either side of the Hill, not only on either side of the aisle. The pressure was on to get a decision and the conference report completed. I imagine that you, too, might have agreed in these circumstances. What we said was that we would give consideration to a supplemental request, and that has now been done. The case presented for additional funds for fiscal 1959 was a very weak one.

Mr. CONTE. If I had the gentleman's fortitude and backbone, I would have stood pat and firm at that point.

Mr. PASSMAN. The gentleman is going to make a good member of our subcommittee.

Mr. CONTE. As Al Smith would say, "Let us look at the record." You said on the record that you were for more funds come January 1959 if additional funds were needed for this program.

Mr. PASSMAN. The gentleman is going to make a fine member of our subcommittee; and when he gets out from under this pressure, I think he will vote as he should on such matters as the one here in question.

Mr. CONTE. I can guarantee the gentleman from Louisiana that certainly I know of no pressure placed on me in regard to this appropriation.

Mr. TABER. Mr. Chairman, I yield 5 minutes to the gentleman from Minnesota [Mr. JUDD].

Mr. JUDD. Mr. Chairman, my good friend the gentleman from Louisiana said that he has never misled anybody. I know he has never misled anybody intentionally, but people might conceivably be misled by the figures he has given if they do not have some additional information on some of the points that have been discussed.

I would like to say, first of all, that I am not under any pressure and I do not know where all this talk of pressure comes from. Once in a while I have had lobbyists coming in to urge me to vote against this program because of the alleged waste in what they usually call the giveaway foreign-aid program. Nobody has ever pressured me in favor of it, from Pennsylvania Avenue or elsewhere. I do not know of, where, or by whom the rest of you may have been subjected to any such irresistible pressure. My decision is based on the total picture—not part of it. And I believe that is true of most other Members also.

Mr. PASSMAN. Just so the gentleman will not get the impression that I was the only one.

I will be very happy to make that information available.

Mr. JUDD. I have not had any pressure.

Mr. BOLAND. Mr. Chairman, will the gentleman yield?

Mr. JUDD. I yield.

Mr. BOLAND. I served on the subcommittee that originally recommended $100 million. I know of no particular

pressure. When the bill came up, I thought they made a fine case. There was no pressure and no influence. This was our best judgment.

Mr. JUDD. When I present some facts now, it is not because I am being pressured; it is simply to present some considerations that the gentleman has not mentioned.

I have supported this program since its beginning, and I am proud of its accomplishments. The gentleman stressed how much the foreign aid program has cost. How many billions did it cost to fight and win World War II? Would you say it was a waste to spend $300 billion or $400 billion to save the United States? This mutual security program has saved country after country whose loss would have been disastrous to the United States and its security.

Now, let me talk about the record on foreign loans. It has been charged that these loans are worthless, wasteful, not being repaid, and so on. Under the mutual security program since its beginning in 1948, we have made foreign loan disbursements, under various lending programs before we concentrated them in the Development Loan Fund, to a total of $2,158 million. We have already received in loan repayments $44.9 million and interest collections of $225.4 million. But this is the most important point: Not a single loan is in arrears today. Payments of interest and repayments of principal are on schedule. At one time one country, Turkey, was in severe economic difficulty and in arrears, but it has resumed payments according to schedule. So when it is said that this is a wasteful, irresponsible and unsuccessful program—what do they mean? Do we ask or expect borrowers to pay ahead of the schedule laid down in the contracts they have signed? They are on schedule. I do not know what more could be asked.

The question of corruption has been brought up. The gentleman from Louisiana has told you that ICA has 42,000 employees scattered around the world. There is only one case thus far of demonstrated corruption, so far as I am aware. I am sure there has been a lot more corruption than that. I am sure quite a few people in the recipient countries and some Americans also have gotten some of the funds improperly; but the fact is that out of 42,000 persons working all around the world under the most difficult circumstances imaginable, with frequently a minimum of tight controls as is almost unavoidably the case in primitive situations, there is only one proved American case of corruption as yet. The man confessed; that record is extraordinary, in fact, too good to be true. Doubtless there will be further instances, some indictments, probably some convictions. But in my judgment that is no reason for closing out a program. I have never yet operated on a patient without his losing some blood; neither has any other surgeon. But do you mean to tell me we should not operate because the patient is going to lose blood, if thereby we can save the patient's life? We use every care to keep the loss to the minimum, but the main objective is to save the patient's life. It is just as simple as that in dealing with this program of aid to threatened countries all around the world.

Unquestionably there has also been waste in parts of this program, but the answer is essentially the same as above. Probably the single most wasteful program we have had anywhere has been the new country of Laos, yet it is probably the single most successful program we have had anywhere. At the time we started that program only 4 years ago, the country did not have a currency of its own. It did not have a bank. It did not have a solid government. It did not have a school above the sixth grade. There was only one qualified doctor in the whole country, about as large as my State of Minnesota. Laos did not even have a national budget, or a taxation system, or funds to pay for its armed forces. All these had been handled by France. It had a civil war in addition. Two northern provinces were occupied by Communist forces, supported and supplied across the border from Red China on the north, and Communist North Vietnam on the east. Yet the strategic location of Laos was such that unless it was kept out of the Communists' control, Vietnam, on the one side, and Cambodia and Thailand, on the other, would go down the drain. The rest of Southeast Asia would be practically helpless, with its tin, oil, rubber, and rice surpluses, a matchless prize whose control would put most of the billion-plus people in Asia at the disposal of our enemies.

The CHAIRMAN. The time of the gentleman from Minnesota has expired.

Mr. JENSEN. Mr. Chairman, I yield the gentleman from Minnesota 5 additional minutes.

The CHAIRMAN. The gentleman from Minnesota is recognized for 5 additional minutes.

Mr. JUDD. We discussed in committee whether ICA ought to start a program in Laos under such almost hopeless handicaps. We decided we ought to make the effort. So we spent a lot of money even though there was at least a 50-percent chance of failure and bound to be some mistakes and a lot of waste. The stakes were so great we had to do it. We could not allow the whole area to go by default.

Today the Government of Laos is stronger than anybody dared believe possible. The two Provinces in rebellion and under the control of the Communists have been brought back under the Government of Laos. The Communist battalions are under its control. The Government has strong leadership which has stood up against the Communist pressures and kicked out the pro-Communists in the previous coalition government, undermining the security of the country from within. What has happened there is nothing short of a miracle. You will hear about the things that went wrong; but look also at the things that went right. I do not condone waste or corruption; we have to work against them all the time. But we need to keep our eyes on the main objective, too. Laos is free and friendly today.

Like a patient recovered from one illness, it may have a recurrence of the same difficulty, or a different and new illness tomorrow; but that is something for the future. The program has succeeded remarkably well thus far.

We need to remember that what we are trying to do is to help countries remain free that want to remain free. We are trying to increase their capacity to defend themselves. We are not trying to buy friends—you cannot buy friends. We are trying to give them the capacity to do what they want most to do, namely, defend their own independence. In many cases it is newly won and very precious to them. But their strength is very limited. It is in their interest and ours to keep them and their resources out of Communist hands. To the extent that we and they do that, we are succeeding.

Now, let me say something more directly about the Development Loan Fund. In earlier years the bill contained provisions for grants or for miscellaneous loans on a year-to-year basis. There were regularly two main criticisms from the gentleman from Lousiana, and his subcommittee, and to some extent they were justified. The agencies could not adequately screen and evaluate applications from countries all over the world in one fiscal year. If the agency did not allocate its funds to a bunch of inadequately considered projects just prior to the end of the fiscal year, June 30, it would not have all its funds obligated and it would be charged here that ICA had asked for more money than was needed; it did not need all the money we had appropriated.

On the other hand, if ICA did allocate the full amount before June 30, it would be accused of carelessness in screening projects or recklessly approving applications in order not to have its funds revert to the Treasury. It was in part to meet these criticisms that we started the Development Loan Fund 2 years ago. If plans and examinations had not been completed for a project by the end of the fiscal year, the Fund managers are not under pressure to decide until their picture is complete. It gives continuity to the program. It permits orderly, intelligent planning and careful use of the funds. They do not have to go through a mad race during each April, May, and June, trying to get the loans made before the end of the fiscal year or else lose funds for projects that are needed and basically sound. The Fund managers can operate in a businesslike way. They can study any proposed project the same way the Army Engineers study projects here at home. They can examine the feasibility, the cost, the probable benefits, and so on. They do not have to meet a definite deadline. Only when they are convinced it is sound do they make the commitment. Surely we prefer loans to grants; and we want loans to be made on the sound basis the Development Loan Fund arrangement permits.

Again the loans, instead of being given to governments where the money might go to some allegedly corrupt official's relative, are given for specific projects, just as we authorize funds to the Army Engineers for a particular dam on the Mississippi River or a conservation project in some State here at home. The projects are analyzed to determine whether they are important for the political survival of the given country, whether they are economically necessary and sound.

Another reason for this particular Fund is that sometimes we need to make loans to countries that are not eligible for loans from other agencies. For instance, the loans of the Export-Import Bank must be used for purchase of goods grown or manufactured in America to ship abroad. But sometimes what a country needs is materials that we don't have in surplus or that can be bought more cheaply by the borrowing country closer home. Export-Import Bank cannot meet that situation.

The World Bank can make only loans that will be repaid in dollars or convertible currencies. Many of these countries do not have the capacity to generate enough dollars to repay. So we need the Development Loan Fund to permit aid to be given in crucial areas where they cannot repay in dollars, or for projects that do not earn money. Capital put into a road or an irrigation project does not earn dividends. Capital put into a cement plant or a fertilizer plant should be able to pay off, at least in the country's own currency. A higher interest rate is charged on such loans.

These are some of the reasons why we set up the Development Loan Fund in addition to the other lending agencies, not to duplicate them but to fill a gap. We need it especially for those countries which are the weakest, which need this kind of assistance most urgently and which cannot get the capital from any other private or public source.

The Development Loan Fund is the most constructive forward step in assisting the economic development of the less developed countries that we have taken since we started this program 12 years ago, not as an act of benevolence, but as a means of helping insure the security and well-being of the United States and all free peoples.

Some say, "This is do-goodism." It, of course, is supposed to do good for other people. But that is not the primary reason why we are doing it. It does good for us. Should we refuse to do good for ourselves if in the process we help other people?

Some say that charity begins at home. Of course, charity begins at home. But who will stand up and suggest that this is charity? This is for the survival of our own country.

This amendment to keep the Development Loan Fund in business for the next 5 months should be adopted as a matter of good common sense.

Mr. THOMAS. Mr. Chairman, I yield 3 minutes to the gentleman from New York [Mr. ANFUSO].

Mr. ANFUSO. Mr. Chairman, I am going to support the amendment to be offered today by my distinguished colleague from New York, the Honorable JOHN J. ROONEY.

This is no time to be talking from both sides of our mouth. We cannot say to our allies in one breath, "We want your help. We want you to be partners with us in stemming the tide of communism, which is a threat to us all." Then from the other side of our mouth nullify this pronouncement by saying, "We will not honor any commitments which we have made to you. You must fight starvation and make all necessary improvements in your own way by yourselves, in order to prevent communism from subjugating your countries. We will not help you."

Such a one-sided partnership is doomed to failure. If those among us who are so blind as not to realize the danger involved, if those who lack the vision to foresee the consequences fail to understand the implications of such action on our part—then it will not be very long before we shall discover that we have been left alone. By then it may be too late to retrieve our steps. In such event we may suddenly find that we have neither the funds nor the resources to alone resist the onslaught of the Communist forces, whose principal target is the annihilation of the United States.

Let me remind my colleagues that the Soviet Union is constantly stepping up its economic aid and technical assistance programs. Although the Soviet foreign economic program is relatively recent, having been started only in 1955, during the last year alone Soviet Russia signed such aid agreements with 18 underdeveloped countries for an amount totaling about $1 billion. Last Sunday, March 22, the New York Times reported that 2,809 Russian technicians spent at least a month in 1 or more of 19 countries during the last 6 months of 1958 under the Soviet technical assistance arrangements with those countries.

While Russia is capitalizing on every moment and every opportunity to further its ends in all parts of the world, we are quibbling and losing precious time. In 1957 we set up the Development Loan Fund to take over the main economic aid functions of the mutual security program. Instead of outright aid which the recipient nations did not have to repay in the past, we now grant them loans at low interest rates in order to stimulate their economic growth and the improvement of their standard of living. In many of these underdeveloped lands economic stagnation leads to unemployment, poverty and starvation, which breeds unrest and paves the way for Communist infiltration.

One of the countries which is looking to us for aid is India. Informally encouraged by our own Government, India has recently made an urgent request for additional credits to enable it to realize its 5-year development plan which would help build up the economy of that country and maintain its freedom and independence. Have any of us given thought as to what might happen if India fails in its task? Do any of us even dare to think of the consequences in all of Asia if India should be swallowed up by communism? Do you suppose for a single moment that any other nation in Asia could long hold out, even under the best circumstances with China and India in the Communist camp?

Take the situation in the critical Middle East area where Russia has been making such tremendous headway by extending economic aid, first to Egypt, and now to Iraq. Our friends and allies, such as Pakistan, Iran, Turkey and Israel, who are with us in their resistance to Communist aggression, are deeply concerned over these Russian moves in the Middle East. They fully understand that Russian economic aid is merely a weapon of Communist penetration into the area. Can we afford to let these underdeveloped lands go by economic default?

Aside from the humanitarian aspects of our economic program in helping the underdeveloped nations fight poverty and seek to improve their conditions, let us not overlook the very important aspect of our own security. By this time it should be quite clear to us that the millions of people in these so-called backward lands of today may hold the balance of power and the key to freedom tomorrow. Shall we ignore them and drive them into the arms of the Communists?

There is also another very important aspect of which we should not lose sight. In extending these loans we not only help to build up the economy of each of these countries, but we are also creating potential customers. As the economies of these nations expand and their standard of living improves, these peoples are bound to buy more of our products. Thus, in the long run our country stands to gain economically for the outlay in financial help now.

It is my prayer, as it must be the prayer of everyone in this Congress, that should a showdown come about, we shall not find ourselves in a situation of having to send forth our boys alone against the whole world. That would be like sending them forth to a certain doom.

The catastrophe of another world war can, to a very large extent, be avoided if we succeed in strengthening our allies. If we allow ourselves to be divided, if we vacillate in our support of them, the Russian bear will pluck our friends one by one without a battle—and then leave us helpless for a similar fate.

Mr. JENSEN. Mr. Chairman, I yield 8 minutes to the gentleman from Wisconsin [Mr. O'KONSKI].

Mr. O'KONSKI. Mr. Chairman, in the 17 years, which is my tenure in the Congress, I have learned one thing quite effectively, and that is that anybody who opposes this foreign aid program is usually termed a demagog, an isolationist, and just a plain bum, and anybody who supports the program is, of course, always a liberal and a statesman. Now, that is the connotation, folks, make no mistake about it. In spite of that fact, I am going to go risk being called a demagog, a bum, and an isolationist, because I think that every statement that

has been made here by the proponents of this bill, or this amendment, is based on hope and hope alone. It has no basis on fact or result whatsoever.

Mr. Chairman, we have spent in excess of $75 billion on this program since World War II ended. The Russians have spent a measly $2 billion, and yet they have succeeded in taking over 800 million people and we have succeeded in taking over nothing. And, yet they say the program is successful; it has to be continued.

As a matter of fact, if it were not for our foreign aid program, we would not be here today wrestling with our brains and our energies on how to stop communism. It is our liberal foreign aid program that got us into this jam. Who made the Soviet Union and the Communist threat what it is today? We did it under our foreign aid program. It started under lend-lease during the war, $13 billion. They will not even talk to us about paying it back. When Mikoyan was over here recently, the question was not even raised, because if it were he might get angry and go back home. Then immediately after the war, while the pipeline of lend-lease was still going, 2 years after the war, we started a program called UNRRA. The people who were getting all these goods from the United States of America thought that UNRRA was a city in the Soviet Union from where they were getting all this fantastic aid. And, what did we do with UNRRA? We helped the Communists in taking over all of China. Half of the UNRRA aid, under the foreign aid program, that we gave to China, went to the Red Chinese. Every satellite country taken over by Russia in central Europe and in the Balkan countries was given UNRRA aid with the stamp of the Russians on it. The Russian Communists were handing it out. In Yugoslavia or any of the Balkan countries or central European countries, if you wanted a loaf of bread, you had to sign up that you were a Communist in order to get it, our bread, that we gave them under UNRRA.

We made the Russians what they are today. We helped them entrench themselves in central and eastern Balkan countries with UNRRA money under the foreign aid program.

Then, in 1947 we started the Marshall plan, and there are those here, newcomers, who will say, sure, the Marshall plan was all right, because that was a program that was started to stop communism. Nothing is further from the truth. If you want to find out what the Marshall plan originally was, read General Marshall's speech made at Princeton University in June 1947.

You will find that it was not a program to stop communism at all. As a matter of fact, the Marshall plan was an invitation to all the countries of the world, including Soviet Russia, to come over to the United States of America and get aid in order to rebuild their country. We invited Russia, in the original Marshall plan proposal. We invited every one of the Communist satellite countries. We invited Red China. We invited every Communist country in the world to come over and get money under the foreign aid program, as well as the countries that were not Communist.

So what happened? The Russians said, No, there might be something attached to this; the Russians said, No, they would not participate in the Marshall plan, and they gave the word to the Communist satellite countries not to take any money from the United States of America under the Marshall plan. What stupid fools they were, because if they had come in under the original Marshall plan, they could have bled the United States of America for billions of dollars more in order to finance communism in the Soviet Union and in the satellite countries.

Mr. Chairman, just think of this. Instead of the $75 billion that we scattered to all parts of the world, just think what a wonderful position our country would be in today if we had used $10 billion of that money, one-seventh of it, and put more emphasis on the conquest of outer space. Or if we had built more submarines to combat the 600 submarines the Russians now have.

Believe it or not while we have been throwing our dollars all over the world to 59 different nations, the Communists have been building up their military might. As a result we have substituted flexibility for appeasement which in reality means the same thing. In condescending to meet Khrushchev at another summit the Communists have scored another major victory.

The Russians put all of their energies into military might while we scattered our resources to the four corners of the world. What good did the foreign aid program do? For example, what good did it do in Cuba? We have spent millions of dollars in Cuba under the foreign aid program. Where are they today? We spent millions of dollars in Venezuela. Does anybody know whether they are on our side or not? Look at the millions of dollars we spent in Iraq. As a matter of fact, they propitiously waited until we sent them the last shipment of arms before the Communists took over that country. They are closer to communism today than they ever were, in spite of the millions of dollars that we poured into that country.

Mr. HALLECK. Mr. Chairman, will the gentleman yield?

Mr. O'KONSKI. I yield to the gentleman from Indiana.

Mr. HALLECK. Mr. Chairman, the gentleman knows of my high affection for him.

I would like to say to him on my responsibility that in recent days and weeks I have had the opportunity to talk not only with the President of the United States, whom I respect and admire, but also the Prime Minister of Great Britain, Mr. Macmillan. And I cannot sit here and let go unchallenged his statement that these men are going over there to appease Mr. Khrushchev. I know that that is not true. As a matter of fact, the policy of firmness that has been demonstrated is going to win through in this crisis as it has in others.

Mr. O'KONSKI. I pray the Lord they will. I hope the gentleman from Indiana is right, and I will back him and our leaders in standing firm with all that is in me. I pray they will not become flexible—which is just another term for appeasement.

Mr. THOMAS. Mr. Chairman, I yield 4 minutes to the gentleman from Rhode Island [Mr. FOGARTY].

Mr. FOGARTY. Mr. Chairman, I take this time to inform the Members of the House, several of whom have inquired of me concerning it, what has happened to the request for the maintenance and operation of schools in federally impacted areas and the construction of schools in federally impacted areas. We were able in the full committee last Friday to have included in the bill before us $20 million for the maintenance and operation of these schools and $24,600,000 for the construction of the schools in federally impacted areas. These amounts, if they stay in the bill, will allow the school districts to receive 100 percent of what they are entitled to under the law. You will recall that we passed legislation last year by a unanimous vote to extend this act for another 2 years.

Mr. HALLECK. Mr. Chairman, will the gentleman yield?

Mr. FOGARTY. I yield to the gentleman from Indiana.

Mr. HALLECK. Is it not true that the budget request last year was for the amount that is now to be included in this deficiency bill reported by the committee? In other words, the Congress for the federally impacted areas and for the construction and operation cut the request some $45 million?

Mr. FOGARTY. They cut it 15 percent, because it was in the closing days of the session and it was a compromise between the House and the Senate. Because we had passed a new law creating new responsibilities under the act, we thought that was a fair compromise at the time.

Some of us who are interested in these programs thought we would have a chance to come back after the Office of Education had firmer applications on hand and give them 100 percent of what they are entitled to, because that is certainly what we voted for in this law.

Another amendment, which will be offered at the appropriate time, is to restore to the Defense Education Act the amount of money that has been requested by the Bureau of the Budget. The request was for $75,300,000. The committee has allowed $25 million for the student loan program. I intend to offer an amendment that will bring that up to $75 million, when we get to that paragraph of the bill. This is something that the President, as you know, asked for last year in an effort to get that bill through. The Secretary of the Department of Health, Education, and Welfare made a strong plea for the inclusion of these funds on yesterday, and I understand the Commissioner of Education himself has also made a strong plea.

So, I do hope that the Members who are interested in these federally impacted areas and who want to see this Federal Education Act carried on as we expect it to be carried on will be on the floor when the bill is being read for amendment so that they will be able to support these amendments.

Mr. THOMAS. Mr. Chairman, I yield 5 minutes to the gentleman from California [Mr. SISK].

Mr. SISK. Mr. Chairman, I hesitate to bring up the small figure which I propose to discuss in view of the billions I have heard tossed around here in connection with our mutual security program, but it is my understanding, as I read the bill, that there are other things of importance in this bill.

First, I desire to commend the committee on the very excellent job they did. I realize the problems and the pressures they were under in an attempt to bring to this floor a bill concerning every agency and every department of the Government.

I am particularly concerned with reference to an item which involves only $200,000. Last year we created the new State of Alaska, our 49th State. All of us, as Members of Congress, are vitally concerned with the well-being, the welfare, and the progress, economically and otherwise, of that great new State in the north.

Some 2 years ago there was created a Presidential Commission called the Alaska International Rail and Highway Commission. It was given responsibilities for a study regarding new transportation facilities that would be needed in the at that time proposed new State. That State has arrived, and I feel it is important that the Commission be permited to complete its study and to make such recommendations as it is able to make.

May I call the attention of the chairman of the committee to the language in the report near the bottom of page 8 that—

> The committee has not allowed $200,000 at this time to expand the operations of this Commission until its program can be reappraised and plans for the future more firmly developed.

Then in the concluding sentence of that paragraph it is stated:

> It can be considered later as a part of the 1960 budget program.

I would like to ask the chairman of the committee, the gentleman from Texas, to comment on that because, as I recall, there were several of us who are members of that Commission who appeared before his committee with our request for the money in this case, and we are concerned about what further information his Committee on Independent Offices would require in order to feel justified in making the money available in order that we may complete our work. I ask the gentleman to comment on that because I am led to believe by the report that he feels further information is desirable.

Mr. THOMAS. I will say to my distinguished friend, the gentleman from California, that on this subcommittee we had the gentleman from Ohio and the gentleman from Iowa, the ranking two members of the subcommittee on the Interior appropriations that had regular jurisdiction over it. So what this particular group did was to say that we thought it should be transferred to them because they were going to have the program permanently in their jurisdiction. That is all that this subcommittee did.

Mr. SISK. Is it my understanding then that the statement of the gentleman from Texas is that this appropriation will come up in the Department of the Interior appropriation rather than under the independent offices appropriation?

Mr. THOMAS. We cannot guarantee that. This committee said that we are not going to take jurisdiction. We are not going to turn it down. We are not denying it. We are not taking jurisdiction. We are sending it to the other group and, I assume, that they will. Of course, that is an assumption on my part.

Mr. SISK. Then may I direct a question to my friend, the gentleman from Ohio [Mr. KIRWAN].

Mr. KIRWAN. As the chairman of the committee explained, when this came before the deficiency committee, it was decided—why set it up here in the supplemental appropriation? Send it back to the regular committee. That is one of the troubles with the supplemental appropriation. Right off the bat, they come up with the idea to rush it into the deficiency or the supplemental appropriation and they rush up here to Capitol Hill. Let it come through the proper channels. I said then and I say now, we have 7,000 engineers in the Department of the Interior and, yet, we have to go out and hire a private engineer to go up and make a survey in Alaska. Canada refused to do it. Until they find out the answer, let them go to the regular committee.

Mr. SISK. Mr. Chairman, I have directed these questions because this Congress has given the Alaska Rail and Highway Commission a responsibility, to be carried out in conjunction with our sister country to the north, Canada, and we need a comparatively small sum to accomplish the job given us. I may add that the potential value of the highways and rail lines which may be built as a consequence of this engineering and economic study are astronomically greater than its cost. And perhaps more important is the vital need for forging the closest possible land links with our new State of Alaska so that both it and the Nation may receive to the fullest the tremendous benefits of this new union. I have risen here today to emphasize the importance of this study and the need for this $200,000, which I trust will not get lost in our anxiety over much larger sums.

Mr. TABER. Mr. Chairman, I yield 5 minutes to the gentleman from Michigan [Mr. BENTLEY].

Mr. BENTLEY. Mr. Chairman, I would like to speak for a few moments on the question of the Development Loan Fund because I think it is particularly interesting that before the Committee on Foreign Affairs this morning we had two witnesses, Under Secretary Douglas Dillon and Mr. Dempster McIntosh, Administrator of the Development Loan Fund, who spent the entire morning before our committee on testimony regarding the Fund. I think, Mr. Chairman, there may be a little misunderstanding on the part of some of the Members about some of the facts and figures regarding this particular fund. We were told that as of this morning, there remains available for loans under the Fund, loans which have in no wise been committed, obligated, promised, or anything else, a total of $800,000. Now that is true. That means that if the action of the committee in taking out this entire supplemental appropriation is upheld by the Committee of the Whole the Development Loan Fund, in effect, stops operations until it gets new money which would probably not be before next August. There is also, it seems to me, some confusion with respect to the amount of money available for the Fund's operation, and I think possibly that confusion has been occasioned by the people who are at least partially responsible for it, who are defending the Development Loan Fund with respect to their use of the word "obligations." As I understand it, when the Development Loan Fund gets an application for a loan from a foreign government or a foreign individual, it goes before the Board of Directors for the Fund for approval.

If that is approved by the Board of Directors, it then goes to the National Advisory Council, and in about 2 weeks' time if the National Advisory Council also agrees in approving the loan, then the Development Loan Fund issues a letter of commitment. The Development Loan Fund regards that letter of commitment as an obligation for the Fund, and the Fund in effect is earmarked for that particular loan.

Then there is the question of working out with the prospective borrower, a matter which takes sometimes as long as 2 or 3 months, the terms of the loan itself; and finally, when the loan obligation is officially signed then the formal terms of obligation are realized and then it becomes an obligation both on the lender, which is the Development Loan Fund, and on the borrower, whoever the borrower may be; yet, as I say, there has been some confusion as to just when the Development Loan Fund has been obligated.

The administrators of the Development Loan Fund regard the obligation as existing at the time the letter of commitment has been issued and not necessarily only when the loan agreement itself has been signed. That is why they came to our committee this morning and told us that there were only remaining available funds for a total of $800,000 to be used until the fiscal 1960 funds would be available, and it is obvious that if the supplemental request is not approved, then, of course, the Development Loan Fund goes out of business until that time which would probably be another 4 or 5 months.

Mr. JONAS. Mr. Chairman, will the gentleman yield?

Mr. BENTLEY. I yield.

Mr. JONAS. Of course, it would go out of business insofar as making payments for loans may be concerned, but the small staff that handles this fund will be very busy processing the obligations that have already been approved. It does not necessarily mean that they will have to close the door, lock it, and go off and do something else for the next 2 or 3 months.

Mr. BENTLEY. The gentleman is entirely right. It means, of course, that there would be no money available for new loans, no negotiations for new commitments or obligations. It is obvious that there would be a great many loans in the mill in process, and that, of course, the Development Loan Fund could be or would be, I imagine, relatively busy during that time.

I think the members of the committee are entitled to know that there could be in all probability no new applications accepted for the Development Loan Fund until, as I say, fiscal 1960 funds are available.

There is another thing there has been some argument about, and that is with respect to the area expenditures under the obligations.

Mr. THOMAS. Mr. Chairman, I yield 2 minutes to the gentleman from Colorado, [Mr. JOHNSON].

Mr. JOHNSON of Colorado. Mr. Chairman, the situation today reminds me of a moment in history in this House some 9 years ago there was before the House a request from the President for $100 million for relief and rehabilitation of the country of Korea. On that day, by an exactly tie vote, the House presumably saved the taxpayers $100 million. But in the next 2 years it cost the taxpayers $100 billion.

Mr. Chairman, I am going to vote for the $100 million today in the hope that it may save us from the necessity of again spending $100 billion.

Mr. TABER. Mr. Chairman, I yield myself the balance of the time on this side.

Mr. Chairman, the funds provided for the Development Loan Fund are practically exhausted. What is left is so small that not very much activity could take place.

There are no funds which could be transferred by Executive order or by the President in any other way into the Development Loan Fund. The funds that are left in the mutual security program today are for military assistance, nonmilitary assistance, and a lot of other items in which the unobligated amounts run to approximately $2 billion. The total amount of funds that could be transferred into the Development Loan Fund or transferred out of the Development Loan Fund is absolutely nothing. That is, there are not any other funds that could be transferred into it.

So, either these people have got to be put on a shelf until along about the 1st of September when a foreign relief bill could be passed which would have these items in it or appropriate the amount now. We would have to wait for the committee to report and have the bill go through before they would have anything to operate with. On the 1st of July the whole of the authorization that is not obligated and appropriated for expires, and unless new language is carried in the authorization bill that is now under consideration in the Foreign Affairs Committee there can be no more operations of this sort. Frankly, I do not believe we can get anywhere by putting them out of business at this time.

I feel we should go ahead and adopt the amendment we have been told will be offered, which will make available $100 million to be expended in the period from now until the 1st of July.

Section 501 does not apply to this particular fund. The provisions of section 202(b) of the Mutual Security Act absolutely prohibit transfers in or out of that particular fund. We must approach the matter with a clear sense of our responsibility, and we must try to see that our responsibilities are met. For my own part, I do not like to waste dollars. But I do feel that these particular loans, if they are made with great care—and I hope that they will be—will be of great assistance, because I have been after the management of the outfit to change it and step it up so that it will be of the highest caliber. I hope that they will. I hope that all of these things will be worked out in a proper way. Now, it is true that there were some UNRRA funds that were diverted to the Communists, but it is also true that from the time the foreign relief program was started Russian has not had any benefit out of the funds. It is also true that out of the Development Loan Fund no money has been passed and no negotiations have been had whereby there would be loans made to Iraq. Anything that has happened with respect to Iraq happened before the Development Loan Fund was set up, and in the last 2 years there has been nothing going in that direction, especially since they have shown a tendency to communistic reaction.

Now, there are a lot of other items in this bill. It is a deficiency bill, and a deficiency bill always carries a great mess of them. The departments always come back for the funds that they have been denied during the previous session in the first deficiency bill and a lot of those items that have been submitted here have been thrown out by the committee. And, it is a very good thing that they have been, because otherwise there would be no bottom left in the Treasury.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. TABER. I yield to the gentleman from Iowa.

Mr. GROSS. Where is it proposed to get the $100 million for this Development Loan Fund? Are we taking that now out of the 97—no, we did not save $97 million the other day, did we?

Mr. TABER. No; we cannot take it out of that.

Mr. GROSS. No. But where is it proposed to get the $100 million?

Mr. TABER. Where are we going to get the $97 million?

Mr. GROSS. Where are we going to get the $100 million?

Mr. TABER. Where are we going to get the $97 million? That is the thing I want to know.

Mr. GROSS. I voted against appropriating $97 million the other day, and I will vote against this foreign handout. Tell me where you are going to get the $100 million.

Mr. TABER. I do not know. It will have to be borrowed, I expect. I do not know that there is any other way of getting money these days. But, I do not think we can afford to turn this down just the same. I feel that we ought to go ahead and pass it.

The CHAIRMAN. The time of the gentleman from New York has expired. All time has expired.

The Clerk will read the bill for amendment.

The Clerk read as follows:

TITLE I—DEPARTMENT OF AGRICULTURE

Agricultural Research Service

Salaries and Expenses

For an additional amount for "Salaries and expenses", as follows:

"Research", $3,666,700, to be derived by transfer from the appropriation for "Conservation reserve program", fiscal year 1959;

"Plant and animal disease and pest control", $2,180,700, to be derived by transfer from the appropriation for "Conservation reserve program", fiscal year 1959; and

"Meat inspection", $1,709,100, to be derived by transfer from the appropriation for "Conservation reserve program", fiscal year 1959.

Mr. MATTHEWS. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I feel that the observations I have to make, even though they might not pertain to the minute particulars with which we are concerned, are of vital importance to our consideration of this great problem of foreign aid as it might be used to stay the Communist menace. And, my observations deal largely with the thought that it strikes me that with one hand we are trying to stay a conflagration whereas with the other hand we are beckoning for the fires to spread upon our shores. I have reference, Mr. Chairman, to the fact that we have as yet taken no specific action to counteract some of the decisions of the Supreme Court which have made it easy for the Communist menace to spread within our shores.

I suggest to you that this afternoon we might be spending our time even in a more valuable way by taking some concrete action to stay this particular menace. I would remind you, for example, that in the Nelson case the Supreme Court held that the States could not act against a Communist seeking the overthrow of the Republic because that was a field which the Federal Government had preempted. The Supreme Court held that despite the fact, as I understand, that the author of the Federal legislation stated specifically that it was not his idea at all that the Federal Government would preempt the field of sedition.

May I remind you, Mr. Chairman, that in the Yates case the Supreme Court held that the Federal Government's own anti-subversive laws did not apply to organizing a cell or a unit of the Communist Party, because only participation in organizing the original Communist Party ran afoul of the law. This means that we cannot even prosecute a Communist who is organizing a new Communist cell even though today we are talking about spending hundreds of millions of dollars of our Treasury to combat the Communist menace.

In the Kent case may I remind you, Mr. Chairman, that the Supreme Court held that the Federal Government cannot prevent even known Communists from leaving and returning to the country at will. On the floor of the House last year I called the attention of the House to this grave problem. What right does a man have, who is a traitor to this country, to travel in other lands? And today while we deal in semantics over a million dollars here or a million dollars there, what about these traitors who are scattering false propaganda, and, yes, I tell you, Communist propaganda, all over the United States of America?

I know that the appropriate committees of Congress are considering these matters, and I congratulate my colleagues who have introduced legislation to correct these matters. But, Mr. Chairman, I tell you it seems to me that with one hand we are throwing the treasure of America to the four corners of the world in an effort to stop communism, and with the other hand, because of inactivity on our part, we are beckoning to the traitors and to the subversives within our own shores to grow and to make their efforts all the more deadly.

I read recently excerpts from a speech by one of this country's greatest orators, Daniel Webster. He described the great misfortunes we could overcome: war, the destruction of our commerce, the desolation of our fields, even the crumbling of our Capitol—all these might be replenished, recultivated, or rebuilt, "But who," he continued, "shall reconstruct the fabric of demolished government? Who shall rear again the well-proportioned columns of constitutional liberty? Who shall frame together the skillful architecture which unites national sovereignty with States rights, individual security, and public prosperity? No, if these columns fall they will not be raised again."

I sincerely hope in our discussion this afternoon that we shall not forget what in my opinion is even the more important part of this fight against communism, and that is to demand immediate action that will enable us to fight successfully the subversion that is within our own shores.

The Clerk read as follows:

Forest Service

Forest Protection and Utilization

For an additional amount for "Forest protection and utilization," as follows:

"Forest land management," $12,282,800, of which $5,432,200 shall be derived by transfer from the appropriation for "Conservation reserve program," fiscal year 1959;

"Forest research," $1,003,400; and

"State and private forestry cooperation," $102,800.

Mr. ROONEY. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. ROONEY: On page 6, after line 22, insert the following:

"FUNDS APPROPRIATED TO THE PRESIDENT

"Mutual security

"Development Loan Fund

"For an additional amount for advances to the Development Loan Fund, as authorized by section 203 of the Mutual Security Act of 1954, as amended, $100,000,000 to remain available until expended."

Mr. THOMAS. Mr. Chairman, will the gentleman yield?

Mr. ROONEY. I yield to the gentleman from Texas.

Mr. THOMAS. Mr. Chairman, I wonder if we can agree on some limitation of time on this amendment. We are all familiar with what is involved here and have had a pretty full debate on it heretofore during general debate. I wonder if we can wind up debate on this amendment in 15 or 20 minutes.

Mr. Chairman, I move that all debate on this amendment and all amendments to the paragraph close in 20 minutes.

The motion was agreed to.

Mr. ROONEY. Mr. Chairman, the amendment now pending, which would provide an additional $100 million in the present fiscal year 1959 for the Development Loan Fund, is offered in behalf of the distinguished gentleman from Massachusetts, my colleague on the deficiency subcommittee, Mr. BOLAND, and myself.

I have served on the Foreign Operations Subcommittee on Appropriations since its inception following the start of the Marshall plan about a dozen years ago. As a member of that subcommittee and a conferee on the part of the House on the 1959 fiscal year mutual security appropriations bill last summer, on the day the 85th Congress adjourned sine die, I was present when the conferees on that mutual security appropriations bill met with the conferees on the part of the other body. It was agreed and subscribed to by all the conferees as follows: that the amounts contained in the bill agreed to by the conferees were too small in the view of some of the conferees, especially in the Development Loan Fund; that it was understood that if additional funds were needed this past January for the purposes contained in the bill, the Appropriations Committees of the House and Senate would give earnest consideration to the recommendations of the Executive in view of the importance of maintaining our friendly relations with countries with whom we have undertakings.

Now, that did not mean that the conferees who sat at the table and signed that conference report agreed that they would approve an application for additional funds in any particular amount. But it was definitely an invitation, if the administration felt it needed additional moneys for the Development Loan Fund, to come up to Capitol Hill and seek and justify any additional moneys needed when the 86th Congress convened.

I do not need to go into the Fund figures all over again. The gentleman from Michigan [Mr. FORD] gave them accurately in his presentation. We know there has been appropriated to date $700 million. I think it has been proved beyond question here on the floor of the House that there is but about $800,000 left of those moneys. It may be said that all the $700 million has not been obligated—that is a legal term. But this agency, this Development Fund is in the loan business. In their loan business, immediately upon their issuance of a letter of advice or intent, the loan becomes firmed up and at that time there instantly occurs a very important step in our international relations. This country issues publicity describing the loan and its approval for country A, and country A announces to all its peoples that the United States has agreed through the Development Loan Fund to lend a certain amount of money or credit to help that country.

I again accentuate the fact that whether legally obligated or committed, there remains out of the $700 million fund but $800,000 for its operations. What does this mean? This means that this organization, the Development Loan Fund, with 60-plus people working and employed by the Congress and the taxpayers on a payroll which is considerable in amount will have to sit these people down to twiddle their thumbs in the event this amendment does not carry, until along or about the 1st or 15th of August next because it will be along about that time that the regular 1960 mutual security appropriations bill will finally become law. While this halt in its operations is taking place and while these employees and the U.S. Government are twiddling their thumbs, we find this situation pictured in the New York Times of March 22, 1958:

Reds' foreign aid to 18 countries up $1 billion in 1958. The Communist bloc signed aid agreements with 18 underdeveloped countries last year totaling $1 billion.

And here we are indecisive about one-tenth of that amount, or $100 million for the Development Loan Fund.

Mr. Chairman, I trust the pending amendment will be adopted in the interest of our national security.

The CHAIRMAN. The Chair recognizes the gentleman from Iowa [Mr. GROSS].

(By unanimous consent (at the request of Mr. GROSS) the time allotted to him was granted to Mr. PASSMAN).

(By unanimous consent (at the request of Mr. JENSEN) the time allotted to him was granted to Mr. PASSMAN).

The CHAIRMAN. The Chair recognizes the gentleman from Louisiana [Mr. PASSMAN].

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. PASSMAN. I yield.

Mr. GROSS. This Development Loan Fund is simply a subterfuge for the foreign giveaway program and I am op-

posed to it. As the gentleman from North Carolina [Mr. JONAS] and others have stated the U.S. Treasury is already busted and borrowing money for the going expenses of the Government. The time is long past due for a drastic curtailment of so-called foreign aid and the uncollectible loans provided through this Development Loan Fund. How much further will this Congress go in loading impossible mortgages on the children of today and tomorrow—debt that they cannot possibly pay? Approval of this $100 million will be another act of irresponsibility and I want the record to show that I refuse to be a party to it.

Mr. JENSEN. Mr. Chairman, will the gentleman yield?

Mr. PASSMAN. I yield.

Mr. JENSEN. Just how much can we expect to get back in repayment on any of these funds under this development loan program?

Mr. PASSMAN. My guess would be, if you should check the record 10 years from now, repayments might be, perhaps, 6 or 7 percent of the total.

Mr. JENSEN. And they have the right to pay these loans back in foreign currencies; do they not?

Mr. PASSMAN. That is provided in the program. They scatter a few dollars around to mislead the people of America into thinking this is a bona fide loan, when, in fact, it is a soft-currency transaction that amounts to but little, if anything at all, more than a grant.

Mr. Chairman, this is not my fight; this is the fight of the Supplemental Appropriations Subcommittee, but it is for a program that is handled before our Subcommittee on Foreign Operations Appropriations. However, I should like to direct one more time the attention of the Committee of the Whole to the fact there are about 28 different items in the mutual security program. Practically every one is related to the other. They frequently change the names, mutual security, development loan, development assistance, special assistance, the President's Asian fund, the President's contingency fund, and so on, until it is thoroughly confusing to endeavor to determine the ultimate situation. Remember, however, that we are considering in excess of $1,100,000,000 available to lending in other categories before you get into the military; and when you get into the military the amount is $5 billion.

Time will not permit me to go through this list of items which are in excess of $6½ billion, and much of this money can be used as a grant or loan.

Mr. ROONEY. Mr. Chairman, will the distinguished gentleman from Louisiana yield very briefly?

Mr. PASSMAN. Yes, I shall be glad to yield to the gentleman from New York.

Mr. ROONEY. Is it not the fact that under the law no part of the mutual security program funds may be transferred to the Development Loan Fund?

Mr. PASSMAN. I might say to the gentleman that you can make the same loan to the same nation, in the same amount, on the same terms, from one of the many other categories that you do out of the Development Loan Fund. The Development Loan could take it over later and ultimately make the loan. On military matters this is not a loan, it is a grant. This loan is a kind of grant that will never be paid back to any large extent.

Mr. ROONEY. Mr. Chairman, will the gentleman further yield?

Mr. PASSMAN. Yes, I yield.

Mr. ROONEY. Is it not a fact and was there not testimony to the effect that these loan funds may be used four and five times over a period of years to make additional needed loans to the same country?

Mr. PASSMAN. Oh, yes; and they could be used 50 times if they could be collected.

You and I heard the statement made that we had collected a million dollars from this fund. Then a member of the Foreign Affairs Committee took the floor and said: "I am sorry, but you are just about 300 percent wrong; the amount paid back was $225,000." So this is a matter about which there is a great deal of misunderstanding. The fund is in such a state of confusion that statements are made about it that cannot be verified by the record.

The CHAIRMAN. The gentleman from Ohio [Mr. BOW] is recognized.

Mr. BOW. Mr. Chairman, I have never voted for foreign aid or foreign-aid funds. Today I shall vote for this amendment.

I shall vote for this amendment for this reason: This House last year authorized this legislation, served notice on the executive department and on the world that this fund would be available. I believe that to be responsible we must appropriate sufficient funds to carry it until such time as the regular committee can report its bill; so I will support this amendment, as I say, the first time I have supported such an amendment since I have been a Member of Congress.

If this were a vote to authorize the Fund, I would oppose it. I shall oppose it in the future. But I do not feel the Appropriations Committee can or should repeal by implication the action taken last year.

May I say I have made this decision without pressure from any source.

Mr. HALLECK. Mr. Chairman, will the gentleman yield?

Mr. BOW. I yield to the gentleman from Indiana.

Mr. HALLECK. Mr. Chairman, I want to add my word of support for this amendment. We all know that in recent months the free world has been much troubled by developments around the world, notably what many people call the Berlin crisis. In my opinion, we are going to win out in this crisis as we have in many others, and for one simple reason: That we in the United States with our free friends in the free world are operating from a position of strength. We have got that position not only because of our own strength here at home, but because of the strength of peoples friendly to us and the strength of our offshore operations, all of which are here involved.

The development loan proposition is better than the grant proposition, and I hope this amendment is adopted.

The CHAIRMAN. The Chair recognizes the gentleman from Maine [Mr. COFFIN].

Mr. COFFIN. Mr. Chairman, we are under some illusion in this body if we think we can do several things that have been held out to us as bait.

For one thing, we cannot declare a recess in this cold war, and if we do not vote for the pending amendment we are not so much putting the staff of the Development Loan Fund out to pasture as we are getting out of the process of encouraging our friends and allies throughout the world. We cannot recess this cold war for the next several months until we vote some money in the regular big bill. Neither can we save any money if we wait for the next 2 months and terminate our operations in the meantime. We will not save a dime by that action.

What the gentleman from Louisiana is suggesting to us, and I am surprised, is that despite the mechanisms we have devised to make loans, which ought to be contrasted with technical assistance, in defense support, and military aid, we ought to discard all of these tools and their legislative criteria and use these other funds for purposes for which they were not intended.

Let us use the tools we have devised in the way we planned to do.

The CHAIRMAN. The Chair recognizes the gentleman from Michigan [Mr. BENTLEY].

Mr. BENTLEY. Mr. Chairman, I find myself somewhat in the position of my friend from Ohio who just preceded me. I do not recall when I voted for mutual security, foreign aid, foreign relief, or any other type of program since I have been in Congress. I may very well vote against the foreign aid authorization bill again this year and against the appropriation bill, as I have done in the past. But at this particular time I am not willing to take out from our foreign policy, our foreign program, a part of this bill which I think is the very best part of the foreign aid program. I think that the idea of making loans to these people is a sound one, and I think it is much more appreciated and wins more friendship than the idea of grants anyway, particularly at this time, Mr. Chairman, when we are facing a crisis, as the minority leader has just said, when we are facing negotiations with our Communist enemies in the near future. I see no reason at all why the Committee of the Whole House, or anybody else, should take any action at this time which would in any way tend to give the impression to the Communist world that we are weakening in our attitude on this situation.

The CHAIRMAN. The Chair recognizes the gentlewoman from Georgia [Mrs. BLITCH].

Mrs. BLITCH. Mr. Chairman, 4 years ago I stood on the floor of this House for the first time and expressed my opposition to the idea of any program of foreign aid. I have heard nothing

thus far in this debate which has in any way changed my mind. I believe that the Members of this House overwhelmingly in their hearts realize that we have a bear by the tail and that we should turn it loose. We should turn it loose now.

We have just seen the Prime Minister of Britain coming over here and our own President indicating there will be a summit meeting. That summit meeting is to get Mr. Khrushchev off the hot seat in his own country and his satellite countries, and we know that Mr. Macmillan needs the prestige of the arrangement to help him in the coming elections. And here we are in the House of Representatives today backing it up with more money.

All of these things are not contributing to the peace and stability of the world.

The CHAIRMAN. The Chair recognizes the gentleman from Massachusetts [Mr. BOLAND].

Mr. TOLL. Mr. Chairman, will the gentleman yield?

Mr. BOLAND. I yield to the gentleman from Pennsylvania.

Mr. TOLL. Mr. Chairman, the supplemental appropriation of $225 million for the Development Loan Fund, which the administration is asking the Congress to approve, is needed to keep a vital instrument in operation. The Development Loan Fund is one of the best ways we have to meet the challenge of the Communist threat in the economic field. In the Near East alone Soviet and Soviet-bloc aid to the Arab countries has exceeded a billion dollars. I do not have to spell out the political effect this Communist aid has had. We cannot permit our own program to be stalled for the next 5 months—and that is what will happen if we do not approve this appropriation—at a time when the Soviet economic offensive is going ahead at full speed. We must have the funds to strengthen our friends and provide them with the means to resist domination and to stay free.

The underdeveloped countries in Asia, Africa, and the Near East must have our help in order to achieve a satisfactory rate of economic growth. They must have our help to maintain their stability and independence. The loans made so far by the Development Loan Fund cover a wide variety of improvements: railways, highways, dams, irrigation, industrial development, telecommunications, and so on. They furnish the funds with which people can develop their own resources, raise living standards and reduce illiteracy. They contribute to the establishment of a sense of security and independence that enables these new governments to steer clear of Communist lures. Throughout the world the United States has been fostering progress and helping people to develop their economies. We have been making friends for freedom and showing people how they can help themselves without sacrificing their rights and their liberty.

Since it began operations, the Development Loan Fund has approved loans in 31 countries; it has committed all the money voted by Congress last year, and it now has a backlog of more than $1.5 billion of screened applications. The Development Loan Fund was a sound approach to our responsibility in aiding underdeveloped countries when it was authorized in 1957. It was encouraged to go ahead last year when it received an appropriation of $400 million with the understanding that a request for a supplemental appropriation would be considered if it should become necessary. That need has been amply demonstrated.

Unless we grant the supplemental appropriation, which is requested, we will be helpless to meet the Soviet economic offensive now being waged with great intensity in Africa and the Near East. At a time when the need is greatest and the tension is mounting, we shall be compelled to sit by with hands folded unless we give the Development Loan Fund the money it needs to operate. We do these things in our own selfish interests and for our own security, but in the larger sense we also have a moral imperative to help those who are willing to help themselves to become free, independent, and strong nations.

Mr. BOLAND. Mr. Chairman, I rise in support of the amendment. The gentleman from New York [Mr. ROONEY] and I are cosponsors of this amendment. Both of us served on the Subcommittee on Supplemental Appropriations that recommended $100 million to the full committee. Both voted against the successful effort of the gentleman from Louisiana [Mr. PASSMAN] to strike this amount from the bill when the full committee met last Friday.

Mr. Chairman, I am convinced that it would be a tragic mistake on the part of this Congress if it failed to provide sufficient funds for the Development Loan Fund to operate for the next 5 months before any additional moneys are voted for it in the fiscal 1960 budget.

This Nation is being challenged by Russia in all areas. But the success with which the Kremlin has entered the economic field should cause us deep concern. This is the place of the real cold war and if we fail to implement our efforts in the field of economic assistance to the less developed areas of the world, we, indeed, are asking for trouble. All over the world we will lose friends and we will be standing alone with few allies. We just cannot afford to get into this position. A common sense aid program that is envisaged by the Development Loan Fund is the answer to a wasteful, extravagant effort. This agency is now moving into the economic assistance arena with a program that promises to produce real results and give needed aid to the underdeveloped friendly countries throughout the world.

Mr. Chairman, I think that the majority of the Members of this House recognize the fact that this program is a program that is going to be with us for a long period of time, the mutual assistance program. The House recognized this a couple of years ago, when it authorized and created the Development Loan Fund. This is a fund which puts mutual security on a businesslike and on a sound basis. Now, all of the abuses that the gentleman from Louisiana complained about, and with some justification, have not occurred in this program we are now discussing. A great deal of them did occur in the Mutual Security Agency. There is no waste, no extravagance, no corruption in this particular development, and I challenge the gentleman from Louisiana to deny that fact.

Mr. PASSMAN. Mr. Chairman, will the gentleman yield?

Mr. BOLAND. I yield to the gentleman from Louisiana.

Mr. PASSMAN. This is a brand new baby.

Mr. BOLAND. Of course, it is a brand new baby. I recognize the fact that it is a brand new baby, and that is the reason we developed it. We created it to get away from the waste and corruption and graft that you so justifiably complain of. Here it is on a sound businesslike basis, and you continue to oppose it. The fact of the matter is that this is the best program that we have developed for mutual assistance ever since the program started.

The CHAIRMAN. The Chair recognizes the gentleman from Vermont [Mr. MEYER].

Mr. GALLAGHER. Mr. Chairman, will the gentleman yield?

Mr. MEYER. I yield to the gentleman from New Jersey.

Mr. GALLAGHER. Mr. Chairman, I rise in support of the Rooney amendment offered to restore $100 million Development Loan Fund to the second supplemental appropriations bill. This program is charged with carrying forward a vital aspect of foreign policy in many critical areas of the world. If disallowed the program would be threatened with a virtual shutdown for half a year or more—and a probable loss of momentum that would take much longer to regain.

The Development Loan Fund concentrates in accelerating growth in the less developed economies of the world. It is the principal instrument of the U.S. Government charged with this objective. The Development Loan Fund supplements, and does not compete with, other sources of capital in the free world.

If this program is discontinued at this time it will be a great boon to the Soviet Union. Communist leaders recognize the profound urge for economic progress in the less developed areas and they see the opportunity to woo uncommitted governments with substantial offers of aid. They support development for their own particular purposes. The success of U.S. aid to less developed countries has been underlined by the decision of the Soviets in recent years to extend an increasing volume of credits to selected countries for development purposes. Recent Soviet announcements predict increased economic competition with the free world and a stepped-up foreign aid program.

It is in the long-range interest of the United States that the less developed countries not lack alternatives to acceptance of Soviet offers. The long-range

interests of the United States require that it become identified with reasonable economic aspirations of developing peoples.

Much has been made of the fact that the Development Loan Fund has not actually expended much of its present $700 million fund and that a third of it is not even technically obligated. Many Federal programs are set up like this with a long leadtime built into them. Virtually every penny of the Fund's money is now firmly committed and applications, carefully screened, are on hand for many times the $100 million in new authority sought for the current year.

Because of the vital importance to our foreign economic objectives a supplemental appropriation for fiscal 1959 of $100 million is now desperately needed for the continuance of the Development Loan Fund. Having assumed the leadership of the free world, it is now no time to relinquish the responsibilities of leadership at the very moment the Soviet Union makes its challenges on the economic front. This program is fiscally sound, in the interest of the free world. It is wholly within the precept that the United States leads the free world with conscience, responsibility and farsightedness. It is a vote for our national interest and the continued security of the free world.

Mr. MEYER. Mr. Chairman, in our desire to economize we are always out looking for dragons. I think sometimes projects such as this Development Loan Fund are more nearly small lizards or small rabbits, and I think it might be well to consider that the entire business of our Defense Establishment is the large dragon. I am not suggesting that we kill dragons or lizards, but I suggest we keep them all under control and well regulated. Therefore, I rise in favor of the amendment.

The CHAIRMAN. The Chair recognizes the gentleman from New York [Mr. TABER].

Mr. TABER. Mr. Chairman, right now I have a report before me showing what the Soviet has done along this particular line: $626 million to Egypt; $120 million to Iraq; $323 million to Syria; $304 million to India; $364 million to Indonesia.

Unless we adopt this amendment we are going to fade out of the picture in our race to maintain the free world and keep things right side up. Now, let us vote the amendment through and go on doing our job.

Mr. PELLY. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Washington?

There was no objection.

Mr. PELLY. Mr. Chairman, as I understand, since the Development Loan Fund was launched in mid-1957, commitments totaling nearly $700 million have been made. The supplemental appropriation under the Rooney amendment would add $100 million to the Fund for the current fiscal year. Then, in turn, $700 million is being sought for fiscal 1960.

I do not think that I can agree with those who are confident the taxpayers' money loaned under this Development Fund program constitutes bankable transactions in the ordinary sense. Or at least I have read that such is not the case.

However, the point I want to make is that for its 30-year credits to foreign governments, I understand the Fund has been asking no more than 3½ percent. In contrast, the U.S. Treasury has had to pay 4 percent on $500 million of 10-year bonds in the past few days and for 30-year bonds I would guess the current legal ceiling of 4¼ percent would hardly be high enough to attract investors.

I will support the amendment to add $100 million, but I would like to limit loans to the rate of interest which the Treasury finds it necessary to pay. I would put in an amendment to this effect except under the rules I realize a point of order would be raised against it as being legislation on an appropriation bill. Recently on the domestic scene the rural electrification representatives meeting here in Washington were unhappy when it was suggested they should borrow from the Treasury at no less than the rate the Federal Government pays. I do not blame them for being unhappy when others are doing the same thing. I am for a requirement that in all cases the Federal Government obtains the same rate that it pays for a comparable borrowing.

Yesterday, it was pointed out in this House that under the new so-called community facilities proposal the Federal Government would be called upon to make $1 billion of long-term loans to municipalities at an interest rate of 2⅞ percent. The Government would borrow at 4 percent and lend at 2⅞ percent. As I see it, each situation like this is forcing the United States to increase its debt and the more the Government borrows the higher the rate of interest it must pay. The annual budgetary $8 billion interest will soon be $9 billion, and that means, or should mean, more taxes. As long as there is available a premium or subsidy by way of a special discriminatory low interest rate, there will be a demand for Federal loans. I believe this special treatment should be removed and the only way to remove it is to provide that the Secretary of the Treasury establish a schedule of interest rates from time to time which the Government finds it necessary to pay on new issues and to charge those same rates to others. All current loans made by the Treasury should be in accordance with what the Treasury has to pay.

However, I would not raise the rate to our own domestic borrowers, or agencies, if we did not likewise treat foreign governments the same way. If we must discriminate, we should do it in our own favor.

Mr. LINDSAY. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. LINDSAY. Mr. Chairman, I rise in support of the amendment offered by my colleague from New York [Mr. ROONEY] appropriating $100 million for the Development Loan Fund. A continuation of the Fund's operation is absolutely essential to the success of our foreign policy. The President and the Secretary of State, plus the leaders of the Congress from both sides of the aisle have said this emphatically. Can there be any doubt about it in this day and age when the struggle for freedom in so many countries of the world hangs in such delicate balance?

The underdeveloped countries of the world cry out for our help and the least we can do is to be their banker to encourage them to help themselves. This is not a grant program but a loan program and it strikes me as strange that it should be argued that this is a continuing drain, with no return, on our resources. In the whole package of foreign assistance programs this is the most sensible. Witness the fact that several Members of this body who have continually voted against all foreign aid measures in the past rise in support of this one.

Let us support the President and do right by ourselves and our friends abroad by voting for the amendment.

Mr. O'HARA of Illinois. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. O'HARA of Illinois. Mr. Chairman, as a member of the Committee on Foreign Affairs, my time largely occupied with the international problems that vex us, I feel that this is a time for frank talking. As the chairman of the African Subcommittee I am deeply concerned by the stepped-up program of the Soviet in offering loans on very easy terms to any of the African countries that will accept them. We operate under the great disadvantage of not being in position promptly to offer loans to countries that have immediate requirement for development funds and which if they cannot turn to us can be expected ultimately to accept what the Soviet has placed within its reach.

In the last year the Communists, worldwide, have made in excess of $1 billon in such loans. I am certainly no alarmist, but I am gravely concerned that we will lose the awakening continent of Africa if the development loan fund is stopped cold in its tracks by failure to include at least $100 million, which is a pitiful amount to meet the $1 billion challenge of the Soviet.

I am convinced that when the Development Loan Fund is better understood by the American public it will have the enthusiastic approval of all thinking persons. The trouble is it is confused with the grants and aids in the period prior to the establishment of the Development Loan Fund just 14 months ago.

In the 14 months of its operation the Development Loan Fund has justified my prediction in the 85th Congress that it

would prove as sound as the program that started with the establishment of the Export-Import Bank. In the 85th Congress I stated that one of the great merits of the Development Loan Fund was the prospect that it ultimately would take in large measure the burden of foreign economic aid from the shoulders of the American taxpayer. This I said would be accomplished by revolving funds of local currency in the various areas of the world where it operated.

It is just this simple: A loan is made, we will say to Nicaragua. The loan is made in American money and the repayment of the loan may be in local currency. The local currency received in the repayments on the loan will go into a revolving fund for further loans in Nicaragua. These new loans will be made in local currency from the revolving fund and they will go into developments in which there is no requirement for American money because all the labor and materials are obtainable in that country. Thus, little by little the demand upon the American Treasury will be reduced and ultimately almost entirely removed. To me it is so simple and its logic so understandable that I was surprised that some of my colleagues made statements implying that everything that I had said along this line was not exactly the fact.

Mr. Chairman, this morning the Honorable C. Douglas Dillon, Under Secretary of State for Economic Affairs, appeared at an open session of the Committee on Foreign Affairs. I asked him to make it crystal clear whether the Development Loan Fund in the 14 months of its existence had proceeded with this objective in mind. He stated positively that revolving funds of local currency in the various countries of the world was the objective and that he was satisfied from the progress already made that that objective would be reached. When today's hearing is printed I hope that my colleagues will turn to the page in the report where Mr. Secretary Dillon makes this statement. Secretary Dillon is no visionary. His experience as a banker certainly qualifies him to speak with authority on banking matters.

The fact is that the loans from the development loan fund are as sound as the loans made by the Export-Import Bank and the World Bank. They have to pass the same rigid banking tests. The only difference is that they may have longer terms and may be made repayable in local currency. In all other respects they are as sound as the loans of the Export-Import Bank and those of the World Bank. Now it follows that if the local currencies received in the repayments are put into revolving funds in the countries where those local currencies are generated there will be a continuing supply of credit for further developments of a sound nature in that country.

All we are doing is following in a general way the pattern of our own banking system in having available in local funds a source of credit for local businesses and needs.

The defeat of the Rooney amendment would be a disastrous blow. Being especially alert to the situation in Africa, where there is a dynamic urge to go forward rapidly, I would be most fearful of the repercussions on that continent that would follow the abrupt halting of the Development Loan Fund.

The CHAIRMAN. The Chair recognizes the gentleman from Texas [Mr. THOMAS].

Mr. THOMAS. Mr. Chairman, I ask unanimous consent that the time allotted me be yielded to the gentleman from Massachusetts [Mr. McCORMACK].

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

The CHAIRMAN. The Chair recognizes the gentleman from Massachusetts [Mr. McCORMACK].

Mr. McCORMACK. Mr. Chairman, the amendment offered by the gentleman from New York [Mr. ROONEY] simply carries out the action taken by the subcommittee that considered this matter. When the subcommittee reported to the full committee the bill carried $100 million. The subcommittee report included that, stating the reasons for it. The committee print carried the $100 million item. It was when this bill got to the full committee that the item was stricken out. So, the subcommittee that considered the evidence, that heard the witnesses, recommended the item being carried in the appropriation bill in the sum of $100 million, and all we are doing is supporting the subcommittee. And, I think the judgment of the subcommittee is wise. I think the judgment of the subcommittee is sound. The thing for you and me to do, whether Democrat or Republican in these trying days, but over and above that, as Americans, is to vote in the manner that we consider to be in the national interest of our country. And at a time when things are picking up in Indonesia, at a time when other countries recently emerged from colonialism are commencing to realize the danger of Communist colonialism and ruthlessness, for us to refuse to approve this amendment today providing $100 million would, in my opinion, be inconsistent with the best interests, the national interests, of our country. As the leader of my party I urge the Members on my side to vote for this amendment.

The CHAIRMAN. The time of the gentleman from Massachusetts [Mr. McCORMACK] has expired. All time has expired.

The question is on the amendment offered by the gentleman from New York [Mr. ROONEY].

The question was taken; and the Chair announced that the "ayes" appeared to have it.

Mr. THOMAS. Mr. Chairman, I demand tellers.

Tellers were ordered, and the Chairman appointed as tellers Mr. ROONEY and Mr. THOMAS.

The Committee divided; and the tellers reported that there were—ayes 191, noes 85.

So the amendment was agreed to.

The Clerk read as follows:

SHIPS AND FACILITIES

For an additional amount for "Ships and facilities", $18,000,000.

Mr. THOMAS. Mr. Chairman, I ask unanimous consent that the remainder of the bill be considered as read and be open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

The CHAIRMAN. Are there any points of order to the bill? If not, the Chair will recognize Members to offer amendments.

Mr. FOGARTY. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. FOGARTY: On page 14, line 10, insert after the comma and before "$25,000,000", "$75,300,000, of which": strike out the comma after "$25,000,000" and insert the words "shall be".

On line 13, strike out the period and insert the following: "; $37,000,000 shall be for grants to States and loans to nonprofit private schools for science, mathematics, and modern language teaching facilities; and $2,000,000 shall be for grants to States for testing, guidance, and counseling."

Mr. FOGARTY. Mr. Chairman, I ask unanimous consent to proceed for 5 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Rhode Island?

There was no objection.

Mr. THOMAS. Mr. Chairman, will the gentleman yield?

Mr. FOGARTY. I yield.

Mr. THOMAS. Does the gentleman's amendment restore the entire budget estimate of $75 million for the program?

Mr. FOGARTY. This is exactly the language that was presented to the committee by the Bureau of the Budget and by the Department of Education. Last year the Defense Education Act was passed after months of hearings and due deliberations. If there ever was a nonpartisan effort which was more successful in the last Congress I am not aware of it. I do not know what act had that kind of cooperation. I think the gentleman from Alabama [Mr. ELLIOTT], the gentleman from New York [Mr. WAINWRIGHT], the gentleman from West Virginia [Mr. BAILEY], the gentleman from New Jersey [Mr. FRELINGHUYSEN], and all those who spoke on both sides of the aisle last year to get the Defense Education Act passed deserve a tremendous amount of credit for the wonderful work they did, working together and making compromises and coming out with a bill to meet the President's request. The President signed the Defense Education Act. So what happened? The President made a firm statement a year ago as to this act. Mr. Folsom was then Secretary of Health, Education, and Welfare. He spent months on it. Thirty or forty national organizations, teachers and parent-teachers and all the groups of that kind came in and endorsed the legislation. The bill was passed and signed into law. The initial request for funds to operate in this fiscal year, 1959, did not come to our committee because we

were too close to adjournment. As a result, the request was made to the other body. Then the committee, which, incidentally did not handle these original requests, met with the other body and came out with a compromise. We were so close to the adjournment that the request went to the other body. The matter was not given extensive hearings in that body. They came back with a conference report, and after a conference was held, $40 million was agreed upon for 1959 with the understanding that if this was not enough, the Department was to come back and ask for more. We had authorized $183 million to be expended in this year, 1959, and only $40 million was appropriated at that time with the understanding that they come back and ask for more. So the Department of Education came to this new deficiency committee and made a request that had been approved by the Bureau of the Budget and by the President asking for $75,300,000 which is still only about two-thirds of what was authorized. But, the Committee on Deficiencies cut this request of $75,300,000 down to $25 million for the loan provisions. I think that is good in itself but it does not go far enough. I do not believe the administration asked for enough for loans. I think they should have asked for more. They have more applications for loans now than the administration is asking for and than this committee has allowed. So all my amendment does is to restore the amount that has been approved by the Bureau of the Budget and by the administration to run this program until June 30 of this fiscal year before the fiscal year 1960 starts.

When the facts are known I am confident that the Members of the House will refuse to accept these recommendations and will show their determination to give this vital program a strong vote of confidence which is urgently needed if we are to carry out our commitments under the National Defense Education Act. It is inconceivable to me as a member of the committee and as chairman of the subcommittee which regularly handles the vital programs that the Congress would want to cripple this program just as it needs to get off the ground and to accomplish the purposes which the Congress recognized and authorized last year. The President recommended a supplemental sum of $75 million for this fiscal year to be added to $40 million previously made available by the Congress as a stopgap appropriation on the last day of the session last year. In recognizing the urgent need for additional funds this year the President has indeed exercised due deliberation called for by the committee in requesting only the amounts actually needed to complete the program for the first year. The Congress provided time for this deliberation by appropriating last September only enough to begin operation this first year.

I call to your attention the fact that the Congress authorized appropriations in the National Defense Education Act for the current fiscal year amounting to $183 million. The funds requested by the administration will provide a total for the year of $115 million or 63 percent of the total amount authorized. The Department has testified that the amounts recommended for completion of the first year's program in many cases are considerably less than the States and institutions can effectively use to initiate the program this year. Therefore, the administration has submitted very conservative estimates of requirements. However, these requests of the President would be sufficient in every instance to make an effective start on all phases of the National Defense Education Act this year. By sharp contrast the action of the committee in allowing only one-third of the total amounts authorized by the law would starve the programs before they get going and would provide for effective operation of only one of the titles of the National Defense Education Act, that dealing with student loan programs. It must be obvious to the members of the committee that if we are to encourage able and needy students to borrow funds to go to college we must strengthen the supporting school programs to be sure that the students are ready and able to do good college work.

The Subcommittee on Appropriations which I head, when conducting hearings on the Department's programs for fiscal year 1960, gave considerable attention to the National Defense Education Act and to the requirements for the programs for fiscal year 1959. It was brought out in this hearing that the budget request for this program has been carefully evaluated and pruned at all levels of approval in the administration and that in no instance has the administration requested funds which are not needed to provide effective operation of the defense education program. I can assure the Members of the House that in my own opinion after careful review of these programs and extensive questioning of witnesses from the Department that the budget requests of the administration are conservative and well below the program levels authorized by Congress. This minimum request deserves strong bipartisan support to show the Nation and our teachers and students that we support this program and that Congress can be relied upon to live up to its obligations. State education agencies—and 45 of the State legislatures—have been working hard to get State plans ready for these programs. They have been fired with enthusiasm which we will either encourage or reject by our action today.

An example of the adverse action which the committee has recommended is found on title III of the National Defense Education Act which provides for the strengthening of instruction in our schools in the fields of science, mathematics, and foreign languages, which are the subjects recognized by all authorities to be most critical in our national defense and security. The Congress authorized $70 million to be appropriated for this purpose this year. The initial appropriation of $19 million was sufficient only to enable the States to make a very meager start for the purchase of vitally needed equipment to provide school laboratories with the materials essential to effective teaching. For example, it was reported to the committee that only 60 high schools in the Nation are adequately equipped to teach foreign languages through the use of new recording devices; and only one out of five classrooms is adequately equipped for the teaching of modern science. Funds requested by the administration would have provided for an additional $37 million for this purpose and the committee disapproved this request in its entirety. There is no excuse for further delay in appropriation of these funds. As a matter of fact, the States are guaranteed 2 years in which to submit plans to use the funds appropriated this year, and the denial of this supplemental request will cripple this program in every State. I urge each and every Member to become familiar with the amounts to be denied to his State and the children of his State if these funds are not restored.

Another example of the drastic effect of the committee's recommendations is seen in the elimination of all funds requested for national defense fellowships. The act clearly authorizes 1,000 fellowships to be awarded in fiscal year 1959, and 1,500 in each of the 3 succeeding years to strengthen the teaching staffs of our colleges and universities. Available funds will cover only 150 of these fellowships this year. The effect of the committee therefore is to limit this program in the first year to 15 percent of its effectiveness. The Office of Education has ready to release, as of this moment, the awards of 850 fellowships which have been carefully screened from 6,000 applications submitted for consideration. I have here a list of the institutions which would receive these awards. This program must not be crippled at this critical time when the country desperately needs more able and qualified teachers in our colleges and universities.

Likewise, the funds eliminated from the programs authorized under title V for the improvement of counseling and guidance services will seriously retard the States and educational institutions in achieving results mandated by the Congress. Some 200,000 bright and able students discontinue their education each year and this drain on our resources will not be stopped until we take action to identify their abilities and encourage them to continue their schooling. The Congress authorized $15 million to be appropriated for grants to States and an additional $6,250,000 for training institutes to be approved this coming year. The budget request of the administration would provide for less than half of the funds authorized for grants to States and for counseling and guidance institutes. The Office of Education has received applications from 300 institutions to run summer and fall institutes and only a small fraction of these can be approved. Clearly the action of the committee in eliminating all supplemental funds will restrict this activity at a time when the States and institutions have every reason to expect the Congress and the Federal Government to give the support promised in the National Defense Education Act.

Title VI of the National Defense Education Act authorizes $15,250,000 for the development of language teaching in our schools by establishing training centers and institutes for teachers and research in new materials and methods. The Office of Education now has available only $800,000 to initiate this extensive program. The supplemental funds would have provided for a total appropriation this year of only $5 million—or one-third of the authorization—to get this vital program initiated. For example, the funds available now will cover the operation of only four summer institutes in language instruction, whereas the Office of Education has received applications from 270 institutions who are ready to initiate institutes for improving the instruction of languages in their States. We know that the Nation is desperately in need of more adequate instruction in foreign languages so that we can work for the friendship and cooperation of billions of people who are now the target of Communist domination. The Commissioner of Education has found that 50 languages each spoken by some 2 million or more native peoples are not taught anywhere in the United States.

Title VII of the National Defense Education Act authorizes $3 million for research in new educational media such as educational television. The administration request for a supplemental budget of $1 million together with funds available would have provided only half of this amount. The Office of Education now has ready for approval 20 vital projects which have been carefully screened by an advisory group which reviewed over 200 project proposals to improve our knowledge of educational methods in the field of television and related media. It would be short-sighted and damaging to education to deny these funds now.

The action of the committee in rejecting funds for the improvement of State statistical services is merely a denial of interest in improving the ability of the States to report the basic facts about education. We in the Congress have, time and again, criticised the Office of Education for the inadequacies of its information about the conditions of education in this country. If we deny these funds, we must be ready to accept the blame for continuation of these deficiencies.

In conclusion, I believe the Members of the House will agree with me that this committee recommendation strikes a blow at the confidence of the States and institutions in this program which we as Members of Congress voted in overwhelming numbers last year. In enacting the Defense Education Act we expressed a far-reaching national interest and concern about the deficiencies in our educational system which weaken our national defense. If we now turn our backs on our schools and the schoolchildren of this country we will have undermined the confidence and respect which we have encouraged and invited through passage of the National Defense Education Act. I do not believe the Congress wishes to repudiate itself in this way.

Therefore, I am offering this amendment to restore to the bill the $50.3 million requested by the President and eliminated by the committee.

Mr. Chairman, I insert in the RECORD at this point a tabulation showing the amounts of funds which would be denied to the States should my amendment not carry. Conversely, should my amendment carry these are the amounts which they will receive:

Funds to be allotted to the States under proposed amendment by Mr. Fogarty

State or Territory	Title III		Title V
	Financial assistance for strengthening science, mathematics, and modern foreign-language instruction		Part A Guidance, counseling, and testing; identification and encouragement of able students
	For acquisition of equipment and minor remodeling	For loans to nonprofit private schools	
Aggregate United States	$32,560,000	$4,440,000	$2,000,000
Continental United States	31,820,000	4,364,122	1,960,000
Alabama	942,815	22,834	43,524
Arizona	280,613	19,924	14,286
Arkansas	519,100	8,628	23,964
California	1,605,000	242,700	148,189
Colorado	328,780	29,774	19,407
Connecticut	261,213	68,798	24,118

Funds to be allotted to the States under proposed amendment by Mr. Fogarty—Con.

State or Territory	Title III		Title V
	Financial assistance for strengthening science, mathematics, and modern foreign-language instruction		Part A Guidance, counseling, and testing; identification and encouragement of able students

Total fellowships	160	1,000

Mr. LAIRD. Mr. Chairman, will the gentleman yield?

Mr. FOGARTY. I yield.

Mr. LAIRD. Is it not true that since this particular program was authorized our subcommittee has never had an opportunity to include any part of this Defense Education Act funding in a regular appropriation bill. The Department of Health, Education, and Welfare has recently, in appearances before our subcommittee, not only fully justified their request for funds in this supplemental or deficiency bill, but also the funds requested in their regular appropriation bill for fiscal year 1960. It is regrettable that our subcommittee has not had full opportunity to report on this program.

Mr. FOGARTY. No; we have not, except in this way, that when the Department of Education appeared before our committee a few weeks ago for the 1960 appropriation request they were asked to detail what they needed to operate with in 1959. A great many of the questions that were asked by the Deficiency Committee were also asked in our committee, and we received the same answers; and that is why I am here today as chairman of that committee making this request for the full $75 million.

Mr. JONAS. Mr. Chairman, will the gentleman yield?

Mr. FOGARTY. I yield.

Mr. JONAS. As long as the gentleman is at this point, how much is needed for this program for the fiscal year 1960?

Mr. FOGARTY. $150 million is being asked for 1960.

Mr. JONAS. For the fiscal year which begins July 1, 1959?

Mr. FOGARTY. Yes. Everyone should understand that this is only a 4-year program—$183 million is authorized for fiscal year 1960, and $222 million is authorized for appropriation in fiscal year 1960.

Mr. JONAS. It is $160 million.

Mr. FOGARTY. And of the $183 million authorized for 1959 we appropriated $40 million. The budget request was for an additional $75 million. This made a total of $115 million out of $183 million authorized.

But this committee which is reporting to the House now with $40 million plus $25 million, makes only $65 million or about one-third of what Congress authorized to be expended in this fiscal year, 1959, and that is the request that we have before us now, one-third of what the administration has asked for to run this particular program.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. FOGARTY. I yield.

Mr. GROSS. Does this provide funds for the employment of this American Institute for Research in the so-called testing program?

Mr. FOGARTY. This provides funds for counseling and testing services to be performed under supervision of the States as well as for institutes to be conducted by higher education institutions.

One of the main reasons the act provides funds for counseling and testing is that when Secretary Folsom was in office he formulated this plan and one of the strongest points he had to make was based on the fact that about 200,000 school children drop out of school every year in this country because they do not have the advantage of the counseling service that is carried on in some areas, as the gentleman from Massachusetts [Mr. BOLAND], mentioned.

Mr. GROSS. Having had some experience with this American Institute for Research is one of the strongest reasons why I would not vote for an amendment of this kind.

Mr. FOGARTY. May I say to the gentleman from Iowa, that these funds are going to be administered by the State. The criteria are set by the local school committees; the Federal Government had no control of any kind over the criteria set up or the standards developed or the tests administered within the State, the city, or the school district.

Mr. THOMAS. Mr. Chairman, will the gentleman yield?

Mr. FOGARTY. I yield to my chairman, certainly.

Mr. THOMAS. Mr. Chairman, we have heard about this program a great deal. It is brand new. It started out last year and we gave it just enough funds to get started. I happened to sit on the conference that started the program off. We gave it a bare minimum.

There are eight programs wrapped up in one. There is one for grants to schools for scientific equipment. It is the biggest item in this paragraph, about $32 million.

The gentleman mentioned the testing program. That is something else.

There is an item of $4,500,000 for scholarships.

As far as I am concerned, I recognize the temper of the House when I see it.

If there is no objection on the part of the committee, we will accept the gentleman's amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Rhode Island [Mr. FOGARTY].

The amendment was agreed to.

Mr. ROOSEVELT. Mr. Chairman, it seems incomprehensible to me that in 1959 there is a possibility that we shall start to undo what we recognized was so important to do in 1958 through the passage of the National Defense Education Act. And undo it we shall if we allow to stand the suggested cut in the supplemental funds request. Since the administration's request for an additional $75 million is a minimum request, certainly cutting it by $50 million would be highly unfortunate, to put it mildly.

When the National Defense Education Act of 1958 became law, we were, in effect, telling the American people, educators and our able and deserving young college students: "Here, we have at least given you a minimum program geared to improving instruction and student opportunity. We do this because we recognize the need to improve our educational programs in order to have additional and qualified mathematicians, scientists, and foreign-language experts. We, like you, recognize the educational and international challenges facing our Nation."

Are we now to tell them: "You have accepted this program; so much so, that its very success in its initial stages has resulted in the need for additional funds that will help do the job of continuing an effective and stable program. Therefore, to offset this success we now say to you that we shall cut off needed funds."

Mr. Chairman, this to me is illogical.

Certainly, it cannot be chalked up to mere fiction that additional funds—in a reasonably realistic amount—are needed. This is a matter of recorded fact. I bring to your attention, for example, that in my State of California, the program, because of its success, is in need of supplemental funds as specified by Roy E. Simpson, State superintendent of public instruction.

Mr. Simpson, an elective official, holds a nonpartisan office. His concern with this problem of additional funds can in no way be charged to partisanship. His concern is as an administrator who must meet the demands of a program assigned to his office. I wish at this time to read his March 23 telegram directed to my office:

> Fifty percent of school districts representing 80 percent of schoolchildren enrolled have filed with the State department of education applications meeting requirements Public Law 864 and California State plans, totaling in excess of $3 million of Federal funds for fiscal 1959 for title III, $590,000 for title V.
>
> Supplementary appropriations now before Congress essential to enable California school districts to finance programs developed under Public Law 864. Present allocations to California from initial congressional appropriation are $2,296,000 short title III and $198,000 short title V.
>
> Urge your active support full amount supplementary budget requested.

I further offer as additional evidence of the concern by those involved in the program, a telegram from Mr. Lionel De Silva, executive secretary of the California Teachers Association, southern section, in which he states:

> We urge you to support the restoration of the full amount of the President's request for the Defense Education Act. President's request was a minimum and should be used for all titles of act.

Mr. Chairman, the matter before us is a national issue in its truest sense; it is a nonpartisan issue; it is a major issue.

I therefore urge my colleagues to support the amendment restoring the minimum request of the administration.

Mr. DIXON. Mr. Chairman, I would like to join with those of my colleagues today who are asking Congress to restore the $50,300,000 supplemental appropriation for the National Defense Education Act.

In the report of the Appropriations Committee I note that the committee felt that Congress should proceed with "due deliberation before embarking on large scale support" of the fellowships, guidance, counseling and testing, languages and educational research.

While I acknowledge the advisability of studying thoroughly, I wish to point out that the National Defense Education Act was passed last August only after extensive hearings and debates in both Houses. I believe adequate study has been given to the implications and need for this act.

I also wish to remind the House that the reason for the passage of the National Defense Education Act, as its title implies, was to meet an emergency—the Russian challenge to our educational system. I hope that since sputnik we have not forgotten that education has become the balance point between the free world and communism.

If we fail to meet the challenge now, we may never get another chance. Emergencies demand fast and decisive action. We can lose the battle for educational know-how while studying and studying the best method of attack.

In approving only the $25 million supplemental appropriation for the student loan section of the act the committee has hit hard at the other vital emergency programs for which plans have already been completed in anticipation of the additional funds.

At the time critics of American education were demanding that the Nation do something about the challenge of sputnik, it was science, mathematics, and foreign language instruction which were deemed crucial areas needing greater emphasis.

Since Congress provided the first appropriation of $19 million for this area, over 31 States have submitted plans to the Office of Education for participation in the equipment grant program in these areas. The denial of the supplemental request of $37 million will cripple a program which I am confident could result in improved facilities and teaching quality of these subjects for many thousands of students.

Under the National Defense Act provision was also made for the establishment of language institutes, language centers and research to improve the skills and effectiveness of teachers. The initial appropriation of $800,000 will hardly launch the program if the additional $4,200,000 is not approved.

At the present time 232 applications have been received by the Office of Education for the establishment of language institutes, and 56 institutions expressed an interest in establishing language centers. At a time when America is linguistically backward I do not think we can in good conscience refuse the supplemental funds.

Nor do I see how we can justify refusing to appropriate $4,500,000 for the other 850 fellowships of the 1,000 which were to be authorized for this year or the refusal to appropriate $1,600,000 for desperately needed experimentation in educational uses of TV, movies, radio, and other media and the gathering of statistics which will serve as a valuable guide to our future efforts in education.

One way of identifying some of our country's best talent and developing it to its fullest is through testing, guidance, and counseling programs. The Office of Education states that 33 States have submitted plans to participate. The initial appropriation, plus the supple-

mental request of $2 million, would provide only about one-half of the authorized funds for this year.

A major difficulty of such a vast Federal program is to put it into effect quickly. At this time I would like to commend the Office of Education for its efforts in getting the benefits of this program through with such efficiency to the local level.

Students in my State of Utah have already received $60,460 under the student loan section of the bill and four fellowships, and $40,000 has been provided the University of Utah for a guidance and counseling institute this summer. Research in challenging the superior student by making the study of Russian available in the elementary school curriculum via television in the Salt Lake City schools has also been approved.

As a result of the Appropriations Committee's OK of the additional $25 million for student loans, an additional $246,879 will be available to needy Utah students.

Other funds under the initial appropriation which are available to Utah are: equipment to improve teaching of science, math, and modern languages for public schools, $123,628; loan for equipment to improve teaching of science, math, and modern language for private schools, $1,989; supervision and administration of science, math, and modern language program in the State, $20,000; general guidance and counseling, $30,400; vocational program, $17,094.

If the supplementary appropriation is restored, Utah would also be eligible for $240,749 for the science, math, and foreign language area for public schools and $3,874 would be available for loans for this purpose to private schools; general guidance and counseling, $11,470; 15 fellowships.

Mr. RHODES of Pennsylvania. Mr. Chairman, I am pleased that the committee has included funds in this bill for grants to schools of public health, as authorized under legislation which I sponsored in the last Congress.

Mr. Chairman, never before has public health had such an important role to play in the protection of our citizens. We are concerned over problems of radioactive fallout, the presence of strontium 90 in milk, radiation hazards in industry, air and water pollution, accident prevention, health problems of the aged, mental illness, rehabilitation of the disabled, and chronic killers such as cancer and heart disease. Public health workers at all levels of government are daily engaged in efforts to solve these and other health problems of our modern civilization.

Public Law 85–544 was an attempt to provide an urgently needed expansion of our public health training facilities. It authorized an appropriation of $1 million for fiscal year 1959 and an equal amount for fiscal year 1960 to assist the 11 schools of public health in providing specialized training to public health doctors, nurses, engineers, and other preventive health personnel.

Mr. Chairman, these graduate schools of public health are located at the Universities of California, Columbia, Harvard, Johns Hopkins, Michigan, Minnesota, North Carolina, Pittsburgh, Puerto Rico, Tulane, and Yale. They train public health personnel for the entire Nation and for many foreign countries.

The purpose of this appropriation is covered in detail at pages 598–609 of the hearings on the second supplemental bill by the special subcommittee of the House Appropriations Committee, headed by the gentleman from Texas [Mr. THOMAS].

As was pointed out in these hearings and in the hearings and debate on this legislation last year, the 11 private and State-supported institutions are now incurring an annual deficit of more than $3 million. They are, in effect, subsidizing the training of public health personnel for Federal, State, and local governmental bodies.

Of the total enrollment of 1,200 graduate students at these schools during the last year, about two-thirds are trained for some agency of the Federal Government. However, tuition fees cover only 11 percent of the actual cost to the institutions for training these students. Over the years, more than 90 percent of the graduates of public health schools have gone into the public service at some level of government or in voluntary health agencies.

The authorization bill was passed in the last session without a dissenting voice. Unfortunately, the measure was not signed into law until it was too late to be considered by the House in the 1959 supplemental appropriation bill acted on last year. The $1 million authorized for the first year of the program was subsequently inserted by the Senate but was eliminated in conference.

The Department of Health, Education, and Welfare requested $500,000 in the second supplemental to operate the program for the remainder of the present fiscal year. They have also requested the full amount authorized in their fiscal 1960 budget. The committee has reduced the Department's request in this bill by $50,000.

Mr. Chairman, let me point out that the full amount authorized under this program, if appropriated, would meet less than one-third of the current annual deficits incurred by these schools in training public health personnel for the Nation.

This program is of vital importance because of its long-range impact on the training of public health personnel for all levels of government. The National Conference on Public Health Training, which met last summer pursuant to the requirements of Public Law 911, endorsed this act and recommend that it be fully implemented by Congress.

Mr. Chairman, I congratulate the committee for its recognition of the importance of this program to the health of the Nation and trust that the $450,000 recommended by the committee will be approved by the House.

Mr. LINDSAY. Mr. Chairman, I rise in support of the amendment proposed by the gentleman from Rhode Island [Mr. FOGARTY], which would restore the appropriation necessary to the continuation of the educational program authorized by the National Defense Education Act. It is inconceivable to me that this Congress would establish a worthwhile and necessary program and then leave it high and dry. The action of the Appropriations Committee would render meaningless the action of the 85th Congress which was endorsed by the President.

The Office of Education, imbued with the sense of urgency implied by the Congress in passing the National Defense Education Act, has worked very hard during the 6 months since it was enacted into law to get these several programs going. They are now ready to carry out the intent of the Congress and lack only the funds.

Mr. McGOVERN. Mr. Chairman, one of the most valuable legislative programs enacted by the 85th Congress was the National Defense Education Act. I am proud of the fact that I was a member of the subcommittee that hammered out the basic outline of this program.

It is my conviction that the minds of our young people constitute our most precious national resource. The program under consideration seeks to improve the quality and the educational opportunity of our students and teachers. It seeks, in short, greater excellence in American education.

I strongly support the amendment to provide $75 million as a supplement to the national defense education appropriation for this fiscal year. There is an urgent need for these funds to carry out even a minimum part of the program authorized by the Congress for this fiscal year.

In my own State, for example, three fine institutions of higher learning, South Dakota State College, the University of South Dakota, and Northern State Teachers College, have all sought funds with which to establish guidance and counseling institutes as provided for in the legislation of last year. But, because of a critical shortage of funds, it does not now appear that any one of these outstanding universities will be able to secure funds for such a program.

I have learned, too, that whereas the Congress has authorized 1,000 graduate fellowships for this year, the Department of Health, Education, and Welfare has only enough funds to grant 160 such fellowships.

Other parts of the program are similarly short of funds to execute the educational assistance which Congress provided last summer.

The program which we are discussing is not one of Federal control of education. It is rather a program which preserves the local direction of our schools and colleges, but which supplements badly strained local school and college budgets with Federal encouragement and support.

High-quality education is not only good for the soul and the mind of man; it has become an essential ingredient in our national defense. I urge approval of this amendment.

Mr. BRADEMAS. Mr. Chairman, I rise in support of the amendment of the distinguished gentleman from Rhode Island [Mr. FOGARTY].

Mr. Chairman, the State of Indiana has had in the last 2 or 3 years the undeserved reputation of being opposed to education. This unhappy reputation is in very large part due to the militant

opposition of a U.S. Senator from Indiana last year, a Republican, to the use by Hoosier taxpayers of funds made available in the National Defense Education Act of 1958, one of the finest pieces of legislation ever passed by Congress in the field of education.

The present Governor of Indiana, along with the former State superintendent of public instruction—and I feel in good conscience compelled to point out that both are Republicans—have also been in the forefront of those who would prevent the taxpayers of our State from seeing their own Federal income taxes used in Indiana. These men have apparently, by their opposition to the use of funds under the National Defense Education Act in Indiana, been willing to see Hoosier taxes go to all of the other 48 States of the Union but not to Indiana.

But, Mr. Chairman, we had an election in Indiana last year. The Senator to whom I refer no longer sits in the other body. The Governor whom I mentioned was defeated in his bid for the U.S. Senate by the largest margin of votes ever recorded in a statewide contest in Indiana and the State superintendent of public instruction was also defeated last fall.

Today, Mr. Chairman, we have representing Indiana in the House of Representatives and the Senate men who believe in education.

I am therefore pleased, as one of the new Members of Congress from Indiana, as one of those who is confident that the people of our State believe in education, and as the only Indiana member of the Committee on Education and Labor, to urge support of the entire request made by the administration for a supplemental appropriation for the National Defense Education Act.

The restoration of these funds will make it possible for us in Indiana as well as for citizens of every other State of our country to press ahead with the important programs set forth in this act to strengthen the national defense and to improve the educational programs of America. Among other sections, these funds will provide for loans to students in colleges and universities, assistance for strengthening the teaching of science, mathematics and modern foreign languages, graduate fellowships for the purpose of improving our college and university teachers, funds for the establishment of centers for the teaching of foreign languages and institutes for improving their teaching as well as for a number of other programs designed to strengthen education in the United States.

Mr. Chairman, as evidence of the support of some of the most distinguished leaders in the field of education in the State of Indiana for the restoration of these funds, I am pleased to insert the following telegrams:

INDIANAPOLIS, IND., *March 23, 1959.*
Hon. JOHN BRADEMAS,
U.S. House of Representatives,
House Office Building, Washington, D.C.:
National Defense Education Act extremely vital. Fight for adequate appropriations.
W. E. WILSON,
State Superintendent of Public Instruction, Statehouse.

NOTRE DAME, IND., *March 23, 1959.*
Hon. JOHN BRADEMAS,
House of Representatives,
Washington, D.C.:
Earnestly urge your support of National Defense Act graduate fellowship section. Regards.
THEODORE M. HESBURGH, *C.S.C.,*
President, University of Notre Dame.

NOTRE DAME, IND., *March 23, 1959.*
Hon. JOHN BRADEMAS,
House Office Building,
Washington, D.C.:
We urge your support of National Defense Act, title IV, graduate fellowships.
Rev. PAUL E. BEICHNER, *C.S.C.,*
Dean, the Graduate School, University of Notre Dame.

INDIANAPOLIS, IND., *March 23, 1959.*
Hon. JOHN BRADEMAS,
Floor of House of Representatives,
U.S. Congress, Washington, D.C.:
Restore cut in President's budget for National Education Defense Act. Funds badly needed to put Indiana plan into operation.
Mrs. DON HERRIN,
First Vice President, Indiana Congress of Parents and Teachers.

Mr. Chairman, I am glad to report that Indiana believes in education. The people of our State are back in the Union once more.

I hope the amendment of the gentleman from Rhode Island to provide for ample funds under the National Defense Education Act will be overwhelmingly supported by Members of this body.

Mr. BOLAND. Mr. Chairman, I rise in support of the amendment of the gentleman from Rhode Island [Mr. FOGARTY]. In speaking on this bill, in general debate, I pointed out that I did not approve of the striking of $50,300,000 from the activities of the Office of Education. Money for science, mathematics and laboratory equipment is essential if we are to back up the national defense education bill passed in the last session of the 85th Congress. We need good teachers in these fields and we can help to secure them by the national defense fellowships. There is a special need to increase the graduates to meet the critical shortage of teachers in the colleges and the universities today. The number of persons being graduated with doctoral degrees, all too few to meet the demand for them, is eroded away and drained off into fields of work other than teaching. The national defense fellowships will supply the incentive to correct this condition.

The activity labeled "Advanced Training in Foreign Languages and Areas" will strengthen our Nation in a field where we are weak. It is well known that as a Nation we are deplorably unprepared linguistically, either to defend ourselves in the case of war, or to exercise the full force of our leadership in the building of a peaceful world. Some 3 million Americans including members of the Armed Forces, are reported to be living, traveling, and working overseas each year. Few Americans available for overseas assignments have had any foreign language training. Most Americans who do study foreign languages start too late and stop too soon to become proficient in the use of the languages.

Mr. Chairman, this situation should not be continued. We did something about in the enabling legislation establishing the National Defense Education Act. But it can get nowhere unless we give it the necessary funds to function. The amendment of Mr. FOGARTY provides the money requested in the supplemental bill by the Department of Health, Education, and Welfare.

FOREIGN LANGUAGE INSTITUTES

Mr. Chairman, an initial allocation of $400,000 has been made in fiscal 1959 to begin the institute program, and an additional $1,100,000 was requested as a supplemental appropriation. The subcommittee struck out this item. I dissented from this action and pleaded for the whole amount. Mr. FOGARTY'S amendment restores that amount. This money is used to establish language institutes. Each institute provides advanced training for language teachers. The initial allocation of $400,000 provided in the regular 1959 budget made it possible to set up four well-staffed institutes, each 8 weeks in duration. The amount requested we ask in this amendment, and this bill will make it possible to establish 6 additional 8-week summer institutes and 600 additional trainees will be accommodated, about 500 of them being public school teachers on Government stipends. Altogether, approximately 1,000 foreign language teachers would receive advanced training in the summer of 1959.

Mr. Chairman, I trust that the amendment adding $50,300,000 to this bill will be adopted by the House.

Mrs. GREEN of Oregon. Mr. Chairman, I rise to support the amendment to restore the funds requested by the Department of Health, Education, and Welfare, under the Defense Education Act of 1958.

In 1958, when the Congress passed that act, we did so because we recognized, in the shadow of sputnik, the fact that scientific and technological excellence is a weapon of war, as well as a tool of peace. We did not go overboard in that act. It represents a satisfying, but at best an inadequate, response to the challenge of Soviet achievements in the field of education. But today, if we go along with the recommendations of the distinguished committee, we will make that legislative accomplishment a hollow mockery. We will, in effect, return to the comfortable smugness of the presputnik era, consoling ourselves with the meaningless and now demonstrably false assumption that education is a luxury, without relation to the desperate struggle of our Nation and our way of life to survive.

What are some of the programs, already approved, already mapped out, which will die on the vine for lack of funds if the committee's recommendations are followed?

Under this act, the Department is authorized to award 1,000 fellowships each year. These graduate fellowships are the heart and soul of any meaningful defense education program. It is at the graduate level where our universities are engaging in the kind of creative scholarship that will make our American edu-

cation equal to the task which has been placed before it.

The Department has received 1,040 applications for fellowship aid for graduate programs. These application visualized a total of 6,000 fellowships. Under the act, only one out of six of these fellowships can be awarded, even with the full appropriation. Yet the committee, in limiting the fellowship program to the money already appropriated in last year's completely inadequate supplemental bill, has limited the fellowships, not to one out of six applications, but to one out of 40. Enough funds are still available from last year's appropriation to provide 150 fellowships. The funds requested would finance an additional 850. The 150 financed by last year's appropriation are already awarded, and already announced. The Defense Education Act fellowship program, if the committee's recommendations are followed, will be completely frozen until the requests for fiscal year 1960 become law. These 850 fellowships would cost a total of $4½ million. This is not a something-for-nothing proposition. It is a wise and prudent investment in national security, one which we can ill afford not to make.

Other aspects of the Defense Education Act program which deserve some consideration here include the language development program. I suspect most of my thoughtful and hard-working colleagues have read the delightfully chilling book, The Ugly American. One of the highlights of that book, one of the aspects of our foreign operations in which we have the greatest inadequacies is the language area. American representatives abroad, both governmental representatives and those valuable adjuncts to our foreign policy, American businessmen, are hampered in their work by the inability to obtain language training in this country. The Defense Education Act, in title VI, provides for a program of research, of institutes for language teachers, and for the establishment of language and area centers in American institutions of higher learning. Eight hundred thousand dollars is presently available, remaining from last year's appropriation. The Department has requested a supplemental allowance of $4,200,000.

What is involved in this request? I am informed that the amount of money now available can finance the setting up of four or five critical language and area centers. With the supplemental funds, the Department can establish six to eight additional such centers. There are 14 languages spoken throughout the world, each one spoken by between 10 million and 42 million people, which are not now taught anywhere in the United States. The list of these languages sounds like a catalog of the most important battlefields of the cold war. Forty-two million human beings speak Javanese. In no university in the United States can a civil servant or an American businessman be taught to speak Javanese. You may be assured, gentlemen, that this ridiculous state of affairs does not exist in the Soviet Union. There are other languages, ability in which is equally vital if we are to meet the threat to our existence where that threat is the most pressing—other languages which are not taught in the United States. These include Afrikaans, the language of the Union of South Africa; Cambodian, Laotian; Pashto, the language of Afghanistan; Sinhalese, the language of Ceylon; and, believe it or not, in spite of the closest and most intimate connections between this Nation and the proud Republic of the Philippines, Tagalog, the native language of that nation, is not taught anywhere in the United States.

Languages such as Chinese, Arabic, Hindi, Farsi, Indonesian, and Swahili are taught in all too few centers in this country, although these languages probably account for the spoken tongues of a majority of the earth's inhabitants.

We can save money if we follow the subcommittee's recommendations, Mr. Chairman. We can reduce the budget, and we can turn the political tables on the reckless political charges which have been leveled at the Democratic Party by labeling it the party of reckless spenders. We can gain some temporary advantage by taking the administration at its word and gaging everything in terms of a balanced budget. But the money we save and the votes we garner in this attempt will leave us with the proud but somewhat empty distinction which has hitherto been the exclusive possession of those budget balancers who took such pride in cutting our Nation's defenses in the months before Pearl Harbor. Today's defenses are not merely guns and bombs. Today's defense expenditures buy brains and books. If they do not, they do not buy defense. I plead with my colleagues not to enter into this contest to see who can be the thriftiest man in the graveyard.

Mr. ANDERSON of Montana. Mr. Chairman, I would like to compliment my esteemed colleague from Rhode Island [Mr. FOGARTY] for his energy and foresight in seeking full restoration of funds for the Defense Education Act. Our Montana PTA leadership, our Montana Greater University System, and our entire Montana Congressional Delegation long have actively supported this educational program. The educational leaders of my State urge its full support. Earlier my colleague from Rhode Island fought for and was successful in securing committee assent to an increase in funds for Public Law 874 and Public Law 815 activities so urgently needed in my district because of the impact of great expansion at two large airbases. I urge that the House today give its approval to these necessary appropriations. In one city alone in my district, Great Falls, they are trying to put across a bond issue for five new elementary schools. There they will have 2,000 unhoused students next September, of which a large percentage are federally connected. The situation is similar and equally critical at Glasgow. So these needs, and the Defense Education Act needs of our institutions of higher learning must be met if we are to keep faith with our people. I strongly urge favorable consideration of the Fogarty amendment.

Mr. ELLIOTT. Mr. Chairman, just 7 short months ago, we wrestled here throughout a long summer, both in committee and on the floor of the House, trying to fashion a realistic and honest, and at the same time an effective answer to the Russian threat in the fields of science and education.

I thought at that time, and I think now, that the House fashioned a program that had depth, and breadth, and height, and imagination. It was fortunate for the country that we were able to work out this program at a relatively very small cost.

That program dared to dream how strong America might really become if we made available the benefits of an educational program to the quarter million or so of the brightest boys and girls of our Nation—boys and girls who do not now go on to college, largely because they do not have the money. Out of that thought grew the loan program, and the testing, counseling, and guidance programs of the National Defense Education Act of 1958, which I had the privilege to sponsor in the House.

We dared to dream how strong America might become if we helped to provide the equipment that more than half of America's high schools need in order effectively to teach the sciences, at the time we must teach them, if we are to have an adequate number of highly trained scientists to serve the uses of a strong America.

We dared to dream how much stronger America would be if through a program of fellowships we started the training this year of 1,000 Ph. D.'s—10 percent more than were trained last year. We are interested at the same time to encourage America's graduate schools to expand their facilities and their programs by at least the number of fellowships granted, and we presumed that once these programs were expanded that they would stay expanded and continue to grow.

We dared dream of how much American school instruction might be improved if we provided money for experimentation with the new communication media, like TV. The Congress of the United States authorized a program in that field.

We dared dream how much American relations with our neighbors throughout the world might be improved if we provided institutes to increase the skills and add to the effectiveness of elementary and secondary school teachers of the modern foreign languages.

We felt, and I feel now, that our Nation should have adequate statistics on education right here in Washington, just as it maintains statistics on labor and business and many other fields.

Mr. Chairman, may I call your attention to the fact that these programs have all proved to be even much more popular than any of us who supported the Defense Education Act of 1958 had thought they would be. The applications under all the programs exceeded our guesses of what they would be by a good 100 percent.

Well, on the final day, or rather the final night of the last session of Congress, we provided $40 million for these programs, and I call the attention of every

Member to the fact that it was understood at the time that this $40 million was an interim appropriation, to be used only, and singly, for the purpose of getting the program started. Staffs had to be recruited, studies had to be made, conferences had to be held, and it was thought that $40 million would carry the program until the first of the year.

Now, the amendment proposed by the gentleman from Rhode Island [Mr. FOGARTY] seeks to restore the complete supplemental budget request of $75,300,000. I support Mr. FOGARTY'S amendment. I trust the House will do likewise. I appreciate the statement that the gentleman from Texas [Mr. THOMAS] has just made with respect to this amendment. His approval of and acceptance of the amendment are of the greatest importance.

The adoption of this amendment will provide money for 850 fellowships that are waiting to be granted. It will provide $37 million for science, mathematics, and modern foreign-language teaching equipment for America's high schools. A small portion of this money will be used for consultants. The amendment will provide $2 million for grants to the States for their guidance programs and $1 million for the counseling and guidance institutes. It will provide $3,100,000 for foreign-language centers and foreign-language research, and $1,100,000 for foreign-language teacher institutes. It will provide $1 million for research in new media of instruction, such as instruction through the medium of TV. It will provide $600,000 as Federal contributions to the States for the educational statistics programs. The adoption of this amendment will add $75,300,000 to the $40 million heretofore appropriated by us on the final day of the last session of Congress. This money will enable these programs to go forward. It will enable them to bring opportunity and hope to tens of thousands of boys and girls in America who desire a higher education, both in the undergraduate and at the graduate level.

Of equal importance by this action, we will say to ourselves and to the world that we are interested in education as a really effective weapon of our defense.

Mr. HAGEN. Mr. Chairman, I rise in support of the amounts contained in this bill for the administration of Public Laws 815 and 874, the federally impacted school assistance program.

First, I wish to commend the members of the Appropriations Committee and their able chairman, the gentleman from Missouri [Mr. CANNON] who in their wisdom saw fit to include funds in the amount of $20 million for operation and maintenance under Public Law 874 and $24,600,000 for construction under Public Law 815.

I am particularly interested in these appropriations because of the location of a number of federally impacted school districts within my congressional district. The officials of these schools advise me that their operations will be seriously disrupted if additional funds are not made available.

It should be noted that the assistance does not by any stretch of the imagination constitute a handout. The fact that additional children are attending the schools involved because of Federal activity places the financial responsibility squarely upon the shoulders of the U.S. Government. The Congress has wisely recognized this responsibility since the inception of the program during the 81st Congress. In fact, I believe it is a fair statement to say that the program has the support of a vast majority of the Members of this body.

It is regrettable that we did not see fit to appropriate sufficient funds to carry out our responsibility last year. Unless the additional money is approved by the Congress those school districts which are dependent upon Federal money for operations will receive only 85 percent of the funds for which they are qualified. Similarly, in the case of Public Law 815 funds, many necessary schoolhouses will not be built unless the $24.6 million recommended by our Appropriations Committee is granted. With respect to the Public Law 874 program, it is my understanding that the $20 million proposed will permit payment of 100 percent of the entitlements of all school districts throughout the country.

The impactment areas of my district are attributable principally to the vital defense work being carried on at Edwards Air Force Base, and the Naval Ordnance Test Station, China Lake. I would call the attention of my colleagues to the fact that these districts' problems are further complicated by the fact that they are situated in an area of the Mojave Desert in which there is an extremely low ad valorem tax base and exceedingly high construction costs.

I am sure the Members of this body recognize the necessity for the appropriations in question and I urge their approval.

I would like now to refer briefly to the amendment offered by the gentleman from Rhode Island [Mr. FOGARTY] to provide funds for titles III and V of the National Defense Education Act to permit grants for scientific study and for testing, guiding, and counseling students.

I would urge that the inadequate funds appropriated last year be supplemented in order that the programs contemplated under titles III and V may function in the fashion anticipated when we approved the authorizing legislation during the last session of Congress.

I also wholeheartedly endorse the action of the committee in appropriating $25 million in additional funds for the student loan program.

With respect to titles III and V, I am advised by Dr. Roy E. Simpson, superintendent of public instruction of the State of California, that valid applications filed in California require an additional $2,296,000 for scientific educational assistance and $198,000 for counseling. I am sure that similar situations obtain in other States.

I urge adoption of the Fogarty amendment.

Mr. McFALL. Mr. Chairman, I rise in support of the supplemental appropriation of $20 million for Public Law 874 and $24.6 million for Public Law 815 programs for the assistance of school districts with an unusual impact of federally attracted students.

The Congress a year ago recognized the equity in these programs by extending them and the local school districts budgeted accordingly.

We cannot now break faith with these local districts by denying them the funds they are due under the law.

These local districts would be forced to bear far more than their fair share of the Nation's educational burden by excessive local taxation if the Federal funds are not forthcoming. Most of the impact districts are already taxed to the local limits, meaning reduction of Federal support must necessarily lead to reduction in the quality of education.

You all are aware of the importance of the Federal impact programs in the areas surrounding Washington. The picture is the same in California where 52 percent of all California school children are from the 425 public school districts in 39 counties now being aided by one or both of the laws.

I was informed this morning that the loss to the schools in my own, the 11th District of California, would be $44,594 this year if we do not keep faith and make the promised appropriation.

Following are the figures—with the authorized amount first, followed by the reduced appropriation unless the additional funds are made available:

Stockton Unified	$185,402	$157,592
Manteca Elementary	27,830	23,656
Manteca High	24,891	21,157
Tracy Elementary	24,756	21,043
Tracy High	15,291	12,997
French Camp	9,955	8,462
Montezuma	5,886	5,003
Lathrop	3,289	2,796
Total	297,300	252,706

Mr. RAYBURN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. RAYBURN: On page 20, line 2, add a new paragraph as follows:

"Outdoor Recreation Resources Review Commission: For an additional amount for the Outdoor Recreation Resources Review Commission, $100,000, to remain available until expended."

Mr. THOMAS. Mr. Chairman, I have discussed this matter with the gentleman from Ohio [Mr. KIRWAN] and with the gentleman from Iowa [Mr. JENSEN]. The committee will accept the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Texas [Mr. RAYBURN].

The amendment was agreed to.

Mr. WEAVER. Mr. Chairman, I ask unanimous consent to extend my remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Nebraska?

There was no objection.

Mr. WEAVER. Mr. Chairman, when I was elected to the Congress of the United States, along with every Member of this House, I assumed a responsibility to every citizen of the United States, not just to the citizens of the First Congressional District of Nebraska. Today I feel im-

pelled to take issue with many Members of this House for whom I have a very high personal regard, because I now feel the weight of that responsibility.

As Members of this Congress we owe a certain responsibility to the people of the District of Columbia because—like it or not—we must sit as their city council. We must act for them, and in their behalf. We have an obligation to bear toward these people who have no government except that approved for them by the Congress itself.

Mr. Chairman, as a member of the subcommittee of the Committee on Appropriations handling District of Columbia affairs, I voted consistently in committee against anything I considered to be wasteful and unnecessary. When the bill came before the House I explained the reasons for my views. It may now appear to some that I am taking a diametrically opposed position in speaking today to support the amendments offered by the distinguished gentleman from Michigan, our subcommittee chairman [Mr. RABAUT]. However, I do not believe I am.

The cuts contained in this bill concerning the District of Columbia, unfortunately have a deep bearing on the very core of our duty to the people of the District. These cuts would, for instance, seriously affect the protection these people need and must have. The cuts would force the furlough of policemen and firemen. They would also require the furloughing of teachers. Without the services of firemen and policemen we would leave a goodly number of the people of the District without these essential services. I ask each of you to examine your own conscience to determine whether you can vote for these services within the framework of the responsibility to the people of the District which we as Members of the Congress have assumed.

Under the amendments to be proposed by my colleague from Michigan [Mr. RABAUT] $1,761,318 would be put back into this bill to provide for these vitally important services. Without this money we might well be opening the gates of Washington to the temptations of crime or to the devastating effect of fire. We as Members of Congress cannot do otherwise with the knowledge that by this positive action, such conditions perhaps would not come into being.

The gentleman from Michigan will also propose the restoration of a portion of the other supplemental funds cut from this bill. I support this also. The money which the gentleman wishes to restore would not go for frills or for nonessentials; it would be used to meet the obligations which we as a Congress have, in our past actions, imposed upon the government of the District of Columbia.

In closing, Mr. Chairman, I would like to point out that the Congress itself through its actions a year ago placed the District in its present situation. In approving pay increases for various employees of the District government, there was no rider, no statement of intent, that this meant the District must fire X number of employees. Had such a rider been included, then Mr. Chairman, my position would be different today. We owe a responsibility to the people of the District. We also, I submit, owe a responsibility to ourselves as Members of this Congress to carry out the full intent of laws which we have ourselves in the past enacted.

I most strongly urge approval of these vitally-needed additional funds and I ask your support for the amendments.

Mr. THOMAS. Mr. Chairman, I ask unanimous consent that the amendments which I have at the Clerk's desk dealing with the District of Columbia be considered en bloc at this time.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. THOMAS. Mr. Chairman, I offer a series of amendments.

The Clerk read as follows:

Amendments offered by Mr. THOMAS: On page 11, line 11, under the heading "Federal Payment to District of Columbia" strike out "$2,500,000" and insert "$5,000,000".

Page 11, line 22, under the heading "Public Schools", strike out "$3,342,250" and insert "$4,295,668".

Page 12, line 6, under the heading "Metropolitan Police", strike out "$2,062,550" and insert "$2,616,800".

Page 12, line 11, under the heading "Fire Department", strike out "$946,550" and insert "$1,200,300".

Page 35, line 20, under the heading "Department of Sanitary Engineering", strike out "$909,750" and insert "$1,213,000".

Mr. JENSEN. Mr. Chairman, will the gentleman yield?

Mr. THOMAS. I yield to the gentleman from Iowa.

Mr. JENSEN. What is the total additional amount which the gentleman has agreed to?

Mr. THOMAS. Mr. Chairman, let me briefly explain the matter.

Mr. Chairman, all of us have been reading the newspapers, particularly the local papers here, which state that the committee is going to close down the schools, the Police Department, the Fire Department, and scatter garbage all over town because there is no money to pick it up.

Briefly, what is in the bill is this: We were trying to keep the District on a sound basis. We all like the District. Some very fine people live here. But I do not think I have ever seen a government grow like this city government has in the last 3 years. In 1955 it had 20,651 employees. This year they have 24,000, a nice army, is it not, and lo and behold for the next year they came in and wanted another 650.

Mr. JENSEN. Will the gentleman tell about the vacancies?

Mr. THOMAS. What the newspapers have not said too much about is that the District has been spending money that they did not have. They intended that the ante be raised from $20 million to $29 million, so this bill asks for an increase in the Federal contribution from $20 million to $29 million. In the bill presently before you the committee suggested $2.5 million. Now, the amendment that we are offering at the Clerk's desk raises that to $5 million. We take the limitations off the Police Department, the Sanitary Engineering Department, the Fire Department, and the schoolteachers. Now, if that does not give them just about everything that they want except $4 million, I do not know. Now, they can certainly live with that. They do not have to fire anybody. And, do you know that on January 1 they had 940 unfilled jobs?

Mr. JENSEN. Right.

Mr. THOMAS. Now, this is a reasonable solution to this. I do not want to cripple the District of Columbia, and as far as I am concerned, I do not want to give them all of that $9 million Federal contribution, either. Now, we have taken the limits off and they can operate and do a good job. I respectfully suggest to those gentlemen downtown that they do not grow so fast.

Mr. JENSEN. You mean in the number of employees?

Mr. THOMAS. That is right.

Mr. Chairman, I ask for a vote.

The CHAIRMAN. The question is on the amendments offered by the gentleman from Texas [Mr. THOMAS].

The amendments were agreed to.

Mr. RABAUT. Mr. Chairman, I move to strike out the last word.

What has happened here just now is that the bill for 1959, as far as it goes, dovetails with the bill that we passed about a week ago setting the Federal payment at $25 million. While the amendment just adopted takes care of the needs of the public school, the police and fire departments, there are still some items in this bill that are not in accord with the treatment that has been extended to other agencies of the Government. Other Federal departments have been cut 10 percent. The District of Columbia has been cut 25 percent. I will introduce a series of amendments that I ask be considered en bloc in order that there may be added to the bill 15 percent of the reduction made by the committee to bring these agencies of the District government into line with the cuts that have been made in the other Federal departments.

Mr. Chairman, I offer a number of amendments and ask unanimous consent that they may be considered en bloc.

The Clerk read as follows:

Amendments offered by Mr. RABAUT: Page 34, line 25, strike out "$27,225" and insert "$32,670".

Page 35, line 1, strike out "$39,390" and insert "$47,268".

Page 35, line 3, strike out "$72,609" and insert "$87,131".

Page 35, line 4, strike out "$129,900" and insert "$155,880".

Page 35, line 5, strike out "$6,750" and insert "$8,100".

Page 35, line 6, strike out "$4,650" and insert "$5,580".

Page 35, lines 7 and 8, strike out "$11,400" and insert "$13,680".

Page 35, line 9, strike out "$245,250" and insert "$294,300".

Page 35, line 10, strike out "$1,409,775" and insert "$1,691,730".

Page 35, line 11, strike out "$105,075" and insert "$126,090".

Page 35, line 13, strike out "$8,250" and insert "$9,900".

Page 35, lines 14 and 15, strike out "$120,525" and insert "$144,630".

Page 35, line 16, strike out "$259,500, which" and insert "$311,400, of which $295,177".

Page 35, line 18, strike out "$62,400" and insert "$74,880".

Page 35, line 20, strike out "$909,750" and insert "$1,091,700".

Page 35, line 24, strike out "$96,000" and insert "$115,200".

Page 36, line 1, strike out "$8,250" and insert "$9,900".

Page 36, line 2, strike out "$185,925" and insert "$223,110".

Page 36, line 3, strike out "$50,775" and insert "$60,930".

The CHAIRMAN. The gentleman from Michigan, in one of the amendments that he has offered, has offered an amendment to an amount which has already been changed by the Thomas amendment previously adopted. Does the gentleman desire to withdraw that amendment?

Mr. RABAUT. Yes, Mr. Chairman; I ask unanimous consent to withdraw that amendment.

The CHAIRMAN. Without objection, the amendment is withdrawn.

There was no objection.

The CHAIRMAN. Is there objection to considering the amendments offered by the gentleman from Michigan en bloc?

Mr. GROSS. Mr. Chairman, reserving the right to object, from what I have heard here, I think probably we ought to recommit this bill and get a new bill, take a fresh start, Development Loan Fund and all.

Mr. Chairman, I withdraw my reservation of objection.

The CHAIRMAN. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. JENSEN. Mr. Chairman, will the gentleman yield?

Mr. RABAUT. I yield to the gentleman.

Mr. JENSEN. Are we to understand that all these additions which the gentleman has offered as amendments to the amounts in the bill are to come out of the District of Columbia funds?

Mr. RABAUT. These moneys will be District of Columbia moneys, from whatever source they get them.

The first figures I cited are the figures that are in this bill. These figures have been cut 25 percent below the budget. The other agencies in this bill have been cut 10 percent. The increase requested is on account of the Pay Act of last year and I believe that 25 percent cut is too drastic. My amendments reduce that cut to 10 percent and that is the same cut that is in the bill for the majority of the Federal agencies. I will ask the chairman of the committee if that is not true.

Mr. THOMAS. Mr. Chairman, I hope the gentleman will withdraw this amendment.

Mr. RABAUT. I am asking the gentleman a question. Is that true?

Mr. THOMAS. Yes, that is exactly right. This is the only agency that is asking for a contribution, too. Let us give the whole picture. You are not increasing the contribution, but where are they going to get the money?

Mr. RABAUT. I am asking that the District of Columbia agencies be treated the same as the Federal agencies. They should not be required to assume more than a 10 percent cut in those obligations which the Congress voted for them last year—the Pay Act. The pay raise cost about $15 million for the District. This bill is still $4 million below that amount.

I ask for a favorable vote on this amendment. It deals with such agencies as the regulatory agencies, the Department of Veterans Affairs, the Office of Civil Defense, the Department of Vocational Rehabilitation, the courts, the Department of Public Health, the Department of Licenses and Inspections, the Department of Highways, the Department of Vehicles and Traffic, the Aqueduct, the water department of the District, the National Guard, and the National Zoological Park, which in my opinion ought not to be under the District government at all. The expenses of the zoo should be borne by the Federal Government.

I ask for a favorable vote on my amendments.

Mr. THOMAS. Mr. Chairman, I ask unanimous consent that all debate on this amendment and all amendments to the paragraph close in 7 minutes, and that the committee be given the last 4 minutes.

Mr. HOFFMAN of Michigan. Mr. Chairman, I offer a preferential motion.

The Clerk read as follows:

Mr. HOFFMAN of Michigan moves that the Committee do now rise and report the bill back to the House with the recommendation that the enacting clause be stricken.

Mr. HOFFMAN of Michigan. Mr. Chairman, as I listened to the amendments of my dear friend from Michigan [Mr. RABAUT] it seemed to me that all the amounts were raised. Is that right?

Mr. RABAUT. That is right.

Mr. HOFFMAN. Then is the total amount carried in the bill for the District raised?

Mr. RABAUT. It is raised as far as they make expenditure of their own funds, the funds that they get from the different sources.

Mr. HOFFMAN of Michigan. Have you increased the amount that the District will get?

Mr. THOMAS. Five million dollars.

Mr. HOFFMAN of Michigan. Is that the result of the publicity given us by the three local papers?

Mr. RABAUT. They have called me the tough guy on the District.

Mr. HOFFMAN of Michigan. Oh, well. You need not worry—your record is good.

Mr. RABAUT. I should like to tell the gentleman——

Mr. HOFFMAN of Michigan. I cannot yield any more.

Mr. RABAUT. Oh, the gentleman has a lot of time.

Mr. HOFFMAN of Michigan. All right.

Mr. RABAUT. We accepted the Federal grant this year of $25 million principally on account of the Pay Raise Act of last year. This action taken by the subcommittee headed by the gentleman from Texas [Mr. THOMAS] here today raises it a similar figure. But, with the raising of that to the similar figure, they took a 25 percent cut out of all these individual items that were read off here, and I feel that is entirely too drastic for them to absorb.

Mr. HOFFMAN of Michigan. Mr. Chairman, will the gentleman yield for a question from me?

Mr. RABAUT. I am glad to yield to the gentleman.

Mr. HOFFMAN of Michigan. In your opinion, then the Thomas committee cut them too deeply?

Mr. RABAUT. I think they did on all these items that have just been referred to in the amendments I offered.

Mr. HOFFMAN of Michigan. And now you are increasing this total $5 million. And then you are telling how it should be spent.

Mr. RABAUT. I am just telling him how it should be done with justice.

Mr. HOFFMAN of Michigan. You, of course, are telling him how to divide it?

Mr. RABAUT. I am telling him how it should be done with justice.

Mr. HOFFMAN of Michigan. I have every confidence in your judgment. But I do wonder if the District realizes how fortunate it is to have a payroll which never missed a payday as do so many sections of the country. If the present trend continues it may be that only the merchants will be able to meet the tax bill for local expenditures. Many taxpayers are getting out of the city because they are being required to pay an ever greater tax burden. So many come to the city because it is what might be called a soft spot for those who cannot—or will not—earn their way.

The CHAIRMAN. The question is on the preferential motion offered by the gentleman from Michigan [Mr. HOFFMAN].

The motion was rejected.

Mr. MORRIS of Oklahoma. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman is recognized.

Mr. THOMAS. Mr. Chairman, I ask unanimous consent that all debate on this amendment, and all amendments thereto, and to the paragraph, close, in 17 minutes with the last 4 minutes to be allotted to the committee.

Mr. JONES of Missouri. Mr. Chairman, I object.

Mr. THOMAS. Mr. Chairman, I move that all debate on this amendment, and all amendments thereto, and to the paragraph close in 10 minutes, the remaining 5 minutes to be allotted to the committee.

The CHAIRMAN. The question is on the motion offered by the gentleman from Texas.

The motion was agreed to.

Mr. HOFFMAN of Michigan. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. HOFFMAN of Michigan. Mr. Chairman, what became of that motion to strike out the enacting clause?

The CHAIRMAN. The motion was voted down.

The Chair recognizes the gentleman from Oklahoma [Mr. MORRIS].

Mr. MORRIS of Oklahoma. Mr. Chairman, I rise chiefly to ask a question of someone. I also rise, Mr. Chairman, in support of the amendments offered by the gentleman from Michigan [Mr. RABAUT]. I think they go largely to the health and welfare of this great District of Columbia, our Nation's Capital. I would like to ask the chairman of this subcommittee, who I consider to be one of the greatest Members among us, or I ask the question of anyone who may be able to answer this question: According to the budget in brief, which was prepared by the Bureau of the Budget, $45.8 billion goes to our major national security; $8.1 billion goes for interest on the debt; $5.1 billion goes to the veterans' program. When you add that all up, you have a total, if I have not miscalculated, and I think I have not, of $59 billion. If I am in error, I want to be corrected. That amounts to about 78 percent of the entire budget. Therefore, in order to secure our national defense, and surely we are all in favor of that, and in order to pay the interest on the Government debts which were created largely by past wars, and in order to pay our veterans their just due, it takes a little less than 78 percent of our budget or 77 plus percent, as I figure it. So let us not kid ourselves and let us not kid the country.

If we are going to make any reduction we are going to have to make it out of that 12 or 13 percent. Even if we should cut it all out except for national defense, veterans and interest on debt and made no appropriation for salaries, made no appropriation for the farm program, made no appropriation for anything and thus destroyed our Government, we would reduce the budget by only 12 or 13 percent. So I say that there just is not any chance that I can see for us materially to reduce this budget anywhere unless we could go in and cut off billions of dollars in the Defense Department, and I certainly would not approve that, nor do I think anyone else would.

I do think we act unwisely in spending this money on foreign aid. I do not want to be riding that horse to death, but I have been opposed to it all the time. That money goes overseas. I do not believe it does the good some people, those who have supported it, thought it would. I have been opposing it and I shall continue to, but I am not going to oppose the amendments that are presented here to restore levels fixed by the Budget; I am going to be for them, because I think they provide essential services for our people.

Yes, I am for balancing the budget; I would like to see the budget balanced; I know all of us would, but I am not for balancing the budget at the expense of our national defense and services vital to our people.

I repeat in conclusion that we are just kidding ourselves and kidding the country when we fool around with these small cuts, which I think adversely offset vital services to our people; we are just injuring and kidding ourselves.

The CHAIRMAN. The Chair recognizes the gentleman from Missouri [Mr. JONES].

Mr. JONES of Missouri. How much time do I have, Mr. Chairman?

The CHAIRMAN. About 1 minute.

Mr. JONES of Missouri. Mr. Chairman, I want to make the same argument today that I have been making for 10 years, and that is that the people of the District of Columbia are not paying their fair share of taxes, and as long as we keep appropriating money for them out of the Federal Treasury they will not. This action here today is a misnomer, when we say we are going to take it out of District funds. Of course, we are going to take it out of District funds, and then we are going to give the money right back to them.

When I came here about 10 years ago the Federal contribution was about $10 million a year. They come in now and want $30 million.

Real estate in this District has not been reassessed for many years; it is out of line. The tax rate is too low. I pay as much school tax in the district in which I live as the average person in the District of Columbia pays in total tax; and that, I say, is wrong. They are never going to have enough money until they raise their taxes, and they are not going to do that until Congress forces them by stopping withdrawing this money from Federal taxpayers from all over this Nation. Whenever they pay their fair share I will go along with the proposition of giving them some money, but until then I do not intend to vote for a dime of it.

The CHAIRMAN. The gentleman from South Carolina [Mr. MCMILLAN] is recognized.

Mr. MCMILLAN. Mr. Chairman, I first want to congratulate my good friend the gentleman from Texas [Mr. THOMAS], and the members of his great committee for agreeing to restore $5 million to the District budget. I realize how the gentleman feels, and he realizes how I feel about some of the affairs in the District of Columbia and some of the publicity we have received by the newspapers in the city of Washington. But we do have some of the finest people in the United States who are paying taxes in the District of Columbia, and we Members of the House obligated ourselves to these people by increasing the salaries of the District government employees by 10 percent. I feel that we are obligated to support of the amendments that have been offered by Mr. RABAUT. I assure you that I shall never come down into the well of this House to emasculate a bill that the Appropriation Committee brings to the floor for consideration unless I have a valid reason. We all had a part in increasing these salaries last year. We did this after the District appropriation bill had passed and we cannot neglect our duty at this time by failing to appropriate sufficient money to take care of this additional expense we placed on the District government.

The District Committee did not increase the salaries of 18,000 District civil employees. That bill came from the Committee on Post Office and Civil Service, my committee increased the salaries of police, and firemen, and teachers. I feel since we did increase the salaries of all these employees we should take care of these additional expenses to the District of Columbia for this fiscal year so that they may be in a position to pay the bill. I heartily support the Rabaut amendments.

Mr. MCMILLAN. Mr. Chairman, I ask unanimous consent that the gentleman from Virginia [Mr. BROYHILL] may extend his remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

Mr. BROYHILL. Mr. Chairman, I rise in hearty support of the movement in this distinguished body to restore the $3.4 million cut in the District of Columbia supplemental appropriations measure.

Washington is a Federal city. It is the obligation of the Congress to stand by its commitments made in good faith through various authorization bills. All of us here know that to deny the District funds for essential services is neither in the local nor national interest.

I regret that through the years there has been an increasing tendency to deprive the Nation's Capital of fair treatment with respect to the Government's share in keeping this city's economy in good health. I deplore this tendency. In the present situation if we support the recommendation of the Appropriations Committee we say in effect to the District that we are completely indifferent to its many problems; that we do not care whether the local government functions efficiently; or whether the Nation's Capital is given the tools to reduce the high crime rate existing here.

The District Commissioners, the Police and Fire Departments, and the many other agencies involved in performing good public service are not deserving of such congressional neglect. They do splendid jobs under difficult circumstances and it behooves us to make, insofar as possible, these jobs easier.

Washington is the Capital of these United States. It is one of the windows through which the world sees us. To permit this city to deteriorate by penny-pinching would be a reflection on our pride in the metropolis that houses our Government from the President down. Unless we revise our attitude; unless we stop regarding the District as a step-sister, the day will come when it will be bankrupt and the laughing stock of the world. We can begin this change in attitude by restoring the $3.4 million deleted by the Appropriations Committee.

The CHAIRMAN. The Chair recognizes the gentleman from Iowa [Mr. JENSEN].

Mr. JENSEN. Mr. Chairman, the bill provides that the 10 percent pay increase that was voted in the last session of the Congress should be fully or partly absorbed by the different departments, agencies, and commissions of the Government and the District of Columbia. This bill provides that the District of Columbia shall absorb 25 percent of that

10 percent, which is only 2½ percent of the whole.

Certainly, after this House has just voted a $5 million increase for the District of Columbia and also in the regular bill it has raised the Federal contribution from $20 million to $25 million, an increase of another $5 million, there is no justification in raising these appropriations for the District of Columbia in the bill by 15 percent, as the amendment offered by the gentleman from Michigan [Mr. RABAUT] would do.

How far can we go, how long, and how much more are we going to contribute to the District fund? The gentleman from Missouri stated the truth. Surely the time has come when we must put into practice some good common business sense.

The CHAIRMAN. The Chair recognizes the gentleman from Texas [Mr. THOMAS].

Mr. THOMAS. Mr. Chairman, let me seriously commend the statement made by my distinguished friend from Iowa [Mr. JENSEN] and the gentleman from Missouri [Mr. JONES].

But do you know what is involved here in all this noise? $3.3 million. To hear them talk you would think the heavens were going to fall in tonight.

The District of Columbia has to obligate this year $178,500,000. All that is involved in this whole show is $3,300,000.

The amendment offered by my loveable friend from Michigan ought to be voted down. And here is the reason why: We gave them $5 million of your constituents' money this afternoon. We raised everything to their liking, we dotted all the "i's," we crossed all the "t's," for the Police Department, the Sanitary Engineering Department, the schoolteachers and the Fire Department. We took care of everything except the City Hall. Now, that is the biggest part of this amendment.

It is all for salaries. That is all. They have 24,000 employees and had only 906 vacancies as on the 1st of January. We restored it on these four big departments. Now my friend wants to come along and cut that 25 percent down to 10 percent on the smaller departments. We have taken care of the big ones now. Otherwise they are going to spend their own money; their own money. Let us take back that $2.5 million you gave them awhile ago if they are going to spend their own money. And, they should absorb a little of it. They could stand on one foot and absorb what is left. They could do that very easily, and they could do it with a smile. Of course, if we do that, they will come back next year and say, "You gave us this increase, but you did not give us any money." They will want not $5 million, not a $25 million appropriation, but they will want the entire $32 million, and you might be in a position where you will have to give it to them.

Mr. JONAS. Mr. Chairman, will the gentleman yield?

Mr. THOMAS. I yield to the gentleman from North Carolina.

Mr. JONAS. Actually, we are confused, because the items in the amendments offered by the gentleman from Michigan are not appropriations from their funds. They are merely limitations on the amount they can spend.

Mr. THOMAS. You are right. Gentlemen, vote this amendment down. You have done the right and the honorable thing by the District. I ask for a vote, Mr. Chairman.

The CHAIRMAN. The question is on the amendments offered by the gentleman from Michigan [Mr. RABAUT].

The question was taken; and on a division (demanded by Mr. RABAUT) there were—yeas 60, nays 156.

So the amendments were rejected.

Mr. PRESTON. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. PRESTON: After line 5, page 33, insert:

"General provisions: The Secretary of Commerce is authorized to transfer not to exceed $900,000 between appropriations of the Department of Commerce available for salaries and expenses for the purpose of providing for increased pay costs in the fiscal year 1959."

Mr. THOMAS. Mr. Chairman, I have discussed this amendment with my distinguished friend from Georgia, who so ably handled the funds for the Commerce Department, and I want to commend him for the amendment. I think it makes good sense and will save some money, and I think it should be adopted.

Mr. BOW. Mr. Chairman, will the gentleman yield?

Mr. PRESTON. I yield to the gentleman from Ohio.

Mr. BOW. If this amendment is adopted, which authorizes the use of $900,000 transfer for pay raises, will the gentleman assure us that this will not come in in a third supplemental bill?

Mr. PRESTON. I will give my personal guarantee that my committee will not approve such a supplemental request.

Mr. BOW. Mr. Chairman, as the ranking minority member of the gentleman's committee, I can say to the gentleman that I would oppose it. But I think the committee should be assured that we are not going to permit this to come in either in a supplemental bill or in the regular bill, but that this is to be regarded as a transfer of funds within the appropriation. Does the gentleman agree?

Mr. PRESTON. Yes; that is a very accurate statement. I certainly shall take the position that the committee would look with great disfavor and would reject any such request in the form of a supplemental or in the form of additional funds in the bill for the fiscal year 1960.

Mr. BOW. Mr. Chairman, on this side we have no objection to the amendment.

Mr. FOGARTY. Mr. Chairman, will the gentleman yield?

Mr. PRESTON. I yield to the gentleman from Rhode Island.

Mr. FOGARTY. Mr. Chairman, I ask unanimous consent that all Members who desire to do so may be allowed to extend their remarks following mine on the amendment to the Defense Education Act and prior to the vote.

The CHAIRMAN. Without objection, it is so ordered.

There was no objection.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Georgia [Mr. PRESTON].

The amendment was agreed to.

Mr. TEAGUE of Texas. Mr. Chairman, I offer two amendments.

Mr. Chairman, I ask unanimous consent that both amendments be reported by the Clerk, that I be permitted to speak to both amendments at the same time, but that they may be voted upon separately.

The Clerk read as follows:

Amendments offered by Mr. TEAGUE of Texas: Page 20, on lines 25 and 26, strike out "$43,148,500," and insert in lieu thereof $47,455,000".

Page 21, lines 5 and 6, strike out "$6,380,000," and insert in lieu thereof "$6,934,000".

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. TEAGUE of Texas. Mr. Chairman, I ask unanimous consent to revise and extend my remarks and to include extraneous matter and certain tables.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. TEAGUE of Texas. Mr. Chairman, my amendment on page 20 increases the appropriation for inpatient care in Veterans' Administration hospitals by $4,306,500. The VA budget request was $47,455,000. This bill provides $43,148,500. I have requested the VA to advise the Veterans' Affairs Committee how it will meet the cut of $4,306,500 in its budget request for inpatient care at VA hospitals and the VA has made the following statement:

In order to bring the financial obligations of the VA into line with the funds being made available, the following action is being directed to all affected offices:

1. Freeze all employment.

No vacancies that arise will be filled unless there will be a showing of dire need for the position. This will have the effect of reducing the employment in regional offices, insurance offices, hospitals, and clinics.

2. Defer equipment purchases.

This will delay the purchase, installation, and use of new equipment until after the beginning of the next fiscal year on July 1.

3. Defer maintenance and repair projects in our hospitals.

This action will serve to delay the necessary normal maintenance projects until after July 1. Such action will have the effect of increasing the backlog of maintenance work that needs to be done in our hospitals.

I am particularly concerned that VA will be required to freeze all employment. The VA is in a very difficult position in recruiting professional personnel in its medical program such as doctors and nurses. A freeze of all employment will bring to a standstill any recruitment which is now in progress for those scarce categories of professional personnel.

The Veterans' Affairs Committee has been making a study of deferred maintenance in VA hospitals. Our study shows that the VA has already accumulated an excessive amount of deferred maintenance items due to lack of funds in previous budgets.

In October 1958 the VA had accumulated $11,500,000 in deferred mainte-

nance items carried over from the 2 previous fiscal years. The 1959 budget does not have funds to take care of all of these deferred maintenance items. Eight million, four hundred thousand dollars in deferred maintenance is being carried into the fiscal year 1960 budget with only $3,100,000 budgeted to take care of the deferred maintenance which is being carried over.

We now find the VA supplemental request for inpatient care being cut by $4,306,500. In order to make up this shortage, the VA will be forced to issue orders to defer additional maintenance to make up for the cut in the estimated budget. In other words, as the cut stands, more maintenance will be deferred and the picture at the end of fiscal year 1959 will be that around $10 million to $12 million in deferred maintenance will be accumulated in VA hospitals with only $3.1 million budgeted in fiscal year 1960 to take care of it.

The VA hospital and medical program has been experiencing pressure as a result of the rising costs of medical care for the past several years. In March 1958 the managers of 23 VA hospitals in 7 Western States met and passed the following resolution regarding a shortage of funds in the VA hospital program:

RESOLUTION OF WESTERN HOSPITAL MANAGERS, MARCH 1958

The managers of the 23 Veterans' Administration hospitals, centers, and domiciliaries located in the 7 Western States have met to consider our hospital program for the next 2 years. Our deliberations have revealed a simple, stark reality. Current appropriations will not support presently legislated benefits and accepted concepts of veterans' medical care. The floodtide of price increases on all fronts is recognized throughout the hospital field. Voluntary hospitals, State hospitals, and university hospitals have experienced the effect of rising costs. With the possible exception of a few State hospitals, the costs are reflected in large rate increases and substantial appropriations each year. In nongovernmental hospitals these costs are passed on directly to the patients.

Our Veterans' Administration hospitals have not received funds over the past several years sufficient to keep abreast of these ascending costs. We are endeavoring to maintain a medical program equal to that offered in the community on preinflation appropriation levels. Neither have the managers funds adequate to discharge their specific responsibility in protecting the Government's investment in the physical plant and in equipment. We have economized to the extent that essential care to our patients is inevitably deteriorating.

Our 23 hospitals must have a substantial increase in fiscal year 1959 and a specific increase of $10 million for 1960 over and above the appropriation for 1958 in order to retain an acceptable level of medical care and to maintain our physical plants. These sums do not include whatever might come in a general pay raise for Federal employees or the automatic wage boost for the blue-collar workers.

Unless these sizable sums are made available, Congress must face these alternatives: (1) Lower quality of medical care and further deterioration of the physical plants; (2) reduced beds with the reduction in patient load—close selected hospitals throughout the country or close whole sections of beds in many hospitals.

We therefore unanimously resolve that the Bureau of the Budget and the Congress of the United States be apprised of this basic issue and be requested to take clear-cut remedial action.

Examples of deferred maintenance which have accumulated at typical stations as a result of lack of funds

	Backlog of M. & R.	Recommended for fiscal year 1959	Amount	Recommended for fiscal year 1960	Amount	Recommended for fiscal year 1961	Amount
N.P. stations: Battle Creek	$193,309	Extend F.A. system	$17,000	Replace hot water heaters, buildings 6, 10, and 11	$2,500	Replace generator at fieldhouse	$2,500

Mr. Chairman, my amendment on page 21 of the bill, lines 5 and 6 strikes out $6,380,000 and inserts the figure $6,934,000. The effect of the amendment is to restore to the out-patient funds of VA $554,000 which was cut from the budget estimate.

The out-patient program has been experiencing difficulties in the last few months as a result of a shortage of funds. However, this cut will aggrevate the situation. VA has advised that to adjust itself to this budget, it will be necessary to freeze all employment in the out-patient program; to defer all purchase of drugs, appliances, such as artificial limbs, hearing aids, and so forth, where possible. In some instances, it will be necessary to cut back on authorized schedules of treatment by fee doctors. The only veteran eligible for out-patient care is the service-connected veteran. Therefore, any cut in this fund directly effects medical service to the out-patient veteran.

I do not believe there is a Member of Congress here who would wish to see that.

Mr. THOMAS. Mr. Chairman, I ask unanimous consent that all debate on these amendments and all amendments to this paragraph close in 10 minutes, including 5 minutes to the gentlewoman from Massachusetts [Mrs. ROGERS] and 5 minutes to the committee.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

The CHAIRMAN. The Chair recognizes the gentlewoman from Massachusetts [Mrs. ROGERS].

Mrs. ROGERS of Massachusetts. Mr. Chairman, I do not believe a Member on the floor of this House will vote against these amendments. We have voted for all the other groups, and I am sure you will not deny the money to the veterans, the veterans who have given more than any group for us and the world. I have received messages from the DAV, the Veterans of Foreign Wars, and the American Legion protesting these cuts. As I stated earlier in the debates, you will lose human lives if you do not restore the cuts, if you do not give the veterans the service to which they are entitled, you will make them expendable. Of course I shall support this amendment and I hope the Senate will restore the remainder of the cut.

Secretary Higgins, who earlier in the parade ceremony was lauded in a special testimonial for his leadership in developing and implementing an improved materiel procurement program for the armed services, made the GI the subject of his last official tribute.

You, the soldier in the field are the object of everything we do he said.

Everything we do is designed to win the next war, heaven forbid, if it is ever thrust upon us. You have the best eyes and ears of any soldiers on the battlefield today. You have the best equipment and the best firearms. But in our book you are not expendable at any time. You are our champions.

I feel very sure that the House will restore this cut. We have given to foreign aid, the District, the Public Health hospitals—no cuts there at all—and the Indian Health Service.

I commend the chairman of our committee for his devotion to hospitalization for the veterans and the entire membership of our committee on Veterans' Affairs I know is mutually interested in the care of the veterans.

Mr. THOMAS. Mr. Chairman, I know what the temper of the House is on this matter, but I want to give you some figures that are well worth thinking over.

The cost of these hospitals is rising, as you know. The cost of everything else is rising, so that is quite understandable. But when the number of beds over a 4-year period does not vary in bed occupancy more than 400 or 500 a year, yet the employment goes up each year, whether there is any increase in bed occupancy, then it is time to do a little thinking; is it not?

Listen to these figures:

For 1958 you appropriated for in-patient care, that is, the hospitals, in round figures $729 million. You had 121,200 beds during that year, and you had 120,730 employees taking care of these veterans.

In 1959 that amount rose from $729 million to $759 million, and lo and behold, you had a decrease of about 250 beds that year, yet you have an increase of about $30 million in appropriations and you have an increase of 300 employees.

For 1960, that is the year right around the corner here, the appropriation goes up to $786,700,000, an increase of over $27 million, yet the increase in the number of beds is only about 60. This gives you a total of 121,014 beds, yet you have an increase in personnel to 123,620, an increase of over 2,500.

You had better think about these figures. I know the temper of the House, but I want to point this out. We have no objection to the amendments because I know you will restore these funds.

The CHAIRMAN. The Clerk will report the first amendment offered by the gentleman from Texas.

The Clerk read as follows:

On page 20, lines 25 and 26, strike out "$43,148,500" and insert "$47,455,000."

The amendment was agreed to.

The CHAIRMAN. The Clerk will report the second amendment offered by the gentleman from Texas [Mr. TEAGUE].

The Clerk read as follows:

On page 21, lines 5 and 6, strike out "$6,380,000" and insert "$6,934,000."

The amendment was agreed to.

Mr. TEAGUE of Texas. Mr. Chairman, I ask unanimous consent that all Members may have permission to extend their remarks at this point in the RECORD.

The CHAIRMAN. Without objection, it is so ordered.

There was no objection.

Mr. MITCHELL. Mr. Chairman, I rise in support of the amendments offered by the gentleman from Texas, the very able chairman of the Committee on Veterans' Affairs. No one is more familiar with, and more qualified to speak on, the need for providing every cent possible for the care of veterans who are hospitalized in VA hospitals throughout the country. The amount of $4,306,500 provided for in the proposed amendment is the minimum which should be adopted. This amount does not increase the amount requested by the VA by one penny. The figure decided on by the VA was, no doubt, much less than is actually needed for the VA to do the job it is required to do by law and is certainly the least we should appropriate to fulfill the obligation which we owe to the veterans of this Nation. I hope the amendments will be adopted.

As the gentleman from Texas has pointed out, if his amendment is not adopted it will result in a freeze on all employment, a further deferrence of the purchase of necessary equipment, and further increase the already long overdue maintenance and repair projects in VA hospitals.

The gentleman from Texas has indicated the situation in regard to deferred maintenance on VA hospital facilities over the Nation. I should like to call attention to the situation as it relates to the facilities, which are woefully inadequate, in the State of Georgia. At the present time, the backlog of deferred maintenance on Georgia VA hospital facilities is in the amount of $187,597. We cannot afford to let this continue to grow by leaving needed repairs left undone. The funds requested by the VA and provided for in the gentleman's amendments, which is now before us, merely holds the line. It is urgently needed and it must be provided if we do not intend to further aggravate what is now a very unfortunate situation. I do not want to report back to the veterans of Georgia that we failed to provide the minimum necessary for the operation and maintenance of the VA hospitals and domiciliary facilities at Atlanta, Augusta, Dublin, and Thomasville, Ga.

Mr. Chairman, I also wholeheartedly support the amendment restoring the amount of $554,000, which was cut from the request for the VA outpatient program. Since every cent spent in the outpatient program goes for the treatment and care of service-connected disabled veterans, I fail to see how we can do less than provide the minimum amount requested. We all realize that even more money is needed for this purpose.

Mr. SIKES. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I shall explain the background for the additional funds that are included in this bill for the National Guard. I hope this will be useful to the Members. I shall undertake to show the essentiality of the increase in funds for the National Guard and to show it is the spirit and the determination of the Congress that the guard not be permitted to deteriorate in this crucial period.

There is carried in the pending bill on page 9 an unbudgeted item entitled "For an additional amount of 'Army National Guard' $10,300,000." This is apart from the budgeted item under the same heading for $3,065,000 which is made necessary by pay act increases for the fiscal year 1958. The larger sum applies to National Guard requirements for fiscal year 1959 and the fact that it is not a budgeted item in no way detracts from its essentiality. The necessity for this amount came to light late in the fiscal year after requests for supplemental funds already had been submitted to the Bureau of the Budget for approval and transmittal to Congress. I refer you to the language contained in the report which accompanies this supplemental appropriation bill on this item and which is found on page 4. The committee has approved the budget estimate of $3,065,000 for the Army National Guard for fiscal year 1958, and is adding $10,300,000 for fiscal year 1959. The amount added by the committee, it is believed, will permit the guard to continue its 1959 program as contemplated and avoid any reductions in strength, paid drills and the 6-month trainee program. If there are any reductions they should be made in maintenance and support expenses and under no circumstances should there be any reduction in paid drills and the 6-month trainee program.

Now may I give you this background information. Last year the Administration proposed that the National Guard be cut in strength from 400,000 to 360,000 men. The proposal was made despite the insistence of National Guard leaders throughout the Nation that such a cut would be extremely damaging to morale and to effectiveness. Congress recognizes the importance of the guard to the Nation and realizes that seven guardsmen can be maintained for the price of one soldier in the regular service. Consequently, Congress voted to make mandatory an average strength of 400,000 for fiscal 1959 for the National Guard and provided the funds which it was anticipated would be required to insure an average strength of 400,000. It has now developed, because of unforeseen circumstances, there is actually not enough money to do the job which Congress specified. In addition to the funds already voted, another $13.2 million are needed.

Faced with the choice of cutting back in the strength of the National Guard and on the training program of the National Guard we are asked for additional funds. Secretary McNeil addressed a letter to the Honorable CLARENCE CANNON, chairman of the Committee on Appropriations. In his letter he listed four items of expenditure for which additional amounts are needed and the reasons for them. These are, first, pay of Army National Guard military personnel has increased because of a higher pay grade structure caused partly by improved reenlistments for an amount of $8.1 million; second, attendance at paid drills increased 2.5 percent creating an additional cost of $2.4 million; third, the Army National Guard air defense program was accelerated in conjunction with the total air defense program, with increased costs of $1.6 million; and fourth, restatement of the requirement for 6-month trainees $1.1 million.

It will be noted that no operation and maintenance funds are included here. These are funds to insure a satisfactory level of training and to maintain strength figures. The facts very simply are that Congress has specified a strength of 400,000 with a training program comparable to that of the former years. As a result, the guard is at peak efficiency. If we do not now provide the funds that are needed there is no alternative but for the Army to reduce its training program. In the main this involves the elimination of the last four weekly drill periods together with other needed training exercises. To start to cut back on the training of a first-class effective force such as the guard is to invite reduced standards of efficiency—to start the deterioration of guard units throughout the Nation.

The committee has recommended not $13.2 million, but $10.3 million. This amount may not be adequate, but it shows Congress means to maintain the effectiveness of the guard. This money, plus the language of the report, demonstrates the insistence of the Congress that there be no letdown in the guard program. I believe that it also means that if it can clearly be shown that more funds are required when this bill moves to the Senate that the House will support additional funds.

I reiterate this crucial period is not a time to sanction the deterioration of the National Guard. I consider that we are clearly demonstrating the determination of the Congress to maintain a first-class effective fighting force in our National Guard.

Mr. CANFIELD. Mr. Chairman, I have two amendments at the Clerk's desk and ask unanimous consent that they be considered en bloc.

The CHAIRMAN. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

The Clerk read as follows:

Amendments offered by Mr. CANFIELD: On page 28, line 15, strike out "$3,803,600" and insert "$3,903,600".

On page 28, line 23, strike out "$27,595,000" and insert "$29,595,000".

Mr. THOMAS. Mr. Chairman, will the gentleman yield?

Mr. CANFIELD. I yield.

Mr. THOMAS. Mr. Chairman, the gentleman from Iowa [Mr. JENSEN] and the gentleman on this side of the aisle have discussed these matters with the distinguished gentleman from New Jersey. This amounts to a compromise. It is not exactly what the Treasury wanted. It is not exactly what the committee wanted. But, these people are in the business of collecting money and doing other things of service so I think the compromise is a good one and we are delighted to accept the amendments.

The CHAIRMAN. The question is on the amendments offered by the gentleman from New Jersey [Mr. CANFIELD].

The amendments were agreed to.

Mr. GROSS. Mr. Chairman, I offer a preferential motion.

The Clerk read as follows:

Mr. GROSS moves that the Committee do now rise and report the bill back to the House with the recommendation that the enacting clause be stricken.

Mr. GROSS. Mr. Chairman, I take this time among other things to ask a question or two. I would like to ask the chairman of the subcommittee if he can tell me how far we are from a $3 billion bill? We started out with about $2,400 million. How far are we now from a $3 billion bill since the spenders got loose this afternoon?

Mr. THOMAS. May I explain to my distinguished friend here that the committee has receded and given ground—yes, on a good many items. The amendments were to restore some 10-percent cuts on the salary increase itself. So dollarwise it does not amount to very much money. The big amendment the committee has adopted this afternoon was the one adopted by the committee on the Department of Health, Education, and Welfare for the educational program. That was an increase of $50 million. So my guess is altogether——

Mr. GROSS. About $500 million, would the gentleman say?

Mr. THOMAS. Oh, no, no.

Mr. GROSS. Well, in the neighborhood of a couple of hundred million or three hundred million?

Mr. THOMAS. Slightly under $200 million would be my guess; I understand it restores $177,880,500.

Mr. GROSS. Well, that is "chicken feed"; is it not?

Mr. THOMAS. It is a great deal more than I have.

Mr. GROSS. Of course, we do not have any national debt. We do not have any worries about our finances—none at all. I was going to offer a few amendments to the bill, but the amendments I was going to offer would have cut only a few million, and with the spenders in the saddle, I just do not have the heart to offer them.

For instance, I would have offered one to stop that $3 million-odd appropriation for the United Nations police force on the ground that we have already put $55 million into that deal, and the other nations are not paying their agreed share, as the gentleman well knows from testimony before his committee.

I would have offered another amendment to the provision for $25,000 for an international study of judicial procedures. That bill came up on the Consent Calendar a year ago in February. The gentleman from Colorado [Mr. ASPINALL] and I asked at that time what the cost was going to be and we were assured by a member of the Judiciary Committee that it would cost only $5,000 or less. Yet the subcommittee this year heard a request for $75,000, and the committee is providing $25,000 in this bill, five times more than they said it was going to cost at the time the bill was called up on the Consent Calendar. In the future I do not know how well I will be to go along with some of the bills on the Consent Calendar.

Mr. THOMAS. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from Texas.

Mr. THOMAS. We cannot quibble with anything the gentleman from Iowa has said; everything he has said is 100 percent true. They came to the committee and we consulted members of the Judiciary Committee, and it was generally agreed that $25,000 would be a very small sum. As a lawyer, I think you are going to get your money's worth.

I cannot argue with the gentleman about the Consent Calendar.

Mr. GROSS. In view of the fact that the spenders have kicked the door down this afternoon with the adoption of amendments calling for the spending of millions upon millions, I am not going to offer any amendment cutting anything. My vote is against the bill.

The CHAIRMAN. The question is on the preferential motion.

The motion was rejected.

Mr. DURHAM. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. DURHAM: After line 24, page 13, add the following:

"OFFICE OF CIVIL DEFENSE AND MOBILIZATION

"Federal contributions: For an additional amount for 'Federal contributions' including financial contributions to the States pursuant to section 205 of the Federal Civil Defense Act of 1950, as amended, to be equally matched with State funds, $3 million to be derived by transfer from the appropriation for 'emergency supplies and equipment,' fiscal year 1959."

The CHAIRMAN. The gentleman from North Carolina is recognized.

Mr. TABER. Mr. Chairman, I make a point of order against the amendment.

The CHAIRMAN. The gentleman will state it.

Mr. TABER. Mr. Chairman, I make the point of order that the amendment is legislation on an appropriation bill.

The CHAIRMAN. Does the gentleman from North Carolina desire to be heard on the point of order?

Mr. DURHAM. Mr. Chairman, this is a transfer of funds, a matter that I understand appears all through the bill, and I was so advised by the clerk of the committee.

The CHAIRMAN. This is a little more than that; it affects the transfer of funds for the fiscal year 1959 for this new purpose, and as such would constitute legislation.

Mr. DURHAM. If that is the Chair's interpretation, I concede the point of order.

The CHAIRMAN. The point of order is sustained.

Mr. ALFORD. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. ALFORD: On page 23, line 19, strike out "$2,032,000" and insert "$1,642,000".

Mr. THOMAS. Mr. Chairman, will the gentleman yield for a consent request?

Mr. ALFORD. I yield.

Mr. THOMAS. Mr. Chairman, I ask unanimous consent that all debate on this paragraph and all amendments thereto close in 10 minutes, the last 5 to be reserved to the committee.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

Mr. THOMPSON of New Jersey. Mr. Chairman, I object.

Mr. THOMAS. Mr. Chairman, I move that all debate on the paragraph and all amendments thereto close in 10 minutes.

The motion was agreed to.

Mr. ALFORD. Mr. Chairman, at this late hour I hesitate to belabor an issue, but I submit to every Member of this distinguished body that as a loyal citizen of a fine cultured community I must as a matter of principle and in all good conscience protest an item that was listed by the Justice Department relative to Little Rock.

My amendment simply strikes out $390,000 which was used to finance special Federal marshals in the second invasion of Little Rock. I realize that is a very small amount when we consider the large amounts that we are appropriating today. But I call your attention, and beg your indulgence, to page 774 of the hearings of the subcommittee and to the testimony of Mr. Andretta, where he states:

We had to buy special police equipment and supplies to the tune of $10,100 and we had a special communication service set up between here and that area such as a special telephone line and other extra communication costs that we ran up in keeping in touch back and forth. That cost $5,200.

He gives all of the items concerned in the $390,000. I submit these items to you: Personal services, temporary employment of, may I say, U.S. marshals; premium compensation for deputies from other districts; total personal service $280,800. Then there are other contractual services, $1,000. And listen to this item, if you please: Supplies and materials, and this is from Mr. Andretta's testimony, ammunition mostly to the tune of $10,100 and equipment of police type, $7,700, taxes and assessments, social security taxes, $5,200, a total of $390,000. May I repeat to you live ammunition cost $10,100 to be used by Federal marshals against loyal patriotic Americans.

Now, to the distinguished Members of this House, I submit there were 110 special marshals that, as reported in the subcommittee hearing, were patrolling the streets of Little Rock at a time when the senior high schools of that city were closed.

I am well acquainted with the U.S. marshal of that district. He is a very capable gentleman and has some very valuable assistants. I submit to you in all sincerity that I cannot in good conscience sit here and not call attention to this insult to a wonderful peace-loving community.

As I stated before, I hesitate to bring up the subject again, but I must protest this political invasion of a sovereign State. The expenditures have already been paid for and they are asking reimbursement of this amount. In the committee hearing the Justice Department asked for $500,000 additional to be used in future political projects of this type.

In the testimony they declared that they wanted such items as live ammunition, police equipment and communica-

tion for any further incidents that might occur. This demand was refused by the subcommittee.

How long must we continue to have this political subject rise again and again? During that time this city had all of its high schools closed and the order had already been given by the Governor.

I would like to submit also detailed information that is given before the subcommittee:

There were 110 special deputies engaged for the approximate period from August 15 through November 30, 1958. Due to adverse local sentiment, it was necessary to employ the services of special deputies from the adjacent counties rather than the immediate local area. A general rate of $28 per day was fixed for these deputies and many were on duty 18 hours a day.

In addition, 52 regular deputies were detailed to Little Rock during this period from the following districts, and I shall list them by States so as not to take up so much time: Alabama, Arkansas, Colorado, Georgia, Illinois, Indiana, Kansas, Kentucky, Louisiana, Mississippi, Missouri, Oklahoma, Tennessee, and Texas.

May I call to your attention at this point the complete hearings before the Appropriations Subcommittee relative to Little Rock:

REQUEST IN CONNECTION WITH MARSHALS AT LITTLE ROCK

Mr. ROONEY. Tell us about this $900,000 request in connection with marshals at Little Rock. How much was actually expended? How many marshals for how long and so forth?

Mr. ANDRETTA. Mr. Chairman, when this estimate was put in the budget it was put in for $1 million back in the fall when things were really hot. We thought later that we were going to need $900,000 in anticipation of any trouble in connection with the school segregation cases. We recruited a corps of deputy marshals and had to bring them in there with others already on the rolls, and to pay their travel expenses, overtime, and premium pay. The result was that in marshaling this specific task force we authorized obligations of some $390,000.

Mr. ROONEY. You want to change this requested amount from $900,000 to $390,000?

Mr. ANDRETTA. No, sir; that threw us behind in some of our regular operations and also the fact that we are running over on some of our litigation expenses in the U.S. attorneys offices.

Mr. Rooney, you know that we always come back for litigation costs on the U.S. attorneys appropriation.

Mr. ROONEY. I understand that, but did you not get this request for $900,000 approved in the Bureau of the Budget on the basis that it was to meet extraordinary situations arising in certain districts as a result of the Supreme Court decision on school integration?

Mr. ANDRETTA. That is right.

Mr. ROONEY. How do you now justify any more than $390,000?

Mr. ANDRETTA. Except this: It will save our coming back for another supplemental appropriation.

Mr. ROONEY. You are the best man on supplementals I know of.

Tell us about the $390,000. What are the details with regard thereto?

Mr. ANDRETTA. The details are $156,000 for personal services. That is——

Mr. ROONEY. How many people?

Mr. ANDRETTA. For "Personal services"; that is $280,800 for special deputy marshals.

Mr. THOMAS. How many are you asking for?

Mr. ANDRETTA. A total of 110 special deputy marshals were employed.

Mr. ROONEY. For how long and how much?

Mr. ANDRETTA. They were on per diem pay, so the rate——

Mr. ROONEY. Could you break that down? Is this a buckshot approach or can you break down this $390,000?

Mr. ANDRETTA. Yes, sir.

As I say, $280,800 is for personal services which were——

Mr. ROONEY. I am talking about a little further breakdown than that, Mr. Andretta.

Mr. BROWN. Mr. Chairman, they were appointed generally for a period of 3 months and the actual period of service varied within that 3-month period. We can give you a breakdown of that.

Mr. ROONEY. What else besides that?

Mr. ANDRETTA. $80,000 for travel expenses.

Mr. ROONEY. Where do you hire these people?

Mr. ANDRETTA. They were hired in neighboring areas and some very few locally. They were taken on by the marshals in adjacent districts but not in that particular area. Then others were brought in——

Mr. ROONEY. They are all off the payroll now?

Mr. ANDRETTA. Yes, sir; they are all off now.

Mr. ROONEY. What else?

Mr. ANDRETTA. We had to buy special police equipment and supplies to the tune of $10,100 and we had a special communication service set up between here and that area such as a special telephone line and other extra communication costs that we ran up in keeping in touch back and forth. That cost $5,200.

We had some special contractual service; that is, for fees and things like that, $1,000.

Then we had the purchase of ammunition and other equipment, $7,700, and $5,200 in contributions on social security payments, which adds up to $400,000.

Mr. ROONEY. $400,000? You gave me $390,000 before.

Mr. ANDRETTA. Yes, $390,000.

Mr. ROONEY. Which is it?

Mr. ANDRETTA. It is $390,000, Mr. Chairman.

Mr. ROONEY. Will you please insert at this point in the record, if you hope to get this money, some real details as to the number of people, for how long, how many days, what dates, and where they came from, and so forth?

Mr. ANDRETTA. Yes, sir.

Mr. ROONEY. And the rate of pay?

Mr. ANDRETTA. Yes, sir.

(The information follows:)

"DETAILED INFORMATION CONCERNING THE SCHOOL INTEGRATION PROGRAM

"There were 110 special deputies engaged for the approximate period from August 15 through November 30, 1958. Due to adverse local sentiment, it was necessary to employ the services of special deputies from the adjacent counties rather than the immediate local area. A general rate of $28 per day was fixed for these deputies, and many were on duty 18 hours a day.

"In addition, 52 regular deputies were detailed to Little Rock during this period from the following districts:

"Alabama: Northern, middle, southern.
"Arkansas: Eastern.
"Colorado.
"Georgia: Northern, middle, southern.
"Illinois: Southern.
"Indiana: Southern.
"Kansas.
"Kentucky: Western.
"Louisiana: Eastern, western.
"Mississippi: Northern.
"Missouri: Eastern, western.
"Oklahoma: Northern, western.
"Tennessee: Eastern, middle, western.
"Texas: Northern, eastern, southern, western."

"Detail of obligations authorized

"OBJECT CLASSIFICATION AND AMOUNT

"01	Personal services:	
	Temporary employment	$265,200
	Premium compensation for deputies from other districts	15,600
	Total personal services	280,000
02	Travel	80,000
04	Communication services	5,200
07	Other contractual services	1,000
08	Supplies and materials (ammunition mostly)	10,100
09	Equipment (police-type)	7,700
15	Taxes and assessments (social security taxes)	5,200
	Total	390,000"

Mr. ROONEY. Are there any questions with regard to the item, "Salaries and expenses, U.S. attorneys and marshals"?

Mr. THOMAS. No questions.

Mr. Chairman, I submit to you in all sincerity that we are crying out only for simple justice, and maintenance of States rights and constitutional government.

The CHAIRMAN. The Chair recognizes the gentleman from New York [Mr. ROONEY] to close debate.

Mr. ROONEY. Mr. Chairman, the Committee on Appropriations was asked to approve $900,000 in this category, United States attorneys and marshals. The committee saw fit to deny all sums beyond the amounts actually expended in connection with the unfortunate Little Rock situation. It was necessary, said the Attorney General and the Department of Justice, to send to Little Rock 110 special deputies during the period from August 15 to November 30, 1958. In addition, 52 regular deputies were detailed to Little Rock from Alabama, Arkansas, Georgia, and quite a number of other States. Now, this is the bill for their services. These services have already been performed. Of the $390,000 which the pending amendment seeks to deny, $280,000 is for the pay of these 162 deputy marshals. $80,000 is for their travel. $5,200 is for their telephone and communication services. $1,000 is for other contractual services. $10,100 is for supplies and materials, ammunition mostly. Equipment, police type, $7,700, and social security taxes $5,200.

Now, the Little Rock situation unfortunately arose and the dignity of the United States of America was and is involved. It became incumbent upon the Attorney General to send these deputies in place of troops to this city to enforce the Federal law and to keep the peace, and we are now confronted with the bill for their cost. Are we going to default on paying this bill, this bill to keep law and order in the United States of America? Well, I do not think that day has yet arrived.

Mr. Chairman, I ask for an immediate vote on the pending amendment, and I trust that it will be overwhelmingly voted down.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Arkansas [Mr. ALFORD].

The question was taken; and on a division (demanded by Mr. FULTON) there were—ayes 43, noes 153.

So the amendment was rejected.

Mr. THOMAS. Mr. Chairman, I offer a committee amendment.

The Clerk read as follows:

Committee amendment offered by Mr. THOMAS: On page 50, line 24, strike out "$203,220,000" and insert "$221,220,000".

Mr. THOMAS. Mr. Chairman, let me briefly explain this amendment. This is another one of these pay cuts, in this case in the Post Office Department. There was involved here a reduction of about $22.5 million that the committee placed upon the Post Office Department out of a total bill of around $226 million.

The Post Office Department has written the committee, and we have talked with the gentleman from Virginia [Mr. GARY] and the ranking minority member of the subcommittee that handles this matter. They say that they can take about $4.5 million of the $22.5 million cut. The purpose of the amendment is to increase the amount by that difference, or $18 million.

Mr. GARY. Mr. Chairman, will the gentleman yield?

Mr. THOMAS. I yield to the gentleman from Virginia.

Mr. GARY. It is true that the Post Office Department has already absorbed about 14 percent of the cut.

Mr. THOMAS. They have done perhaps a better job than any other agency in the Government.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Texas [Mr. THOMAS].

The amendment was agreed to.

Mr. CANFIELD. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. CANFIELD: On page 51, line 20, strike out "$260,550" and insert "$280,550".

Mr. CANFIELD. Mr. Chairman, may I say to the chairman of the subcommittee and the Members of the House that the purpose of this is to make a partial restoration of the evidence fund for the Bureau of Narcotics.

Mr. THOMAS. Mr. Chairman, we accept the amendment.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New Jersey [Mr. CANFIELD].

The amendment was agreed to.

Mr. THOMSON of Wyoming. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I think that it is most regretful that the chairman of the subcommittee accepted the amendment of the gentleman from Rhode Island to restore the $50,300,000 request to expand the seven programs under the Defense Education Act of 1958, other than the student loan fund, which was already provided for in the bill.

I think the committee was absolutely right when it said in the committee report, at page 7:

Congress should proceed with due deliberation before embarking on large-scale support of programs such as grants for statistical studies, testing, and classroom facilities. The matter will be thoroughly developed during the hearings on the $150 million budget estimate for 1960.

As a minimum, each of these widely diversified programs should have been made to stand on its own merit.

At this late hour, I do not intend to take a great deal of the time of the House. I merely ask each Member to study the hearings, as I have, to determine what this means as far as education is concerned in his particular district. The amount, you will find, is negligible. What this does is to add to bureaucracy and Federal domination.

I refer you to page 553 of the hearings. The testimony there appearing shows that exclusive of personnel to administer the Defense Education Act, which of course is a complete misnomer in that it has nothing to do with defense, is 653 employees in the Office of Education. The number added for administration of the act totals 353, over a 50 percent increase.

Mr. Chairman, in the session of the Wyoming State Legislature just recently adjourned, there were provided teacher-training scholarships in addition to those already authorized. There was added to the State contribution to the school foundation program an amount of between $1 million and $2 million, as compared to the $150,000 for grants provided in this bill. The State set up a student loan plan for higher education, whereby the State guarantees loans obtained through banks, which is far more adequate than the $48,938 provided in this bill and in the regular appropriation for the State of Wyoming, which is an average sized congressional district.

At the same time, a request was made for legislation authorizing the acceptance of Federal grants under the Defense Education Act. That bill was passed, with a most significant amendment. The State department of education may accept such funds only when the Federal budget is in balance.

Mr. Chairman, it is regretful that the Congress does not show the fiscal responsibility that this amendment to house enrolled act No. 31, signed into law by the Governor of the State of Wyoming on February 9, 1959, which I have before me, suggests. Unless the Congress, in the years ahead, measures up to that responsibility, this country cannot survive.

Mr. McGOVERN. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. MCGOVERN: Page 31, line 19, strike out "$186,755" and insert "$112,053".

Mr. McGOVERN. Mr. Chairman, I can explain this amendment in just about 1 minute. About a month ago the Secretary of Agriculture announced that he was dropping the support price on feed grains to 60 percent of parity. What I am attempting to do in this amendment is to keep the Secretary's office operation consistent with what he has proposed for the farm people, and to reduce the salaries and expenses of his office to 60 percent of parity, which is $112,053.

Mr. THOMAS. Mr. Chairman, I ask unanimous consent that all debate on this paragraph and all amendments thereto close in 2 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

There was no objection.

Mr. THOMAS. Mr. Chairman, if the gentleman is really serious about this amendment, we will accept it and take it to the conference, with the right of throwing it out the window if it does not look right to the conferees.

Mr. HALLECK. Mr. Chairman, will the gentleman from Texas yield to me?

Mr. THOMAS. I yield to the minority leader.

Mr. HALLECK. Mr. Chairman, we have gone along here very well today on a great many things that have really been important. I think the House of Representatives has made something of a record for itself. I just want to say at this juncture to some of those who are running this Congress, if they do not like the agriculture program that we have, they had better start doing something about it, because they cannot just get by sniping and criticizing somebody who is trying to administer the program.

The CHAIRMAN. The question is on the amendment offered by the gentleman from South Dakota [Mr. MCGOVERN].

The amendment was rejected.

Mr. HOLIFIELD. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, the gentleman from North Carolina [Mr. DURHAM] rose a few minutes ago and offered an amendment which was ruled out of order. The amendment was to allow the Federal Civil Defense Agency to transfer $3 million from money which they have, authorized for one purpose, and use it for grants-in-aid in the States in the perfecting of the Federal civil defense organization.

May I say I think the amendment was out of order. It was not properly drawn. I conferred with the clerk of the committee and felt the amendment was properly drawn, but I find out there was a mistake. But I want to comment on the substance of what the committee has done. Last year we passed a bill, Public Law 85–606, which gave joint responsibility to the Federal Government and the State government for the building of a civil defense system in the United States. In that bill there was a provision that 50 percent grants could be made to the States and local subdivisions for administrative purposes to build up this organization in the United States. By the denial of this grant the Congress has gone back upon the legislation it passed last year and, in my opinion, has broken faith with the States. Many States have passed legislation providing funds to build a Federal civil defense and a disaster organization. Denial of this $3 million goes right to the functioning of your local State agencies and your city agencies in the field of disaster organizations.

I do not know at this time how this money could be provided, but I do feel that we are making a mistake in not recognizing that there is a problem of

civil defense in this Nation, and something should be done about it.

I will not take any more of the Committee's time because I recognize the temper of the House, but I could not let this go by without calling the attention of the House to what I think is a grievous mistake.

Mr. MORRIS of Oklahoma. Mr. Chairman, will the gentleman yield?

Mr. HOLIFIELD. I yield to the gentleman from Oklahoma.

Mr. MORRIS of Oklahoma. I want to associate myself with the remarks of the gentleman. I agree with him fully in what he has said.

Mr. HOLIFIELD. Mr. Chairman, the supplemental appropriations bill, H.R. 5916, reported by the Committee on Appropriations, has omitted one small item which could have great consequences on the fate of our Nation. I refer specifically to the President's request for authority to transfer $3 million in civil defense funds from one account to another.

During the past session, Congress enacted legislation authorizing the Federal Government to provide matching funds for civil defense administrative and personnel expenses of the States and localities. As I recall, the President's request for supplemental funds to start that program was rejected late last summer with the specific provision that the executive branch resubmit the item in a deficiency appropriation request after the Congress returned in January. This request was resubmitted but the Appropriations Committee apparently has not seen fit to include a provision for this item in the bill under consideration today.

I think it is important to note in this connection that the administration is not asking for the appropriation of new money. The request is for authority to transfer $3 million of unexpended funds from one account to another. From a balance of $4.5 million in the civil defense equipment and supplies account, $3 million would be transferred for use in matching, on a 50–50 basis, State and local funds for administrative and personnel expenses.

The stack of hearings and reports on this table represents more than 3 years of study and investigation of civil defense matters by the Government Operations Subcommittee on Military Operations, of which I am chairman. In this time we have compiled 9 volumes of hearings, comprising 4,000 printed pages of expert testimony. We have issued four carefully documented committee reports.

More than 250 expert witnesses, including the chairman and members of the Joint Chiefs of Staff, have assisted us in our appraisal of national civil defense requirements.

As a consequence of our study, the Military Operations Subcommittee in its basic civil defense report—House Report No. 2946, 84th Congress—set forth a series of recommendations designed to strengthen the Federal civil defense effort in keeping with the constitutional responsibility of the Federal Government to provide for the national defense. These recommendations were subsequently incorporated in proposed legislation—H.R. 2125, 85th Congress—which was introduced in the House by every member of the subcommittee.

One of the provisions of that proposed legislation would have authorized the Federal Government to provide matching funds for civil defense administrative and personnel expenses of the States and localities. While our comprehensive legislation was never acted upon, the Congress did adopt this particular provision in the civil defense amendments of 1958—Public Law 85–606—which were introduced by the distinguished gentleman from North Carolina [Mr. DURHAM]. Those amendments were approved by the Armed Services Committee and enacted into law during the past session of Congress.

In refusing to authorize a simple transfer of $3 million to carry out this particular provision of law, the Appropriations Committee is in effect nullifying the findings of the Armed Services Committee as well as those of the Military Operations Subcommittee.

I may also note that the purposes for which this transfer of funds is requested have been strongly endorsed or recommended by the various survey and study groups considering civil defense problems in recent years. These include the Kestnbaum Commission on Intergovernmental Relations, the project East River Group, the National Planning Association and the Sarnoff Study Group.

In addition the civil defense committee of the Governors' conference, the American Municipal Associations' Civil Defense Committee, as well as the National Association of County Officials, the American Legion and the AFL–CIO have all recommended this program.

The Appropriations Committee report accompanying the measure now under consideration is, by implication, very critical of the Office of Civil and Defense Mobilization. It indicated that the funds under consideration would be wastefully expended with no concrete benefits to the national security.

Let me say that as a Member of Congress, I have been an outspoken critic of the civil defense operations in the Federal Government. On more than one occasion I have raised objections to the manner in which the FCDA, and its successor, the OCDM, have carried out civil defense functions at the Federal level and I shall probably have many more critical things to say about the OCDM in the future.

The point at issue today, however, goes to the question of whether we shall have any civil defense program in our Nation. While I believe that a vastly expanded Federal program is required before we can expect to have an effective national civil defense, I recognize that any program must rest ultimately upon the people of our Nation and their instrumentalities of government at all levels, including the State and local.

The States and localities are willing to do their part, provided Federal leadership and assistance are forthcoming. To date, the States have matched Federal funds amounting to $131 million for equipment, training, and other items in the matching program. Altogether the States have budgeted approximately $24 million for this program for the coming fiscal year.

I have been advised by various State and local officials that unless increased Federal assistance is forthcoming, we are in danger of losing the benefit of all the civil defense work accomplished to date. I am told that failure to provide such assistance will cause us to lose the nucleus of civil defense personnel now residing at the State and local levels.

While many of us agree that our civil defense program is not what it ought to be, I am firmly convinced that we cannot afford to lose whatever capability we now have. With the Berlin crisis simmering, with the Communists on the march from Iraq to Bolivia, with trouble even in the remote land of Tibet, and with our missile development program and our overall Defense Establishment not only gaping, but sagging, the Congress should not stand idle while our civil defense program is being dismantled.

The Appropriations Committee report would make it appear as though the civil defense transfer authority requested by the administration would embark this Nation on an entirely new program—something new in the American scheme of things. In fact, there are many precedents for the type of assistance contemplated in this request. Federal grants have long been used by the States to administer a number of health, education, and welfare programs, such as public assistance, vocational rehabilitation and education, and hospital construction. Federal funds have been used to administer the State employment offices. Federal funds have supported the National Guard. Federal grants for administrative and personnel costs have made possible the successful operation of various agriculture and forestry programs.

Time does not permit a comprehensive discussion of the many civil defense tasks facing our Nation. I intend to request a special order for an address of considerable length at a later date, but at the present time I should like to call attention to certain evidence of increased Soviet concern with civil defense matters.

I have here a detailed study of Soviet civil defense compiled by the Library of Congress. It was completed only last week and includes the latest information available in Russian publications and other sources.

According to the evidence collected in this study, the Soviet Union last year revised its civil defense plans to bring its program up to the requirements of thermonuclear warfare. The indication is that large segments of the Soviet population are being indoctrinated in techniques of survival and rehabilitation.

In the face of this evidence, and lacking any clear understanding of Soviet intentions, it is my firm belief that we in the United States should be attempting to build a civil defense program instead of stifling it in its infancy.

Mr. GROSS. Mr. Chairman, I move to strike out the requisite number of words.

Mr. Chairman, last week we had a bill before the House to provide for airport construction, and we heard at that time from one of our leaders that the vote to save $97 million would separate the boys from the men. Today we had a vote on spending an additional $100 million on foreign countries. I wonder who got separated today? I simply want the RECORD to show, if we are not going to have a rollcall vote on this bill, that I am absolutely opposed to it.

Mr. ANDERSON of Montana. Mr. Chairman, I concur fully in the statements made in behalf of the Veterans' Administration's need for supplemental funds. I hope we will give a full and resounding vote of affirmation to the amendment to restore fully these critically needed funds, and that the proposed reduction of $6,118,500 not be made. As a combat veteran of World War II myself, I support our veterans' groups views that all these funds are needed to assure effective operation of our VA facilities through 1959. These situations always occur when unforeseen costs arise, such as the pay raise enacted following the initial budgetary request for these VA functions. I should be terribly distressed, and I believe all thinking Americans would be distressed, should VA hospitals have to close down a part of their bed capacity for qualified patients in the final 3 months of 1959. I especially urge full appropriations be made for general operating expense, inpatient care and outpatient care to service-connected patients throughout 1959 in the VA program.

Mrs. DWYER. Mr. Chairman, I am greatly disturbed at the recommendations made by the Appropriations Committee in its report on the second supplemental appropriations bill for fiscal year 1959. In several respects, the bill as reported fails dismally to provide for absolutely essential Government responsibilities. I am especially concerned at the failure to provide funds for all but one of the programs implementing the National Defense Education Act of last year.

We have heard a great deal lately about the need to economize in Federal spending. This is a very real need; I recognize it; and wherever possible I have supported and shall continue to support efforts to economize with the people's money.

But there is such a thing as false economy. For instance, it is impossible to administer a program with efficiency and economy when its budget is subjected to fits and starts, to plenty of money in one quarter and not enough in the next. Any program requires continuity of personnel and consistency of effort. Neither is possible when a program's budget is uncertain and unpredictable.

Likewise, it is not genuine economy when we put off until tomorrow expenditures that have to be made today. Delay is expensive. Wasted time is never going to be recovered. A steady level of activity is indispensable if economy is to be achieved in any kind of operation: it can be controlled better, and the best possible use of resources can be obtained. Maximum results for minimum costs is possible only under this kind of program administration.

The price of false economy today, Mr. Speaker, is higher spending tomorrow.

The National Defense Education Act is a particularly discouraging example of the likely consequences of the committee's proposed action. The committee has, in effect, given a green light to one of the education activities while it has abruptly stopped all the rest.

Can our memories be so short as to allow us to forget the conditions and the stimulus which led the Congress to pass the National Defense Education Act only a few short months ago? Or can our judgments have so changed that what seemed critically important then has since faded into relative obscurity? Has the Soviet Union suddenly ceased to challenge the free world? Have Soviet developments in education, science and foreign languages, for example, become less significant in the struggle to influence the new countries of the world? Or has our own educational system demonstrated in the last half year that it does not need the help contemplated in the act? Are we really so superior, so proficient, so well provided for in these once-crucial fields of study?

If we can honestly answer "yes" to each of these questions, Mr. Speaker, then we have no business seeking to restore the $50,300,000 cut by the committee. But I doubt if any of us would be so foolhardy as to answer "yes" to a single one of these questions.

Let us, therefore, review for a moment the reasons why a supplemental appropriation is necessary for activities under the Defense Education Act.

The Committee on Labor and Public Welfare reported the education bill on July 15, 1958. In its report, the committee highlighted its motive as follows:

> America is confronted with a serious and continuing challenge in many fields. The challenge—in science, industry, government, military strength, international relations—stems from the forces of totalitarianism. This challenge, as well as our own goal of enlargement of life for each individual, requires the fullest possible development of the talents of our young people. American education, therefore, bears a grave responsibility in our times.

The committee also had this to report:

> The members of the committee believe that the bill offers an effective approach to those critical areas of shortage and neglect which now carry highest priority in the national interest—in the teaching of science, mathematics, and modern foreign languages. The committee believes, too, that the related sequence of programs in testing, counseling, scholarships, loans, and the fellowships—to identify, encourage and assist the ablest students who need help—will be of great value in the continuing effort to conserve and develop the critically needed human resources of our country.

In passing this momentous legislation, Congress announced to the world that it took seriously the challenge the committee had recognized, and it expressed its hope and expectation that the bill would help strengthen the Nation to meet the challenge successfully. This was no simple gesture or statement of empty words. It was the act of determined people, guided by high values and clear-sighted recognition of both the cost and the benefits of its action.

Earlier last year, our Committee on Appropriations also had something to say on the subject of education. On March 25, 1958, the committee reported the Departments of Labor, and Health, Education and Welfare appropriation bill for fiscal year 1959. Discussing the item for the Office of Education, the committee noted:

> During the past several months the Nation's attention has been called more forcibly to the fact that we cannot afford to be complacent. If we are to maintain a position of leadership it is more and more being recognized that education must keep up with the times.

The committee also remarked of the Agency that:

> The whole Office has been built up to a level where it can come closer to rendering the services that the educational system needs and must have if the Nation is to keep abreast of the changing conditions nationwide and worldwide.

This expression of concern for the need to improve education and this statement of regard for the Agency responsible for helping education was made, of course, before the Congress approved the vast new programs of the National Defense Education Act.

With passage of the act, which authorized appropriations of $182,800,000 for the first year, the Appropriations Committee was called upon to implement it with at least a preliminary appropriation of funds. The President estimated in August 1958, that $117,200,000 would be required to get the program started, though this figure was shortly revised upward when Congress approved the inclusion of the area vocational school program in the education bill, to a total of $133,700,000. In addition, $2,100,000 was estimated to be sufficient for salaries and expenses in the beginning months of the program.

As the distinguished gentleman from Rhode Island [Mr. FOGARTY], a member of the Appropriations Committee, declared during debate on the bill appropriating these interim funds: "The full requirements of the program for this fiscal year can then be assessed when the 86th Congress convenes in January. At that time we can consider the supplemental needs of the Office of Education for the remainder of fiscal year 1959. Certainly the least we should do is to appropriate these amounts before this Congress adjourns."

The Congress, however—under the stress of the final moments of the 85th Congress—appropriated only $40 million for the National Defense Education Act instead of $133,700,000; and it appropriated only $750,000 instead of the $2,100,000 for salaries and expenses.

While this left approximately $142 million of the first-year authorization unappropriated, the President requested only $75 million for the remainder of fiscal year 1959 in his January budget message to Congress. This reduction—which was nearly 50 percent—represented the administration's best judgment on the minimum defense education program the country could afford—de-

spite the fact that the act had received wide acclaim from educators throughout the country and despite the fact that the Office of Education had made an early and effective start in organizing a working and efficient program.

Therefore, it can hardly be alleged that the President's supplemental request of $75 million was anything but a minimum figure, carefully estimated and drastically reduced.

It is in this light, Mr. Speaker, that I must agree with the Secretary of Health, Education, and Welfare's reaction to the report of the Appropriations Committee as "incredible." He has estimated a whole year may be lost in putting into effect the program authorized by Congress to strengthen our country's educational system—unless the committee's cut is restored.

Again, Mr. Speaker, I ask what has happened since August 1958, to make it safer or wiser to stop so badly needed a program as this?

If we fail to restore these minimum appropriations, then our people and the whole world will be right in concluding that our concern for education last year was an idle fancy, a passing emotion, a meaningless jumble of words.

Mr. MONAGAN. Mr. Chairman, I am glad to support the second supplemental appropriation bill for 1959—H.R. 5916—in its amended form.

I believe that the House has approached this bill in a spirit which combines an interest in needed programs with a desire to keep appropriations within reasonable bounds.

It is worthy of note that the Committee on Appropriations reduced the recommendations of the Bureau of the Budget by $385,432,032 and even with the amendments passed by the House the final appropriations will be approximately $208 million below the budget.

I am happy to support the restoration of $100 million to the Development Loan Fund. Even though there are five other agencies supplying money in whole or in part for economic development abroad and in spite of the fact that we are currently receiving reports of discouraging mismanagement in our foreign assistance programs, nevertheless, I feel that the main objectives of these programs are valid. I feel that our administration of these programs is improving and I believe that our security and the stability of our friends throughout the world require that they be continued.

This does not mean that we should not keep these programs continually under observation. It is our duty to do this because of the amounts involved and because of the constant danger that their objectives will not be realized because of faulty administration. In our present status of international tension, however, I am sure that this is not a time to abolish these programs.

Mr. JENSEN. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I see the gentleman from Texas [Mr. THOMAS] on his feet about to move that the Committee do now rise, and I am glad that he is going to do so because up to this time we have spent quite a little money, but still we have saved money and, as I said, even though we have spent a lot of money today, we are still below the budget to the extent of $208 million.

Mr. THOMAS. I must say my friend, the gentleman from Iowa, deserves a large share of the credit.

Mr. Chairman, I move that the Committee do now rise and report the bill back to the House with sundry amendments with the recommendation that the amendments be agreed to and that the bill, as amended, do pass.

The motion was agreed to.

Accordingly the Committee rose; and, the Speaker having resumed the chair, Mr. BOGGS, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 5916) making supplemental appropriations for the fiscal year ending June 30, 1959, and for other purposes, had directed him to report the bill back to the House with sundry amendments, with the recommendation that the amendments be agreed to and that the bill, as amended, do pass.

The previous question was ordered.

The SPEAKER. Is a separate vote demanded on any amendment?

Mr. WILLIAMS. Mr. Speaker, I demand a separate vote on the Rooney amendment restoring the $100 million to the Development Loan Fund.

The SPEAKER. Is a separate vote demanded on any other amendment? If not, the Chair will put them en gros.

The question is on the amendments.

The amendments were agreed to.

The Clerk will report the amendment on which a separate vote has been demanded.

The Clerk read as follows:

On page 6, after line 22, insert:

"FUND APPROPRIATED TO THE PRESIDENT

"Mutual security

"Development Loan Fund

"For an additional amount for advances to the Development Loan Fund, as authorized by section 203 of the Mutual Act of 1954, as amended, $100,000,000, to remain available until expended."

The SPEAKER. The question is on the amendment.

Mr. WILLIAMS. Mr. Speaker, I demand the yeas and nays.

The yeas and nays were refused.

Mr. FULTON. Mr. Speaker, I ask for a division.

The question was taken, and on a division (demanded by Mr. FULTON) there were—ayes 183, noes 59.

So the amendment was agreed to.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed, and a motion to reconsider was laid on the table.

GENERAL LEAVE TO EXTEND

Mr. THOMAS. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days within which to extend their remarks on the bill just passed.

The SPEAKER. Is there objection to the request of the gentleman from Texas?

There was no objection.

MINIMUM WAGE OF $1.25 AND EXTENSION OF COVERAGE

Mr. RODINO. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. RODINO. Mr. Speaker, it is essential that the Fair Labor Standards Act be amended without delay to increase the minimum wage and to extend its coverage to millions of workers who are not protected under the present law's restrictive provisions regarding exempted industries. To remedy these deficiencies, I have introduced a bill, H.R. 4740. This bill proposes to raise the minimum wage to $1.25 and to provide coverage for employees of employers who are engaged in activities affecting interstate commerce and to eliminate certain exemptions.

An increase in the minimum wage at this time will produce two beneficial results. First, it will raise the level of income for numerous workers who are subsisting on earnings that have lagged far behind those of organized employees in higher wage industries. Second, it will bolster the economy by placing additional purchasing power in the hands of consumers.

When the $1 minimum was voted in 1955, many people believed it to be inadequate and advocated the $1.25 rate now being considered. If it was felt at that time that the floor to wages should be raised to $1.25, how much more imperative it is today to establish the higher minimum. During the past 3 years that the $1 minimum has been in effect, the cost of living has risen steadily; the Consumer Price Index jumped from 114.7 to 123.8, an increase of 9.1 points. As a result, the purchasing power of the dollar has deteriorated to the extent that during the past year its purchasing power was 2.6 percent less than it was in 1957. All of us have felt the impact of higher prices, and it does not take much imagination to visualize the difficulties that the low-wage workers are undergoing to stretch their meager earnings to buy even the necessities of life.

We have been reminded from time to time, but it bears repeating, that the wage and hour law was enacted for the purpose of correcting and eliminating "conditions detrimental to the maintenance of the minimum standard of living necessary for health, efficiency, and general well-being of workers." We cannot, in all honesty, say that the present minimum of $1 is adequate to carry out this declared purpose. The majority of low-wage workers are unorganized and do not have collective support to plead their case. It is up to Congress to protect their interests and we should act now to bring relief to those living on substandard incomes.

The original Fair Labor Standards Act of 1938 was one of the measures enacted to fight the depression of the 1930's. The problem of unemployment and its solution were of utmost importance at that time and one of the aims of the act was to increase the incomes of consumers

and create a demand for goods and services. The increases in the minimum wage to 75 cents and $1 an hour in 1950 and 1956 were necessitated by the economic inflation, and the failure of wages in low-paying industries to keep abreast with higher living costs. Today the specter of unemployment again hangs over us, and the increase in the minimum wage to $1.25 will add to consumer purchasing power and help stimulate the economy and the demand for workers. We cannot hesitate to act to bring relief to the unemployed.

Since its enactment nearly 21 years ago, the Fair Labor Standards Act has provided protection to 24 million employees in industries in interstate commerce covered by the act. Unfortunately, there are still some 20 million workers who are denied coverage. Under my bill, it is proposed to correct the injustice done to approximately 7½ million workers in retail stores, laundry and dry cleaning establishments, service occupations, and other categories. The 7½ million workers I mentioned are employees of large business concerns, most of them employed in retail stores. The retail stores I have in mind are not the family, neighborhood variety. They are the ones connected with giant operations, such as the food chainstores and variety chainstores which have branches spread throughout broad areas or the whole expanse of the Nation. These giant concerns can readily pay the higher minimum, and the same is true of other exempt industries whose yearly amounts of business run into hundreds of thousands of dollars.

It has been argued that coverage of these employees should be left to the States. But let us take a look at this situation. Sixteen States do not have a minimum wage law; only 12 States that do have laws provide coverage for both men and women; even fewer States have basic minimum hourly rates of $1; and only 10 States and the District of Columbia set overtime rates in addition to the basic minimum for work beyond 40 hours a week. Probably one-fifth of the 20 million workers not covered by the Fair Labor Standards Act are afforded protection under State laws. Extension of coverage under the Federal law alone can at least partially eliminate the inequities and deprivations that exist today.

I earnestly ask you to support me in this endeavor to establish adequate minimum wage protection so urgently needed for the relief of our fellow countrymen and for the prosperity of the United States.

NICHOLAS CHRISTOPILOS' CONTRIBUTION TO SCIENCE

Mr. PRICE. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. PRICE. Mr. Speaker, recent press reports regarding the valuable contributions to American science which have been made by Dr. Nicholas Christopilos of the University of California Radiation Laboratory underline the importance to American research of utilizing all talented individuals, no matter how great a formal education the individual has had in nuclear physics.

I would like to refer to testimony presented to the Research and Development Subcommittee of the Joint Committee on Atomic Energy last year by Dr. George K. Green of Brookhaven National Laboratory, describing the extraordinary contribution which Dr. Christopilos has made in the field of high energy accelerators, despite the limited education he received before coming to the University of California from his home in Greece.

Brains are where you find them. I allude to the fact that Dr. Christopilos had made his fundamental discovery of the important strong focusing principle for accelerators while he was still working in Greece in a nonscientific job, and independently of the work being done by scientists in this country. In fact, he apparently discovered this principle about a year before U.S. scientists did, even though he had no formal affiliation with scientific research groups.

I call my colleagues' attention to the exchange from the subcommittee's hearings in February 1958, in which Dr. Green described the contributions of Dr. Christopilos. Let me read it.

After describing the work which had been done on several high energy accelerators in this country, Dr. Green goes on to say:

Dr. GREEN. So a group of our people sat down and discovered the strong focusing principle, whereby one could build a magnet of much bigger diameter with the magnet itself being a smaller cross section and it would not take so much steel. Interestingly enough, Nicholas Christopilos in Greece, working all by himself, discovered this strong focusing principle on his own, completely independently. It turned out he was born in the United States and taken back to Greece when he was 4 years old, and later on Nick came to work in our laboratory with us.

Representative PRICE. When was this?

Dr. GREEN. He apparently discovered this principle about a year before we did.

Senator ANDERSON. Did he not submit it to our people and we turned it down as being impractical?

Dr. GREEN. No.

Senator ANDERSON. Is that right?

Dr. GREEN. Let me be frank and tell the story.

Nick mailed a letter to Berkeley about accelerators, in which he was very interested, and the letter was a mess. People at Berkeley read it very carefully, analyzed it, and it was no good. So they wrote him back an explanation of what was wrong with all of these crazy ideas. Nick sat down, being a very brilliant individual, and proposed to correct his ideas. This letter from Berkeley did him a lot of good.

Then he sent to Berkeley a description of this strong focusing principle. People at Berkeley said it is another letter from that crazy Greek, threw it in the file and never read it.

When Nick came over and saw the article our people had published in Physical Review, he said, "I described that before." We telephoned Berkeley; they went and pulled it out of the file; their faces were very red and there it was.

Senator ANDERSON. I would say that is an easy explanation to make after the facts. Somebody did put it away and it did have the strong focusing principle in it and no attention was paid to it. That much we would have to agree on.

Dr. GREEN. Exactly. That is exactly what happened.

Senator ANDERSON. Nobody agrees that it was not as good as we had here?

Dr. GREEN. No. It looked like a crank letter. We get these crank letters.

Senator ANDERSON. You are not the only one that gets them.

I think that is a very fine statement, Dr. Green. I am happy that you do state that this was overlooked.

Dr. GREEN. Certainly.

Senator ANDERSON. It would be an amazing thing if you did not overlook anything.

Dr. GREEN. When we got acquainted with Nick, we were so well impressed with him, we hired him.

Senator ANDERSON. I could not commend you more for what you did.

PASSPORTS AND THE COMMUNIST CONSPIRACY

Mr. SELDEN. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD and to include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Alabama?

There was no objection.

Mr. SELDEN. Mr. Speaker, last year I introduced a bill—H.R. 13760—that provided for the denial of passports to persons knowingly engaged in activities intended to further the international Communist movement. Although this measure was approved by the House without a dissenting vote, there was not sufficient time before adjournment for the Senate to consider it.

On January 7 of this year, I introduced an identical bill—H.R. 55—and, on several occasions since, I have called to the attention of this House the vital need for its enactment. An address delivered today, March 24, to the Chicago Council of Foreign Relations by the Honorable John W. Hanes, Jr., Administrator of the Bureau of Security and Consular Affairs of the Department of State, further emphasizes the necessity for the earliest possible enactment of H.R. 55 or similar legislation.

Mr. Hanes' address follows:

PASSPORTS AND THE COMMUNIST CONSPIRACY

(Address by the Honorable John W. Hanes, Jr., Administrator, Bureau of Security and Consular Affairs, at the Chicago Council of Foreign Relations luncheon meeting, Chicago, Ill., Tuesday, March 24, 1959)

I am very pleased to have an opportunity to meet with this particular group in this particular city. I want to talk with you about some basic matters involving our foreign relations and our national security.

Foreign relations used to be something that this country thought it could afford largely to ignore, or at least to delegate to the sole attention of a few people who were interested in such things in Washington. The pioneer work which your own organization, comprised of so many leading citizens of this great central city of the United States, has done for nearly 40 years is one very tangible reason why that situation has changed.

Today it is self-evident that our foreign relations are inseparable from our national security. We all recognize that our security, our lives and our very existence, both as individuals and as a nation, are effectively threatened from abroad. We all recognize

the existence of a powerful and implacable hostile force dedicated to world conquest, and to the destruction of all that our republic and our people stand for. The hostile force is international communism, and its primary manifestation is Soviet Russia. It is also, however, an international conspiracy that extends into every nation in the world, including our own.

These facts have a connection with the U.S. passport. I would like today to tell you why.

A great deal of confusion and misunderstanding has surrounded the matter of Communists and passports. The misunderstanding has related both to the facts and to the issues which are involved, as well as to others which are not, but which have been introduced into the controversy. I hope to set the record straight on these facts and issues.

THE SUPREME COURT DECISION

In June 1958 in the Kent, Briehl, and Dayton cases, the U.S. Supreme Court, by a majority of 5–4, handed down decisions holding, in effect, that the Secretary of State does not have the authority to refuse a passport because of membership in the Communist Party, or even because he has specifically found that an applicant is going abroad willfully and knowingly to engage in activities which would advance the Communist movement. In both decisions, the Court denied the Secretary's right because the Congress has not passed legislation specifically giving the Secretary that right. Contrary to popular belief the Supreme Court did not hold that it was unconstitutional to deny a passport to a Communist. It did say that any legislation giving the Secretary the right to make such a denial must carefully protect the constitutional rights of citizens.

Since that date, the administration has been urgently seeking the passage of such legislation by the Congress. Although the House overwhelmingly passed a bill in the closing days of the last session of Congress, the Senate failed to act; and neither House has taken action as yet in this session.

THE NATURE OF THE COMMUNIST CONSPIRACY

In order to understand why this situation is serious, it is necessary first to understand the nature and methods of the international Communist conspiracy.

That conspiracy today creates a greater menace to the United States than we have ever faced before.

With assets of some 900 million people and 16 once independent countries that have fallen under its control, it commands frightening resources. The United States is the only power strong enough to maintain the alliance which alone keeps international communism from its goal of world conquest. We would be naive indeed if we believed that its vast and harshly regimented resources were not consistently committed against us in every way which could do us harm—openly and secretly; abroad and at home.

This conspiracy is truly international. It is controlled and directed from Moscow. That part of it which exists in America is no more American than that part which rules in Hungary is Hungarian. Some hard-core supporters of the international Communist movement hold American citizenship, but they are not ordinary American citizens. They voluntarily give service and allegiance to a foreign ideology which promotes the objectives of a foreign power.

Some people feel that, because actual membership in the Communist Party, U.S.A., as of today is small, the American brand of communism therefore offers no threat to our internal security. Many top Communists, of course, are not party members. The Communists themselves do not even agree that the party is weak. Last month, William Lorenzo Patterson in an editorial in "The Worker" said: "The prevailing political atmosphere permits increasing activities with lessening dangers of victimization. * * * Let's be bolder." Every day brings us new evidence of the vitality, the far-flung operations and the current danger of the Communist conspiracy in the United States.

We believe that the travel abroad and the possession of a valid American passport by hard-core American Communists constitutes a real danger to our country. This is so because all the evidence about Communist organization and methods shows that the effective functioning of the international party machinery depends in large part on the freedom of its members to travel.

One does not have to be a student of Communist organization to realize the truth of this. Think of your own organizations. Everyone in business today travels almost constantly. You all know that personal contact is an essential part of doing business. The mails—even the telephone—are not an adequate substitute. If this is true of normal business operations, how much more true must it be of the enormously complex worldwide operation of an international conspiracy where virtually everything must also be kept secret. I do not know how one would go about recruiting an espionage agent by mail or by telephone. I doubt if the Communists know either. Such things require personal assessment, personal recruitment, personal contact. In an organization of this sort, to hamper the movements of any members of the organization is a crippling blow and puts the operations of the organization under a most heavy handicap.

Another thing that is important to understand is that the size and complexity of this Communist organization requires a a very great variety of orders and instructions and information and activities to keep it operating. It has top people in it, and it has little people. It isn't only the top people who are important. Each of the little people in this highly disciplined machine is a cog who has his own place and his own usefulness to the functioning of the whole machine. A relatively unimportant but reliable member of the conspiracy may act as a courier to carry an important message between Communist leaders in different countries. The whole elaborate organization which has surrounded every Communist espionage network which we know about in this country, such as in the Rosenberg case, has demonstrated conclusively the essential role played by the numerous unimportant little people in the organization without whom it would cease to function.

We are by no means helpless against this conspiracy, nor has our Government been inactive or unsuccessful in fighting back. Much of the success we have had is attributable directly to the dedicated fight over many years and many obstacles which has been carried on personally by Mr. J. Edgar Hoover and by the FBI. Their persistence and their results have inspired others who work in this field, and have done much to awaken the American people to a clear and present danger.

Our weapons against Communist subversion have been a closely interlinked set of techniques. They have included penetration of the conspiracy and constant surveillance and, always, to the extent we could achieve it, by passport and visa and immigration regulations, the denial of free movement in and out of the country and thereby of easy and satisfactory communications.

The loss of our ability to stop American members of the Communist apparatus from getting passports has blunted the other weapons we have against the Communist conspiracy. For example, our success in preventing the entry of foreign Communist agents and couriers with their financing and instructions from headquarters becomes rather hollow if American members of the apparatus can travel freely out of the country. Similarly, the most successful penetration of the domestic Communist apparatus by agents of the United States is rendered much less useful if the persons watched can evade observation for extended periods by traveling abroad, probably behind the Iron Curtain where we can hardly expect to know what they are doing.

I have sometimes been asked whether there is really any point in denying passports to American Communists, for after all they can travel legally to Latin America without a passport, and from there usually can obtain illegal passage to wherever they wish to go. This is undeniably true. However, it is also a fact that, in the years during which we denied passports to Communists, very few important members of the apparatus took advantage of this roundabout route. One reason may be that whenever you require an organization to utilize cumbersome and devious and illegal methods of this sort, you stretch that much further and that much thinner the trail which the conspirators cannot fail to leave. They must utilize more people with more risk of some breakdown in the system and compromise of its secrecy. It is that much more likely that somewhere along the trail those whose job it is to counter the Communist conspiracy will uncover it. Undoubtedly, one of the greatest protections we have against the conspiracy is knowledge of what is taking place within it. Whenever such a trail can be uncovered at any point, it can usually be unraveled fairly easily in both directions with the result of a considerable increase of our knowledge about the whole conspiracy.

COMMUNIST INTEREST IN PASSPORTS

Our own Government has long recognized how important American passports are to the Communist conspiracy. Forty years ago, just after the Bolshevik revolution, the Department of State became aware that American Communists were carrying on espionage, propaganda and revolutionary activities for the Soviet Government and the international Communist movement. The State Department decided in 1920 that passports should be refused to persons who advocated the overthrow of governments by force, who espoused publicly the Soviet cause, or were carriers of Communist correspondence. This policy remained in force until 1931. At no time, I might point out, during this 11 years was the Secretary's discretion in the matter ever challenged in the courts.

The American passport has always been valuable to espionage rings, as you can well imagine. For example, prior to World War II an espionage agent was arrested in Copenhagen and found to have four U.S. passports in his possession. The Communist underground has long maintained workshops devoted to the wholesale forgery and falsification of passports and other documents.

However, genuine American passports were highly prized at intelligence headquarters in Moscow, according to a former chief of Soviet intelligence in Europe. During the Spanish Civil War, Communist leaders assiduously collected the passports of the several thousand Americans in the International Brigade, and the bulk of these passports eventually found their way to Moscow for alteration and possible use by Soviet agents. In fact, so many American passports were collected from this source that, as a countermeasure, the U.S. had to replace every outstanding passport in the world with a new document.

CONGRESS ACTS

In 1949, 11 members of the National Board of the Communist Party, U.S.A., were convicted of conspiring to advocate the overthrow of the U.S. Government by force or violence. In 1950, American Communists

were actively supporting the enemy position in the Korean war. Congress, recognizing these dangers, passed the Internal Security Act and found that "travel of Communist members, representatives, and agents from country to country facilitates communication and is a prerequisite for the carrying on of activities to further the purposes of the Communist movement."

Congress also said that Americans who participate knowingly in the world Communist movement "in effect repudiate their allegiance to the United States, and in effect transfer their allegiance to the foreign country in which is vested the direction and control of the world Communist movement." Yet allegiance is the touchstone of the right to a passport.

Indeed, the Internal Security Act of 1950 made it a crime to issue passports to members of registered Communist organizations; but this sanction still has no legal effect because protracted litigation in the courts has been able to prevent that part of the act from becoming applicable.

Again in 1954 Congress made its intention clear when it declared that the Communist Party of the United States, "although purportedly a political party, is in fact an instrumentality of a conspiracy to overthrow the Government of the United States." Congress further found that the role of the Communist Party, U.S.A., as the agency of a hostile foreign power renders its existence a "clear, present and continuing danger to the security of the United States."

THE DEPARTMENT'S REGULATIONS

The Secretary of State, charged by law with the issuing of passports, could hardly have ignored these congressional findings. In 1952, the Department's policy was made a matter of official record when Secretary Acheson issued regulations establishing the criteria for refusing passports to Communists and Communist supporters.

The publication of these regulations triggered a violent attack by the Communists through their press and through the courts, utilizing every device of law and procedure. Their clever campaign gained respectability because many sincere persons, who have no sympathy whatever with communism, became disturbed by the argument that the regulations permitted the Secretary of State arbitrarily to restrict a citizen's rights. These were the regulations which in 1958 the Supreme Court struck down by finding that they had not been specifically authorized by Congress.

I think it might be well to put into perspective exactly how these regulations operated, and their practical effects, by giving you some statistics on the numbers of Communist supporters refused passports under them and the numbers of Americans who received passports. For the 2 calendar years preceding the Supreme Court's decision, 1956 and 1957, 1,145,000 passports were issued or renewed. During that same period, the Passport Office limited the passport privilege of 51 persons because of Communist grounds. Every one of those persons had access to an elaborate and impartial appeal mechanism, and many of them utilized it.

From the time this mechanism was set up in 1952 until the Supreme Court's decision in June 1958 the Secretary of State—and it must be the Secretary personally—refused passports to only 15 persons on Communist grounds after full hearings. A number were granted passports after hearings; some others, of course, did not contest the Passport Office's denial; and undoubtedly many active Communists never bothered to apply at all, knowing they would be scrutinized and required to make a sworn statement about Communist Party membership.

I believe it is important to remember these figures when statements are made about the arbitrary action of the Department in passport matters. I assure you that these 15 persons who were denied passports by the Secretary did not include a single one who was an ordinary American citizen, or whose only activity in behalf of the Communist movement was some vague alleged beliefs and associations.

HISTORY OF PASSPORTS

American passports, of course, are valuable documents, and well worth all this trouble that the Communists have gone through to get them. Our passport requests foreign governments to let the bearer, an American citizen, pass safely and freely, and to give him all lawful aid and protection. It invokes for him the full prestige of the U.S. Government; and foreign governments usually accept it as meaning that he is a reputable person.

The passport has also become a practical necessity for travel. Today 75 percent of all countries, including most of Latin America, require foreigners, including Americans, to have passports for entry; and we ourselves require Americans to obtain passports for travel outside the Western Hemisphere because we are still in a state of national emergency.

We have made it easy, however, to meet this requirement. We issue nearly three-quarters of a million passports each year, each one valid for a maximum of 4 years. We refuse only an infinitesimal number.

Much of the meaning of even the very few, but very important refusals became academic, of course, in June 1958, when the Supreme Court's ruling was handed down. Since then, as we anticipated, there has been a flood of applications from persons with records of Communist affiliations or activities. Some of them had previously been denied passports, but many had never previously applied. Many we know a great deal about, and none of it is good. Others we would like to know more about, but the Department of State is no longer in a position even to inquire, much less investigate, whether any such applicant is a Communist Party member, or how dangerous he may be. There is quite a difference, for example, between a known courier and a harmless fellow traveler.

This flood of applications continues today. The Communists are getting passports while they can. Naturally, in all these cases the Department's previous policy has had to give way and passports have been and are being issued to all these people.

LEGISLATION REQUIRED

Immediately following the Supreme Court decision, Secretary Dulles sent Congress a draft bill to provide the specific legislative authority which the Court held was lacking. He wrote to the Congress:

"I think there can be no doubt in anyone's mind that we are today engaged for survival in a bitter struggle against the international Communist movement. * * * [This] movement seeks everywhere to thwart United States foreign policy. It seeks on every front to influence foreign governments and peoples against the United States and eventually by every means, including violence, to encircle the United States and subordinate us to its will. The issuance of United States passports to supporters of that movement facilitates their travel to and in foreign countries. It clothes them when abroad with all the dignity and protection that our Government affords. Surely, our Government should be in a position to deny passports to such persons."

President Eisenhower urgently endorsed the legislation, saying: "Each day and week that passes without it exposes us to great danger."

What must such legislation do?

Again, the President has expressed it well. He said:

"In exercising these necessary limitations on the issuance of passports, the executive branch is greatly concerned with seeing to it that the inherent rights of American citizens are preserved. Any limitations on the right to travel can only be tolerated in terms of overriding requirements of our national security, and must be subject to substantive and procedural guarantees."

Simply stated, what we need is legislative authority which will allow the Secretary of State to deny passports to hard-core supporters of the international Communist movement. We believe such denial should occur under due process of law, including judicial review. We believe that it should apply only to those who knowingly engage in activities—not merely hold beliefs or have associations—but engage in activities in furtherance of the international Communist movement, or who are going abroad to engage in such activities.

We do not seek statutory passport authority to stifle criticism of this Government or its policies. We do not believe that the passport should or can be used to restrict the movement of people who hold political, social, or economic opinions which are not of the orthodox American variety.

We do not seek or want authority to deny passports to any whose travel or activity abroad is merely an embarrassment to our country. I believe that the United States is strong enough to survive embarrassment if we must.

Neither do we wish to penalize loyal Americans who at one time, before the nature of the Communist conspiracy became as crystal clear as it is today, may have sympathized with Communist theories or even belonged to Communist organizations in this country.

All we seek, and what I feel we must have, is the capacity to protect ourselves by denying passports to those relatively few hard-core, active Communist supporters who are not ordinary American citizens and whose travel abroad constitutes a danger to the United States.

Much has been said concerning the constitutionally protected right to travel of an American citizen, Communist or not. I believe we should understand such terms thoroughly, for they are central to this issue.

Our Constitution can and does guarantee the citizen's freedom to travel among the 50 States in the Union. However, it obviously does not and cannot guarantee any right of an American citizen to enter any foreign country. We do not recognize the right of any alien to enter our own country except as we, as an act of sovereignty, grant him permission to do so. An excellent example of a foreign regime exercising sovereignty in this way is the Chinese Communists. For nearly 2 years now, some 25 American newsmen representing the major foreign newsgathering organizations of this country have had and still have American passports valid for travel to Communist China, but that regime has refused to let them enter.

The constitutionally protected "right to travel" abroad, therefore, is really only the right to leave the United States, and I certainly agree that this right is part of the liberty of which the citizen cannot be deprived without the due process of law of the fifth amendment. However, like any other constitutional right, it is not absolute and may be abridged by society for good and sufficient reasons involving its own protection so long as due process is observed.

In the case of passports "due process" means that the Secretary of State cannot be arbitrary or capricious but must have sound reasons for restricting an individual's right of exit. It means that he must tell the individual the reasons for his action in sufficient detail and under such circumstances that the individual may have an opportunity to show the reasons untrue. Such circumstances should include a full hearing and review with the Department of State, and, ul-

timately, of course, the right which now exists to appeal to the courts.

It is interesting to note in this connection that even such citadels of democracy and individual rights as the United Kingdom, France, and Canada do not provide for any judicial review of passport denials. In those and other free countries, passport denials are matters strictly within the jurisdiction of the executive branch, from whose decision there is no appeal.

There is one other essential of passport legislation which is much misunderstood, and that is the necessity for the Government to be able to utilize confidential information as part of the basis of its decision.

I can say bluntly that any legislation concerning denial of passports to Communist supporters would be meaningless and would not achieve any purpose if it prohibited the Government from utilizing confidential information. Almost without exception, dangerous cases in the Communist area involve confidential information and investigative sources. Indeed, the more recent and meaningful our information is, the more likely it is that it has come from current confidential investigative sources within the Communist movement.

The Government has a legitimate and overriding interest in maintaining the security of these investigative sources and methods. If faced with the unpalatable choice between exposing and thereby destroying a valuable and continuing source of information about the activities of the Communist conspiracy, and issuing a passport to an individual member of that conspiracy, the Government has no alternative but reluctantly to issue the passport as the lesser evil.

Some people feel that the use of confidential information in such cases means using vague and unsubstantial gossip or allegation that will not stand the light of day. This is nonsense. In the first place, if one is prepared to believe that the Secretary of State, who must personally decide passport appeals cases, would actually base a considered decision upon anything less than substantial and corroborated evidence, then one must believe that our country's security is in far greater danger than from the capricious denial of passports.

In the second place, confidential information is almost always a small part of any total case, although usually essential because of the clear proof it provides. Most of every case can be fully and publicly disclosed.

Beyond this, however, we believe, based on a careful review of the Communist cases we have had in the past, that in every case the Government can provide a fair summary of even the confidential information both to the applicant and to the courts. Such a fair summary would include all the pertinent reasons for which the passport is denied, and would exclude only those details required to protect confidential sources of information.

I would have no objection to any legislation requiring the Government in all cases to provide such a fair summary of the content of any confidential information relied upon.

THE CLEAR AND PRESENT DANGER

One other thing should be clear. What we are talking about is not a criminal proceeding in which someone is being tried or punished for past actions, but an administrative process which attempts to predict someone's future course of action if he travels abroad, and to balance its potential danger to the United States against the desirability of facilitating the travel and giving him protection while he is performing it. These are services which the Government should extend to its citizens, but they are not inviolable rights which the individual can demand no matter what the menace to society may be.

Even having said this, however, much about this subject remains repugnant to Americans. The use of confidential information in any kind of proceeding, judicial or not—indeed, any sort of governmental restriction, whether on travel or passports or any other activity of the individual—these are things which we will never like and which I hope we never accept apathetically.

Here, however, I believe, we must face squarely one fact which is inherent in every aspect of this matter which we have been discussing today. That is, simply stated, that our Nation, although not technically at war, assuredly is not at peace. We face, almost on a daily basis, actual threats to our national security and to our very existence which very clearly are the equal of any threats we have ever faced in peace or war. One need only think of the implications of Berlin today, or the countless crises of the past decade, to realize that the cold war is a contradiction in terms.

This uneasy situation of not-peace not-war is something entirely new to our experience. It places a tremendous strain upon our governmental and constitutional institutions, for it blurs lines which had always previously been considered sharp and clear.

It used to be that when our Nation was not at war it was truly at peace. Certain rules obtained and governed our lives in peacetime. These rules were evolved over a century and a half by and for a free people who since the earliest days of their history had been faced by no serious external threat to their freedom or their national existence. Occasionally war came, and there was a clear line of demarcation. War was declared and waged with certain formalities. During wartime certain special rules obtained because the Nation temporarily required the subordination of individual desires to the overall national effort. These special rules, while repugnant, were considered tolerable for the limited duration of the war. When the war was over, other prescribed formalities occurred, the Nation was at peace again, and the special wartime rules, which were usually incompatible with complete constitutional freedom were dropped.

This sharp demarcation between peace and war does not exist today. International communism has thrown away the rule book. It does not consider itself ever at peace. It is always totally mobilized to advance its aim of world domination. It does not recognize any of the accepted rules of international or legal or human conduct except when, and only for as long as, those rules may suit its purpose.

This situation creates an unprecedented threat both to our liberty and to our very existence. Our response must include a recognition of these changed circumstances, or risk the loss of existence and liberty together.

The threat, moreover, will continue to exist, perhaps for many years in the future. This makes it imperative that whatever response we do adopt must be one that we can indefinitely sustain, and without endangering the strength or the integrity of our basic and cherished institutions which we are seeking to protect.

I believe that such a response is possible to a free people. I believe that our institutions—our Constitution, our laws, and our form of government—are strong enough and flexible enough to adjust to these changed circumstances, just as they have adjusted to many changes in the past.

I have tried to illustrate what I mean by suggesting, in the limited but important field of passport policy, a procedure which meets these criteria. It meets, I believe, the most pressing requirements of national security. It does so by law and under the Constitution. I think, for the reasons I have given, that adequate passport legislation is essential to our security. But let me be very clear. I do not believe that this piece of legislation will eliminate all the dangers which we face from the Communist conspiracy; or even all of those which it is intended to counter.

I do believe that adequate passport legislation is a necessary and integral part of the screen of weapons we have raised against the conspiracy, and that it will seriously cripple the effectiveness of that conspiracy.

I do believe, finally, that all our weapons together, wisely and effectively used, will contain the internal menace of the Communist conspiracy within tolerable limits while our military strength deters its worldwide menace and our foreign policy seeks to replace its threat with a just and durable peace.

PEACETIME DRAFT

The SPEAKER. Under the previous order of the House, the gentleman from New York [Mr. POWELL] is recognized for 60 minutes.

Mr. POWELL. Mr. Speaker, in these days of continuing emergency our young men are required to make a great sacrifice. Eight of the best years of their lives are now kept at the disposal of the Armed Forces. This continuous peacetime draft is a new thing in our country and one that requires a hard look at the conditions which surround our Armed Forces.

For many years I have heard my colleagues from the South speak on the need for respecting the peculiar institutions of that region. One of the peculiarities that has come to my attention is the number of camps, forts, and other military establishments which are located in the 13 Southern States.

According to the Department of Defense there were 677,471 members of the Armed Forces in the 13 Southern States as of June 1958—not including that part of Virginia which is in the immediate vicinity of Washington:

Alabama	25,327
Arkansas	17,376
Florida	69,718
Georgia	67,748
Kentucky	44,925
Louisiana	31,017
Mississippi	16,864
North Carolina	70,201
Oklahoma	35,102
South Carolina	53,369
Tennessee	17,298
Texas	169,187
Virginia (not including area near Washington, D.C.)	59,339

The national figure for all the States was 1,551,642. So we see that the armed personnel in the 13 Southern States amounted to more than 43 percent of the total. Yet we know that areas outside those 13 States subject Negroes to discrimination. Also we know that colored people other than Negroes are discriminated against in some parts of this country. So I would estimate conservatively that 50 percent of the armed personnel of our Government in this country is being trained in a discriminatory environment.

I realize that the Government installations are important economically to a region that needs help. But I am concerned about the young men who are drafted into the Army and sent to these camps. Must they suffer in order to respect the peculiar local discriminations of the South? I say that the Federal Government has no right to subject citizens to such discrimination.

That is why, Mr. Speaker, I have introduced H.R. 5277. I hold it to be an essential duty of this Government to prevent discrimination against members of the Armed Forces. Of course this House knows that I do not favor discrimination anywhere, but at the very least we should protect our soldiers and sailors against it.

H.R. 5277 is an amendment to the United States Code, chapter 13 of title 18. It would prevent hotels, restaurants, theaters, parks, and all public transportation from discriminating against members of the Armed Forces in uniform because of race, color, or creed.

It is as simple as that, Mr. Speaker, but even more it would prevent our soldiers and sailors from being treated as second-class citizens in their own country, for whose defense they are making a great sacrifice.

The ignoble practice of segregation has no legitimate place in a democracy. If it still persists in some area of this country, at least those who have been raised in the freer areas should not be subjected to it by the Federal Government.

One-half of our armed personnel is now being unfairly punished by the Federal Government because of the conditions of segregation which they must endure as a part of their military service.

This is unfair, unpatriotic, and unwise. I call upon my colleagues from all parts of the country to support H.R. 5277 so that we may put an end to such an abuse of our young citizens.

If they are trained in a free environment they will know better the importance of defending freedom.

RIGGED PRICES IN DOMESTIC OIL AND PETROLEUM PRODUCTS

The SPEAKER. Under the previous order of the House, the gentleman from Ohio [Mr. VANIK] is recognized for 5 minutes.

Mr. VANIK. Mr. Speaker, rigged prices in domestic oil and petroleum products are the direct result of President Eisenhower's proclamation restricting oil imports for the benefit of the domestic oil industry.

The President's proclamation restricting oil imports for the benefit of the poverty-stricken and depressed domestic oil industry is without question the most inflationary and arbitrary action executed by the President during his term of office.

The obvious purpose of the executive order is to prop up and support the domestic prices of oil and petroleum products in a sagging world market. While import controls close out competition from abroad, the Texas Railroad Commission, controlling most of the domestic oil production, is limiting production to only 11 days per month. The combination of controlled imports and controlled domestic production results in controlled supplies and controlled consumer prices. The only thing that remains uncontrolled is the stranglehold which the oil industry has on our economy.

In his proclamation the President said the administration would carefully watch the inflationary or price-raising impact of the administered price order.

Well, prices have already responded to the effect of the President's proclamation. Continental Oil yesterday increased its prices on all grades of gasoline a half-cent per gallon in five States: Colorado, New Mexico, Wyoming, Oklahoma, and Montana.

In its operating areas, Standard Oil of Indiana yesterday raised its gasoline prices 1.8 cents per gallon simply because it must pay more for domestic petroleum in the face of cutbacks on imports.

If the President's oil import control program is continued, the average American motorist will be paying 3 to 4 cents more per gallon of gasoline by midsummer. The President's timid capitulation to the domestic oil industry will force America from large automobiles to a motor-scooter economy before the expiration of his term.

SLUMS

The SPEAKER. Under previous order of the House, the gentleman from Massachusetts [Mr. LANE] is recognized for 15 minutes.

Mr. LANE. Mr. Speaker, there was a time when a roof and four walls met the minimum requirements for human shelter. The spreading blight of the slums in every community has opened our eyes to the fact that this definition is no longer adequate. As a result, nearly everyone agrees that we should have a housing program, encouraged and aided by the Federal Government. As we consider the Housing Act of 1959, there will be no dispute concerning the overall need for such legislation. There will be strong differences of opinion, however, concerning some parts of the bill.

One of the most successful features of our Federally sponsored housing program, has been FHA mortgage insurance. This has been so popular, that, in recent years, the FHA has practically used up its insurance authorization. There is need for a substantial increase in the insurance ceiling, to coax more private capital into housing development. We have tried, under FHA mortgage insurance, to provide every possible incentive to private enterprise, and it has responded with impressive results. A larger number of Americans have been able to buy homes of their own.

At the same time, we recognize that there are certain areas where private initiative cannot do the job. Public housing for low-income groups has helped to fill a long-neglected need. Experience has revealed the necessity of a new program designed to provide rental housing for elderly persons at rentals which they can afford.

Many of us believe that a new loan program should be established to provide low-cost financing on liberal terms to nonprofit corporations interested in building housing for the elderly. The maximum interest rate to the borrowing nonprofit corporation would be held to a limit of 3½ percent annually. The loan term could extend to 50 years, and loans would be provided up to 98 percent of the project cost. As the required equity investment of the sponsor would be reduced to 2 percent, this would be a great inducement for such sponsors to proceed from plans to blueprints and actual construction.

By such methods it will be possible to build housing units that will rent for approximately $20 a month less than the rent that would be required for the same unit under financing restrictions of the present section 207 program.

Under the new program "elderly families" would mean families the head of which—or his spouse—is 62 years of age or over; and the term "elderly persons" would mean persons who are 62 years of age or over.

To prevent exploitation of this program by those not eligible for its benefits, the proposed legislation will prohibit such undesirable practices as the use of an elderly person as a "screen" in order to gain occupancy for younger persons whose economic circumstances are adequate to permit them to afford decent housing elsewhere.

The administration wants to raise the interest rate on VA loans, currently limited by law at 4¾ percent, to 5¼ percent, in order that veterans will be able to get mortgage money to build their homes. The Congress prefers additional direct loans to veterans for this purpose. It is likely that there will be some compromise on this issue.

It is advisable to extend and improve the low-rent public housing program. It is an undeniable fact that a large proportion of the millions of families now living in slums do not have sufficient income to afford the prices or rents which private enterprise must, of necessity, charge for decent housing under present-day conditions. They will never be able to escape from the slums unless more public housing units are built to accommodate them. Furthermore, approximately half of the families displaced by urban renewal, highway construction, and other public activities, cannot be rehoused except in public housing because of their low incomes.

Central to the whole housing problem is the need for urban renewal, under which the Federal Government provides advances, loans, and grants to localities to assist in the elimination of slums and blight, and to prevent their recurrence.

An expert in this field recently commented, concerning a big city along the eastern seaboard, that one-third of its housing accommodations should be torn down or substantially renovated, because little or no attempt was made to remedy their deterioration over the years. It is from many of these areas that our veterans come, determined to build small ranchhouses in the suburbs or the country, so that their young families may grow up in healthy and wholesome accommodations that serve a much better purpose than a mere roof and four walls.

It is here that many elderly couples live, now that their children have grown up and moved away, in order to be close to the downtown area and its conveniences.

The committee which thoroughly studied this problem reported that:

> The urban renewal program is the best means yet devised to eliminate slums, arrest blight, and save the vast human and economic resources which are our great urban

centers. As a matter of paramount national interest, the program must be sustained at a high level through the provision of substantial amounts of capital grant authority over the next several years. Spreading slums and blight threaten to engulf our cities, bringing misery to millions of our fellow Americans and haunting many cities with the specter of municipal bankruptcy. Your committee is convinced that local and State governments just do not have the resources to finance unaided the massive urban renewal program which is required to save and preserve our American cities.

Since the beginning of this program, $1,350 million has been made available to meet the Federal share of the cost of urban renewal projects. As of December 31, 1958, $1,326 million had been reserved, contracted for, or disbursed in connection with 648 projects in 386 localities.

A program that is only partly completed can waste all previous investment in it, by curtailing the lifegiving funds that are essential for its fulfillment. The failure to implement this program last year has raised havoc with urban renewal plans.

Additional capital grant authority is needed immediately to "unfreeze" the backlog of applications. It is proposed to increase these authorizations by $500 million on the date of enactment and by $500 million on July 1, 1959, and July 1, 1960. It is believed that this is the irreducible minimum to maintain an effective urban renewal program.

The rotting slums of our cities are a threat to the economic health of our Nation. Sixty-five percent of our people live in the cities. From here, the Federal Government derives more than three-fourths of its revenues. If their manufacturing and commercial activities which contribute to the wealth and prosperity of our Nation are slowed down by this spreading deterioration, the Government itself will feel the consequences.

The Housing Act of 1959 will help to reverse that downward trend. For we cannot stand aside and watch our cities slowly die.

EXTENSION OF REMARKS

Mr. COHELAN. Mr. Speaker, I ask unanimous consent that the following Members may be permitted to extend their remarks at this point in the RECORD and to include extraneous matter if they so desire: Messrs. DINGELL, RIVERS of South Carolina, PATMAN, and HAGEN.

UNEMPLOYMENT STATISTICS

Mr. DINGELL. Mr. Speaker, the unemployment statistics for the month of February have been made available to the American people. Contrary to the blithe and happy statements of the administration that an economic upswing is upon us, the statistics give us grave cause for concern. Lack of sound economic approach by the administration was no better characterized than by the recent action of the Federal Reserve Board in raising the rediscount rate from 2½ to 3 percent.

Ordinarily February is a month when jobs rise and unemployment falls. The corrected unemployment rates for February shows an increase from 6 to 6.1 percent. Translated into statistics which we can more easily understand, 1 man in 16 was looking for and unable to find employment.

For the benefit of the administration, unemployment has exceeded 6 percent or higher for 3 months, a performance characterized by the Washington Post and Times Herald as "probably the worst recovery in jobs following the three postwar slumps.

Unemployment in the State of Michigan and the city of Detroit is still worse. The city of Detroit in February of 1959 had 229,000 unemployed or 15.4 percent of the work force, and the State of Michigan had 364,000 unemployed or 12.4 percent of the work force.

A comment which should not be lost on us comes from no less than Mr. Raymond J. Saulnier, Chairman of President Eisenhower's Council of Economic Advisers, who said he was baffled by the figure of 6.1 percent unemployed in December. Mr. Saulnier said further before the Joint Economic Committee:

> If I found those figures for January and February continuing to lag substantially, I would be concerned.

From the foregoing it becomes clear that Congress must take vigorous and forceful action to see to it that recovery, apparently lacking or stifled by the administration's economic policy, is accelerated. As an interim step Congress must extend the temporary unemployment compensation program for another year. Failure to do this means that over 337,000 people will go off the rolls on April 1 when the program expires. We find in January 1959 that 212,416 people over the United States and 12,198 people in the State of Michigan had exhausted their unemployment compensation. In 1959, 2.6 million in the United States and 244,000 in Michigan exhausted their unemployment compensation. Indeed 668,000 and 107,000 exhausted their temporary unemployment compensation benefits in the United States as a whole and in the State of Michigan, respectively for 1958. In January 1959, 121,000 and 14,000 for the United States and Michigan respectively exhausted temporary unemployment compensation.

A second thing that Congress can and must do is to pass legislation of the sort authored by Congressman THADDEUS MACHROWICZ and others including myself, to provide for unemployment reinsurance grants to the States, to revise, extend, and improve the unemployment insurance program. This will meet the long-term need for adequate standards in the unemployment compensation field.

A distinguished economist was recently quoted as saying that the present unemployment compensation program was inadequate to meet either the needs arising from a protracted period of economic downturn or a recession of severe character, a situation which will describe the recent and continued economic downturn. I need remind no one that the last recession was substantially cushioned by the pumping into the economy of better than $3,512 million from the various State unemployment compensation programs during 1958. This fact was chronicled by a statement in a recent issue of the U.S. News & World Report which stated that the economic downturn would have been much worse were it not for these and other economic cushions. Economists have been known to call 3 or 4 percent of the work force unemployed a normal situation. With this I do not agree. Mr. Ira T. Ellis, a leading business economist employed by the Du Pont Co. is reported to have predicted a 5-percent unemployment rate would persist in the foreseeable future; a gloomy prediction in which he is joined by a number of other reputable economists. Five percent is certainly an excessive unemployment figure.

In addition to the above-mentioned action, Congress must report out other legislation which will include a vigorous and substantial urban renewal program and Federal assistance to depressed areas.

IMPROVED ADMINISTRATION OF ARMY-AIR FORCE DENTAL SERVICES

Mr. RIVERS of South Carolina. Mr. Speaker, I am today introducing bills to place the Army and Air Force dental services on a par with the highly efficient Naval Dental Corps. This legislation has the solid endorsement of the Nation's dentists. Less than 6 months ago, the American Dental Association, in behalf of its 90,000 members—more than 85 percent of America's practicing dentists—reaffirmed its long-standing policy that the dental programs of the Army and Air Force, like the Navy's, should be under the direction of dentists. This is the best assurance that control over dental professional matters and over decisions involving the professional activities of dental personnel will be vested in dentists.

It is axiomatic that dentists are best equipped to manage programs of dental care. It is equally obvious that this is in the best interests of our active duty military personnel.

I believe, furthermore, that Congress has the responsibility to see that military health care programs are administered at the highest level of professional excellence. If this means that Congress must chart legislative guidelines for the Army and Air Force dental services, as we did for the Navy, then I believe we should not hesitate to do so.

In 1945 I introduced and supported for the Navy Dental Corps, a counterpart to the bills I have introduced today. This legislation became Public Law 284, 79th Congress. Under that law the advancement made by the Navy Dental Corps in developing an outstanding career service and in improving its health care functions have been monumental. One need only look at the record to become convinced that the Navy Dental Corps has far excelled its sister services of the Army and Air Force.

For example, the Navy Dental Corps in 1958 had 1,012 regular dental officers out of a total strength of 1,599 dental officers. The Army had 529 regulars out of 1,779; the Air Force had only 441

regulars out of 1,777. These figures were set forth by the distinguished gentleman from Georgia [Mr. VINSON] during the recent debate on the draft extension bill, H.R. 2260.

I believe that the Army-Air Force dental bills I am introducing today will, if enacted, enhance the career programs of the Army and Air Force dental services. What is more, they will achieve economy. Today the personnel turnover in the Army and Air Force dental services far exceeds that of the Navy Dental Corps. This needless turnover is not only expensive; it is disruptive to effective management of an essential health care program.

I have included at the end of these remarks—exhibit 1—a comparison of the provisions of the Navy dental law with the proposed provisions of the Army-Air Force bills as the latter would appear in title 10, United States Code, if enacted. This comparison does not reflect a provision within the Air Force dental bill which would create a statutory identification of the Air Force Surgeon General and a general designation of his responsibilities.

It is my earnest hope that Congress will shortly enact the legislation I have introduced today so that the Army and Air Force dental services will be able to match the achievements made by the Navy Dental Corps in developing an outstanding career service.

EXHIBIT 1

COMPARISON OF PROPOSED ARMY-AIR FORCE DENTAL BILL WITH NAVY DENTAL LAW (PUBLIC LAW 284, 79TH CONG., 1ST SESS.)

NAVY LAW	ARMY (PROPOSED)	AIR FORCE (PROPOSED)
(a) There is a Dental Division in the Bureau of Medicine and Surgery. An officer of the Dental Corps in the grade of rear admiral shall be detailed as Chief of the Dental Division (10 U.S.C. 5138(a)). The Dental functions of the Bureau of Medicine and Surgery shall be so defined and prescribed by Bureau directives, and if necessary by regulations of the Secretary of the Navy, that all such functions will be under the direction of the Dental Division. All matters relating to dentistry shall be referred to that Division (10 U.S.C. 5138(c)).	[There is an Assistant Surgeon General appointed from the officers of the Dental Corps. An appointee who holds a lower regular grade shall be appointed in the regular grade of major general.] He is the Chief of the Dental Corps and is responsible to the Surgeon General and the Secretary for making recommendations on all matters concerning the dental health of the Army. (Bracketed language appears in existing law (10 U.S.C. 3040(b))).	There shall be a Dental Service in the Air Force. The Dental Service shall consist of (1) the Chief of the Dental Service; and (2) such dental, auxiliary, and ancillary personnel as the Secretary of the Air Force shall, by regulation, prescribe. There is a Chief of the Dental Service in the Air Force, who is appointed by the President, by and with the advice and consent of the Senate, from dental officers of the Air Force above the grade of major. The term of the office is 4 years, but may be sooner terminated or extended by the President. An appointee who holds a lower regular grade shall be appointed in the regular grade of major general. The Chief of the Dental Service shall be responsible to the Surgeon General and to the Secretary of the Air Force for making recommendations on all matters concerning the dental health of the Air Force.
(b) The Dental Division shall (1) establish professional standards and policies for dental practice; (2) conduct inspections and surveys for maintenance of such standards; (3) initiate and recommend action pertaining to complements, appointments, advancement, training, assignment, and transfer of dental personnel; and (4) serve as the advisory agency for the Bureau on all matters relating directly to dentistry (10 U.S.C. 5138(d)).	The Secretary of the Army shall, by regulation, require the Chief of the Dental Corps to (1) establish professional standards and policies for dental practice; (2) conduct inspections and surveys for the maintenance of such standards; (3) initiate and recommend action pertaining to Dental Corps and auxiliary strength, appointments, advancement, training, assignment and transfer of dental personnel; and (4) serve as the adviser to the Army Medical Service on all matters relating directly to dentistry.	The Secretary of the Air Force shall, by regulation, require the Chief of the Dental Service to (1) establish professional standards and policies for dental practice; (2) conduct inspections and surveys for the maintenance of such standards; (3) initiate and recommend action pertaining to Dental Service and auxiliary strength, appointments, advancement, training, assignment and transfer of dental personnel; and (4) serve as the adviser to the Surgeon General of the Air Force on all matters relating directly to dentistry.
(c) The Secretary of the Navy shall prescribe regulations for dental services on ships and at shore stations. Such services shall be under the senior dental officer, who is responsible to the commanding officer of the ship or station for all professional, technical, and administrative matters concerning dental services (10 U.S.C. 6029 (a)).	The Secretary of the Army shall, by regulation, provide for the organization of the dental service throughout the Army, so that the senior dental officer for each major command, Army division, or other headquarters or installation shall be directly responsible to the commanding general or officer for all professional, technical, and administrative matters pertaining to the dental health of the command, including, but not limited to, the assignment or detailing of dental officers and assigned auxiliary personnel within the command, division, headquarters, or installation. This subsection does not prevent the Secretary from providing for the assignment of dental officers as commanding officers of other appropriate health activities or functions.	The Secretary of the Air Force shall, by regulation, provide for the organization of the dental service throughout the Air Force, so that the senior dental officer for each command, or other major Air Force organization, activity, or installation shall be directly responsible to the commanding general or officer for all professional, technical, and administrative matters pertaining to dental health, including, but not limited to, the assignment or detailing of dental officers and assigned auxiliary personnel within the command, organization, activity, or installation. This subsection does not prevent the Secretary from providing for the assignment of dental officers as commanding officers of other appropriate health activities or functions.
(d) No specific provision.	The Secretary of the Army shall, by regulation, provide for the training of an adequate number of personnel in military occupational specialties auxiliary or ancillary to the practice of dentistry, and for the assignment of such personnel in effective numbers to duty with personnel of the Dental Corps.	The Secretary of the Air Force shall, by regulation, provide for the training of an adequate number of personnel in military occupational specialties auxiliary or ancillary to the practice of dentistry, and for the assignment of such personnel in effective numbers to duty with personnel of the Dental Service.

WHY MAIN STREET VOTED DEMOCRATIC

Mr. PATMAN. Mr. Speaker, a few days ago, to be exact March 16, 1959, one of the leading Republican Party campaigners lamented the recent heavy losses by his party. He stated:

There are 8 million voters who left the party between 1954 and 1958. Some of these are Republicans who never before have voted Democratic. These 8 million could tell you something about the Republican Party.

In that connection he remarked:

It is strange indeed to see even the small-business men leaving the party—to see us losing Main Street.

Well, it is not strange to me that political upheavals are taking place on Main Street. There is a perfectly clear reason, though many of us have preferred to ignore it. The fact is that small-business people are disappearing—Main Street is disappearing.

MAIN STREET IS BEING RUN FROM WALL STREET

Yes, the store fronts are still there, but behind these store fronts the Main Street we used to know is no longer there. We still like to think of Main Street as a place of hometown mer-

chants—a place where independent, locally-owned businesses of all kinds have their shops, their banks, and their offices. But we are dreaming.

The Main Streets of this country today are largely owned and operated by a few nationwide corporations. Behind the new glass fronts on Main Street there are local men and women who appear to be in charge, but actually they are working for absentee owners. Sometime we may imagine that these local managers can decide such things as what kind and quantity of goods they will offer the local people, what price tags will be put on these goods, how many employees will be laid off and in what age groups, and so on. But more and more all such matters affecting the welfare of the local communities are decided in the board rooms of Wall Street and by the mechanical computers in the plush offices of Madison Avenue.

Big business has been taking over, while many of us in Congress looked the other way and the administration was busy making slogans about how small business is thriving as never before. Locally owned, independent business is being pushed out at a rate much too fast for comfort.

Recently Miss Sylvia Porter wrote a series of articles about what she found behind the store fronts on a visit to the lovely city of Louisville, Ky. This is one of the most shocking reports I have ever read. She found that 60 percent of all the factory jobs in Louisville are in absentee-operated industries; and in the retail stores an even bigger percentage of the business is absentee run.

Think of this: Between 80 percent and 90 percent of all the employees in retail stores in Louisville are working in a branch of a coast-to-coast chain.

So I think the reason why small-business people have been deserting the political party of big business is not too hard to find.

THE BIG BUSINESS ADMINISTRATION DESERTED SMALL BUSINESS FIRST

When things are going reasonably well for the people at home, they tend to give credit to the administration in power and to be content with the administration in power. And likewise, when they fall on great hardships or are greatly disturbed by trends that threaten the Nation's welfare, they tend to blame the administration and the party in power.

Small-business people have more and more shifted their support to Democratic candidates in both local and national elections for reasons of self-interest, obviously, but also because—and this I personally know—they are deeply concerned for the welfare of our country as they see this creeping corporate collectivization taking place.

But more than this, small-business people are not completely ignorant of the record. Despite the short rations of facts about the doings in Congress which they receive, and in spite of the massive efforts being made by the U.S. Chamber of Commerce, the NAM, and other such organizations to keep small-business people propagandized and in line politically, some of the facts do leak through and many small-business people are beginning, as they say in the cigarette ads, to think for themselves.

The habit of making glowing speeches in Congress about small business is not an acceptable substitute for a Member's active support of small-business legislation. Small-business people no longer accept lip service as an excuse for their Congressman's failure to get small-business bills out of the committee and out into the open for a vote in this Chamber.

INDIVIDUAL MEMBERS OF CONGRESS ARE ON TRIAL

The practice of declaring support to small business in general and then finding plausible excuses to oppose, to whittle down, or to insert monkey wrenches in each small-business bill that arises comes to have a cumulative impact on the thinking of small-business people, as it does on their opportunity for survival.

The party labels attached to the Members of Congress who have actually tried to do the right thing by small business have, of course, given small-business people reason to believe that Democratic candidates for Congress will give more support to their cause and offer them a fairer chance to survive. Yet they do not think—if I know their thinking—that the small-business record of the last two Democratic Congresses is anything to brag about. Nor do I. The last Congress passed more measures to correct the inequalities heaped on small business than any one Congress in history, and for that we can all be grateful. But these measures are not adequate to bring back a climate of laws and practices in which efficient firms without great aggregation of economic power have a fair chance to compete.

In truth, this Democratic Congress is on trial insofar as small business is concerned. And more particularly, the Members of this House are on trial individually, because this country has learned that when it comes down to small-business bills and antimonopoly bills, the record of the individual Member must be considered. When big-business influence is at work, neither party label nor section of the country a Member comes from are reliable indexes as to how a Member stands.

BIPARTISAN EFFORT NEEDED TO AVOID GHOST TOWNS

We are face to face with a most serious problem—a most serious trend which will not wait until we remain undecided about what we would like to do about it. The welfare of all of our hometowns is at stake. The communities in all of our districts are being affected. So let all of us who realize what this means join together, without respect to our party labels, and make the great effort that will have to be made if this problem is to be solved. On other occasions when our country was seriously threatened, Republicans and Democrats have been willing to join together in bipartisan efforts for the common good. Our way of life is threatened today, from forces within our country, as surely as it has been threatened from the forces of foreign aggression. So let us not hesitate to make a bipartisan effort now—time is short.

Small business has many problems. Hundreds of adjustments would have to be made if we were to remove all of the injustices and obstacles now standing in the way of a free and fair opportunity for business firms of all sizes to compete.

But most of the problems will be solved if we do no more than plug the loopholes in our antitrust laws and remove the discriminations in our tax laws. These are the main things, and if we can accomplish these we will turn back the tide.

Business success in this country today depends upon economic power, not on how efficient the business firm may be. Our antitrust laws permit abuse of power and in some instances actually encourage abuse of power.

For example, for several years now I have called attention repeatedly to the fact that the decision of the Supreme Court in the Standard Oil—Indiana—case opened up a loophole in the Robinson-Patman Act almost as big as the antitrust law itself. This decision opened up small business' one protection against the most destructive and most common of all abuse of power—price discrimination.

ABUSE OF POWER AND DISCRIMINATORY TAX LAW ARE MAIN THINGS WRONG WITH MAIN STREET

The game of price discrimination is nothing more or less than a power game. It is a surefire monopoly game, because the biggest competitor is sure to win out. The biggest competitor wins out as quickly or as leisurely as it chooses to crush its smaller opponents. So if we really intend to save small business, we will have to put some restraints on this kind of abuse of power. We cannot allow small firms to continue to be wiped out in wholesale lots by a practice which does no one any good, except, of course, the giant corporations that are gaining monopoly control and then hold consumers at their mercy.

And so, too, our tax system is a sure road to monopoly. It imposes back-breaking taxes on the little man but sets up a great escape hatch for the giant corporations. It is a system which allows the administered-price corporations to shift the tax burden onto consumers and thus immunize their stockholders from any tax on their accumulations of wealth left in the corporation. But this system reaches deep into the pocket of the small-business man and it leaves him without funds with which to expand or improve his business equipment. Surely we must make this tax system fairer and give a better chance to small business.

If we can do these things in this session of Congress—improve our antitrust and tax laws—we will bring about a renewed opportunity for local people to do business on Main Street.

I invite the Members' most serious attention to Miss Sylvia Porter's article which I have mentioned. I do this without any reflection on the city of Louisville, Ky. In fact, if the problems facing us were peculiar to just this one city, it would perhaps not be necessary to mention them at all. Obviously these

problems are not peculiar to this one city. They are common problems of all of the cities, towns, and villages of our country. Miss Porter's articles are as follows:

EIGHTY TO NINETY PERCENT OF ALL JOBS IN RETAIL STORES ON MAIN STREET NOW UNDER ABSENTEE OWNERS

[From the Louisville Times]

THE LOUISVILLE STORY—NO. 1: A CITY OWNED BY OUTSIDERS—OVER 60 PERCENT OF FACTORY JOBS ARE IN ABSENTEE-RUN INDUSTRIES; BIG STORE PICTURE MORE STARTLING

(By Sylvia Porter)

If you work for a manufacturing firm in Louisville today, the odds are better than 6 to 4 that you are an employee of a plant owned by outsiders—controlled by interests far removed from your hometown.

More than 60 percent of the manufacturing jobs in your proud, 187-year-old Kentucky city are in absentee-owned corporations. Decisions of crucial importance to you, your family, your entire community are not made by Louisville residents; often they're made by tycoons, efficiency experts or financiers who only rarely visit your city.

If you work for a big retail store in Louisville, the odds are a towering 8 or 9 to 1 that you are working for a branch, a coast-to-coast chain.

REALITY IS HERE

Of Louisville's seven biggest stores, only one is home-owned and that one is No. 5 in size. Your store manager may appear in charge but it's most improbable that the key policies are set by him. Rather, the likelihood is they're fixed at headquarters elsewhere.

In Louisville, absentee ownership of industrial plants, stores, major service organizations is no longer a threat arising from the great merger trend of this decade.

Here, the trend—which I first reported from Rochester, N.Y., a month ago—has become a startling reality. And the implications go far beyond the obvious—the inclination of imported managers to disregard local charities, to give only minimum support to city groups.

In Louisville, absentee control is striking at the very industrial and financial heart of the city itself. Here is a tale which cities the Nation over will ignore at their own peril.

The list of Louisville companies sold to or absorbed by nationwide concerns since World War II covers dozens upon dozens of once-famous names. And I'm not including new factories which American corporations have established here—such as General Electric's creation on Louisville's outskirts of Appliance Park, the world's largest home appliance factory. Nor am I touching on the hundreds of small distilleries which have been gobbled up by the liquor giants. Omitting these, consider that just in the past 10 years:

Mengel Furniture has become Kroehler, and Mengel Box has become Container Corp. of America. Girdler Tube-Turns has become National Cylinder Gas (Chemetron), and B. F. Avery became Minneapolis-Moline (now closed here). Ballard Mills has become Pillsbury, and C. T. Dearing Printing has become Fawcett Publications. Cochran Foil has become Anaconda Co., and Enro Shirt has become Wilson Bros. And so it goes.

Of course, in many instances the workers and city have benefited. Some payrolls have been sharply increased. New talent has come into town. And, as Archie P. Cochran, head of Cochran Foil until its merger with Anaconda 2 months ago, put it to me, "We had reached a size where we had to compete for national markets, but we didn't have the cash, research, or marketing facilities to do so properly. Merger will bring us these."

But in other instances payrolls have dwindled, disappeared. And hidden beneath the surface are threats which are actively worrying leaders of Louisville. Here are exact quotes from Louisville citizens, whose names I am deliberately withholding:

"We go into a plant, ask for contributions to the Community Chest or Louisville Fund, and what we get is an indifferent nod. The managers aren't part of Louisville. They feel they're camping out, and they don't care about the city's future."

"WE'LL HAVE TO CHECK * * *"

"Some executives who seem to be big shots can't spend $15 of the company's money on their own initiative. They duck out by saying, 'We have to check the home office.' The home office doesn't answer, or, when it does, the answer is 'No' or a piddling contribution."

"The frustration is maddening. The city isn't controlled by us. It's controlled elsewhere. It's infuriating to ask about a personnel policy or a product and get the answer, 'We haven't heard from New York yet.' "

But these, I repeat, are just some of the obvious disadvantages of absentee ownership of a city. Much more vital is what this is doing to the Louisville economy itself. This tale I'll report tomorrow.

THE LOUISVILLE STORY—NO. 2: SOUNDS A WARNING TO ALL—DREADFUL PLIGHT OF DOWNTOWN IS TIED TO ABSENTEE OWNERSHIP; MEETING MONDAY WILL SEEK ACTION

(By Sylvia Porter)

Usually, when I visit a city on a business trip for the first time, my hosts insist on driving me through the finest areas of town. And usually, they boast and I exclaim about the city's new houses, stores, civic centers, and so forth.

Here in Louisville, though, I was given the reverse treatment. For in Louisville, my hosts took me on a drive through the downtown shopping district, the downtown streets bordering on the Ohio River, the downtown areas where once were mansions of Kentucky's oldest families. And I saw * * *

Street after street choked with stores bearing nationally known names but thoroughly identified with lower-income shoppers. Street after street deformed by massive, decaying structures shockingly out of place in the heart of Kentucky's largest city. Street after street of old homes haphazardly turned into makeshift offices. And slums, used-car lots, minimum-income apartments on land which in almost any other city of comparable size would be in the highest price category.

TAKES GUESTS ELSEWHERE

"This is dreadful," I said to my hosts. "This I didn't expect."

"Yes," nodded the operating head of one of the biggest industrial firms in the area. "When I bring in important people, I bypass downtown. I take the long way around so they don't see this area."

"This is the tragedy of Louisville," added another of the town's most prominent citizens, and he gave me statistics to prove what is happening. Athough population has been expanding, the number of businesses in Louisville's central business district actually is down from a decade ago. The percentage of the city's retail sales in downtown has slumped from almost 50 percent in 1948 to under 40 percent now. Downtown Louisville is not only failing to progress, it is retrogressing rapidly.

Why?

The answer lies in the story I reported yesterday. Specifically, absentee ownership—control of a vast portion of Louisville's industrial, financial, and commercial enterprise by interests located elsewhere and concerned not with Louisville's beauty or potential growth but primarily with maintaining their profit margins or return on an initial investment.

It's a harsh indictment. But the evidence is unmistakable.

As an illustration, many of the men in charge of big operations here are not really the bosses. They are branch managers. As one put it frankly to me, "We'd like to help in rebuilding Louisville but it's not within our power to do so. We haven't the right to invest major capital. We must get permission from headquarters and they tell us 'If we do it here, we must do it elsewhere. We can't participate in the redevelopment of every city in which we are located.' "

Headquarters' reply makes financial sense but it doesn't help an absentee-owned city.

As a second illustration, in Louisville as in many other cities, the downtown land itself is owned "in trust," controlled by wealthy families who care more about dividends than about risking capital. On top of this land are the stores owned by national corporations. The combination presents defiant difficulties to sponsors of a redevelopment program.

What happens now?

ACTION IS THE GOAL

One thing that will happen in Louisville is a meeting next Monday to compel action instead of just talk. It's an ill-concealed secret that at this meeting, the city's leading businessmen and financiers will be asked to put up a big nest egg to finance practical planning by professionals who "are now or will become Louisville citizens with a stake in the community's future." (Coming to the meeting, incidentially, will be Albert M. Greenfield, head of City Stores, with which one of Louisville's major stores is affiliated. And although Greenfield may not know it yet, he's to be tapped for a fat contribution.)

[EDITOR'S NOTE.—Kaufman-Straus, the Louisville affiliate of City Stores of which Mr. Greenfield is chairman, already has accepted its quota. There will be no solicitation at the March 9 dinner.]

Also under way is a study to wipe out the eyesores along the Ohio River just as New York has replaced her slums on the East River and is about to revive deteriorating properties along the Hudson River.

"The other day someone asked me why I cared so much about this," remarked one of my hosts. "Without thinking, I said, 'Why, I live here.' "

That one simple reply holds the key—and shouts a warning to all cities which welcome absentee ownership without pondering its implications and taking steps to offset its dangers.

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted to:

Mr. STRATTON, for March 26, 1959, on account of official business of the Committee on Armed Services.

Mr. VINSON (at the request of Mr. PRESTON), for the balance of the week, on account of official business.

Mr. LOSER (at the request of Mr. DAVIS of Tennessee), for today and the balance of the week, on account of official business.

Mr. MULTER (at the request of Mr. SANTANGELO), for the balance of the week, on account of illness.

Mr. COHELAN, for Thursday, March 26, 1959, on account of Armed Services Committee inspection trip to Berlin.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. LANE, for 15 minutes, on today.

Mr. SIKES, for 30 minutes, on Thursday, April 9.

Mr. LEVERING (at the request of Mr. COHELAN), for 15 minutes, on Wednesday next, March 25, 1959.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mr. ALGER in 10 instances.

Mr. GAVIN and to include extraneous matter.

Mr. FOGARTY, to revise and extend the remarks he made in the Committee of the Whole today and include extraneous matter.

Mr. ROOSEVELT, to include two telegrams in the remarks he made in the Committee of the Whole today.

Mr. BOLAND, to revise and extend the remarks he made in the Committee of the Whole today and include extraneous matter.

Mr. ROONEY, to revise and extend the remarks he made in the Committee of the Whole today and include extraneous matter.

Mrs. KEE.

Mr. DORN of New York.

Mrs. ROGERS of Massachusetts, to include in her remarks made in the Committee of the Whole certain telegrams from veterans' organizations.

Mr. KING of Utah in two instances and include extraneous matter.

(The following Member, at the request of Mr. COHELAN, and to include extraneous matter:)

Mr. ANFUSO.

SENATE BILL REFERRED

A bill of the Senate of the following title was taken from the Speaker's table and, under the rule, referred as follows:

S. 722. An Act to establish an effective program to alleviate conditions of substantial and persistent unemployment and underemployment in certain economically depressed areas; to the Committee on Banking and Currency.

ADJOURNMENT

Mr. COHELAN. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 53 minutes p.m.) the House adjourned until tomorrow, Wednesday, March 25, 1959, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

758. A letter from the Comptroller General of the United States, transmitting a report on the review of the Capehart housing program of the U.S. Army Engineer Center and Fort Belvoir, Fort Belvoir, Va.; to the Committee on Government Operations.

759. A letter from the Secretary of Agriculture, transmitting a report relative to a program for the national forests; to the Committee on Agriculture.

760. A letter from the Acting Secretary of Defense, transmitting a report by the Department of Defense on payments made under Public Law 220, 82d Congress, relating to the correction of military or naval records for the period July 1 through December 31, 1958; to the Committee on Armed Services.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. FORRESTER: Committee on the Judiciary. House Concurrent Resolution 80. Concurrent resolution extending a welcome to the Inter-American Bar Association; without amendment (Rept. No. 246). Referred to the House Calendar.

Mr. FORRESTER: Committee on the Judiciary. House Concurrent Resolution 103. Concurrent resolution to commemorate the quadricentennial anniversary of Florida and to recognize the quadricentennial anniversary commission of that State; without amendment (Rept. No. 247). Referred to the House Calendar.

Mr. LANE: Committee on the Judiciary. H.R. 470. A bill to amend title 10, United States Code, to authorize the Secretary of Defense and the Secretaries of the military departments to settle certain claims for damage to, or loss of, property or personal injury or death, not cognizable under any other law; with amendment (Rept. No. 251). Referred to the Committee of the Whole House on the State of the Union.

Mr. LESINSKI: Committee on Post Office and Civil Service. H.R. 4595. A bill to clarify and make uniform certain provisions of law relating to special postage rates for educational, cultural, and library materials, and for other purposes; with amendment (Rept. No. 252). Referred to the Committee of the Whole House on the State of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. LANE: Committee on the Judiciary. H.R. 5362. A bill for the relief of M. E. Boales; without amendment (Rept. No. 244). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 5733. A bill for the relief of Park National Bank; with amendment (Rept. No. 245). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. H.R. 1758. A bill for the relief of Gerald M. Cooley; with amendment (Rept. No. 248). Referred to the Committee of the Whole House.

Mr. LANE: Committee on the Judiciary. House Resolution 189. Resolution providing for sending the bill (H.R. 5093) for the relief of North Counties Hydro-Electric Co. and accompanying papers to the Court of Claims; without amendment (Rept. No. 249). Referred to the Committee of the Whole House.

Mr. TOLL: Committee on the Judiciary. H.R. 2594. A bill for the relief of certain claimants against the United States who suffered personal injuries, property damage, or other loss as a result of the explosion of a munitions truck between Smithfield and Selma, N.C., on March 7, 1942; with amendment (Rept. No. 250). Referred to the Committee of the Whole House.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. BURNS of Hawaii:

H.R. 5968. A bill to amend section 104 of title 23 of the United States Code to provide for apportionment of certain minimum amounts for highways in the Territory of Hawaii; to the Committee on Public Works.

By Mrs. CHURCH:

H.R. 5969. A bill to liberalize the tariff laws for works of art and other exhibition material, and for other purposes; to the Committee on Ways and Means.

By Mr. DENTON:

H.R. 5970. A bill granting the consent and approval of Congress to the Wabash Valley compact, and for related purposes; to the Committee on the Judiciary.

By Mr. DOYLE:

H.R. 5971. A bill to amend chapter 15 of title 38, United States Code, to provide for payment of a pension of $100 per month to World War I veterans who have attained the age of 60 years; to the Committee on Veterans' Affairs.

H.R. 5972. A bill to repeal the excise tax on amounts paid for communication services or facilities; to the Committee on Ways and Means.

By Mr. EVINS:

H.R. 5973. A bill to provide for the removal of the restriction on use with respect to a certain tract of land in Cumberland County, Tenn., conveyed to the State of Tennessee in 1938; to the Committee on Agriculture.

By Mr. FINO:

H.R. 5974. A bill to amend title II of the Social Security Act to provide that a widow under retirement age may continue to receive mother's insurance benefits (but at a reduced rate) even though none of the children of her deceased husband are any longer entitled to child's insurance benefits; to the Committee on Ways and Means.

By Mr. HARRISON:

H.R. 5975. A bill to provide for the erection of a Woodrow Wilson memorial in the District of Columbia; to the Committee on House Administration.

By Mr. HÉBERT:

H.R. 5976. A bill to repeal the excise tax on amounts paid for communication services or facilities; to the Committee on Ways and Means.

By Mrs. KEE:

H.R. 5977. A bill to amend the Federal-Aid Highway Act of 1958 (72 Stat. 89) to provide additional funds for the construction of highways in labor surplus areas; to the Committee on Public Works.

By Mr. LANKFORD:

H.R. 5978. A bill to provide for the payment for unused leave of members of the Armed Forces who were killed in action during World War II or the Korean conflict; to the Committee on Armed Services.

By Mr. McINTIRE:

H.R. 5979. A bill to amend the Federal Farm Loan Act to transfer responsibility for making appraisals from the Farm Credit Administration to the Federal land banks, and for other purposes; to the Committee on Agriculture.

H.R. 5980. A bill to provide a revolving fund for certain loans by the Secretary of Agriculture, for improved budget and accounting procedures, and for other purposes; to the Committee on Agriculture.

By Mr. MEYER:

H.R. 5981. A bill to authorize multiple-purpose development at Victory Reservoir site, Vermont; to the Committee on Public Works.

By Mr. PELLY:

H.R. 5982. A bill to amend section 1371 of the Internal Revenue Code of 1954 to provide that a husband and wife shall be treated as one shareholder for purposes of determining whether a corporation is a small business corporation; to the Committee on Ways and Means.

By Mr. QUIE:

H.R. 5983. A bill to enable producers to provide a supply of turkeys adequate to meet the needs of consumers, to maintain orderly marketing conditions, and to promote and expand the consumption of turkeys and turkey products; to the Committee on Agriculture.

By Mr. RIVERS of South Carolina:

H.R. 5984. A bill to amend title 10, United States Code, to provide more efficient dental care for the personnel of the Army, and for other purposes; to the Committee on Armed Services.

H.R. 5985. A bill to amend title 10, United States Code, to provide more efficient dental care for the personnel of the Air Force, and for other purposes; to the Committee on Armed Services.

By Mr. RODINO:

H.R. 5986. A bill to amend chapter 71 of title 38, United States Code, to permit judicial review of decisions of the Board of Veterans' Appeals in compensation and pension claims; to the Committee on Veterans' Affairs.

H.R. 5987. A bill to provide pension for widows and children of veterans of World War II and of the Korean conflict on the same basis as pension is provided for widows and children of veterans of World War I; to the Committee on Veterans' Affairs.

H.R. 5988. A bill to amend the Federal Credit Union Act; to the Committee on Banking and Currency.

H.R. 5989. A bill to revise the basis for establishing wartime service connection for multiple sclerosis and the chronic functional psychoses; to the Committee on Veterans' Affairs.

By Mr. SIMPSON of Pennsylvania:

H.R. 5990. A bill to amend section 270(b) of the Internal Revenue Code of 1954 relating to limitation on deductions allowable to individuals in certain cases; to the Committee on Ways and Means.

H.R. 5991. A bill to amend section 170 of the Internal Revenue Code of 1954 (relating to the unlimited deduction for charitable contributions for certain individuals); to the Committee on Ways and Means.

By Mr. STEED:

H.R. 5992. A bill to encourage the development of petroleum and coal reserves within the United States; to the Committee on Ways and Means.

By Mr. THOMPSON of Louisiana:

H.R. 5993. A bill to permit certain real property heretofore conveyed to the board of supervisors of Louisiana State University and Agricultural and Mechanical College to be used for general educational purposes; to the Committee on Government Operations.

By Mr. WEAVER:

H.R. 5994. A bill to amend the Federal Property and Administrative Services Act of 1949 to require the disposal of certain surplus land for agricultural use in family-type farm units; to the Committee on Government Operations.

By Mr. ZELENKO:

H.R. 5995. A bill to require the Secretary of the Treasury to issue identifying numbered receipt upon the filing of income tax returns in order to aid in the collection of income taxes; to the Committee on Ways and Means.

By Mr. ADAIR:

H.R. 5996. A bill to provide that no application shall be required for the payment of statutory awards for certain conditions which, prior to August 1, 1952, have been determined by the Veterans' Administration to be service connected; to the Committee on Veterans' Affairs.

By Mr. BERRY:

H.R. 5997. A bill to provide that certain lands shall be held in trust for the Lower Brule Sioux Tribe in South Dakota; to the Committee on Interior and Insular Affairs.

By Mr. BLATNIK:

H.R. 5998. A bill to reduce the import duty on cigars; to the Committee on Ways and Means.

By Mr. BURDICK:

H.R. 5999. A bill relating to acreage allotments for durum wheat; to the Committee on Agriculture.

By Mr. CELLER:

H.R. 6000. A bill to amend title 28 of the United States Code to increase the limit for administrative settlement of claims against the United States under the tort claims procedure to $3,000; to the Committee on the Judiciary.

By Mr. DELANEY:

H.R. 6001. A bill to amend section 203 of the Social Security Act to increase the amount of outside earnings permitted without deductions from benefits, and to liberalize the provisions under which such earnings are charged for purposes of such deductions; to the Committee on Ways and Means.

H.R. 6002. A bill to increase the personal income tax exemptions of a taxpayer, including the exemptions for a spouse and dependents and the additional exemptions for old age and blindness from $600 to $800; to the Committee on Ways and Means.

By Mr. FISHER:

H.R. 6003. A bill to amend the Internal Revenue Code of 1954 to provide a procedure under which the excise tax on tires and tubes will not be imposed until they are sold at retail; to the Committee on Ways and Means.

By Mr. FULTON:

H.R. 6004. A bill to amend the Veterans' Readjustment Act of 1952 to make the educational benefits provided for therein available to all veterans whether or not they serve during a period of war or of armed hostilities; to the Committee on Veterans' Affairs.

H.R. 6005. A bill to provide for a study by the Secretary of the Interior of strip-mining operations in the United States and for a report to Congress of the results of such study, and for other purposes; to the Committee on Interior and Insular Affairs.

H.R. 6006. A bill to prohibit unjust discrimination in employment because of age; to the Committee on Education and Labor.

By Mr. GUBSER:

H.R. 6007. A bill to repeal the excise tax on amounts paid for communication services or facilities; to the Committee on Ways and Means.

By Mr. HAYS:

H.R. 6008. A bill to promote the foreign policy of the United States by providing for the appointment of an assistant to the Secretary of State to assure the coherent development of all official international cultural activities of the United States; to the Committee on Foreign Affairs.

By Mr. HOGAN:

H.R. 6009. A bill to amend the Federal Property and Administrative Services Act of 1949 to provide for making payments in lieu of taxes with respect to a Government installation located on real property owned by the United States; to the Committee on Government Operations.

By Mr. HOLIFIELD:

H.R. 6010. A bill to repeal the cabaret tax; to the Committee on Ways and Means.

By Mr. McSWEEN:

H.R. 6011. A bill to permit certain real property heretofore conveyed to the board of supervisors of Louisiana State University and Agricultural and Mechanical College to be used for general educational purposes; to the Committee on Government Operations.

By Mr. MATTHEWS:

H.R. 6012. A bill to amend the Annual and Sick Leave Act of 1951 to provide that annual leave credited to an employee at the end of a leave year in excess of the maximum amount which may be carried over into the next leave year shall be credited to the employee's sick leave account; to the Committee on Post Office and Civil Service.

H.R. 6013. A bill to amend the Civil Service Retirement Act (5 U.S.C. 2259) to authorize length of service credit for periods of employment by agricultural stabilization and conservation county committees; to the Committee on Post Office and Civil Service.

By Mr. MASON:

H.R. 6014. A bill to amend the Internal Revenue Code of 1954 with respect to the involuntary liquidation of LIFO inventories as the result of labor disputes; to the Committee on Ways and Means.

By Mr. METCALF:

H.R. 6015. A bill to provide for the establishment of the Morrill Homestead National Monument at Strafford, Vt.; to the Committee on Interior and Insular Affairs.

By Mr. O'NEILL:

H.R. 6016. A bill to provide evaluation of rehabilitation potentials and rehabilitation services to handicapped individuals who as a result thereof can achieve such ability of independent living as to dispense with the need for expensive institutional care or who can dispense with or largely dispense with the need of an attendant at home; to assist in the establishment of public and private nonprofit workshops and rehabilitation facilities; and for other purposes; to the Committee on Education and Labor.

By Mr. ROBISON:

H.R. 6017. A bill to amend section 72 of the Internal Revenue Code of 1954; to the Committee on Ways and Means.

By Mr. VAN ZANDT (by request):

H.R. 6018. A bill to authorize the Foreign Claims Settlement Commission of the United States to amend its determinations on certain claims under section 6 of the War Claims Act of 1948, as amended; to the Committee on Interstate and Foreign Commerce.

By Mr. MOULDER:

H.J. Res. 319. Joint resolution proposing an amendment to the Constitution of the United States relative to equal rights for men and women; to the Committee on the Judiciary.

By Mr. ADAIR:

H.J. Res. 320. Joint resolution designating the fourth Sunday of September as Senior Citizens Day; to the Committee on the Judiciary.

By Mr. FISHER:

H.J. Res. 321. Joint resolution proposing an amendment to the Constitution of the United States providing that a provision of a treaty which conflicts with any provision of the Constitution shall not be of any force or effect; to the Committee on the Judiciary.

By Mr. MAILLIARD:

H. Res. 222. Resolution to provide for a flag for the Members of the House of Representatives; to the Committee on House Administration.

By Mr. SHELLEY:

H. Res. 223. Resolution to provide for a flag for the Members of the House of Representatives; to the Committee on House Administration.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. CELLER:

H.R. 6019. A bill for the relief of Isak Irving Herz; to the Committee on the Judiciary.

By Mr. CLARK:
H.R. 6020. A bill for the relief of Ivica Basic; to the Committee on the Judiciary.
By Mr. FARBSTEIN:
H.R. 6021. A bill for the relief of Ada E. V. Gigante; to the Committee on the Judiciary.
H.R. 6022. A bill for the relief of Giuseppe Faraci; to the Committee on the Judiciary.
By Mr. FINO:
H.R. 6023. A bill for the relief of William J. Kaiser; to the Committee on the Judiciary.
By Mr. FULTON:
H.R. 6024. A bill for the relief of Mrs. Helen Hranisavljevic; to the Committee on the Judiciary.
By Mr. GALLAGHER:
H.R. 6025. A bill for the relief of Ruth Adams, Joseph Adams, and Thomas Herbert; to the Committee on the Judiciary.
By Mr. HOLT (by request):
H.R. 6026. A bill for the relief of Harold Janklowicz; to the Committee on the Judiciary.
By Mr. MONAGAN:
H.R. 6027. A bill to provide for the payment of a disability retirement annuity to Joseph J. O'Loughlin; to the Committee on the Judiciary.
By Mr. POWELL:
H.R. 6028. A bill for the relief of Roger Sajous; to the Committee on the Judiciary.
H.R. 6029. A bill for the relief of Mrs. Jessie Mullings; to the Committee on the Judiciary.
By Mr. ROBISON:
H.R. 6030. A bill for the relief of Mrs. Marcia W. Barrett Bowes; to the Committee on the Judiciary.
By Mr. ZABLOCKI:
H.R. 6031. A bill for the relief of James N. D. Liang; to the Committee on the Judiciary.
By Mr. WALTER:
H.J. Res. 322. Joint resolution for the relief of certain aliens; to the Committee on the Judiciary.
H.J. Res. 323. Joint resolution to facilitate the admission into the United States of certain aliens; to the Committee on the Judiciary.
H.J. Res. 324. Joint resolution to waive certain provisions of section 212(a) of the Immigration and Nationality Act in behalf of certain aliens; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

131. By Mr. DOOLEY: Resolution of the Council of the City of New Rochelle, N.Y., opposing the proposed McDonough amendment (H.R. 5096) to the pending urban renewal, slum clearance and housing bill which would subject local housing authority bonds to Federal taxation; to the Committee on Ways and Means.

132. By the SPEAKER: Petition of H. W. Reed, Dupo, Ill., with reference to Senate bills 505 and 748 relating to labor organizations; to the Committee on Education and Labor.

133. Also, petition of Joseph E. Hughes, member of Smith's Wage and Negotiation and Grievance Committee, Minneapolis, Minn., petitioning consideration of their resolution with reference to requesting passage of a hospital assistance measure for our senior citizens, age 62 and older; to the Committee on Ways and Means.

EXTENSIONS OF REMARKS

Fighting Progress and Committing Suicide

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 24, 1959

Mr. ALGER. Mr. Speaker, when chainstores and mail-order houses came into the retail sales field there was great resistance to them. They offered better service and lower prices. Is this bad? No; the consumers liked them fine. Some merchants resented this intrusion, however, progress notwithstanding, and forgetting that most businesses start as price cutters and offerers of unusual service, decided to eliminate this new threat. First, there were horizontal conspiracies where dealers got together to blacklist the offenders. Ninety such suits are contained in Antitrust Assistant Bicks' brief—1958 Senate Select Committee on Small Business, appendix I—wherein the Government had to prosecute the dealers and others who endeavored to enforce an economic blockade in one way or another.

Then came another effort or reaction—the vertical price-fixing attempt to eliminate the new upstart business wherein manufacturers, distributors, and dealers variously conspired with each other. Here again antitrust action by the Government was necessary. Fifty-three such vertical combinations were prosecuted and are listed in Mr. Bicks' brief—appendix II. Finally, these new businesses were accepted by merchants because of consumer acceptance. A new, more efficient distribution and sales effort had won out.

But today the lessons are forgotten. Now once again retailers resist new and tough competition, only now they want a so-called fair trade law with the antitrust law set aside so that prices can be set by manufacturers, thus assuring the same price by force of law for every retailer. Aside from depriving consumers of lower prices, these retailers seeking this fair trade law are asking, first, Federal intervention which is bad enough; and second, the curses of planned economy rather than the blessings of a free market; and third, worst of all are unbeknownst to themselves trying to commit suicide by holding an umbrella over the big retailers who can market their own brands at their own prices. The smaller retailers will not be able to compete because the fair trade law will not permit it. Fair?

M Men Basketball: Bulwark of Spirituality and Clean Living

EXTENSION OF REMARKS
OF
HON. DAVID S. KING
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 24, 1959

Mr. KING of Utah. Mr. Speaker, the senior tournament of the largest basketball program in the world is being played this week in my district, on the campus of the Brigham Young University, at Provo, Utah. Its junior counterpart was played last week in Logan, Utah.

These tournaments are the annual all-church basketball tournaments of the Church of Jesus Christ of Latter-day Saints. The participants represent the best of more than 2,500 teams and 25,000 players scattered throughout the 49 States, Canada, and Mexico.

However, Mr. Speaker, it is the ideal and the program behind the tournaments, and not their size, which compels me to call them to the attention of my colleagues. In a Nation deeply disturbed over the growing menace of juvenile delinquency, this program represents a shining example of wholesome and constructive youth activity which has taught thousands of young Americans a respect for good health, clean living, morality and chastity, and, at the same time, has given them a deeper love of God.

This program is carried out by the Mutual Improvement Association of the Church of Jesus Christ of Latter-day Saints, which was founded by Brigham Young. This great western colonizer, who was the second president of the Latter-day Saints—Mormon—Church, saw the teen-age problem in his own day. In 1869 he called together his teen-age daughters and, through them, established an association to give effective supervision and direction to young women of the church in their use of leisure time. In 1875 he founded a similar organization for the young men.

The wisdom and vision of Brigham Young were apparent in the associations from their beginning. An early issue of the magazine which the young men established soon after they were organized observed:

> The organization spread with astonishing rapidity, and in a few months, towns where there had been crowds of uncouth boys loitering around the stores, holloaing in the streets and breaking horses on the Sabbath day, a change was seen. In some cases, the roughest of these boys had been chosen presidents of associations.

In this century, as the delinquency problem has grown, these organizations have grown in both size and influence. Their total membership has passed 355,000 in some 2,000 wards and branches of the church throughout the world.

The scope of the program has broadened over the years, but the purpose has remained constant: the constructive use of leisure time in wholesome recreation, study, social, and athletic activity, and, above all, in religious training.

A lack of religious training has been a major cause of delinquency. This fact has been asserted repeatedly by

J. Edgar Hoover, a peerless authority on the problem.

This celebrated Director of the Federal Bureau of Investigation has said:

> The churches are in the front trenches of America's crime prevention crusade * * * I have been profoundly impressed with the fact that the churchgoing people are the most substantial group of citizens in the Nation. Church attendance and crime appear to be like * * * oil and water—they do not mix. * * * The greatest single factor in crime causation among juveniles today is the disintegration of the American home.

Mr. Hoover has also observed:

> Juvenile delinquency is always rooted in adult delinquency, and only through general acceptance of higher moral values can we solve the problem entirely. The easiest way to bring this about, in my judgment, is through a return to religion. For several decades the general trend has been away from the age-old belief that man is God-centered and responsible for his thoughts and behavior to a higher power as well as to his fellow man. The resultant materialism has emphasized the values of expediency, shirking responsibility, and selfishness.

The Mutual Improvement Associations offer instruction and supervision for every teenage group, and for young men and women. It also encourages the participation of parents.

At the local level, the associations meet weekly throughout the year—usually on Tuesday nights. The meetings open with a song, prayer, and with other appropriate devotional exercises. Later the members separate for classwork, project activity, and special events.

Variety and flexibility are cornerstones in the program's success. Members have ample opportunity to express and cultivate their special interests and talents—including athletics, public speaking, and the cultural arts.

In the winter months, the young men organize basketball teams. The winners in league play advance to division tournaments, and the division champions become the participants in the all-church tournaments.

The senior tournament, which is being played this week, is held annually in the spacious George Albert Smith Fieldhouse at Brigham Young University, which is the largest church-operated university in the Nation. With pride and enthusiasm, Dr. Ernest L. Wilkinson, Brigham Young University president, and the school's 10,000 students serve as hosts and provide cheering sections for the 32 teams. Thousands of spectators annually see the tournament, whose championship game traditionally is televised to western audiences.

In other seasons the young men and boys play softball and volleyball. MIA athletics are a year-round program which stresses the blessing of good health and the value of physical fitness. The all-church championships are cherished prizes. But the emphasis lies not alone upon winning. In every all-church tournament a prize more coveted than the championship itself is the sportsmanship trophy, whose winners are rousingly applauded as real champions in their own right.

In the local league play, and in the tournaments, the players invariably convene in prayer. Under no circumstances is profanity countenanced.

Only the boys who are morally clean and who live a strict health code—known among the Latter-day Saints as the Word of Wisdom—are eligible to play. The code permits no smoking and no drinking and urges members to practice temperance and moderation in personal habits as well as in diet. Chastity is a strict requirement.

The former middleweight boxing champion of the world, Gene Fullmer, himself a product of the program, has said that MIA athletics and the Word of Wisdom are all that a young man needs to keep in good physical condition.

Perhaps the best measure of the success of the MIA is the appeal it holds for outsiders. Visitors are encouraged to participate—and often do. They are welcomed into every activity and are eligible for basketball, softball and volleyball, provided they respect the Word of Wisdom.

In Japan the MIA meetings have attracted more nonmembers than members. In 1956 the average attendance at the meetings in Japan was 760 Latter-day Saints and 1,500 nonmembers.

Rebecca Franklin, writing in the New York Times Sunday magazine in 1955, gave the program this tribute:

> Undoubtedly one of the most efficiently organized youth movements in the world, MIA provides spiritualized recreation for its members through music, drama, speech and athletics, a never-ending round of carefully supervised activities. For 100 years the Saints have been keeping 'em busy and out of mischief.

In concluding, Mr. Speaker, I find the reason for the success of this program very clear—it holds the key of genuine happiness and has given that key to young Americans. It has shown them that lasting success and happiness do not lie in the pleasures and temptations of the material-rich world which surrounds them, but lie instead in the spiritual treasures in which home and church and faith and service abound.

Could Be a True Story

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 24, 1959

Mr. ALGER. Mr. Speaker, you are a retailer and the manufacturer sets your prices on the merchandise you handle and sell. You must sell at that price. The manufacturer thus protected then makes the same product for a big chain or department store who puts on the product his own trademark or brand. This he sells at a price of his own choosing—let us say a six-tube radio—considerably below your identical radio.

You cannot lower your price—your prices are controlled by the manufacturers. You lose your customers to the department store or chainstore. You go broke. Why?

Because Congress changed the entire free enterprise system, and did it to help you, the little retailer.

Fantastic? Yes, but it could be true. This is exactly what the fair trade bill, H.R. 1253, will do.

West Virginia's Request for a North-South Route To Be Included in the Interstate Highway System

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 24, 1959

Mrs. KEE. Mr. Speaker, last week, on March 19, it was my privilege to attend an important conference here in Washington with reference to West Virginia's urgent request for the addition of a north-south route to be included in the Interstate Highway System.

Present for this conference, which was conducted under the chairmanship of Representative ARCH A. MOORE, JR., of West Virginia, were Commissioner E. L. Armstrong and other officials of the U.S. Bureau of Public Roads; State officials and citizens of the State of West Virginia under the leadership of Gov. Cecil H. Underwood, officials and citizens of the State of Pennsylvania under the leadership of the Honorable Parke Martin, who attended both as secretary of highways and the authorized representative of Gov. David L. Lawrence; interested Members of the Congress from the State of Pennsylvania; and our West Virginia congressional delegation under the leadership of Senator JENNINGS RANDOLPH and Senator ROBERT C. BYRD.

Representatives and spokesmen from both Pennsylvania and West Virginia were unanimous in recommending an extension of the interstate route from Washington, Pa., to Beckley, W. Va., and to continue to the West Virginia-Virginia border in the immediate vicinity of my home city of Bluefield. This requested extension will connect the Great Lakes and Florida.

Mr. Speaker, I strongly feel that the benefits which may be derived from allocating the some 200 miles requested for this specific route fully justify this request.

In addition to the advantages this route would provide for national defense—the closest available sheltered north-south route in the East, protected by the Allegheny Mountains—the availability of adequate underground area for protecting industrial facilities, and so forth, this route would help West Virginia's present industries to expand and help West Virginia attract new industries and create vitally needed new productive payrolls.

West Virginia suffers more from unemployment and lack of prospective job opportunities than any other State in the Union.

Mr. Speaker, nature has given West Virginia some of the most beautiful

scenery to be found in the world. One of our brightest economic spots lies in the attraction of tourists. One of our difficulties today is the lack of adequate roads and highways. This proposed route would provide an accessible avenue which would greatly benefit our entire State. Even with the present handicap, tourism now ranks in dollar value as the third most important income producer in West Virginia, following mining and manufacturing. I understand that $240 million was spent in our State by tourists during 1958.

Additional highway construction would provide employment for thousands of our presently unemployed. Private industry would then be able to develop facilities to better accommodate the traveler who would enjoy the great natural beauty of our State of West Virginia.

While I deeply appreciate the careful consideration that will be given by officials to this request—in the event mileage should become available in the interstate program—the fact remains that 41,000 miles have been allocated, with the exception of a small amount reserved for contingencies. Therefore, I am happy to introduce in the House a bill to amend the Federal-Aid Highway Act of 1958 (72 Stat. 89) to provide additional funds for the construction of highways in labor surplus areas. This measure is identical to S. 423 which is presently pending in the U.S. Senate.

Mr. Speaker, it is my hope that similar legislation will be passed by this Congress, and I am grateful to be privileged to give this proposal my full and complete support.

Price Fixing—Vertical Becomes Horizontal

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 24, 1959

Mr. ALGER. Mr. Speaker, vertical price fixing is illegal according to antitrust law. Collusion or conspiring to set prices by manufacturer, distributor, or dealer is declared illegal by antitrust law serving as a protection to businesses in healthy competition. Horizontal price fixing is illegal, too. Manufacturers, distributors or dealers respectively must not get together to set prices. No one questions the need for such protection. Not until now, that is.

Now, the terms of the proposed fair trade bill H.R. 1253 are simple—set aside this antitrust protection of business and permit vertical price fixing by the manufacturer stipulating the retailers' price.

Well, there's a sleeper in this one. Problems of definition always trip up the bureaucrat or economic planner trying to control the uncontrollable, namely the market place of healthy competition. Vertical price control will result in horizontal control too. As Stewart Lee, chairman of economics at Geneva College points out:

If the owners of pharmacies would agree to sell all brands of toothpaste at the same price to avoid price competition, the law would declare this horizontal price fixing. But if the pharmacists would persuade each manufacturer to fair trade his products, the end result is horizontal price fixing.

Thus, vertical and horizontal price fixing both result and declaring one legal or illegal in this case necessarily affects the other. Simply saying this is not so in a bill. Fair trade will not change the result.

Comments by Representative Joe L. Evins of Tennessee

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, March 24, 1959

Mr. KEFAUVER. Mr. President, Representative JOE L. EVINS, the very able Representative from the Fourth Tennessee Congressional District, wrote a splendid newsletter on the commemoration of the 170th anniversary of our Constitution, and on the occasion of the congratulation of the Speaker of the House, the Honorable SAM RAYBURN, on his long tenure of service in the Congress.

This thoughtful and well prepared newsletter appeared in a number of Tennessee papers.

Mr. President, I ask unanimous consent that the newsletter be printed in the RECORD.

There being no objection, the newsletter was ordered to be printed in the RECORD, as follows:

[From the Johnson City (Tenn.) Chronicle, Mar. 14, 1959]

CAPITOL COMMENTS

(By JOE L. EVINS, Member of Congress, Fourth District Tennessee)

The House last week, on March 4, paused in its deliberations to observe two historic events. First, the 170th anniversary of our Constitution—that historic document which has provided the framework for our Government; and, secondly, to congratulate the Speaker of the House, SAM RAYBURN, on his long tenure of service in the Congress.

The 170 years that have passed since our Constitution went into effect have seen the Nation expand and grow from Thirteen Colonies on the Atlantic seaboard to 49 States stretching from coast to coast. Today America is the most highly developed nation in the world, covering half the continent and reaching into the Arctic Circle. From a thin population of 3 million it has grown to its present teeming 175 million.

The problems of today are far different, and many feel far more numerous, than they were 170 years ago; but the Constitution still stands with only a few amendments, still successfully guiding the course of our Nation and still preserving the freedoms that are our tradition. Our Constitution is the oldest living and active document of its kind in existence today. Never in the history of the world has a constitution served a nation so long and so well.

CONGRATULATE RAYBURN

While celebrating the anniversary of the Constitution, several Members took occasion at the same time to congratulate Speaker SAM RAYBURN, who on March 4 completed his 46th year of service as a Member of the House of Representatives. Speaker RAYBURN has already held this office longer than any man in our history. In entering his 47th year of service, he now has also exceeded all previous records of service in the Congress. So far as is known, this record is also unprecedented in the history of the entire world.

William Gladstone served in the Parliament of Great Britain for 60 years and Winston Churchill is serving his 54th year. But both these great English statesmen were elected to Parliament for only a limited period and later appointed to the House of Lords in perpetuity. So that it appears that Mr. RAYBURN has served as an elected member of a national legislature longer than any man in the history of modern democracies.

Our great State of Tennessee may rightfully take pride in this unprecedented achievement because SAM RAYBURN was born in east Tennessee, in Roane County, adjoining our own Fourth District. The Speaker is one of the many distinguished men whom our great State has contributed to the history of Texas—a list that includes Sam Houston, Davy Crockett and many others. Our State has contributed three Speakers by election—John Bell, James K. Polk, and Joe Byrns; we can add with pride the name of SAM RAYBURN by nativity.

Although the principal duty of the Speaker is to serve as the presiding officer of the House, the office carries with it many other exacting duties, great power and responsibility. In his ability to influence the course of our Nation, the Speaker is probably second only to the President.

Speaker RAYBURN has served our Nation well and uses his great office with a high sense of public duty. Though the leader of the Democratic Party in the House, he has discharged his official duties as an American, without narrow partisan consideration, and always with a truly national rather than provincial point of view. Tennessee, Texas, and all America may take equal pride in his record of service in the public interest.

Women Will Rebel

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 24, 1959

Mr. ALGER. Mr. Speaker, fair trade is the setting of prices by manufacturers and will occur if and when Congress sets aside antitrust price-fixing protection by an alleged fair trade bill—H.R. 1253. Some retailers blame discount houses as the cause of retailers pricing troubles. Not so. Discount houses may well be a manifestation of a change in our whole distribution apparatus. Discount houses, in short, are a recognition of a fact of life, not the cause of it.

Fair trade is unenforcible in the courts and in the marketplace. It is unenforcible because people can see for themselves that it is not fair, but unfair. Price setting is in the retailers province, price acceptance in the buyers—neither is the manufacturers choice at the retail level. Either this is so or we do not have a competitive economy.

In this Nation people cannot be regimented by economic controls—not yet anyway. Just wait until the shoppers of this Nation, the women, realize the import of the fair trade price setting under H.R. 1253, or similar bills.

Need for an Overall Science and Technology Agency

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 24, 1959

Mr. ANFUSO. Mr. Speaker, the first sputnik aroused great public and congressional concern over the state of American science and technology. That event served to alert us and to spurt us on to action, with the result that during the past year and a half we have made considerable progress and scored some notable achievements in these fields.

There is some evidence, however, that as a result of our own recent successes in astronautics we are once again lapsing into a state of complacency. The Eighth Annual Report of the National Science Foundation warns us as follows:

> We have only made a beginning; the major job is still to be done. As a nation, we appear to forget that we live in a competitive world and shall continue to do so. It seems abundantly clear that we shall rapidly lose in competition, unless we can show more determined and constructive efforts than we have during the past years.

This is a warning we should heed. It deserves our fullest attention. I have given it considerable thought and it is as a result of this warning that I was prompted to take the action described in the succeeding paragraphs.

A vital element in an adequate science program is, to my mind, the creation of a single agency in which the National Science Foundation, the National Aeronautics and Space Administration and other existing Federal science agencies can be gathered together under one roof. This would make for efficiency, economy, better coordination and cooperation, and above all for greater achievements in less time.

At the present time, our Government administers a vast and highly diversified research and development effort in science. This, in itself, is a task of almost incredible complexity. Considering the dimensions of this task, it is not surprising that we have as yet not been able to devise the most effective ways and means for managing such a gigantic and varied program. To be sure, there have been attempts in the past to relate the research and development activities of various Government agencies to each other, as well as to research activities being carried on outside of the Government. These efforts, however, have had limited objectives and even more limited results. Consequently, the fundamental problem, that is, to devise effective means to manage our scientific research program, remains unsolved.

In order to help solve this problem and to establish the means whereby effective management of our science program could be obtained, I have introduced a bill, H.R. 5612, which calls for the creation of a Science and Technology Agency. It is to be known as the "Science and Technology Agency Act of 1959."

The bill would create an independent Science and Technology Agency for the coordination and improvement of Federal functions relating to the conduct and support of scientific training and research. It takes the first necessary step of reorganizing and integrating the various science programs of the Federal Government. The Science and Technology Agency is to be headed by a Director appointed by the President with the consent of the Senate.

To this new Science and Technology Agency shall be transferred certain existing agencies and functions of the Government, together with their personnel, property, records, et cetera. Specifically named in the bill are the following agencies: National Science Foundation, National Aeronautics and Space Administration, National Bureau of Standards, and such other agencies as the Congress believes should be incorporated in the overall agency.

Such additional matters as the processing and distribution of scientific information, educational grants and loans, national institutes of scientific research and cooperative international programs may later be incorporated in the bill, or discussed in the committee's report to the House, as the recommendations of the executive agencies and the testimony at the hearings on the measure would demonstrate their need. The bill was referred to the House Committee on Science and Astronautics, and I trust the committee will place it high on its calendar for early hearings and due consideration.

Celebration of the 41st Anniversary of Byelorussia's Independence

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 24, 1959

Mr. DORN of New York. Mr. Speaker, on Sunday, March 22, Americans of Byelorussian descent celebrated the 41st anniversary of the independence of Byelorussia.

The history of the struggle for independence by Byelorussian people was long, constant, sacrificial, dedicated and determined, marked with armed uprisings and reflected in most of the Byelorussian literature as well as being led and inspired by all of the national leaders and supported morally by many neighboring countries.

On March 25, 1917, the Byelorussian Rada assembled in Minsk declared an independent Byelorussian Democratic Republic, thus marking the end of occupation.

Unfortunately the Byelorussian Democratic Republic was short lived. Once again the Russian Army under a new slogan of communism overran the country and forced the first Byelorussian Government into exile. However, neither the difficult path of exile nor countless persecutions that followed on Byelorussian territory swayed the firm stand of the Byelorussian people.

The declaration of independence gave to every Byelorussian a special sacred meaning of freedom, a special respect and loyalty to all free nations seldom experienced by other peoples.

So this year on March 22, Americans of Byelorussian descent, marked the day of the independence of Byelorussia extending their brotherly hand to all men of Byelorussia who never yielded to the will of any aggressor.

I hope that Byelorussian Independence Day will be celebrated each year not only by Americans of Byelorussian descent but by all citizens and all men who value, respect and jealousy guard freedom.

Free People Need Free Prices for Progress

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 24, 1959

Mr. ALGER. Mr. Speaker, it is argued that the fair trade bill, H.R. 1253, will give the price protection needed because there are other forms of Manufacturers' control of prices at retail such as selling on consignment and manufacturer-owned retail stores. If a manufacturer is really interested in controlling the retail price, then maybe that same manufacturer should assume some of the risks which manufacturers assume when selling on consignment or when owning the retail outlet. Risk and responsibility are part of consignment selling and owning retail outlets, but what are the additional responsibilities and risks which will be assumed by the manufacturer under this resale price maintenance bill?

The rise of the so-called discount house is used as an argument for enacting a Federal fair trade bill, but a study of the discount house indicates rather strongly that State fair trade laws stimulated its growth. A high, well advertised price with a wide profit margin naturally stimulates such competition. Since when is Federal law designed to assure a guaranteed fat profit?

The truth of the situation concerning the entire fair trade genesis may be found to be resistance to better merchandising, a fighting of the progress in more efficient merchandising and distribution. But progress we will, with or without

the Federal mandate of a fair trade bill, conceived in shortsightedness. Customers will demand greater efficiency, better production, distribution, and merchandising—that is, so long as they are a free people.

Human Rights Are Everybody's Problem

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 24, 1959

Mr. HUMPHREY. Mr. President, on February 22, it was my privilege to address the Chicago Conference for Brotherhood at the Shoreland Hotel, Chicago, Ill. The theme of my address was that Human Rights Are Everybody's Problem.

I ask unanimous consent that this speech be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

REMARKS BY SENATOR HUBERT H. HUMPHREY, BEFORE THE CHICAGO CONFERENCE FOR BROTHERHOOD, FEBRUARY 22, 1959, CHICAGO, ILL.

Throughout our country people have been meeting this past week in commemoration of National Brotherhood Week.

Such gatherings reflect a growing awareness of the importance of human brotherhood and understanding in a free and democratic society. As never before in our history, there is a recognition that suspicion and prejudice stand as a mortal threat to the political and social health of the Nation. Discrimination, bigotry, and prejudice are the dangerous subversive forces at work in our society.

The denial of equal rights to so many of our citizens, as a result of such prejudice, is the reason that we are gathered here tonight. The denial of the God-given right to freedom is the No. 1 moral and political issue which we face today in America and in the world.

The present struggle between the free world nations and the Communist bloc is, after all, based upon the fundamental issue of man's right to freedom. This is what the present conflict, when all is said and done, is all about. The issue is whether government should be the servant of the people or master of the people.

In such a basic and crucial struggle we cannot afford to ignore denials of freedom right here in America. We must put our own house in order if we are not to be considered hypocrites when we point an accusing finger at the Soviets for their denial of human rights.

And may I add that the problem we face right here at home is not a regional problem only confined to the South. We know this only too well from firsthand experience. Minority groups still face employment barriers and by gentlemen's agreements a system of restrictive covenants is effectively maintained in many towns and cities of the North.

At the conclusion of the recent New York hearings of the Civil Rights Commission, Father Hesbergh, president of Notre Dame, speaking on behalf of the Commission members, said that it had been demonstrated beyond a doubt that the problem of discrimination in housing is nationwide in scope.

"We are talking about the face of America," said Father Hesbergh, "and that face must have the beauty and dignity and harmony of the Constitution." Equal protection of the laws, he said, must begin in the homes of all Americans.

In spelling out the problem which we face, I do not wish to leave the impression that we are not making progress. Advancements in the field of civil rights and human understanding are being made every day.

I was heartened to read only the other day that your new State superintendent of public schools here has announced that he intends to take affirmative action against segregation in certain schools in southern Illinois.

Yes, more and more jobs are opening to qualified Negroes. Fewer and fewer trade unions maintain color bars. Progress is being made, slowly to be sure, toward nonsegregated housing.

And in the South there is encouraging progress also. The recent opening of integrated schools in Virginia is a milestone. Its significance cannot be overestimated. The doctrine of massive resistance in that historic State has collapsed completely.

In Kentucky, 85 percent of the schools have been integrated.

In the border State of Maryland, integration of schools is almost complete and has taken place without any difficulties.

Tennessee is in the second year of a start with its capital city integration plan as accepted by the court.

In North Carolina, its largest city, Charlotte, is proceeding with an accepted plan; its fine university has for years had Negro students.

In Texas, Negroes were admitted to the university several years ago, and many of its towns and cities have integrated their schools.

Louisiana admitted Negroes to the State University 2 years ago, and this year admitted Negroes to its undergraduate school in New Orleans.

In Florida, a Negro has been admitted to its law school, and Governor Collins, a courageous and good man, has proposed the abolition of all Negro graduate schools and the admission to the regular university of their students this coming September.

There are only four States in the South which have made no start toward integration and in which a policy of massive resistance continues unabated.

So progress is being made. And this is the encouraging thing to remember. The job remaining to be done is still tremendous, but we have every reason to feel confident that we have reached the time in our country's history when the goal we seek of first-class citizenship for all our people is in sight.

Both as mayor of Minneapolis and as a U.S. Senator I have worked for legislation to protect the rights of all the people. I have advocated civil rights legislation on the basis of the moral law and the constitutional guarantees of freedom to all citizens.

I would like to set forth to you these basic and fundamental principles upon which I have based my stand. Emotional outbursts and arguments of those who oppose civil rights must not cloud the basic issue; namely, the moral and constitutional duty of the State to protect and to guarantee the rights of its citizens, regardless of their race, religion, creed, color or national origin.

In the year 1896, a great American wrote the following words on this duty of the Government:

"The sure guarantee of peace and security of each race is the clear, distinct, unconditional recognition by our Governments, National and State, of every right that inheres in civil freedom, and of equality before the law of all citizens of the United States without regard to race. We boast of freedom enjoyed by our people above all other people. But it is difficult to reconcile that boast with a state of the law, which, practically, puts the brand of servitude and degradation upon a large class of our fellow citizens, our equals before the law."

These are the words from the dissenting opinion of Justice Harlan in the historic case of *Plessy* v. *Ferguson*. As we all know, Justice Harlan's colleagues on the Supreme Court rejected his defense of man's rights under the Constitution by adopting the "separate but equal" doctrine.

However, Justice Harlan's dissenting opinion was finally accepted in 1954 in the case of *Brown* v. *Board of Education* in which the Court stated: "We conclude that in the field of public education the doctrine of separate but equal has no place. Separate educational facilities are inherently unequal."

Justice Harlan had been a slaveholder himself, and an opponent of the 13th amendment. He was, however, a just and righteous man with a deep reverence for the Constitution, and he clearly understood what was intended by the 14th amendment. As his biographer stated:

"The simplicity and directness with which he viewed it approaches that of a layman. He believed that it should be construed in accordance with the views of the framers and the dictates of commonsense."

Justice Harlan's opinion should be read and heard today by every citizen in the land. It demolishes the emotional arguments which have been raised in an effort to bury the simple and fundamental constitutional guarantee of equal protection of the law.

Yes, it is this guarantee which we must constantly keep in mind. We must not let it be pushed aside and obscured. The 14th amendment is clear:

"No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws."

When the Supreme Court in 1954 overthrew the "separate but equal" doctrine, it breathed new life into the Constitution. Such a decision was inevitable in an age when second-class citizenship can no longer be tolerated. There can be only one class of citizens permitted under our legal structure; and those who argue otherwise are in opposition to the supreme law of the land and the basic and fundamental principles upon which our Nation was founded.

The framers of the Declaration of Independence laid down the basic philosophy of our Government when they wrote:

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed."

In these short sentences is summarized two great and abiding ideas which have served to guide our country for almost 200 years.

First of all, that man has certain rights under the natural law; rights given to him not by the government, but rights given to him by God, Himself. As such these rights are unchangeable and everlasting and above the power of Government to destroy or deny.

Second, governments are established by the people for the primary purpose of securing these natural rights—which include that of liberty—and to protect the individual in their enjoyment.

This indeed was a radical philosophy of government in the 18th century, and there were many who deemed it both dangerous and visionary. But this doctrine has served us well and under it our Nation has grown and prospered and government has remained

the servant rather than the master of the people. Unfortunately, however, this great concept of a government established to protect the rights of all the people is still not accepted by all. There is still a denial of freedom and equality to many of our fellow citizens—particularly those of the Negro race.

To the extent that our Federal, State, and local governments fail to protect the natural rights of the citizens, such governments are failing to fulfill their function according to our basic philosophy of the role of government.

Human rights are inalienable rights. They are God's gift to man—and their protection and advancement is the first obligation of organized society.

Government at all levels must give constructive and imaginative leadership in the effort to overcome discrimination throughout the Nation.

Protection of human rights is the moral responsibility of government officials in a free and democratic society. They have the obligation to establish standards and practices of equal rights and equal protection of the law for all citizens to follow.

However, action of representative government generally reflects moral and political standards of its citizenry. For that reason fulfillment of civil rights and civil liberties is the continuing responsibility of every community, of every civic organization, and of every individual. Action in Congress is vital and important, of course—but it is not enough alone.

Leadership from the President, the executive branch of our Federal Government, from our Governors and from our mayors is equally important, of course—but it too is not enough alone.

We need courageous leaders in behalf of human rights in every community. We need local action, as well as national action. We need private action as well as public action.

The cause of civil rights should enlist the active support of government, of voluntary organizations, of religious groups and institutions, and of civic bodies. Only by such unified action can we truly fulfill mankind's inalienable rights.

Great progress, as I have already noted, has been made in recent years in the field of civil rights, but we still have a long way to go.

So long as segregation is practiced in schools, parks, libraries, hospitals, buses and trains, we will not have achieved true freedom. So long as color bars exist in housing, hotels, restaurants and theaters, we will be short of the goal. So long as citizens are denied the right to vote or denied the right to a job because of their color, we will have failed to live up to our announced principles.

Those of us who maintain that it is the obligation of government to protect the civil rights of all citizens are proposing no new or radical idea. Our position is as old as the Declaration of Independence itself; founded on the basis of faith in the natural rights of man and in the Constitution of the United States.

I realize only too well that segregation cannot and will not be wiped out overnight. Prejudices which have developed over scores of years cannot simply be ignored in working toward the goal of equality under the law. But these very real problems and roadblocks to understanding should not and cannot be permitted to serve as excuses for refusing to act.

It is my firm conviction that government must give constructive and imaginative leadership in this endeavor. This will require patience, understanding, and a determination on the part of men of good will to cooperate in a dispassionate manner.

This is no time for name calling or for emotional tirades or for holier-than-thou attitudes. It is the time to calmly and rationally discuss and work out methods whereby equality under the law shall be assured to all citizens in as orderly and civil a manner as possible. I am convinced that it can be done if we but put our minds and our hearts to it.

We in the Congress have a grave responsibility to aid in protecting the rights of all the people. And we are making headway.

The Civil Rights Act of 1957 was the first civil rights legislation passed by Congress since 1875. It added greatly to the excellent record of the 85th Congress. While it failed to contain many of the proposals that I, and many of my colleagues, had hoped and worked for, it was a positive step forward. Under this act there was created a Commission on Civil Rights, a Civil Rights Division in the Department of Justice, and most important of all, the Attorney General was empowered to seek an injunction when a person was deprived or about to be deprived of his right to vote. These were provisions which many of us had striven for many years to achieve.

This civil rights record of the 85th Congress, however, should not serve as an excuse for failing to take further action in the 86th. And I am confident that we will have reason to be proud of the civil rights record of this Congress.

As you know, a number of civil rights bills have already been introduced in the Congress this year.

Senator JOHNSON has offered a bill which would (a) make it a Federal crime to bomb schools, churches and other buildings; (b) grant the Attorney General subpena power in investigations of violations of voting rights; (c) extend the life of the Civil Rights Commission another two years; and (d) establish a Community Relations Service to provide conciliation service to communities involved in civil rights disputes.

The administration's proposed bills would (a) make the use of force or threat of force to obstruct court orders in school integration cases a Federal offense; (b) provide funds for education of the children of members of the armed services in areas where the public schools have been closed; (c) make it a Federal offense to travel in interstate commerce to avoid prosecution for the bombing of religious or school property; (d) prohibit the destruction of voting registration lists and make such lists and records available for examination by the Department of Justice; (e) authorize appropriations by the Federal Government to assist local school agencies in desegregation programs; (f) extend the life of the Civil Rights Commission 2 additional years; and (g) create a Commission on Equal Job Opportunity under Government Contracts.

Your own Senator PAUL DOUGLAS and I, joined by several other Members of the Senate, have introduced a bill which (a) endorses the principle of the antidiscrimination decisions of the Supreme Court; (b) provides that the Attorney General may institute a civil action for the purpose of preventing any interference with a person's right to equal protection of the laws; and (c) authorizes the Secretary of Health, Education, and Welfare to (1) render technical assistance to aid in school desegregation; (2) provide grants to areas where desegregation in public schools is being carried out; (3) prepare plans for the elimination of segregation in public schools where no effort has been made to comply with the Court's decision; and (4) institute legal proceedings to enforce compliance when such plans are rejected by State or local officials.

I personally feel that the most meaningful legislation is that which Senator DOUGLAS and I are sponsoring. This is not to say that the bills as offered by Senator JOHNSON and by the administration are not desirable. I think that they are. They would be steps forward. Not as long strides forward as I and many of my colleagues in the Congress favor, but forward strides nevertheless.

Senator JOHNSON is to be commended for offering his civil rights bill and for indicating that he intends to push for its adoption by the Senate.

I think it is significant that under the leadership and direction of Senator JOHNSON, a Senator from a State which was part of the Confederacy, no less than 5 of the 22 southern Senators voted for the Civil Rights Act of 1957. For the first time the solid South split on the civil rights issue.

There is general agreement that the 86th Congress will pass further civil rights legislation. And it will be significant action.

Yes, we are moving forward. We are making progress on wiping out the great evils of discrimination and segregation. The gap between the flowing words embodied in the Declaration of Independence and the Constitution and the denial of first-class citizenship to so many of our people, is being faced up to. This gap is slowly but surely being closed.

The words of a distinguished American, a former Senate colleague from North Carolina, Frank P. Graham, summarize the opportunity which we now have to advance the cause of freedom:

"With human liberty in peril around the earth, may the people of the United States, in cooperation with free nations, light up the wide heavens of the hopes of all peoples with another great declaration of the equal freedom and dignity of all people. Now is the time to make clear to the friends of freedom in the East and West that freedom, due process of equal justice under law, and the equal opportunity for all people are the historic and living sources of the faith of the American people in themselves, of the world's faith in America, and of America's moral influence and power in the world."

Fair Trade Anachronism

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 24, 1959

Mr. ALGER. Mr. Speaker, the fair trade is a legislative anachronism. The language of the bill would do credit to the Government control of socialism. At the least it contains the bureaucratic dictation of the planned economy concept, not free enterprise. What is meant by such phrases as "prices that are adequate to stimulate said distribuion and low enough to enable distributors of such identified merchandise to compete effectively with those marketing goods of the same general class and to satisfy the needs of ultimate consumers."

Now, what does this mean? Prices "high enough to"—"or low enough to"—and who is so wise to know what to prescribe by legislative edict? What means the phrase "of the same general class" or "to satisfy the needs?" And who will play the Almighty in giving the answers?

The answers can be found only in the marketplace where merchandise in competition is selected or rejected for a price or for bargaining between seller and buyer. Thousands of transactions daily provide the answer—not a bureaucrat, nor we in Congress assembled.

American Education in the Space Age

EXTENSION OF REMARKS
OF
HON. DAVID S. KING
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 24, 1959

Mr. KING of Utah. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the speech which I delivered March 20, 1959, to the first meeting of new Space Law and Sociology Committee of the American Rocket Society. The speech, entitled "American Education in the Space Age," follows:

AMERICAN EDUCATION IN THE SPACE AGE

It is no secret that there has been a good deal of dissatisfaction with American education in recent times.

The question as to how much of it may be warranted is, no doubt, open to dispute. But the dissatisfaction is there, and I believe it merits a long, hard look. Let us take a moment to explore the reasons for this phenomenon.

Educators say that this era of scholastic soul searching has been consistently picking up steam ever since World War II, which—like all wars—initiated a strong trend toward social introspection. World War II and the Korean war disclosed weaknesses and soft spots in many phases of our civilization. And so we became conscious of certain rips and tears in our educational fabric. This is one reason for the dissatisfaction.

Another is that we have reached a point in the evolution of history where rates of change and the tempo of events have speeded up tremendously, and are steadily gathering more speed. What was good enough yesterday will not be good enough tomorrow. Scarcely any social facet of our civilized world either was or is prepared to adjust rapidly enough to match the whirling pace of invention, of science and of population. Education is one of those social facets.

A third reason, of course, has been the overnight appearance of the specter of Soviet science, which—like the genie from the bottle—materialized on the world's political horizon with the launching of Sputnik I. This sudden realization that the Soviets were not only playing in the same technical league as the United States but, in some respects, were leading us by a disturbing margin was a rude shock to our superiority complex.

Such was the picture as we entered the space age 17 months ago. I need not describe the berating which American education has taken since then. At times the flaying has assumed almost hysterical proportions. And, while subsequent spectacular demonstrations of our own aptitude for space have quieted the clamor to a degree, it can still be heard. Our educational system remains under a blanket of heavy criticism, and the conviction is still general that we must do something about it.

This leads to the key question: Is all this concern and criticism a healthy thing?

Generally speaking, I believe that so long as we do not undermine public confidence in our school system the answer is, yes. The reasons for the conclusion will be presented later. First, however, let me say that I do not hold myself out as a professional educator or education expert. However, I have taught school. My native State has a fine reputation in education. And I have always been deeply interested in the general problem.

More important, perhaps, I have listened to many scores of hours of testimony from those who are educational experts in this matter of where-we-stand on education today, and from them I draw certain conclusions.

One of those conclusions is that the present disposition of the American public to cast a critical eye on its educational process is more than justified. Improvement would seem essential to our continued role of leadership in the world community.

At the same time, my plea is for balance. If, for example, we go on a nationwide educational binge which favors only the natural sciences—we shall almost certainly be as poorly off as if we totally ignored the need for more and better scientific training. Clearly we cannot do the latter. Nor can we do the former.

All the science in the world will not achieve the fine destiny most of us visualize for our country if we do not also continue to nourish our gifts of philosophy, law, and effective self-government—to show sustained progress in the social sciences and the humanities and, above all, in spiritual values. These are areas in which we have a strong lead, I believe, over all but a very few of the homogenous, highly civilized small nations; and the gap between the Soviets and ourselves in these areas is pronounced.

Nevertheless, the social sciences are no more static than the physical ones. They call for continuing research and application of trained effort. Otherwise, we shall not be able to make maximum use of them in the cause of world leadership.

This is something the Russians seem to have learned very well in regard to the natural sciences. While it has become trite to call attention to the great efforts the Soviets are making in education, I am, nonetheless, impressed with the uniform observation of American educators, scientists, and lawyers who have recently spent time in the U.S.S.R., studying their institutions, an observation to the effect that education has become almost a fetish in the Soviet Union.

"Education," says U.S. Commissioner of Education Lawrence Derthick, "is paramount in Russia. It is a kind of grand passsion—this conviction that children, schools, and hard work will win them their place in the sun, and on the moon. We are today in competition with a nation of vast resources, a people of seeemingly unbounded enthusiasm for self-development, and fired with conviction that future supremacy belongs to those with the best-trained minds, those who will work hard and sacrifice."

I am not one of those who believes we must emulate the Soviets in all things. So far as education is concerned, it seems clear that they are, in many ways, trying to emulate us—whether or not they know it or will admit it. As one recent visitor to the U.S.S.R. put it: "Everywhere in Russia are evidences not only of passionate love of country but of a burning desire to surpass the United States in education, in production, in standard of living, in world trade, and in athletics. The slogan we saw most, in posters, films, and everywhere, was 'Reach and overreach America.' "

In this quest, Russia has followed the United States example. It has adopted philosophy of mass education, to attempt to raise the knowledge level of all its people, and not simply to educate a chosen few.

But if the Soviet emphasis is different from ours, and if (as our experts allege) it is topheavy in the physical sciences, stereotyped in the arts, and rigidly controlled in other ways for political purposes—still we cannot afford to ignore what is proving effective in their system.

Obviously the Soviets are making prodigious strides in science, in mathematics, physics, biology, astronomy, chemistry, nucleonics, electronics, and other sciences. And their great achievements in rocketry and the aeronautical and space sciences leave little doubt of a growing proficiency in engineering and technology. So while I believe in balance and scope for American education, a look into the future assures the high strategic importance of physical science to our national security, our prosperity, and our international preeminence. We cannot afford to lag in this direction.

After mulling over Soviet school curriculums and the reports of competent educators who have made careful studies of the Soviet educational system—what it is accomplishing and how—I am convinced that we can find in the Russian effort much that is worth serious reflection. We might even take a few leaves from their book on such points as these:

1. Provide wider and better basic scientific training at the elementary and secondary school level, using revised and up-to-date text and learning aids.

2. Emphasize languages at these same levels. I am informed that by the time a Russian youngster completes his 10th year in school, he not only reads but has conversational competence in a foreign language. Significantly, 45 out of every 100 students at this level know English, 35 know German, and 20 know French. Common sense suggests the great advantage of this in reaping the benefit of knowledge which others have acquired in other tongues.

3. Step up rapidly the translation of foreign scientific writing into English, especially Russian ones, and insure their dissemination. We may as well face the fact that Americans do not have the same everyday necessity for foreign language as Europeans, and therefore we will probably never have the same language proficiency no matter how much educational emphasis we place upon languages. We must offset this with translations. Some are being done now at Government level by the Library of Congress, the Central Intelligence Agency, and the Department of Commerce. But for the most part our translations seem to be a matter of too little and too late, with a circulation that is far too limited. The Russians' astounding progress in science is undoubtedly due in part to their assiduous work in translating scientific publications. They translate our scientific articles, journals, and textbooks into Russian soon after they are published. And their translations of our work are widely circulated among their scientists. We accept a serious handicap in the technology race when we fail to take similar advantage of their scientific publications. Naturally, not all of their scientific publications are available to us, but we are making no consistent effort to translate and distribute those which are.

The best example of this was the sputnik surprise. In scientific publications available to us, the Russians announced, some 90 days before they shot their first sputnik into orbit, the very date on which the satellite would be launched. Because we had failed to translate this information, the sputnik caught us by surprise.

4. Elevate the stature of our teaching profession. This is probably the most important and, at the same time, the most difficult of all our educational problems. Somehow it must be done.

Perhaps the root of the problem lies in the public attitude toward education. I sometimes wonder whether we Americans have the respect for education and educators that we imagine we have. If our respect were as great as we imagine, our teachers already would enjoy the professional stature they deserve. Instead, we often find them in the embarrassing plight of being their own best advocates, of waging their own fight for a comfortable living standard which would allow them to give their undivided attention and energy to training our children.

I firmly believe that in the lives of our children, education should have first priority. But in American homes I find that schoolwork is seldom given proper priority—that

it must compete for time and attention with television, radio, and recreation, with social engagements, and with the preparations for those social engagements. Too much emphasis is placed on fun. Not enough emphasis is placed on the orderliness and stern self-disciplines without which there can be no significant progress in any academic field of endeavor.

In an age when the volume of man's knowledge is growing at a fantastic rate, at the time when our need for intellectual discipline has never been as great, we surround our children with temptations and distractions which obscure the importance of learning and the value of a cultivated mind. Yes, any reformation of American education, if it is to be successful, will have to begin at home.

In Russia the teacher is at the top of the professional ladder, on a par with the scientist and the party leader. He is more highly regarded than the doctor, the lawyer, the journalist, the entertainer or the artist. No doubt this is why the Soviets now operate 484 teachers colleges not counting their universities.

In the United States there are 332 accredited teachers colleges, public and private, including the universities. While I am rarely moved by comparative figures, this, I submit, is a rather significant fact. We are having real trouble getting enough good teachers. The Russians are not. And we cannot put the blame on our educational system per se when it belongs to us, the public. So long as we make personal distinction and recognition synonymous with acquisitiveness, so long as we place teachers low on the success scale by paying them low professional salaries (far lower than comedians, ballplayers, and nightclub singers), we are going to continue to have difficulty recruiting good ones. In view of the immense importance of the teacher in our modern world and of his even more critical role in the future, this is, truly, an agonizing situation.

In conclusion, I reiterate my belief that our current penchant for criticizing American education is a good thing. It shows a flexibility in our makeup that is highly utilitarian; and it does not mean that we are not proud of our educational process which, on a broad scale, neither the Soviets nor any other people have yet been able to match.

If I may borrow words from one of this country's most experienced and penetrating educators, Byron Hollinshead:

"It would be strange if an educational system designed to carry out the democratic idea or ideal did not have defects and difficulties. No nation at any time in earlier history has ever tried to give everybody educational opportunity. But it is not only that we have tried to follow a great ideal. We can be genuinely proud of what our schools and colleges have accomplished, proud of their present efficiency, variety, and scope, and particularly proud that the professional conscience of our educators has given them the humility to see faults and the desire to correct them."

Fair Trade a Misnomer

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 24, 1959

Mr. ALGER. Mr. Speaker, fair trade, the setting of consumer prices by manufacturers under Federal mandate, is a misnomer. The language is as unfathomable as Washington gobbledygook can contrive. What means "unfair and deceptive acts" or "satisfy the needs of ultimate consumers" or "prices that are adequate"? Unscrambling the meaning and intent will assure all attorneys more business than they can handle and be a field day for the courts, and they do not need the business.

Heavy litigation and court redefining or legislating the intent of Congress will be the end result if Congress passes the fair trade bill, H.R. 1253.

USDA Announces Development Program for National Forests

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 24, 1959

Mr. GAVIN. Mr. Speaker, steps to provide more timber, water, recreation, wildlife, and other renewable resources from the Nation's increasingly valuable national forest system were proposed today by Secretary of Agriculture Ezra Taft Benson.

With special letters to the President of the Senate and the Speaker of the House, Secretary Benson submitted a program to advance management and increase facilities of the national forests during the coming years to meet needs of a growing population and expanding economy.

The statement follows:

PROGRAM FOR THE NATIONAL FORESTS: COMMUNICATION FROM THE SECRETARY OF AGRICULTURE, TRANSMITTING A REPORT RELATIVE TO A PROGRAM FOR THE NATIONAL FORESTS

DEPARTMENT OF AGRICULTURE,
Washington, D.C., March 23, 1959.

THE PRESIDENT OF THE SENATE,
U.S. Senate.

DEAR MR. PRESIDENT: A report entitled "Program for the National Forests" is transmitted herewith for information of the Congress and appropriate reference.

President Eisenhower in his state of the Union message in February 1953 called attention to the vast importance to this Nation, now and in the future, of our soil and water, our forests and minerals, and our wildlife resources. He indicated the need for a strong Federal program in the field of resource development.

On July 31, 1953, the President supplemented that message by sending to the Congress a special message relative to a program designed to conserve and improve the Nation's natural resources.

In referring to the national forests administered by this Department and to other public lands, the President stated in that special message that the Federal Government has a responsibility to manage wisely those public lands and forests under its jurisdiction necessary in the interest of the public as a whole. Important values exist in these lands for forest and mineral products, grazing, fish, and wildlife, and for recreation. Moreover, it is imperative to the welfare of thousands of communities and millions of acres of irrigated land that such lands be managed to protect the water supply and water quality which comes from them. In their utilization of these lands, the people are entitled to expect that their timber, minerals, streams, and water supply, wildlife and recreational values should be safeguarded, improved, and made available not only for this but for future generations. At the same time public lands should be made available for their best use under conditions that promote stability for communities and individuals and encourage full development of the resources involved.

Accordingly, provisions for a marked increase in management activities on the national forests have been made in recent years. These Federal properties have been substantially improved. The flow of values stemming from them has markedly increased. Our management experience clearly dictated the need for still more intensive development and management.

As a result, in 1956 I asked the Forest Service to develop a long-range conservation program for national-forest resources. The first result of this request was a 5-year program, Operation Outdoors; the second is the enclosed "Program for the National Forests."

This conservation program embraces all the renewable resources of the national-forest system—water, timber, recreation, forage, and wildlife habitat. It includes both long-range objectives and interim proposals. The program provides for the continued orderly use and development of the renewable resources of these Federal lands in accordance with the basic conservation principles of sustained yield and multiple use. What is done in the next 10 to 15 years will largely determine whether these vastly important public lands will contribute by the year 2000 their fair share to a greatly expanded national economy.

The national forests are widely scattered throughout the United States, occurring in all but 10 States and in Puerto Rico. They are of direct benefit to millions of people. From them are derived an impressive portion of the Nation's supply of meat, fiber, shelter, water for irrigation, industrial, and domestic purposes, hydroelectric power, feed for livestock and wildlife, and outdoor recreation.

These national forests belong to all American citizens. Their resources and services are available for use by everyone. In recent years the use of these lands has been increasing steadily. Demands are now such that a comprehensive program for the orderly growth of development and management activities is of demonstrated urgency. Our rapidly growing population and expanding economy indicate mounting and competitive pressures for national forest resources.

Legislative authorities for the recommended program are generally adequate. Supplemental legislation will be proposed as the need arises. Appropriation requests to implement the program will be submitted to the Congress in future years in connection with budget presentations after due consideration of the overall fiscal needs and resources of the Federal Government.

A similar letter is being sent to the Speaker of the House of Representatives.

Sincerely yours,

EZRA TAFT BENSON.
Secretary.

PROGRAM FOR THE NATIONAL FORESTS [1]

There are presented herein long-range objectives and a short-term conservation program for the national forests and associated lands. The long-range objectives are related to the year 2000 and the short-term program to what needs to be done in the next 10 to 15 years toward meeting current needs and attaining long-range objecives.

[1] Prepared by the Forest Service, U.S. Department of Agriculture.

This program has been developed after much study. The Department of Agriculture has recently completed an exhaustive study of the U.S. timber situation entitled "Timber Resources for America's Future." Operation Outdoors is a 5-year recreation program for the national forests. Research needs are based in part on the findings of a departmental committee on research evaluation. The Forest Service has long maintained a project work inventory for the national forests. These and other studies are the background for the objectives and program herein developed.

The statutory authorities under which the national forests and associated lands are administered, and under which research is conducted, are generally adequate to permit carrying out the program subsequently outlined. Additional legislation which would be helpful in carrying out the program will be recommended as needed, particularly legislation to facilitate development of an adequate road system.

The national forest system

The national forests of the United States are invaluable national assets. These Federal properties, consisting of forest and rangelands and high mountain watersheds, occur in 39 States and Puerto Rico. There are 181 million acres of national forest land grouped into 148 national forests. Eighty-seven percent of national forest lands occurs in the West.

Of the land area of the continental United States, 1 acre out of every 12 is in national forest. In the West it is about 1 acre out of every 5. Every citizen owns a share of the national-forest system. It might be said that every man, woman, and child in the United States owns 1 acre of national-forest land.

The national forests consist largely of land reserved from the public domain by Presidential proclamation under the act of March 3, 1891. These lands have always been in Federal ownership. President Theodore Roosevelt proclaimed 148 million acres of public domain as forest reserves—far more than any other President. In 1905, the forest reserves were placed under the administration of the Secretary of Agriculture and the Forest Service was created to administer them. Later their name was changed to national forests to reflect a conservation policy of resource utilization rather than of preservation.

Most of the national-forest land in the East was purchased under the Weeks law of 1911, as amended in 1924, which authorized purchase of lands to protect the watersheds of navigable streams and for timber production.

Pursuant to the act of June 4, 1897, the 1911 act, and others, the national forests have been administered under the dual policies of sustained yield and multiple use of resources. Research has been conducted mainly under the act of May 22, 1928, as amended.

The national forests yield water, timber, forage, recreation, game and other wildlife, and minerals. Western agriculture and industry are dependent on water flowing from national-forest watersheds; hundreds of thousands of people earn their livelihood processing timber grown on national forests; millions of domestic livestock graze national-forest ranges; and many millions of people seek the national forests for rest, relaxation, and spiritual uplift. All of the renewable resources are to be utilized at a high sustained level of productivity and in harmonious relationship each with the other. This is the basic policy.

Most national-forest resources and services, such as recreation, wildlife habitat, waterflow, and scenery cannot be evaluated in monetary terms. There is no known way to measure the multiple intangible values and services of the national forests; but the timber, forage, and land alone are appraised at well over $7 billion.

The national forests are revenue-producing properties. Twenty-five percent of such revenues is distributed to counties in which national-forest lands are located in lieu of direct taxes. Current annual revenues are about $100 million and more than $1 billion has been received in total from the sale of national-forest goods and services. National-forest payments received by the counties, coupled with Federal expenditures for roads and fire control which States or counties would otherwise make, substantially exceed the taxes that the national forests would pay if subjected to ordinary assessment and levy.

In addition to the national forests, the Forest Service administers some 65 land-utilization projects totaling over 4.5 million acres in 27 States. These are largely forest and rangelands, submarginal for private ownership and acquired by the Federal Government during the 1930's for purposes of conservation and rehabilitation. The lands are administered under title III of the Bankhead-Jones Farm Tenant Act of July 22, 1937, and with the same general sustained-yield and multiple-use objectives as the national forests.[2]

National forests in a changing world

Rapid change in the United States is everywhere evident. Highway construction, housing developments, and expanding urban areas are prevalent throughout the land. The two foremost economic indicators of these and other changes are population and gross national product.

In the 13 years since the end of World War II population in the United States has increased 32 percent. An estimate of 332 million persons by the end of the century is more than double the 1950 census. In the same half century, gross national product is expected to increase more than five times. Furthermore, in the West, where most national forests are located, population growth is even more phenomenal. The estimate for the 11 Western States is for a tripling of population in the last half of the 20th century.

Another indicator of special significance from the standpoint of recreational impact on the national forests is the increase in leisure time. The average individual today has about 50 percent more leisure time than in 1920. By the turn of the century an individual may have a third more leisure time than he has today.

The impact of this national growth upon the national forests already has been tremendous as evidenced by recent trends in use. The impact will be even greater in the future. No longer are the national forests the inaccessible and distant hinterlands they were when the system was first established. No longer can the Forest Service be primarily a custodian whose principal function is protection of national forests from fire. Barriers of time, distance, and inaccessibility have been fast fading, especially in the last two decades. The people have found the national forests; and their vast resources are in great demand. Management must become progressively more intense and more adequately supported by research findings if the national forests are to keep pace with economic needs and national growth.

The role of the national forests in the national economy, and especially in that of the Western States, cannot be discounted. Nearly half of all softwood sawtimber in the Nation and more than half the commercial forest land in the West is found in the national forests. About one-fourth of the timber cut in the West comes from the national forests.

Nearly one-fifth of the 11 Western States is national forest land and these lands, because of their mountainous character and generally high elevation, receive one-third of the precipitation and furnish over half the streamflow. Western national forests are major sources of water for 1,800 towns and cities including such major metropolitan areas as Salt Lake City, Seattle, Portland, San Francisco, Los Angeles, and Phoenix. Over 600 hydroelectrical developments depend on the national forests for water.

Irrigation accounts for one-half of the Nation's consumption of fresh water. By 1975 daily use of water is expected to nearly double, an increase which would be equivalent to the daily flow of over 13 Colorado rivers. Inevitably, western national forests will continue their indispensable role as regulators of the kind and amount of fresh water available to western people.

Similarly in recreation the national forests are of increasing importance because of more leisure time, greater mobility of the average family, increased accessibility of the national forests, and the relatively low cost of a national forest vacation.

In the West, despite downward adjustments in the numbers of permitted livestock, over one-fifth of the sheep and one-eighth of the cattle graze national forest ranges. Over one-third of all big game in the Nation is found on the national forests along with 81,000 miles of fishing streams and over 2 million acres of natural lakes and impounded waters.

National forest progress since 1953

In his first state of the Union message on February 2, 1953, the President called attention to the vast importance to this Nation now and in the future of the soil and water, the forests and minerals, and the wildlife resources. It was recognized that the Federal responsibility in the field of resource development called for a strong program.

Since that time, substantial and gratifying progress has been made, both financially and physically, in the development and management of the national forests and associated lands.[3] Some of the outstanding achievements that have been accomplished since 1953 should be mentioned.

In timber resource management, the funds available for sales administration and management have risen from $5.9 million in fiscal year 1953 to $13.5 million in fiscal year 1959, and those for reforestation and stand improvement have risen from $1.2 million to $3 million. In 1953, 5.2 billion board-feet of timber with a stumpage value of $70.6 million were cut. After reaching a previous peak in 1957, 8 billion board-feet with a stumpage value of more than $100 million are expected to be cut in 1959. At the same time, the number of timber sales rose from 24,300 to an estimated 36,000 in 1959. In 1953, the area planted or seeded to trees was 51,200 acres. Almost double that amount is now being planted annually. Timber stand improvement work was done on 387,300 acres in 1953. Today this work is being carried out on approximately 800,000 acres annually.

In 1953, the sum of $2.4 million was available for range resource management: $1 million being for range management, $763,000 for range revegetation, and $658,000 for range improvements. In fiscal year 1959, the sum of $4.8 million is available, $1.7 million being for range management, $1.5 million for range revegetation, and $1.6 million for range improvements. During this period, reanalyses and revised range management plans were completed on 2,150 or nearly one-fourth of the 8,790 range allotments. The rate of range

[2] The statistics used in this report relate only to the national forests unless otherwise specified; but the objectives and program presented apply to both the national forests and associated land-utilization projects.

[3] Hereinafter referred to as the national-forest system.

reseeding has practically doubled the 53,600 acres reseeded in 1953. During the period 1953 through 1958 nearly a half-million acres have been reseeded. During the period 1953 to 1958 inclusive, about 1,600 range water developments have been constructed. Annual rate of construction is double what it was in 1953.

The Federal financing of the construction rehabilitation, and maintenance of recreational developments has increased from $3.1 million in fiscal year 1953 to almost $10 million for fiscal year 1959 and the amounts for wildlife habitat management increased from $223,000 to $805,000. During this same period, the recreation visits rose from 35.4 million in 1953 to 68.5 million in 1958, one-fourth of these being visits from hunters and fishermen. The number of developed campground and picnic sites in 1953 was approximately 4,600, containing 41,100 family units. Most of these were constructed in the mid 1930's and were badly in need of rehabilitation. Although the work of rehabilitating these areas had begun a few years earlier, the program for the recreational development of the national forests called "Operation Outdoors," was prepared and initiated in 1957. As a result, good headway has already been made in the rehabilitation of the developed campground and picnic sites and some new sites have been developed. There are now 5,100 developed campground and picnic sites containing 46,700 family units.

For soil and water management the sum of $137,000 was available in 1953. This has been increased to $1.4 million in fiscal year 1959. The number of national forest watershed rehabilitation projects increased from 12 in 1953 to 145 in 1958. This work is done specifically to improve and protect watersheds, lessen flood damage, or restore damaged and eroding lands, over and above that normally being done in connection with other national-forest activities.

In fiscal year 1953, there were $22 million of Federal funds available for the construction and maintenance of forest development roads and trails. The amount for fiscal year 1959 for this purpose is $35.4 million. In 1953, there were constructed with Federal funds 728 miles of forest development roads. In the 1953 through 1958 period, 5,289 miles have been constructed and it is estimated that 1,062 miles will be constructed in fiscal year 1959. In addition, purchasers of national-forest timber during the period 1953 through 1958, constructed 12,570 miles of forest development roads, with allowances therefor in timber appraisals.

One of the most troublesome problems was the need for housing, particularly to provide suitable housing for field personnel. In 1953, the amount available for structural improvements for fire and general purposes was $3.1 million, practically all of which was for maintenance. This has more than trebled and for fiscal year 1959, the amount is $10.6 million. Since 1953, there have been constructed 602 dwellings and related improvements, 769 service buildings, and 139 lookout structures.

In 1953, the total receipts from the sale of timber and from the use of the range and other surface resources was $76 million. It is anticipated that these receipts for fiscal year 1959 will be about $110 million. With these anticipated receipts for 1959, almost $600 million will have been received by the Federal Government since the close of 1953. This is almost 60 percent of the first billion dollars of national-forest receipts reached on November 21, 1958, after the national forests were placed under the administration of the Secretary of Agriculture in 1905. Twenty-five percent of these revenues were distributed for the benefit of schools and roads in the counties.

Federal financing of research bearing on national-forest problems in 1953 was $6.2 million. In 1959, it was $16.5 million, including $2.5 million for construction of research facilities. Any precise allocation of the benefits of forestry research to the support of management and development of the national-forest system is difficult. Generally, research projects benefit anyone who protects and manages forest resources regardless of landownership. Thus it serves private as well as public forestry. During this period, forestry research has made substantial and significant contributions to the development, management, and protection of the national-forest system. These include, to name only three, (a) development of a new aerial forest fire control method, with the result that in 1958 more than 1.4 million gallons of chemical fire retardant were dropped on 320 fires in the national forests with a high degree of success; (b) a new technique for fumigating tree nursery soils was perfected in 1957, increasing the efficiency and effectiveness of seedling production; and (c) a patch-type of cutting for lodgepole pine timber was developed for high, mountainous national-forest areas of the Rocky Mountains which increases late spring water yield by 25 to 30 percent because of its influence on snow accumulation and rate of melt.

There have been many other major conservation accomplishments in the management of the national-forest system. New or revised policies have been adopted since 1953 in order that the management of the national forests would be more responsive to the needs of the users. As a result of cooperative effort with both the forest and mining industries, authority was enacted in 1955 and procedures developed to provide for the multiple use of the mineral and surface resources. In 1958, "Timber Resources for America's Future," the most comprehensive study of the timber resources of the Nation, was published and as a result the timber goals for the national forests have been raised substantially. Changes have been made in national-forest grazing policies to give permittees increased stability in the utilization of the grazing resources. The number of public advisory committees at State, regional, and local levels, advisory to the Forest Service on activities covered by this program, has been increased to 170.

The national forests are clearly national in significance because of their impact on our people in both their work and their play. Wood and livestock products from the national forests enter into the commerce of every State; waters flowing from the national forests cross State boundaries; and the millions who hunt, fish, camp, picnic, and ski on the national forests come from every State and every walk of life.

The national forests are federally owned and their multiple-use management to produce a sustained yield of services and products is a Federal responsibility. Despite the splendid progress that has been made since 1953, these properties with their current assets and enormous potential must be responsive to national needs. In addition, there are opportunities for development primarily of localized significance in collaboration with non-Federal groups, both public and private.

Past trends, present use, and future expectations indicate clearly the need for a planned program of development and use supported by essential research. Resource development is a long-time proposition. What is done in the next 10 to 15 years will largely determine the heritage that our children and their children will receive from the national-forest system.

A national-forest conservation program

The program presented herein is geared to meeting the needs of this short-term period and to preparing the national-forest system to contribute its fair share to the national well-being at the end of the century.

The program is described in terms of both long-range resource objectives to be accomplished by the year 2000, and the specific work which will need to be done in the short-term period to attain these objectives. The program will be carried out as rapidly as possible within the overall budgetary requirements and financial resources of the Federal Government.

Resource Development and Management

The basic renewable natural resources of the national-forest system upon which the Nation will rely to an increasing extent in the years to come are the timber, water, range, and the recreation and wildlife habitat resources. Their intensive development and management is truly a conservation program of great significance to the continued development, prosperity, and welfare of the Nation.

Timber Resources

The long-range timber goal for the national-forest system is an annual harvest on a sustained-yield basis of 21.1 billion board feet of sawtimber by the year 2000. This goal is about 3 times the 1957 timber cut. Total sawtimber growth estimated to be needed in the year 2000 to meet national demands is 105.4 billion board feet. The national-forest goal is that portion of the national need which the national forests could reasonably be expected to produce under intensified management.

The objective is to reach this goal by: (a) Intensifying the management of existing stands, including measures to assure stand improvement and regeneration; (b) growing more and better trees on the lands that are not producing their full capacity today; (c) reducing losses from disease, insects, and fire; and (d) improving utilization. The short-term program steps to further items (c) and (d) are covered later under the headings "Protection and Research."

The program proposals for the short-term period are:

1. Harvesting will be increased toward the goal of full sustained-yield cut on all working circles so that annual cut will reach 11 billion board feet.

2. Harvesting will be developed in a manner that will, to the extent possible: (a) Accelerate cutting of stagnant stands, release advance reproduction by removing overstory of old growth, and increase the salvage of dead, dying, and diseased trees; and (b) encourage reasonable distribution of sales among small, medium, and larger operators.

3. Develop and apply on sale areas higher standards of regeneration, hazard reduction, salvage, and erosion control.

4. Up-to-date inventories will be obtained for all commercial forest lands and timber management plans will be completed for all working circles. When completed, they will be maintained by periodic reinventories and revisions.

5. Approximately three-fourths of the 4.4 million acres of nonstocked and poorly stocked plantable lands will be seeded or planted.

6. The productive condition of over 11 million of the 30 million acres of less than saw-log-size stands will be substantially improved by plantation care, pruning, weeding, thinning, release cutting, reinforcement planting of lightly stocked areas, and planting new burns in these stands.

Water Resources

In continuing their role as regulator of waterflows, national forest watershed will continue to be managed in accord with two principal long-range objectives: (a) Protection of the watershed by stabilizing the

soil and thereby preserving and improving water quality; and (b) management of the area to increase the quantity of water.

Protection of the watershed and water quality will continue to be a primary objective. Quantity of water yielded will receive major consideration in the multiple-use management of national forests.

To accomplish these objectives, an accelerated program of watershed management, rehabilitation, and protection will need to be carried out, including the application of new methods and practices as they are developed and proved.

Program proposals for the short-term period include:

1. More intensive management activities to assure full protection of the hydrologic condition of watersheds in the management and use of other resources. Management plans for other resources that involve manipulation of plant cover will adequately consider watershed management needs.

2. Reasonable protection to, and minimizing damage from the greatly increasing number of water development projects in and adjacent to the national-forest system.

3. Preparing and maintaining watershed management plans for areas which are the sole or major source of municipal water supplies.

4. Initiating field inventories of water supplies and yield with comparative data as to effects on water yield and quality of range, timber, and other uses and management practices.

5. Complete soil surveys on about 33 million acres, or 22 percent of the total area in need of survey.

6. Watershed rehabilitation measures to stabilize gullies and channels, control sheet erosion, stabilize dunes and earth slides, control erosion on roads and trails, and accomplish water spreading will be done in varying degrees ranging from one-tenth to one-third of the total work needed. Work scheduled includes 10,000 miles of gully and channel stabilization; 1.3 million acres of sheet erosion control; 20,000 acres of dune and blowout stabilization; erosion control on 14,000 miles of substandard roads and trails; 5,600 acres of water spreading; 535 structures for flood prevention; and 170 stream pollution control projects.

Range Resources

The development and management of the 68 million acres of rangeland in the national-forest system has two major long-range objectives:

(a) Proper stocking and improvement of the range resource to achieve desirable watershed conditions and sustained high-level production of forage. Over many years the Forest Service has attempted to bring livestock numbers into balance with available forage. This is being done by building up forage production through reseeding, other range-improvement measures, and better management. Where this is not sufficient, necessary adjustments to grazing capacity have been made in either numbers of permitted livestock or season of use.

(b) Making lands suitable for livestock grazing available for use under conditions that promote stability for communities and individuals, and encourage full development of the range resource with due regard to other resources and uses.

These policies can be furthered by intensifying management of all range allotments; obtaining and maintaining desirable forage to high capacity; constructing, rehabilitating, and maintaining range improvements needed to attain intensive management on all ranges; and making adjustments in numbers of livestock or seasons of use when necessary.

In order to make substantial progress toward the long-range objectives, the short-term program proposals are:

1. Complete and thereafter keep current range analyses and management plans on all range allotments.

2. Where stocking adjustments are necessary to balance utilization and available forage, these will be carried out as rapidly as practicable bearing in mind the needs of the range and other factors.

3. Separation of cattle and sheep grazing on common use areas, and substantial reduction of livestock trespass.

4. Properly coordinate all range use with other resource use.

5. Revegetation and control of noxious or poisonous range plants and farm weeds will be undertaken on about 4.4 million acres of rangelands needing one or both treatments.

6. Reconstruction or rehabilitation of presently deteriorated range improvements will be completed; other improvements will be maintained.

7. Construct 18,000 miles of fences and 9,500 water developments to initiate programs of intensive range management for control of livestock and more efficient use of forage.

Recreation and Wildlife Habitat Resources

As previously described, the growth and development of the Nation already has had a terrific impact on the national forests in increased use of the recreation and wildlife habitat resources. It is estimated that these uses will rise from the 68.5 million recreation visits of 1958 to 130 million visits by 1969, with a continued rapid annual increase to a possible 600 million visits by the year 2000. This expected increase to nearly double the present use by 1969 and about nine times the present use by the year 2000 is far in excess of the expected rate of increase in population.

The long-range objective is that: (a) National-forest recreation resources will be so developed and managed that the kind, quality, and quantity of their development and maintenance will be sufficient to keep abreast of this tremendously increased demand; and (b) the wildlife habitat will yield a fish and game population adequate to meet the equally tremendous increase in sportsmen use.

The program proposals for the short-term period are:

1. Complete part 1 of Operation Outdoors, which is a 5-year program initiated in 1957 to reconstruct and rehabilitate the then-existing recreation facilities consisting of 4,700 campgrounds and picnic sites containing 42,400 family units, construct additional facilities, and adequately maintain and service these facilities to meet the existing and predicted situation.

2. Complete inventory and evaluation of recreation and wildlife habitat resources. This will be done partly in cooperation with the Outdoor Recreation Resources Review Commission, and with respect to wildlife habitat resources, in cooperation with the States.

3. Revise and complete recreation management plans for all administrative units and thereafter keep them current.

4. Prepare and execute development plans on 10,000 new campground and picnic sites containing 102,000 family units.

5. Repair and reconstruct dams and spillways as necessary in order to place them in a safe condition for recreational use.

6. Provide adequate sanitation, cleanup, safe water, fire prevention, and public safety at all developed recreation sites and in heavily used unimproved areas.

7. Protect and manage wilderness-type, roadside, and other special areas.

8. Review at least 30 of the remaining 41 primitive areas as to their wilderness characteristics and reclassify them accordingly.

9. Revise and complete wildlife habitat management plans for all administrative units, assuring proper coordination between uses of wildlife habitat resources and other resources.

10. Participate in planning, inspection, and control phases of all habitat improvement projects conducted on lands of the national-forest system by States and by other Federal agencies to insure that the projects will benefit wildlife and be in harmony with other resource values.

11. Improve food and cover on 1.5 million acres of key wildlife areas.

12. Develop wildlife openings, food patches, and game walkways in dense vegetation by clearing or controlled burning on about a half million acres.

13. Improve 7,000 miles of the 81,000 miles of fishing streams and 56,000 acres of lakes by stabilizing banks, planting streamside cover, and constructing channel improvements.

Protection

The total adverse impact of disease, insects, fire, weather, destructive animals, and other forces on the uses and values of forest resources is not generally recognized. They kill and destroy, retard or prevent reproduction and growth, impair and damage values, and disrupt uses.

The total growth impact on sawtimber from destructive agencies in the continental United States and coastal Alaska in 1952 was estimated to be equal to 92 percent of the net sawtimber growth. Cause of the impact on sawtimber growth was distributed 45 percent to disease, 20 percent to insects, 17 percent to fire, and 18 percent to all others.

These destructive forces also have a seriously adverse effect upon the watersheds and their life-supporting waterflows, and upon the other renewable forest resources.

The long-range objective is to hold the damage from destructive agencies below the level which would seriously interfere with intensive management of the national-forest system under principles of multiple use and high-level sustained yield of products and services. This can be accomplished substantially by a continued trend toward better facilities and techniques for fire control and more resources to cope with critical fire periods, and a more intensive application of a program of prevention, detection, and control of insect and disease infestations. In addition to direct protection measures, more intensive management of timber resources will result in reduction of losses from insects and disease.

Protection From Insects and Disease

In the short-term period, it is proposed that insect and disease control on the national-forest system be stepped up to a level of prevention, detection, and control of insect and disease infestations that will substantially reduce the occurrence of large infestations toward the end of the initial period. This will require about a 50-percent increase over the present level of protection. The work will consist of:

1. Intensification of present activities through (a) quicker, more extensive, and more thorough surveys to detect incipient outbreaks; (b) more reliable evaluation of the potential of initial outbreaks to cause widespread damage; (c) quicker and more effective control action in the initial stages to prevent a large-scale epidemic. The initial suppression activities would cover about twice the acreage currently being treated.

2. Continuation of present blister rust control work plus extension of control to 250,000 acres not now protected but which should be managed for white pine production. The objective is to achieve sufficient effectiveness of control on all of the area now under treatment plus the additional acres so that after the initial period only maintenance control will be needed.

3. Initiating a program to control dwarf-mistletoe on several hundred thousand acres of selected better stands of young softwood sawtimber on better growing sites.

4. Coordination of timber harvesting with pest control objectives in order to reduce the loss from high-risk old-growth trees and to reduce the possibility of old-growth stands serving as a focal point of infection.

Protection From Fire

It is proposed that by the end of the initial period all commercial timberlands, all critical watersheds, and other lands in the national-forest system developed or proposed for intensive use will be given protection from fire adequate to meet the fire situation in worst years and under serious peak loads. This will include 125 million acres compared to 23 million acres now receiving such protection. An additional 15 million acres will be given a lesser degree of protection but adequate to meet the average fire situation.

Meeting these levels of protection from fire calls for:

1. Expansion, modernization, and development of fire control to a proficiency and strength of force which will prevent as many fires as possible and suppress fires before they spread beyond permitted standards. This is to be accomplished by nearly doubling the present level of preventive effort, detection, skilled firefighting crews, training, supervision, and equipment.

2. Development and use of new and modern techniques for prevention, for suppression of fires while small, and for stopping large fires while running and burning intensely.

3. Reduction of hazardous fuel conditions to minimize the chances of large fires developing and spreading to high-value areas. This work will cover the most serious one-fourth of all land needing such treatment, and will consist of burning 300,000 acres of highly hazardous debris concentration, felling snags on 320,000 acres of high lightning-occurrence areas, prescribed burning on 3.5 million acres, removing roadside fuel on 37,000 acres, and clearing and maintaining 12,000 miles of firebreaks.

Protection From Other Damage

Rodent control work for the short-term period will be aimed at control of the most serious infestations of harmful rodents, such as porcupines and mice, on high-value areas of forage and commercial timberlands. These areas comprise about half of the total area of rodent infestation on the national forests. Approximately 1.8 million acres of rangelands and 9.4 million acres of timberlands would be treated in this period. Control would be limited to those rodents for which economical means of control are known.

Roads and trails

The road and trail system which serves the national forest lands is a complex of highways and access roads and trails under various ownerships and jurisdictions. This transportation system is vital to the multiple use of all the resources of the national forest system.

For administrative purposes, the road and trail facilities are grouped into a forest highway system and a forest development road and trail system. All these facilities benefit the national forests. There are now 24,400 miles of forest highways; 149,700 miles of forest development roads, and 112,200 miles of trails. When fully installed, there will be about 70,000 miles of forest highways; 542,000 miles of access roads, and the trail network will be reduced to about 80,000 miles.

The forest highway program is administered by the Bureau of Public Roads in the Department of Commerce. The forest highways are therefore not included in the program herein outlined.

An adequate system of roads and trails is essential to proper management of forest lands. The presence or lack of access roads has a direct and controlling influence on many phases of forest management, such as the volume of timber that can be marketed; the size, duration, and distribution of sales within working circles; the level of salvage cutting; protection of national-forest resources from fire, insects, and disease; and recreational and forage use.

Financial losses occur every year to the Federal Government through inability to market mature timber now inaccessible but in need of harvesting, and to promptly and completely salvage losses resulting from fire. windstorms, insects, and diseases. As the road and trail system is expanded the revenue to the Government increases, primarily through expanded timber sales. Timber access roads for the national-forest system are investments which will pay for their own way over a period of years.

The long-range objective is to have and maintain a system of roads and trails to service the national forests adequately at the levels needed to meet expected demands. Such a system will not only make that possible, but will at the same time enhance the value of the timber and other resources being utilized.

Construction of about 392,600 miles of new roads and 6,000 miles of new trails will ultimately be needed, along with reconstruction of about 112,600 miles of roads and 11,300 miles of trails. Also about 41,400 miles of existing trails will be replaced by construction of new roads.

In the short-term period the program proposals are:

1. Complete construction and reconstruction of about 90,000 miles of access roads and 8,000 miles of trails. This constitutes about 19 percent of roads and trails included in the long-range objectives. Approximately half of the value of the work on timber access roads planned for this period will be constructed by national-forest timber purchasers, but paid for by the Government through adjustment of stumpage prices.

2. Provide maintenance to full standards on the 261,900 miles of existing development roads and trails and on 58,600 miles of new construction.

Land adjustment and uses

Effective management of the national-forest system requires reasonable consolidation of ownership where there are intermixed public and private lands. Accomplishment of these ownership adjustments will contribute much toward meeting resource demands by the year 2000 and will be largely accomplished by that time.

In the initial period, national-forest boundary and ownership classification studies will be completed for all national-forest lands as the basis for landownership adjustment. Such adjustments will be brought about mainly by exchanging on a land-for-land basis approximately 1.4 million acres of scattered or checkerboard national-forest parcels for other lands needed to consolidate the national-forest land pattern. This will (a) enable national-forest boundaries to be modified to exclude about 11 million acres of private and State land from within national-forest boundaries; and (b) materially reduce the checkerboard pattern of ownership. Special attention will be given to completion of consolidation of national-forest ownership in the boundary waters canoe area and in certain key watersheds of the Cache National Forest in Utah. In addition, about 217,000 acres of land utilization project lands will be exchanged in the initial period to promote more effective management of such projects. Thereafter there will be a continuing program in the national forests and related areas to adjust ownership problems and further consolidate these public properties.

There must also be accomplished in the short-term period: (a) Development of an improved and more adequate land status record system with provision for continuous maintenance; and (b) establishment and marking of public property corners and the surveying and posting of over 100,000 miles of property lines between national-forest and other lands which now are inadequately located and marked.

The uses of national-forest lands for many special purposes, including the extraction of mineral resources, will continue to increase at a rapid rate. The supervision of these uses will need to keep pace in order that such uses can be properly correlated into multiple-use management of the national-forest system, and to prevent unauthorized use. The program for the determination of surface rights which has been under way since the approval of the act of July 23, 1955, will be completed.

Administrative structures and equipment

To facilitate the resource management and development work, construction and maintenance of administrative and fire-control improvements will need to be provided at an increased rate in the short-term period. This will consist of completing the present backlog of housing needs for field officers and of administrative and fire improvements, and the construction of additional housing and improvements. New construction needs include 2,730 dwellings and related improvements, 2,710 service buildings, and 530 lookout structures. Completion of the communications system needed for protection and management of the national forests will require 2,000 additional radios and replacement of 9,000 radios and 3,000 miles of telephone lines. The increasing use of aircraft as an efficient and economical means of transportation for protection and management of wild lands will require an additional 25 landing fields and reconstruction of 37 existing fields.

Research

Forestry and allied research is needed to keep the national forests and the utilization of their resources moving ahead on an efficient, effective, and economical basis to play their proper role in the progress and development of the Nation. Resource managers and administrators need answers to their everyday problems. Resource development, management, protection, and utilization have an additional need, and organized research has an additional objective to achieve significant breakthroughs that will show the way to new methods and new horizons in the management of timber, soil and water, forage, wildlife habitat, and recreation resources. The short-term research program is needed to yield both quick results of applicability during the initial period, and information of value in attaining long-range objectives.

The research proposals for the initial period embrace work that should yield information of wide application of high value. These proposals include—

1. Accelerated research in forest genetics to produce trees superior to present ones—in growth rate, wood quality, resistance to insects and diseases, and other special qualities—for use in the needed planting programs on national forests.

2. Development of new cultural practices to increase the production of high-quality seed through establishment and management of seed orchards; better methods of harvesting, storing, and processing of seed; and more efficient planting practices, including direct seeding with aircraft.

3. Better implementation of the national-forest pest control program by developing a broader knowledge of the life histories of

damaging insects and diseases and of new methods for controlling them through use of diseases and predators of the pests themselves, as well as through improved selective chemicals for use in direct control action.

4. Better implementation of the national-forest fire control program by developing a better understanding of fire behavior and new techniques and equipment needed to eliminate the runaway fires now responsible for 90 percent of fire losses in the national-forest system.

5. Development of new and improved practices required to facilitate good watershed management so vitally important to the management of national-forest timber and range resources. This will include studies of water yields, both quality and quantity, and management of snowpacks at high elevations and soil stabilization.

6. Design and evaluation of new and improved equipment for logging without damage to watershed values—as by an overhead cable system in order to extend harvesting operations into steep mountainous slopes not now operable by ground skidding methods; and equipment to increase the efficiency of woods utilization of forest products.

7. Improvement of volume and yield tables, rotation age data, and other information for regulating timber growing-stock levels for use in the national-forest timber-management plans.

8. Development of silvicultural bases to guide timber harvesting and regeneration practices in new forest types and areas, particularly in Alaska and the more remote areas of the western national forests to be newly reached in sustained yield operations.

9. Continuing investigations of the physical and chemical properties of wood and of processing methods to increase the efficiency of forest products utilization from national-forest timber sale areas.

10. Development of new uses for the large volume of low-quality timber, for logging and milling residues, and for thinnings in order to broaden the utilization and market base, and to facilitate timber sales and sustained yield management.

11. Development of log and tree grades and other information needed in the marketing of national-forest timber.

12. Development of improved livestock grazing management practices on the national forests to increase forage yields and to protect watershed values.

13. Develop methods of improving national-forest wildlife habitat through modified timber and range management practices, as well as through development of special measures such as propagation of browse and other game foods.

14. Determination of the needs and preferences of recreational uses of the national forests, and of the carrying capacities of campgrounds and other recreational areas in order to guide the development and management of the recreational resources.

15. Provision for laboratories, greenhouses, and other facilities, including modern scientific equipment, required to adequately implement the research program. This will consist of expansions through new construction and betterment of existing facilities. The needs include 17 specialized laboratories and related greenhouse and service facilities for the basic research on forest insects and diseases, tree genetics and physiology, forest soils and hydrology, forest fires, and forest products, and for development of new equipment for firefighting and for harvesting timber; 5 office-laboratory buildings at regional headquarters of forest and range experiment stations; 25 office-laboratories at centers of field research, and minor structures, fencing, stream gages, and other research installations that will be required on about 100 experimental forests and ranges.

Program benefits

Under the proposed program, management and utilization of national-forest resources will keep pace with population growth and national economic development and needs.

Many of the benefits from the program for the short-term period will carry over or will be delayed until after the end of the period. Investments in such measures as roadbuilding, tree planting, range reseeding, water conservation, research, recreation, and other improvements proposed in the initial period are geared not only to short-term needs, but also to the longer-range objectives of meeting expected demands on the national forests during the remainder of the century.

Benefits include direct financial revenues, secondary benefits, and intangible values.

Direct financial revenues from the national-forest system will rise to about $210 million annually by the time the short-term conservation program is completed, or double current receipts. Over 90 percent of such revenues will continue to come from the sale of standing timber. By the year 2000 national-forest timber sales should reach 21 billion board-feet of sawtimber worth $350 million at 1958 prices.

Payments from national-forest revenues for county schools and roads will increase correspondingly. These increased payments to counties coupled with increased national-forest expenditures for roads and fire control, will exceed the taxes that the national-forest system would pay, if subject to local taxation, by an even greater margin at the end of the initial period than at the present time.

The capital value of the timber, forage, and lands of the national-forest system will have increased by about a billion dollars as a result of the short-term conservation program.

In addition to direct financial income to the United States as a result of the national-forest conservation program, there will be both substantial secondary benefits and very real intangible benefits.

Secondary benefits include such things as numbers of people employed in the harvesting of national-forest timber and other products and the value added to those products by manufacture, distribution, and marketing.

In timber alone, it is estimated that for every dollar of national-forest stumpage sold the end products wil be worth $20 by the time they reach the ultimate consumer. This means that the annual sale of 11 billion board-feet of sawtimber expected to be reached by the end of the short-term period will have a total consumer value of $3.7 billion.

Furthermore, some 620,000 people will derive their livelihood from the harvesting, processing, hauling, and merchandising of national-forest timber and the products made therefrom. This wil be an increase of 60 percent over the current level.

Similarly, the value of meat, hides, wool, and other livestock products increases with reprocessing and handling as do the numbers of dependent people.

It is estimated that reactional use of the national-forest system will reach 130 million visits by 1969, in contrast to the 68.5 million visits in 1958, and a probable 600 million by 2000. The recreationists making these 130 million visits will put into trade channels a total of nearly a billion dollars for sporting equipment, transportation, licenses, lodging, and other items.

Most of the truly intangible values of the national forests are experienced by those millions of people who use the national forests for reasons other than commercial utilization of resources. No measure of value expresses the worth of the relaxation, pleasure, rest, spiritual satisfaction and improvement in health derived from the national forests.

No realistic dollar value can be placed on water from the national forests. Water is already the most precious commodity in the West and over half of all waterflow in the West originates on the national forests. These lands will continue indefinitely to be indispensable regulators of the kind and amount of fresh water available to western people. The national-forest conservation program will improve soil stabilization, result in more regular streamflow, and enhance water quality. It will foster infiltration of water in underground storage. These results will lessen the need for construction of surface reservoirs, settling basins, and other water construction works.

Nor can there be any complete assessment in dollars of the lives saved, damage prevented, and resources preserved by improved accessibility, suppression of insect and disease epidemics, fires prevented or controlled when small, and reduction and prevention of floods. All of these are benefits of the conservation program proposed for the national forests.

Substantial progress has been made. The foundation for progress is in place. This program builds on that foundation. The result will be full development of these extensive and valuable public properties.

How Business Operates Not by Price Fixing

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 24, 1959

Mr. ALGER. Mr. Speaker, fair trade, the setting of retail prices by manufacturers would be a death blow to free enterprise, and the countless blessings enjoyed by consumers because of mass production, efficiency, research, streamlined operation—all resulting from competition between manufacturers, where all take risk and some make it, some do not.

If the manufacturer is assured a certain price by law where then is the incentive to discover and remove inefficiency, ingeniously to devise new systems, new manufacturing procedures, techniques and tools, more production, more efficient distribution? In free enterprise competition keeps the industries on their toes. Sure, it is a battle for survival. The customers must be pleased—a better product at a lower price with quicker delivery with better service and warranties, countless courtesies, advertising schemes, window displays. From raw material to customer's home competition drives each manufacturer, distributor, and dealer to do his best to please the consumer, who must be pleased at the right price or no sale.

Well, we can set prices by law but they will not stick. Before John Doe rebels the damage will be poorer products at higher prices, slower service, less striving to please, less volume, less efficiency and finally more bureaucratic laws to undo the damage of bureaucratic laws until in the struggle the whole system slips beneath the quicksand. Fair trade? Hardly.

Political Danger

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 24, 1959

Mr. ALGER. Mr. Speaker, the basic flaws of reasoning behind the fair trade bill, which would permit manufacturers to go around antitrust and set retail prices, will come to light sooner or later. Sometimes the obvious is difficult to see.

Imagine asking that antitrust price conspiracy laws, originated to protect businessmen and consumers alike, be set aside. Imagine, trying to eliminate the need for women shopping around. Imagine, eliminating competition in a free enterprise market system.

Fair trade is a contradiction, is self-defeating and will hurt most those it is designed to help. One has but to study the bill and understand marketing and merchandising to see this.

When the fatal flaws are clearly seen, the consumers will not be forgiving of these Federal representatives who put this law on the books. It is not unlikely that even those manufacturers and retailers who thought they wanted fair trade price fixing will turn against those legislators who accepted their earlier advice and passed this law.

Marketplace, Not Manufacturer Nor Congress, Sets Prices

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 24, 1959

Mr. ALGER. Mr. Speaker, what Congressman, bureaucrat, judge, or jury can tell you the "prices that are adequate to stimulate—and low enough to enable"—page 2, H.R. 1253, fair trade bill.

They cannot. It takes thousands, even millions of buyers, a free people in a free society freely bargaining for competitive merchandise at a mutually agreeable price. The price naturally results then like water seeking its level.

Now comes Congress to tell the public that from now on by Federal decree, we will let manufacturers tell the retailer what price they must charge. Are manufacturers all-knowing? Can they set the prices substituting the resale price maintenance of the fair trade bill for the spontaneous price setting of people in the marketplace through supply, demand, and competition? Yes, anyone can set a price, but who will buy if the price is too high? And if they do not buy who is hurt—the consumer?

Possibly so, but most hurt will be the retailer for whom the fair trade bill is intended. Meanwhile, the big competitor chainstore or department store with his own brand merchandise cleans up. Fair trade indeed.

SENATE

WEDNESDAY, MARCH 25, 1959

The Senate met at 10 o'clock a.m.

Rev. Peter N. Kyriakos, Greek Orthodox Cathedral, Boston, Mass., offered the following prayer:

In the name of the Father, and of the Son, and of the Holy Ghost. Amen.

Almighty God, who art worshiped and glorified at all times, at every hour, both in heaven and on earth, we fervently thank Thee for the rich and perfect blessings granted to Thy children, especially in our blessed land. We thank Thee for the high principles of our civilization, the democratic Christian principles, by which Thou hast seen fit to guide us, and for the spirit of brotherly love inspired by Thy teachings.

We beseech Thee, O Lord, our God, to receive at this very hour our supplications, and to direct our lives in the way of Thy commandments. Encompass us with Thy holy angels, that guided and guarded by Thy hosts, we may attain the knowledge of Thine unapproachable glory. Keep us ever mindful of the mercies of Thy grace. Make us ever grateful, not only for special blessings which we may personally enjoy, but also for the manifold blessings which, as citizens of this great Nation, we share in common. Give to us all—the leaders and citizens of our great Nation—Thy guidance and inspiration in our every endeavor. As we are today mindful of the martyrdom and sacrifice of the Greek people in their valiant struggle for independence and for their ancient principles of democracy, we pray Thee to strengthen us in those democratic convictions and to keep us ever mindful of our sacred responsibilities toward our fellow men, Thy children.

Bless richly, O Lord, Thy servants, the most faithful and God-fearing President and Vice President of our Nation, and the honorable representatives of Thy people, gathered here today. Strengthen them in their calling, and make them ever worthy of the great stewardship which Thou hast seen fit to entrust to them. Bless, enlighten, and direct all those upon whom the responsibility of leadership rests, for Thou art the way, the truth, and the life; and blessed art Thou now, and forever, from all ages to all ages. Amen.

THE JOURNAL

On request of Mr. KUCHEL, and by unanimous consent, the reading of the Journal of the proceedings of Tuesday, March 24, 1959, was dispensed with.

TRIBUTE TO REV. PETER N. KYRIAKOS

Mr. SALTONSTALL. Mr. President, it gives me great pleasure formally to welcome Rev. Peter Kyriakos, the assistant dean of the Greek Cathedral of the Annunciation, in Boston. Dean Kyriakos carries forward in this country the tradition of the Greek people and their church. Many freedom-loving citizens of Massachusetts and of the United States trace their ancestry to Greece; but, in a larger sense, all of us trace many of our proudest traditions of science, medicine, literature, and democracy to the culture of ancient Greece.

Today is the 138th anniversary of the independence of Greece. In their homeland and in many nations which, like ourselves, have received immigrants from Greece, this 138th anniversary is being celebrated today. We are proud to honor this anniversary, for there is no more independent people or greater lovers of freedom than the people represented here by Reverend Kyriakos.

I join in expressing the best wishes of all of us to the people of Greece.

Zito Héllas! Long live Greece!

Mr. President——

The VICE PRESIDENT. The Senator from Massachusetts.

TRIBUTE TO GREEK ORTHODOX ARCHBISHOP

Mr. SALTONSTALL. Mr. President, it is a great honor to join with other Members of this body in welcoming back to the United States the new Greek Orthodox archbishop of the New World. Recently he served as metropolitan of Malta, having risen in responsibility to this position from a position as deacon of the Boston archdiocese. Boston viewed his ordination to priesthood in 1940, and following that event he served in Connecticut and St. Louis before returning to Boston to be dean of the Greek Orthodox Cathedral of the Annunciation from 1942 to 1954. From there he went to Malta.

Metropolitan James, while at Boston, took advantage of our great opportunities for further study in Massachusetts by taking an advanced degree at Harvard in theological studies. For a time he also contributed to our halls of learning by lecturing at Harvard, Boston University, and other institutions. He served as a director of the Holy Cross Orthodox Theological School in Brookline, Mass., which, I understand, is the only school of its kind in our Nation.

Father Coucouzis, as he was known to his friends and admirers in Boston, who number in the thousands, was greatly admired for the fine work he did while with us in Massachusetts. We wish him well in his new office as archbishop of the Greek Orthodox Church of North and South America and his former parishioners in Boston look forward to his continued leadership in their church.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States submitting nominations were communicated to the Senate by Mr. Miller, one of his secretaries.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the House had passed a bill (H.R. 5916) making supplemental appropriations for the fiscal year ending June 30, 1959, and for other purposes, in which it requested the concurrence of the Senate.

HOUSE BILL REFERRED

The bill (H.R. 5916) making supplemental appropriations for the fiscal year ending June 30, 1959, and for other purposes, was read twice by its title and referred to the Committee on Appropriations.

COMMITTEE MEETINGS DURING SENATE SESSION

On request of Mr. KUCHEL, and by unanimous consent, the following committees and subcommittees were authorized to meet during the session of the Senate today:

The Subcommittee on Stabilization of the Committee on Agriculture and Forestry;

The Committee on Labor and Public Welfare;

The Subcommittee on Health, Education, Welfare, and Safety of the Committee on the District of Columbia; and

The Subcommittee on Veterans' Affairs of the Committee on Labor and Public Welfare.

LIMITATION OF DEBATE DURING MORNING HOUR

Mr. KUCHEL. Mr. President, under the rule, there will be the usual morning hour for the introduction of bills and the transaction of other routine business. I ask unanimous consent that statements in connection therewith be limited to 3 minutes.

The VICE PRESIDENT. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. KUCHEL. Mr. President, there are several nominations on the Executive Calendar. I move that the Senate proceed to consider executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business.

EXECUTIVE MESSAGES REFERRED

The VICE PRESIDENT laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the appropriate committees.

(For nominations this day received, see the end of Senate proceedings.)

The VICE PRESIDENT. If there be no reports of committees, the nominations on the calendar will be stated.

POSTMASTERS

The Chief Clerk proceeded to read sundry nominations of postmasters.

Mr. KUCHEL. Mr. President, I ask unanimous consent that these postmaster nominations be considered en bloc.

The VICE PRESIDENT. Without objection, the nominations will be considered en bloc; and, without objection, they are confirmed.

Mr. KUCHEL. Mr. President, I ask unanimous consent that the President be immediately notified of the confirmation of all these nominations.

The VICE PRESIDENT. Without objection, the President will be notified forthwith.

LEGISLATIVE SESSION

Mr. KUCHEL. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

EXECUTIVE COMMUNICATIONS, ETC.

The VICE PRESIDENT laid before the Senate the following letters, which were referred as indicated:

REPORT ENTITLED "PROGRAM FOR THE NATIONAL FORESTS"

A letter from the Secretary of Agriculture, transmitting, for the information of the Senate, a report entitled "Program for the National Forests," which, with the accompanying report, was referred to the Committees on Interior and Insular Affairs and Agriculture and Forestry, jointly, under authority of the order of the Senate of March 24, 1959.

REPEAL OF SECTION 8F OF AGRICULTURAL ADJUSTMENT ACT OF 1933

A letter from the Acting Secretary of Agriculture, transmitting a draft of proposed legislation to repeal section 8f of the Agricultural Adjustment Act of 1933, as amended (with an accompanying paper); to the Committee on Agriculture and Forestry.

AUDIT REPORT ON FOREIGN AGRICULTURAL SERVICE

A letter from the Comptroller General of the United States, transmitting, pursuant to law, an audit report of the Foreign Agricultural Service, Department of Agriculture, January, 1959 (with an accompanying report); to the Committee on Government Operations.

REPORT ON REVIEW OF CAPEHART HOUSING PROGRAM, FORT BELVOIR, VA.

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on review of the Capehart housing program of the U.S. Army Engineer Center and Fort Belvoir, Fort Belvoir, Va., dated March, 1959 (with an accompanying report); to the Committee on Government Operations.

PROPOSED ALASKA OMNIBUS ACT

A letter from the Director, Bureau of the Budget, Executive Office of the President, transmitting a draft of proposed legislation to amend certain laws of the United States in the light of the admission of the State of Alaska into the Union, and for other purposes (with accompanying papers); to the Committee on Interior and Insular Affairs.

CERTIFICATION OF ADEQUATE SOIL SURVEY AND LAND CLASSIFICATION, COLLBRAN PROJECT, COLORADO

A letter from the Assistant Secretary of the Interior, reporting, pursuant to law, that an adequate soil survey and land classification has been made of the lands to be served by the Collbran project, Colorado (with an accompanying paper); to the Committee on Interior and Insular Affairs.

REPORT ON PAYMENT OF CLAIMS ARISING FROM CORRECTION OF MILITARY OR NAVAL RECORDS

A letter from the Acting Secretary of Defense, transmitting, pursuant to law, a report on the payment of claims arising from the correction of military or naval records, for the period July 1, 1958, through December 31, 1958 (with an accompanying report); to the Committee on the Judiciary.

RESERVATION OF MEMALOOSE ISLAND, COLUMBIA RIVER, OREG., FOR USE OF THE DALLES DAM PROJECT

A letter from the Secretary of the Army, transmitting a draft of proposed legislation to set aside and reserve Memaloose Island, Columbia River, Oreg., for the use of the Dalles Dam project and transfer certain property to the Yakima Tribe of Indians in exchange therefor (with an accompanying paper); to the Committee on Public Works.

REPORT OF BOY SCOUTS OF AMERICA

A letter from the Chief Scout Executive, National Council, Boy Scouts of America, New Brunswick, N.J., transmitting, pursuant to law, a report of the Boy Scouts of America, for the year 1958 (with an accompanying report); to the Committee on Labor and Public Welfare.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the VICE PRESIDENT:

A telegram in the nature of a memorial from the Statehood Republican Party of Puerto Rico, of San Juan, Puerto Rico, signed by Miguel A. Garcia Mendez, state chairman, and Luis A. Ferre, vice chairman, remonstrating against the proposed repeal of the law concerning Federal relations with Puerto Rico; to the Committee on Interior and Insular Affairs.

A telegram in the nature of a memorial from Dr. Leopoldo Gifueroa, floor leader, Statehood Republican Party representative, and Senator Miguel A. Garcia Mendez, floor leader, Statehood Republican senators, of San Juan, Puerto Rico, remonstrating against the proposed repeal of the law concerning Federal relations with Puerto Rico; to the Committee on Interior and Insular Affairs.

A resolution adopted by the mayor and Board of Supervisors of the City and County of Honolulu, T.H., expressing appreciation for the Senate vote granting statehood to Hawaii; ordered to lie on the table.

By Mr. McNAMARA:

A concurrent resolution of the Legislature of the State of Michigan; to the Committee on Public Works:

"SENATE CONCURRENT RESOLUTION 13

"Concurrent resolution urging action by the Congress of the United States concerning the grave situation that exists with respect to divergence of waters from Lake Michigan by the city of Chicago, Ill.

"Whereas the State of Michigan since 1926 has been unalterably opposed to the diversion of water from Lake Michigan by the State of Illinois and its creature, the Sanitary District of Chicago, and was a complainant in the several suits that were filed in the Supreme Court of the United States against the State of Illinois and said sanitary district by the States of Minnesota, Wisconsin, Ohio, Pennsylvania, and New York; and

"Whereas since it was inadvisable to require the State of Illinois and the Sanitary District of Chicago to reverse the flow of the Chicago River back to Lake Michigan because of the highly contaminated condition of the river at that time, the Court temporarily allowed the Sanitary District of Chicago to discharge its sewage effluent into the sanitary canal flowing into the Des Plaines River until they had constructed the necessary sewage disposal plant. Said sewage treatment plants have been constructed and have been operating for many years; and

"Whereas the attorneys general of the States of Michigan, Minnesota, Wisconsin, Ohio, Pennsylvania, and New York have filed a petition in the Supreme Court of the United States asking that the Court review its decree of April 21, 1930, and require the Metropolitan Sanitary District of Greater Chicago to restore to the lake the water designated as "domestic pumpage", now amounting to approximately 1,800 cubic feet per second. It is feared that said domestic pumpage will increase in volume as the population and industry of the Greater Chicago area grows according to predictions; and

"Whereas the diversion of water from Lake Michigan at Chicago creates an embarrassing international situation between the United States and Canada, as a result of which the President of the United States on two separate occasions vetoed bills passed by the Congress permitting an increase in the amount of diversion; and

"Whereas there has been introduced in the present 85th Congress a bill designated as H.R. 1 by Congressman O'BRIEN of Chicago to allow the Metropolitan Sanitary District of Greater Chicago to divert an additional 1,000 cubic feet per second of water from Lake Michigan into the sanitary and ship canal; and

"Whereas the construction of the St. Lawrence Seaway necessitated the deepening of the channels as well as ports and harbors, which costs the taxpayers hundreds of millions of dollars; this would be partially nullified by the lowering of the depths of the waters of the Great Lakes through the diversion at Chicago and detrimental to the total economy and best interests of the State of Michigan: Now, therefore, be it

"Resolved by the senate (the house of representatives concurring), That all officials of the State of Michigan responsible for protecting the interests of the State against this threat be urged to make every effort to preserve and protect the legal rights and interests of the State of Michigan, both in the Supreme Court of the United States and in the Congress of the United States; and be it further

"Resolved, That Michigan's Senators and Members of the House of Representatives in the Congress of the United States be urged to oppose vigorously and uncompromisingly any bill that may come before them which would allow any increase in the amount of water being presently diverted at Chicago; and be it further

"Resolved, That copies of this concurrent resolution be transmitted to the President of the United States, the Secretary of the Interior, the Governors of the several States named herein, and to each member of the Michigan delegation to the U.S. Congress.

"Adopted by the senate, February 18, 1959.

"Adopted by the house, March 11, 1959.

"NORMAN E. PHILLES,
"Clerk of the House of Representatives.
"FRED I. CHASE,
"Secretary of the Senate."

STATEHOOD FOR HAWAII—RESOLUTIONS

Mr. GRUENING. Mr. President, I ask unanimous consent to have printed in the RECORD resolutions I have received from the legislature and organizations in Hawaii expressing gratitude for the action taken by this body in the admission of Hawaii to the Union.

There being no objection, the resolutions were ordered to lie on the table and to be printed in the RECORD, as follows:

SENATE CONCURRENT RESOLUTION 66

Whereas the hopes and aspirations of the people of Hawaii for equal rights and privileges with all other citizens of the United States have been realized by the passage of the bill admitting the State of Hawaii into the Union; and

Whereas it is particularly appropriate that special thanks be given to those Members of the Congress of the United States whose patient and tireless personal efforts on behalf of the people of Hawaii brought about the eventual fulfillment of these hopes: Now, therefore, be it

Resolved by the Senate of the 30th Legislature of the Territory of Hawaii, That the special thanks and fondest aloha of the people of Hawaii be, and they are hereby, given to Senator ERNEST GRUENING, of the great State of Alaska, for his patient, forceful, and untiring efforts on their behalf to attain for them full and equal rights and privileges with all other citizens of the United States by the granting of statehood to Hawaii; and be it further

Resolved, That a duly certified copy of this resolution be sent forthwith to the Honorable ERNEST GRUENING.

RESOLUTION 103

Whereas the 86th Congress of the United States of America has enacted monumental legislation permitting the Territory of Hawaii to enter the Union as its 50th State; and

Whereas the difficulty and often disheartening fight to achieve statehood encountered by the people of Hawaii have, nevertheless, mustered to their side friends residing in distant places; and

Whereas of our many friends, we are privileged to embrace not only as friends but as comrades in arms the people of the great State of Alaska; and

Whereas the Senators and Congressman from the great State of Alaska have unceasingly and tirelessly pushed and achieved successfully statehood for Hawaii: Now, therefore, be it

Resolved by the Board of Supervisors of the County of Kauai, State of Hawaii, That Senator E. L. "Bob" Bartlett, Senator Ernest Gruening, Congressman Ralph J. Rivers, Gov. William Egan, and Acting Gov. Hugh J. Wade be and are herein informed of the deep sense of gratitude and aloha that the people of Hawaii, this county of Kauai, have and feel toward all the people of Alaska and their capable and able officials; be it further

Resolved, That copies of this resolution be forwarded to the above-named persons.

RESOLUTION 65

Whereas the hopes and aspirations of the people of Hawaii for equal rights and privileges with all other citizens of the United States have been realized by passage of the bill admitting the Territory of Hawaii into the Union; and

Whereas it is particularly appropriate that special thanks be given to those Members of the Congress of the United States whose patient and tireless personal efforts on behalf of the people of Hawaii brought about the eventual fulfillment of these hopes: Now, therefore, be it

Resolved by the Board of Supervisors in and for the County of Hawaii, That the personal thanks and fondest aloha of the people of Hawaii be and they are hereby given to the Honorable Senator ERNEST GRUENING of the great State of Alaska for his patient, thoughtful, and untiring efforts on their behalf to attain for them full and equal rights and privileges with all other citizens of the United States by the granting of statehood to Hawaii; and be it further

Resolved, That a certified copy of this resolution be sent forthwith to the Honorable ERNEST GRUENING.

Dated at Hilo, Hawaii, this 18th day of March 1959.

RESOLUTION OF NORTHERN TEXTILE ASSOCIATION

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the RECORD a resolution adopted by the board of directors of the Northern Textile Association commending the Special Subcommittee To Study the Textile Industry.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

The Northern Textile Association endorses the conclusions and recommendations of the Special Senate Subcommittee on the Textile Industry, and commends Senator PASTORE, the chairman, the members of the committee, and the staff for a comprehensive, timely, and constructive report.

The sympathetic and thorough hearings conducted in key textile areas have been effectively distilled in the report to bring the problems of the industry clearly and forcibly into focus, and to demonstrate the harmful results of Government policies. The report is a significant contribution to a better national understanding of the textile industry.

The recommendations, if carried out in good faith by the executive departments and implemented where necessary by legislation, should solve the major problems imposed on the industry by Government.

We urge our Senators and Representatives to assist in the implementation of the recommendations of the subcommittee including the appointment by the Senate of a Textile Subcommittee within the Interstate and Foreign Commerce Committee.

We also urge the Secretary of Commerce, in accordance with the recommendations of the committee, to establish forthwith a Textile Interagency Committee and an Advisory Committee as a first step in carrying out the other recommendations of the committee.

RESOLUTIONS OF ORGANIZATIONS OF THE STATE OF NEW YORK

Mr. JAVITS. Mr. President, I present for appropriate reference, sundry resolutions adopted by organizations of the State of New York. I ask unanimous consent that the resolutions may be printed in the RECORD.

There being no objection, the resolutions were received and appropriately referred, and ordered to be printed in the RECORD, as follows:

To the Committee on Finance:

[Transcript of minutes, regular meeting, Feb. 4, 1959]

WILLIAM W. DOUD POST NO. 98,
DEPARTMENT OF NEW YORK,
AMERICAN LEGION.

The following resolution was moved by Martin Becker, seconded by Frank Tomdale, and duly carried:

"Resolved, That this post hereby heartily endorses the American Legion three-point

pension program for 1959 and urges the passage thereof upon the U.S. Senate and House of Representatives; and be it further

"*Resolved*, That copies of this resolution be sent to the U.S. Senators from the State of New York, and the Members of Congress of the 38th and 39th New York Districts, and also, to the chairman of the Senate Veterans' Affairs Committee, and the chairman of the House Veterans' Affairs Committee."

I hereby certify that the above is a true copy of a resolution duly passed at the above meeting.

EDGAR C. MITCHELL,
Commander.
CLARA RUTH ARDELL,
Adjutant.

To the Committee on Labor and Public Welfare:

SIR: The following resolution was unanimously passed at the last regular meeting of this post of the American Legion, with a membership of 237:

"Whereas Castle Point Veterans' Administration Hospital has opened a general medical and surgical ward to accomodate veterans in the immediate vicinity;

"Whereas since the ward was opened admissions have steadily increased to a point where it is now contemplated that the hospital will shortly reach a waiting list status in this ward;

"Whereas the veterans of this general area including Dutchess, Ulster, and Orange, Sullivan, and Putnam Counties would be better served if the bed space at the Castle Point Hospital for medical and surgical cases could be expanded;

"Whereas in addition to this expansion, there is need now for a dermatologist, orthopedist and X-ray therapy, etc.;

"Whereas at the present time, three hospital buildings are closed and therefore are not available to use for the care of veterans requiring hospitalization;

"Whereas VA hospitals in New York City and Albany now have a waiting list of veterans applying for admission; yet Congress will not permit the Castle management to utilize the existing facilities: Be it

"*Resolved*, That Beacon Post No. 203 American Legion endorse the use of the full facilities and the reopening of the three hospital buildings for general medical and surgical care at the Castle Point Veterans' Administration Hospital; be it further

"*Resolved*, That Beacon Post send a copy of this resolution to Congressman, J. ERNEST WHARTON, and Senator KENNETH B. KEATING, urging them to do their utmost to expand the general medical and surgical facilities at the Castle Point Hospital."

Respectfully submitted.

WARREN I. HUGHES,
Adjutant.

BEACON, N.Y.

At their regular monthly business meeting of March 12, 1959, the board of education, Plainedge public schools, approved the following:

"*Resolved*, That the board of education of Plainedge Public Schools favors and endorses legislation to provide additional moneys for Public Law 874 and Public Law 815 covering Federal aid to school districts having students whose parents work in defense industries connected with the Federal Government. This endorsement is to be sent to our local Federal legislators, the U.S. Office of Education, the New York State School Boards Association, and the members of the Nassau-Suffolk County School Boards' Tax Relief Committee."

Sincerely,

HENRY A. WEINSTEIN,
President, Board of Education.

To the Committee on Rules and Administration:

"RESOLUTION OF THE 24TH CONVENTION OF THE UKRAINIAN NATIONAL ASSOCIATION

"The 24th convention of the Ukrainian National Association, Inc., a fraternal-benefit organization established in 1894 and which now numbers 75,000 members in the United States and Canada, with assets of $22 million, adopted the following resolution in Cleveland, Ohio, on the 29th of May 1958:

" 'Whereas the 100th anniversary of the death of Taras Shevchenko, the greatest son of Ukraine, falls during the next 4-year term; and

" 'Whereas Taras Shevchenko is regarded as the patron of our organization; and

" 'Whereas this topic was the subject of consideration and efforts of the cultural committee of the Ukrainian National Association; be it therefore

" '*Resolved*, That the 24th convention empowers the supreme assembly, and especially the supreme executive committee and the cultural committee of the Ukrainian National Association, to, first, continue the efforts about the erection of a monument to T. Shevchenko in the Nation's Capital, Washington, D.C.; second, form agreements with other organizations to make the realization of this project and this initiative a concerted, joint effort of the whole community.' "

"RESOLUTION OF THE SEVENTH CONGRESS OF AMERICANS OF UKRAINIAN DESCENT

"The Seventh Congress of Ukrainian Americans, which represents all Americans of Ukrainian descent, adopted the following resolution on February 22, 1959, at Washington, D.C.:

" 'To strengthen and support morally and materially the bill aimed for the dedication of a monument in Washington, D.C., to Taras Shevchenko, the greatest Ukrainian poet, on the occasion of the 100th anniversary of his death, in appreciation for his work for the ideals of freedom.' "

RESOLUTIONS OF FARMERS UNION CENTRAL EXCHANGE, ST. PAUL, MINN.

Mr. HUMPHREY. Mr. President, on March 2, 3, and 4 in St. Paul, Minn., one of the outstanding farmers cooperatives in this country, the Farmers Union Central Exchange, held its 28th annual meeting. This service cooperative, which has been built by farm people in Minnesota, Wisconsin, North and South Dakota, Montana, and bordering States, is a shining example of how farmers can help themselves by working together. The cooperative makes possible substantial savings to its members in the purchase of the many expensive tools and items needed for the production of farm crops.

However, the interests of these fine people go beyond their immediate day-by-day concerns; they also take an interest in important State and National issues that affect the well-being of all farmers.

Mr. President, I ask unanimous consent that the resolution adopted at the 28th annual meetings of the Farmers Union Central Exchange be printed at this point in the RECORD and appropriately referred.

There being no objection, the resolutions were referred to the Committee on Agriculture and Forestry, and ordered to be printed in the RECORD, as follows:

COMPLETE TEXT OF RESOLUTIONS ADOPTED AT CENTRAL EXCHANGE CONVENTION

(The following is the complete text of the resolutions adopted at the 28th Farmers Union Central Exchange stockholders' meeting, March 2, 3, and 4, in the St. Paul Auditorium:)

1. DISTRIBUTION OF SAVINGS

The distribution of savings of the Farmers Union Central Exchange, Inc., for the fiscal year ending December 31, 1958, made by the board of directors of the corporation, as shown in the minutes of the December 1958 meeting of the board of directors and as set forth in the audit report ending December 31, 1958, is hereby ratified and approved.

2. ECONOMIC POLICY

Prompt and vigorous measures should be taken by the Government to stop the growing recession and unemployment which in some States is exceeding 10 percent of the labor force.

The quickest and most effective way to combat recession and prevent its development into a full-scale depression would be to put income into the hands of producers in agriculture and other basic industries where consumer purchases are presently being held up due to lack of buying power.

On every farm, thousands of dollars in repairs, replacements and improvements would be made if farm prices and income were restored to full parity levels. We believe that this would be the greatest stimulus to consumer demand, business activity and full employment.

An antirecession program which does not provide for farm income improvement simply will not get to the roots of our economic trouble.

3. FARM POLICY

We, the stockholders of the Farmers Union Central Exchange, Inc., command and wholeheartedly endorse the farm policy of the National Farmers Union, and by so supporting it, we present a united front in fighting to get this policy into Federal law.

The Farmers Union farm program is a total program administered by farmers, designed to give real parity of income to farm families.

It calls for Federal enabling legislation to permit farmers to adjust the volume of their commodities going to market.

4. TAX LEGISLATION

We urge Congress to reject proposals of the National Tax Equality Association and similar groups to enact punitive and discriminatory taxes on the savings of cooperative associations.

5. PUBLIC POWER

There exists an ever-increasing need for an abundant supply of low-cost power to facilitate maximum development of the natural resources of the great Northwest States. Utilization of the maximum potential of these resources requires a comprehensive development of the river systems of this area. This can be properly achieved only through the construction of publicly owned multipurpose dams. We urge the Congress to authorize construction of Hells Canyon, Paradise, Yellowtail, and other high, multipurpose dams.

We urge that if Congress authorizes a program of public works to help alleviate the unemployment situation, this would take the form of comprehensive resource development projects, which would reflect the greatest economic benefits to the Nation. Water and power resource development should have the highest priority.

6. REA AND RTA

We reaffirm our continued support for expanding and strengthening REA and rural

telephone service to all rural America. We favor adequate appropriations, so there will be no lessening in the support and extension of loans to farmers' cooperatives to build generation plants and transmission lines when this will increase adequacy or lower cost of service. We urge Congress to reject recommendations to eliminate the statutory limit on interest rates on rural electric and telephone loans. We are opposed to an administration proposal which would force REA systems to seek private financing.

7. PUBLIC RELATIONS

We commend the Farmers Union Central Exchange, Inc., and the affiliated companies, on the fine job they have performed in the past year in the field of advertising and public relations.

We feel our advertising in farm publications, radio, and TV have been a great aid in getting our story to our people.

We recommend continuing and expanding this public relations and advertising program as our growing business warrants.

8. FARMERS UNION CO-OP CREDIT ASSOCIATION

We realize the need for cooperatively owned and controlled credit and endorse the Farmers Union Credit Association and their method of building capital cooperatively, and also the purpose for which such capital is used.

9. CO-OP CREDIT

We strongly recommend that the Farmers Union Credit Exchange, Inc., continue to advise all local cooperatives to develop a sound credit policy so that each association will be encouraged to keep accounts within reasonable bounds. We note that credit practices have reached a dangerous stage in many of our local associations, and we, therefore, urge the central exchange to continue to make available qualified field personnel to assist each local cooperative to work out a sound credit program.

10. CO-OP PATRONAGE

Annual reports of the Farmers Union Central Exchange, Inc., show a continuous growth from year to year, which is a tribute to the excellent management and to the superior quality of our products. However, this growth could be much more rapid if all of our affiliated cooperatives would channel all possible purchases of their supplies through the Central Exchange. Directors should be alerted to the importance of encouraging their managers to increase their business in every way possible with our own regional wholesale.

11. FARMERS UNION HERALD

Whereas for many years, Farmers Union Herald has been published for and in behalf of the stockholder-members of Farmers Union Central Exchange, Inc., and their stockholder-members and the stockholder-members of the Farmers Union Grain Terminal Association and Farmers Union Marketing Association; and

Whereas during all of said time, said Farmers Union Herald has been the recognized official publication of said cooperative associations and has, during all of said time, and does now publish in each issue thereof facts and information relative to the operation, plans, business, and affairs of said associations, including information and facts relating to the marketing of grain, the marketing of livestock, the distribution of automotive and petroleum products, other farm supplies and equipment, and much other information of value to farmers, and especially to said stockholder-members in the areas served by said cooperatives; and

Whereas the stockholder-members of this association and their stockholder-members desire that said publication continue to be issued and forwarded to them through the U.S. mail, and that the subscription price therefore be paid for them by this association; and

Whereas because this association is a cooperative organization wholly owned by its stockholder-members and is in fact their agent, payment of such subscription price by this association on behalf of said stockholder-members is actually payment by them: Now, therefore, be it

Resolved, That the management of this association be and it hereby is directed to subscribe to Farmers Union Herald for and on behalf of each of its stockholder-members and to pay the subscription price therefore for each of said associations and individuals.

12. DISTRIBUTION OF COMMODITIES

We commend the board of directors of the Farmers Union Central Exchange and the Farmers Union GTA for their cooperation and businesslike action in the manufacture and distribution of commodities.

13. IN MEMORIAM—WM. F. HANSON

We mourn the passing of Wm. F. Hanson of Chippewa Falls, Wis., in mid-August. Mr. Hanson was a director of the Central Exchange between 1935 and 1938. His memory will long be revered in the annals of this and other cooperatives.

14. APPRECIATIONS

We wish to thank the officials and citizens of St. Paul for their hospitality.

We express our appreciation to the rooms committee of the Farmers Union Central Exchange, Inc., and to the management and employees of the Twin City hotels for courtesies extended to the delegates and visitors to our 28th annual stockholders' meeting.

We also wish to commend the Twin City press, radio, and television stations for their excellent coverage of our annual meeting.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. McCLELLAN, from the Committee on Government Operations, with amendments:

S. 899. A bill to provide for the discontinuance of certain reports now required by law (Rept. No. 146).

By Mr. MURRAY, from the Committee on Interior and Insular Affairs, without amendment:

S. 1217. A bill to add certain public domain lands in Nevada to the Summit Lake Indian Reservation (Rept. No. 147).

By Mr. MURRAY, from the Committee on Interior and Insular Affairs, with amendments:

H.R. 3648. An act to regulate the handling of student funds in Indian schools operated by the Bureau of Indian Affairs, and for other purposes (Rept. No. 151).

By Mr. ANDERSON, from the Committee on Interior and Insular Affairs, without amendment:

S. 1271. A bill to donate to the pueblo of Isleta certain Federal property in the State of New Mexico (Rept. No. 149).

By Mr. ANDERSON, from the Committee on Interior and Insular Affairs, with amendments:

S. 418. A bill directing the Secretary of the Interior to convey certain property in the State of New Mexico to the pueblo of Santo Domingo (Rept. No. 150).

By Mr. NEUBERGER, from the Committee on Interior and Insular Affairs, without amendment:

S. 1242. A bill to authorize the use of the revolving loan fund for Indians to assist Klamath Indians during the period for terminating Federal supervision (Rept. No. 148).

By Mr. SPARKMAN, from the Committee on Foreign Relations, without amendment:

H.R. 2575. An act to authorize the appropriation of $500,000 to be spent for the purpose of the III pan-American games to be held in Chicago, Ill. (Rept. No. 152).

BILLS AND JOINT RESOLUTIONS INTRODUCED

Bills and joint resolutions were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. PROXMIRE (for himself, Mr. MUSKIE, Mr. MORSE, and Mr. WILLIAMS of New Jersey):

S. 1525. A bill to amend the National Security Amendment so as to provide for congressional review of proposed action thereunder and to rescind the action of the President imposing quotas on petroleum and petroleum products; to the Committee on Finance.

(See the remarks of Mr. PROXMIRE when he introduced the above bill, which appear under a separate heading.)

By Mr. NEUBERGER (for himself and Mr. MORSE):

S. 1526. A bill to establish the Oregon Dunes National Seashore in the State of Oregon, and for other purposes; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. NEUBERGER when he introduced the above bill, which appear under a separate heading.)

By Mr. KENNEDY:

S. 1527. A bill for the relief of Sister Araceli Cordero Martin, Sister Cecilia Villanueva Idoate, Sister Ines Orive Vadillo, Sister Marcelina Garcia Zabaleta, Sister Maria Encarnacion Fernandez Fernandez, Sister Maria Belen Garcia Garcia, Sister Amparo Vidal Sastre, and Sister Maria Guadelupe de la Rosa Algundez; to the Committee on the Judiciary.

By Mr. McCARTHY (for himself and Mr. HUMPHREY):

S. 1528. A bill to amend the Internal Revenue Code of 1954 to allow a taxpayer a personal exemption for a foreign student who resides in his home while in the United States attending high school; to the Committee on Finance.

By Mr. CURTIS (for himself and Mr. HRUSKA):

S. 1529. A bill to provide for Federal cooperation with the Nebraska Mid-State Reclamation District, Nebraska, in the construction of the Mid-State project; to the Committee on Interior and Insular Affairs.

By Mr. PASTORE:

S. 1530. A bill relating to the amount of loss recognized for income tax purposes in the case of certain casualty losses; to the Committee on Finance.

By Mr. PASTORE (for himself and Mr. KEATING):

S. 1531. A bill providing that the Administrator of Veterans' Affairs shall recognize representatives of the Italian American War Veterans of the United States, Incorporated, in the preparation, presentation, and prosecution of claims under laws administered by the Veterans' Administration; to the Committee on Finance.

By Mr. NEUBERGER:

S. 1532. A bill to provide for nonquota immigrant visas; and

S. 1533. A bill for the relief of Ho Rim Yoon; to the Committee on the Judiciary.

By Mr. ENGLE:

S. 1534. A bill to clarify the legal status of employer or joint industry contributed apprenticeship funds and other joint or individual apprenticeship activities; to the Committee on Labor and Public Welfare.

By Mr. HUMPHREY:

S. 1535. A bill for the relief of Leslie L. Nemes; to the Committee on the Judiciary.

By Mr. CURTIS (for himself, Mr. McCLELLAN, Mr. MUNDT, and Mr. GOLDWATER):

S. 1536. A bill to amend title 18 of the United States Code so as to prohibit certain interference with Federal construction projects; to the Committee on the Judiciary.

By Mr. ALLOTT:

S. 1537. A bill to establish a national mining and minerals policy; and

S. 1538. A bill to stabilize production of lead and zinc from domestic mines; to the Committee on Interior and Insular Affairs.

S. 1539. A bill to prohibit sales of gold by the Government for commercial use or for the arts, or for the purpose of lessening the price and value of gold; to the Committee on Banking and Currency.

(See the remarks of Mr. ALLOTT when he introduced the above bills, which appear under a separate heading.)

By Mr. JOHNSTON of South Carolina:

S. 1540. A bill authorizing the Secretary of the Air Force to carry out a research and testing program to determine the effectiveness of a certain vegetable product in the treatment of burns, sunburns, poison ivy, and poison oak dermatitis; to the Committee on Armed Services.

By Mr. MURRAY (for himself, Mr. ANDERSON, Mr. GOLDWATER, Mr. JACKSON, Mr. KUCHEL and Mr. O'MAHONEY):

S. 1541. A bill to amend certain laws of the United States in light of the admission of the State of Alaska into the Union, and for other purposes; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. MURRAY when he introduced the above bill, which appear under a separate heading.)

By Mr. MAGNUSON (by request):

S. 1542. A bill to amend the Federal Aviation Act of 1958, so as to authorize the imposition of civil penalties in certain cases; and to increase the monetary amount of fines for violation of the criminal provisions;

S. 1543. A bill to amend the Federal Aviation Act of 1958 to authorize the Civil Aeronautics Board to include in certificates of public convenience and necessity limitations on the type and extent of service authorized, and for other purposes;

S. 1544. A bill to amend the Federal Aviation Act of 1958 in order to (1) assure for the Civil Aeronautics Board independent participation and representation in court proceedings, (2) provide for review of nonhearing Board determinations in the courts of appeals, and (3) clarify present provisions concerning the time for seeking judicial review;

S. 1545. A bill to amend the Federal Aviation Act of 1958 so as to authorize elimination of a hearing in certain cases under section 408;

S. 1546. A bill relating to the use of Civil Aeronautics Board reports and testimony of Board personnel regarding aircraft accidents;

S. 1547. A bill to amend the Federal Aviation Act of 1958 so as to prohibit certain practices regarding passenger ticket sales and reservations;

S. 1548. A bill to amend the Federal Aviation Act of 1958 to include a declaration of policy relative to the use of civil aircraft in meeting the needs of the Government for transportation by air;

S. 1549. A bill to amend section 407 of the Federal Aviation Act of 1958;

S. 1550. A bill to amend the Federal Aviation Act of 1958 to provide for the separation of subsidy and airmail rates, and for other purposes;

S. 1551. A bill to amend the Federal Aviation Act of 1958 in order to authorize free or reduced-rate transportation for certain additional persons;

S. 1552. A bill to amend section 1005(c) of the Federal Aviation Act of 1958 to authorize the use of certified mail for service of process, and for other purposes;

S. 1553. A bill to amend the Federal Aviation Act of 1958 to provide for the regulation of rates and practices of air carriers and foreign air carriers in foreign air transportation, and for other purposes; and

S. 1554. A bill to amend the Federal Aviation Act of 1958 so as to authorize the Civil Aeronautics Board to regulate the depreciation accounting of air carriers; to the Committee on Interstate and Foreign Commerce.

(See the remarks of Mr. MAGNUSON when he introduced the above bills, which appear under a separate heading.)

By Mr. KENNEDY (for himself, Mr. ERVIN, Mr. HILL, Mr. COOPER, Mr. JAVITS, Mr. CHURCH, Mr. WILLIAMS of New Jersey, Mr. RANDOLPH, Mr. MURRAY, Mr. MORSE, Mr. MCNAMARA, Mr. CLARK, Mr. SPARKMAN, Mr. HUMPHREY, and Mr. ENGLE):

S. 1555. A bill to provide for the reporting and disclosure of certain financial transactions and administrative practices of labor organizations and employers, to prevent abuses in the administration of trusteeships by labor organizations, to provide standards with respect to the election of officers of labor organizations, and for other purposes; to the Committee on Labor and Public Welfare.

(See the remarks of Mr. KENNEDY when he introduced the above bill, which appear under a separate heading.)

By Mrs. SMITH:

S. 1556. A bill for the relief of M. Sgt. Emery C. Jones; to the Committee on the Judiciary.

By Mr. HILL (for himself and Mr. SPARKMAN):

S. 1557. A bill for the relief of Allen Howard Pilgrim, Cheryl Ann Pilgrim, Robb Alexander Pilgrim, and Jocelyn Marie Pilgrim; to the Committee on the Judiciary.

By Mr. SYMINGTON:

S. 1558. A bill for the relief of Theopi Englezos; to the Committee on the Judiciary.

By Mr. BIBLE (for himself and Mr. CANNON):

S. 1559. A bill to provide for the striking of medals in commemoration of the 100th anniversary of the first significant discovery of silver in the United States, June 1859; to the Committee on Banking and Currency.

By Mr. HUMPHREY:

S. 1560. A bill to provide for the adoption of a capital budget by the Federal Government; to the Committee on Government Operations.

(See the remarks of Mr. HUMPHREY when he introduced the above bill, which appear under a separate heading.)

By Mr. COOPER:

S. 1561. A bill to establish a home gardening program to assist needy persons in supplementing their food supplies; to the Committee on Agriculture and Forestry.

(See the remarks of Mr. COOPER when he introduced the above bill, which appear under a separate heading.)

By Mr. COOPER (for himself, Mr. BYRD of Virginia, Mr. ROBERTSON, and Mr. MORTON):

S. 1562. A bill to amend the Federal Coal Mine Safety Act in order to remove the exemption with respect to certain mines employing no more than 14 individuals; to the Committee on Labor and Public Welfare.

(See the remarks of Mr. COOPER when he introduced the above bill, which appear under a separate heading.)

By Mr. BEALL:

S. J. Res. 82. Joint resolution designating the black-eyed susan as the national flower of the United States; to the Committee on the Judiciary.

(See the remarks of Mr. BEALL when he introduced the above joint resolution, which appear under a separate heading.)

By Mr. JAVITS (for himself, Mr. COOPER, Mr. DOUGLAS, and Mr. HUMPHREY):

S. J. Res. 83. Joint resolution to provide for the establishment of an Advisory Council on National Security; to the Committee on Armed Services.

(See the remarks of Mr. JAVITS when he introduced the above joint resolution, which appear under a separate heading.)

By Mr. HUMPHREY:

S. J. Res. 84. Joint resolution providing for the issuance of a proclamation designating March 25 as Greek Independence Day; to the Committee on the Judiciary.

(See the remarks of Mr. HUMPHREY when he introduced the above joint resolution, which appear under a separate heading.)

RESOLUTION

Mr. PROUTY (for himself and 60 other Senators) submitted a resolution (S. Res. 95) extending birthday greetings of the Senate to Robert Frost, which was considered and agreed to.

(See the above resolution printed in full when submitted by Mr. PROUTY, which appears under a separate heading.)

RESCISSION OF ORDER IMPOSING QUOTAS ON IMPORTS OF OIL

Mr. PROXMIRE. Mr. President, for myself, the senior Senator from Oregon [Mr. MORSE], the junior Senator from Maine [Mr. MUSKIE], and the junior Senator from New Jersey [Mr. WILLIAMS], I introduce herewith a bill to rescind the recent order of President Eisenhower imposing quotas on the import of oil. This proposal of ours would also permit the Congress to act within 60 days of any subsequent order of this kind to cancel any similar action by the President in the future by the majority vote of both Houses of the Congress.

Mr. President, here are some of the reasons why I hope Senators will give this proposed legislation their most thoughtful attention:

First. The oil industry has won a position of excessive and corrupting power and influence in our Federal Government. The favorable effect this Presidential action will have on oil investments and profits is just the latest instance in a series of immense political privileges for oil featured by the lushest tax give-aways any American industry has ever enjoyed.

Second. Unless we reverse this action, the precedent set by the President will encourage an even greater incentive for political influence by the No. 1 special interest in American politics today.

Third. The Presidential order can have only one effect on the cost of living, and that is to push it up. Obviously, by reducing foreign competition through quotas, the pressure on oil prices is sure to be up. This comes at a time of rising demand for oil, and after some oil prices have already risen.

Fourth. The President's action adds the guarantee of a higher and more profitable price to the juicy and stable after-tax profits Federal tax concessions have permitted the oil industry. Has any American industry ever enjoyed such a super combination bonanza at the expense of the taxpayer and the consumer?

Fifth. The President's order introduces a Government price-fixing mechanism in a free-enterprise industry in which there is no shadow of excuse for it.

Sixth. Our own limited domestic oil reserve is sure to be used up faster by this order, which prevents American consumers from utilizing available foreign oil.

Seventh. The order is sure to hurt our allies, some of whom depend heavily on the United States as the prime market for oil as their principal export.

Eighth. The national defense justification for this action given by the President is completely contradicted by the facts. The President argues that quotas would so protect the American industry that more reserves would be proven, and we would be less dependent on shipments of foreign oil that could be cut off in wartime. The failure of reserve exploration to follow a clear pattern of response to demand refutes this.

It is certain that the restriction of foreign oil would assure a greater consumption of the total and limited American oil reserve.

Finally, Canada would be restricted from sending oil into the United States under the President's order, although obviously no overseas oil shipment would be required.

The VICE PRESIDENT. The bill will be received and appropriately referred.

The bill (S. 1525) to amend the National Security Amendment so as to provide for congressional review of proposed action thereunder and to rescind the action of the President imposing quotas on petroleum and petroleum products, introduced by Mr. PROXMIRE (for himself, Mr. MUSKIE, Mr. MORSE, and Mr. WILLIAMS of New Jersey), was received, read twice by its title, and referred to the Committee on Finance.

NATIONAL SEASHORE PARK ALONG OREGON SEACOAST DUNES AND SEA-LION CAVES

Mr. NEUBERGER. Mr. President, I am about to introduce a bill, and I ask unanimous consent that I may speak on it in excess of the 3 minutes allowed under the order which has been entered.

The VICE PRESIDENT. Without objection, the Senator from Oregon may proceed.

Mr. NEUBERGER. Mr. President, much of man's destiny has been decided where the land meets the sea. Today, Americans are conscious of the wonderful and varied recreational opportunities offered along the beaches and seacoasts of the Nation. Yet many of these areas have been exploited or liquidated so that their recreational value is permanently impaired. The National Park Service has directed our attention to this distressing occurrence along much of the Atlantic shoreline. Alarm over such a situation lies behind the commendable efforts of the National Park Service to save Cape Cod and Cape Hatteras for future generations—if it can be done.

Fortunately, along the Pacific coast the emergency is not so great. We still have time and breathing space in which to think of the future, as the National Park Service has emphasized in a thorough and comprehensive report just released to the country.

No seacoast, Mr. President, is more magnificent or awe inspiring than the 300 miles of rugged shoreline where my native State of Oregon is buffeted by the heaving and foaming surf of the world's greatest ocean, the Pacific.

For this reason I am introducing today, for myself and my colleague, the distinguished senior Senator from Oregon [Mr. MORSE], a bill to establish a national seashore in the Oregon Dunes and at the Oregon sea lion caves. I ask unanimous consent that the text of the bill be included with my remarks at this point.

The VICE PRESIDENT. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1526) to establish the Oregon Dunes National Seashore in the State of Oregon, and for other purposes, introduced by Mr. NEUBERGER (for himself and Mr. MORSE), was received, read twice by its title, referred to the Committee on Interior and Insular Affairs, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in order to preserve for the benefit, inspiration, and use of the public certain unspoiled shoreline in the State of Oregon which possesses scenic, scientific, and recreation values of national importance, the Secretary of the Interior is authorized, as provided herein, to establish the Oregon Dunes National Seashore.

SEC. 2. The Secretary of the Interior may designate for inclusion in the Oregon Dunes National Seashore not to exceed thirty-five thousand acres of land and such adjoining waters and submerged lands as he finds are required for the national seashore. Lands designated pursuant to this section shall consist of not more than thirty-four thousand six hundred sixty acres, referred to as Oregon Dunes, and lying between the Siuslaw and Umpqua Rivers in Lane and Douglas Counties; and not more than three hundred forty acres, referred to as Sea Lion Caves, in Lane County, lying approximately seven and one-half miles north of the Siuslaw River.

SEC. 3. (a) Within the exterior boundaries designated by him, the Secretary of the Interior is authorized to procure, set aside, and develop in such manner as he finds to be in the public interest, the land and waters, or interests therein, that he considers necessary to assure adequate preservation and public use of such areas in furtherance of the purposes of this Act. The Secretary may procure said land and water, or interests therein, by donation or by purchase with donated or appropriated funds, and such authority to purchase with donated or appropriated funds shall include authority to condemn under the provisions of the Act of August 1, 1888: *Provided,* That land owned by the State or its political subdivision within the boundaries selected by the Secretary may be procured only with the concurrence of the State or political subdivisions. Any Federal land within the boundaries selected by the Secretary shall be transferred to the Department of the Interior for administration as a part of the national seashore: *Provided further,* That the Federal department or agency having administration over such land shall agree in advance to such transfer.

(b) When the Secretary finds that land has been procured by the United States in sufficient quantity to afford an administerable unit, he shall declare the establishment of such national seashore by the publication of notice thereof in the Federal Register. Following such establishment, and subject to the aforesaid acreage limitation, the Secretary may continue to acquire lands for the national seashore as authorized in this Act.

(c) The administration, protection, and development of national seashores pursuant to this Act shall be exercised by the Secretary of the Interior, subject to the provisions of the Act of August 25, 1916 (39 Stat. 535; 16 U.S.C., 1952 ed., secs. 1–4), as amended and supplemented, relating to the national park system, and in accordance with other laws of general application relating to that system as defined by the Act of August 8, 1953 (67 Stat. 496; 16 U.S.C., 1952 ed., Supp. V, sec. 1c), except that authority otherwise available to the Secretary of the Interior for the conservation and management of natural resources may be utilized to the extent he finds such authority will further the establishment and preservation of the national seashore.

SEC. 4. There are authorized to be appropriated such funds as may be required to carry out the purposes of this Act.

Mr. NEUBERGER. Mr. President, these unique and stirring areas are located in Lane, Douglas, and Lincoln Counties of our State. The Oregon Dunes consist of lofty and massive ramparts of sand, which tower above the sea. Behind the Dunes lie gemlike little lakes. Native grasses and evergreen trees add to the wild beauty of the location. Birds and wildlife abound. The sea-lion caves combine rocky grandeur with the rookeries of these clumsy but fascinating mammals, which inhabit tossing reaches of salt water.

MARVELS OF OREGON SEACOAST

Lest any of my colleagues think I exaggerate the marvels of Oregon's seacoast, let me read the words written by the noted author, Robert Carson, of Hollywood, Calif., in the February 1959 issue of Holiday magazine:

We had been told beforehand that the Oregon coast is the most beautiful in the world, and were prepared to resist; but after 2 or 3 days we were entirely conquered. Nothing in our experience compared to it, even the shores of the Mediterranean, Brittany, the Caribbean, the British Isles and Ireland, and the Pacific side of Central America. To a generation steeped in the wonders of Cinerama, and more inclined to look at Lawrence Welk, the region is a constant delight to the eyes. The unending and almost bewildering succession of sandy beaches, bold cliffs, towering forests, and clean little towns dressed for holidays, is incredibly pleasant. If one grows tired of sparkling water and the swell of bold mountains, it is easy to turn to fields covered with azaleas, rhododendrons, Canterbury bells, tiny white daisies, and yellow and blue lupine. Around Tillamook, fat cows ruminate in landscapes Constable might have painted, and in the cheese factory they make tasty yellow slabs of the Tillamook Cheddar, which is favorably regarded by connoisseurs. All along the fisherman is paramount, either on the beach or in rivers and streams, in search of salmon and steelhead. And clamming and crabbing rate high in popularity.

California's coast is nowhere near the equal of Oregon's, and the road decently turns inland shortly after the town of Eureka.

So, Mr. President, my purpose in coming before my colleagues today is to introduce a bill which will preserve in perpetuity, we trust, an extraordinary

and beautiful stretch of this great Oregon seacoast. I am fully mindful of the kind and helpful cooperation afforded by Members of the Senate and the House in helping us to enact, in 1958, the Fort Clatsop National Memorial bill which will safeguard a rich historic site where the intrepid explorers, Meriwether Lewis and William Clark, spent the winter of 1805–06 at the mouth of the Columbia River, after having made the original crossing by Americans of what is now the United States. I also appreciate President Eisenhower's signature which made that bill law.

BILL PRESERVES SCENIC GRANDEUR

That legislation was for historic purposes, Mr. President. The bill I am offering today is to preserve scenic grandeur and outdoor majesty. Despite Oregon's substantial area and its wealth of scenery, comparatively few areas of Oregon have been set aside for permanent safekeeping under the jurisdiction of our capable National Park Service, with its splendid traditions. We have the Crater Lake National Park, a place of unparalleled natural beauty, but relatively small among national parks—160,000 acres. We also have the Oregon Caves National Monument in southern Oregon—likewise small in area. It covers 480 acres.

I cite these facts, Mr. President, only to demonstrate that we of Oregon have not fared overly generously as national park reserves have been created during the past half century, despite the vast scenic potential within our State's boundaries. Thus, we are not imposing excessively on the Nation when we suggest that some 33,000 acres, along a seacoast of charm and grandeur, be set aside as a national seashore under our National Park Service.

Let me give to my friends of the Senate some specific details regarding the realm which we have in mind.

The Oregon Dunes National Seashore would include two units supervised and developed under National Park Service standards. The south unit of the seashore area would include about 32,800 acres between the mouth of the Siuslaw and Umpqua Rivers. The north unit, about 7½ miles north of the massive dunes, would include the famed sea lions caves and precipitous coastal bluffs within an area of 340 acres.

Actual boundaries of the Oregon Dunes National Seashore would be established by the Secretary of the Interior after survey studies have been completed. The area under consideration for the south unit would encompass about 23 miles of Oregon's seacoast where the ancient dunes and evergreen forest are located.

DUNES UNIQUE IN ENTIRE NATION

During the National Park Service survey of the Pacific coast shoreline, just completed, about 33,000 acres along the south central Oregon coast were found to constitute a region of scenic, scientific, and recreational values of exceptionally high caliber. A south unit of 32,830 acres and a north unit of 340 acres are recommended by the study group for a national recreation reserve. The south unit would contain 23 miles of seacoast with excellent beach. Farther back are massive dunes, ever moving. Some of the present dunes are beginning to overwhelm the coniferous forest which is growing on ancient dunes. Three lakes—130 to 3,200 acres—lie in depressions between dunes. The geology and ecology of the area, as well as its scenic qualities, are most impressive.

Seven and one-half miles to the north is the proposed north unit. It offers complete scenic, geologic, and biologic contrast to the south unit, being an area of precipitous coastal bluffs. Caves in the basaltic rock are inhabited by Steller and California sea lions, offering an unparalleled opportunity for observing these animals in their natural habitat.

About 15,000 privately owned acres of the south unit would have to be acquired; also 180 acres of privately owned land in the north unit. At present the caves are operated as a private commercial venture with the sea lions as the attraction. Total acquisition cost would probably run between $2 million and $3 million, but further economic studies are now in progress to firm up this estimate.

PARK DEVELOPMENT STIMULATES BUSINESS

Mr. President, it is well known that areas adjacent to national parks have benefited from park, memorial, and monument development. These units of the national park system have acted as magnets for the attraction of visitors to the area. In my opinion, the establishment of the Oregon Dunes national seashore area will stimulate the economy of the entire Oregon seacoast by providing visitors with improved facilities and recreational opportunities.

The National Park Service has an exceptional record of improving conservation practices in land areas acquired for park use. These policies, I am sure, will be applied to Oregon Dunes area so that erosion control problems will be intensified and cutover forest lands restored. Moreover, Mr. President, the Park Service has utilized a policy which results in a minimum of dislocation and inconvenience to summer home occupants in park areas. It is my understanding that when private land is acquired for park purposes, the Service works out an arrangement with summer-home owners so that they can retain use and occupancy of the property during their lifetimes. Where public land is acquired for inclusion in a park, the Service generally has recognized the tenure and conditions of leases granted to summer-home owners by other governmental units so that they are assured of occupancy during the unexpired balance of the lease period.

Mr. President, I ask consent to have printed in the RECORD with my remarks descriptive material on the Oregon Coast Sand Dunes as published by the Oregon Coast Association, and an article by Mrs. Ann Sullivan from the Portland Oregonian of March 15, 1959, describing the famed Sea Lion Caves which are adjacent to the Oregon Dunes. As I said earlier, Mr. President, the Atlantic seaboard is hard pressed to find seacoast areas suitable and available for inclusion in the national park system. This situation was reviewed recently in the New York Times, and I ask consent to include in the RECORD the New York Times article of March 12 entitled "Cape Cod Seen as 40-Mile National Seashore," and an editorial of March 15, entitled "Preserving Cape Cod."

There being no objection, the material was ordered to be printed in the RECORD, as follows:

OREGON COAST SAND DUNES

(Published by Oregon Coast Association, Tillamook, Oreg.)

SPECTACULAR SILENCE

The sand dunes on the Oregon coast are being acclaimed the finest display of this type of natural scenery to be found anywhere in the United States.

To stand upon any of the dunes heights and look over the wide expanse of ever drifting, never static, gray sand and view it in the brightness of a clear day, when the westering sun has highlighted the wind-rhythmed pattern of the insweeping dunes is more than a privilege, it is an inspirational opportunity. Here is taking place the silent drama of a radical change in this bit of the earth's surface, where there is being displayed the usual spectacle of an ancient sand dune area that had become stabilized, clothed with a forest, centuries before, now in the process of being overwhelmed and obliterated by a new invasion of drifting sand that is strikingly beautiful, even in its inexorable aggressiveness.

Geologists have told us that here the continental shelf is a sandstone formation that is slowly rising. The pounding seas disintegrate this sandstone and cast it upon the beaches only to be swept up by the winds and form the intricately patterned dunes that make this area famous.

Throughout the dune area, there is abundant evidence that beneath the sand drifts is a buried forest that existed for many years before the rising seashore had again set in motion the sands which have almost obliterated the trees that once covered this seaward slope. In support of this is the presence of several tree islands, ranging north and south along the slopes, and numerous dead trees, some standing, some down, that have been smothered beneath the sands and which, by some shift of the whimsical winds, have been exhumed in the windswept hollows and are now a mute evidence of the forest that once clothed these slopes.

In a broad overlook of the dune area there is, of course, a general sameness. In traversing their surface, sameness has vanished. Each ridge, each vantage point, opens up a new prospect and an impelling curiosity is always newly aroused to view in intimate detail what is hidden beyond, and there ever recurs the intriguing query of where and when these sands that so continually rise from the sea will stop.

Ancient dunes rise to an elevation of 550 feet, many new ones exceed 300 feet and are growing rapidly. Measurements have recorded increases in sand depths on some of the dunes from 3 to 5 feet in 8 years.

The smooth, straightway tidal beach that fronts the dune area is of good width and with an occasional stream coursing through. It is backed by a surf line that is often piled with logs and flotsam and jetsam of the mighty Pacific. Inside of this drift line is a strip that is splashed by the high waves and spray of storm periods where grow patches of bright-green sedgegrass and dwarfed trees and shrubs. Just beyond this green strip begins the rise of the dunes and the drifting sands start piling up the serried ridges that rise ever higher in their onward march to the wooded crests of the highlands.

Occasionally, green spruce treetops protrude from the sand for perhaps a third of

their height which, judging from the exposed portions, were trees probably 100 or more feet high, and no doubt between 150 and 200 years old. The exposed tops are in sand hollows, open on the uphill side, backed by a sand ridge that rises above them. There are also depressions, surrounded by dune ridges rising an estimated 100 feet above their depths, where grasses and shrubs are growing. In some the plots of green are only marshy places, others surround small, sedgy pools. Down the hollow a rivulet of water may flow for a short distance, then disappear beneath a high sandbank. Along its short course, the scattered down trunks and occasional stubs of the destroyed predune forest that has been uncovered either by a flow of water or a shift of the wind currents. Similar forest relics are noted in numerous windswept depressions, where the grasses and shrubs have newly established themselves.

All along the eastern edge of the dune area is a forest made up of Douglas-fir, Sitka spruce, western redcedar, western hemlock and lodgepole pine. This forest tends to delay but does not stop the inevitable advance of the drifting sands. Holland grass and native pine plantings will be noted at several points where sand threatens to cover the highway, some park, or water supply.

Forest undergrowth is comprised chiefly of rhododendron, evergreen huckleberry, wax myrtle, salal, salmon berry, and manzanita.

WHERE, WHEN, AND HOW

One may enter this geological wonderland at several points indicated on the accompanying map. Leave your car at the edge of the sand or along the highway.

When you reach the top of the first dunes, look back—select a tall tree as a landmark for returning to your point of entry.

These dunes are most enjoyable during May, June, September, and October.

To the uninitiated, walking over the dunes may be found somewhat tiresome, but they present no difficulties with good footwear. The ridges that slope smoothly to the northwest are generally quite firm and the walking is good. The steeper, opposite slopes, where the sands roll over the edges, are loose and yielding underfoot, but these are usually short pitches that are soon overcome.

Many people enjoy the dunes barefoot. Stick adhesive tape under the toes to prevent blistering.

If sand skiing should become a popular sport, the long slopes of these high dunes will present unexcelled opportunities for enjoying this pastime.

SUBLIME SHADOWS

Along the central Oregon coast from the Siuslaw River to Coos Bay and west of the Oregon coast highway, U.S. 101, lies a relatively unknown sand dune area of magnificent beauty and impressiveness.

These dunes attract some nature lovers who find fascinating beauty in viewing or tramping the gray aeolian sands that reach from the wooded highlands to the smooth straight-line beach in an alluring series of ridges and hollows that hold an impelling touch of scientific interest in the cause and future import of the long range, geologic and physiographic changes that have, and are now, slowly but surely taking place in the forced transformation of this portion of the Oregon coast from a living forest to a sand dune exquisite under the implacable influence of the slowly rising Continental Shelf.

Parts of the dune area, particularly just south of the lower Umpqua River, once attracted the attention of the National Park Service with plans for the creation of a national monument. This particular area is now a part of Oregon's State park system.

On the north side of the Umpaqua Lighthouse road, midway between the highway and the light tower, is a forest feature that is most unusual. Apparently a century or two ago, a violent wind uprooted a considerable area of exceptionally large trees, presumably Sitka spruce, which escaped being burned. For some unknown reason they did not dissolve into mold as fallen trees usually do but their huge trunks retained the bulky shapes of their living form. These fallen monarchs, judged by their great diameters, must have lived several hundred years before being destroyed. Growing over and astride of them, and rising above them, are new spruces that appear to be nearly 200 years old, making a remarkable exhibit of fallen and living trees that represent, in two generations of trees, a visible forest cycle of 500 or 600 years.

Individual trees growing over occasional fallen ones are not uncommon in the rain forests of the Northwest, but no similar area has come to the attention of the writer in this wide range of like forest where practically all of a considerable area of large trees have survived utter dissolution over such a long period of time as is represented by the living trees that are here seen growing over the prostrate forms of such large specimens of their predecessors in kind. The circumstance is most unusual and worthy of note.

[From the Oregonian, Portland, Oreg., Mar. 15, 1959]

ONLY KNOWN MAINLAND ROOKERY AN OREGON TOURIST ATTRACTION

(By Ann Sullivan)

A famed Oregon tourist attraction, the Sea Lion Caves just north of Florence, has been suggested to the Oregon State Highway Department as a part of the State park system. The commission has ordered a survey of the facility.

It has been available to the public only since the last part of 1932. Before that, it was almost inaccessible at the base of a 320-foot-high ocean cliff. During that year three families constructed a series of paths, switchbacks and steps down to the higher north entrance of the cave. One of the original families dropped out, and another took its place. Since that time the Sea Lion Caves has remained in the control of the three families, who maintain a pleasant and efficient commercial establishment there. The three operators are Clifton Saubert, Jack Jacobson and Don Houghton. Although not particularly interested in selling their operation, they would be glad to listen if the State is interested in it as a self-sustaining park.

Discoverer of the unique cavern, believed to be the only mainland sea lion rookery known, was Capt. William Cox, a Nova Scotia sealer who left his schooner, Sapphire, one calm day in 1880 and rowed into the cave in a skiff.

Residents of the area had long known of the cave's existence, but it was a perilous journey to get down to it. Clifton Saubert, one of the present owners, reports that when he was 12 years old, his father and he went down the cliff on ropes.

Inaccessibility of the cavern probably accounts for the fact that the sea lions have used it for so many years. The three families wisely limit entrance by the public to the higher of three tunnels, and a sturdy fence prevents their going down into the big cavern proper, which covers two acres.

A clutter of huge rocks, splashed by waves at almost all tides, makes attractive resting places for the big 2,000-pound bulls and their harems of cows and pups. The largest entrance to the cave on its west side is the one most often used by the animals. It cannot be seen by the public. A smaller 1,500-foot tunnel, which is full of water at high tide, stretches south from the cave, but is rarely used by the animals.

The three families own approximately 72 acres of the bluff. They have a gift shop and rest rooms and restaurant concession in a sizable white building on the highway. Location is 12 miles north of Florence, 39 south of Newport.

They are at present at work boring an elevator tunnel from near this building straight down to connect to the west entrance.

The sea lions are not always in the cave, but can usually be seen in good weather sunning themselves by the hundreds on rocky ledges on either side of the point. These are the Stellar sea lions, or hair seals (Eumetopias jubata) and are much larger than the California black sea lions, Zalophus californianus. A few of the latter are in this herd.

Wildlife lovers disagree with fishermen on value of the animals. Fishermen maintain they destroy much too many valuable fish and wreak great havoc when they get into the nets. Saubert says they usually eat more slow-moving fish such as sand sharks and skates.

[From the New York Times, Mar. 15, 1959]

PRESERVING CAPE COD

There is much that is meritorious in the proposal of the National Park Service that the Atlantic Ocean front of Cape Cod be turned into a "national seashore," a permanent noncommercial area designed as a national park. It would cost several million dollars to acquire all the privately owned property on this 40-mile stretch of beach, but it could well be a national investment worth many times its expense.

When we think of conservation and parks we usually think of woodland and mountain. That is natural, and what has been done has won the approval of most thinking persons. Our country and our society are richer for what has been wisely preserved. We are justifiably proud of our Yellowstone and Yosemite.

But on a much more modest scale, it may be possible to keep in its integrity some other area that has a unique esthetic and historical value. We shall be poorer, indeed, if this Atlantic shoreline is gradually inundated, not by the waters of the sea, but by the march of commercial establishments which, however justifiable in themselves, can do damage to an artistic whole that is and should be a part of our national cultural inheritance.

Cape Cod is unusual in many ways. It can continue so to be, if it is not reduced to some sort of lowest common denominator in our culture pattern. It can be an unusual national monument if we have the right sort of imagination at the right time.

[From the New York Times, Mar. 12, 1959]

CAPE COD SEEN AS 40-MILE NATIONAL SEASHORE—PARK SERVICE FEARS BEACH IS VANISHING UNDER BUILDING

(By Richard E. Mooney)

WASHINGTON, March 11.—The National Park Service has proposed that the Federal Government rescue the outer arm of Cape Cod from the march of commercialization by creating a national seashore along the entire Atlantic Ocean front.

The proposal was published today by the Department of the Interior, with a statement that the Department had neither approved nor disapproved. Conrad L. Wirth, director of the Park Service, estimated that it might cost $16 million to acquire the land.

Stating the case for rescue, the report said:

"Even now the still-unspoiled great beach is vanishing under building. It is time to set aside, preserve and protect the last of the old cape so that the inspiration of its surpassing beauty can be kept intact and handed down to future generations of Americans."

THOREAU NAMED BEACH

The report was lyrical in its recitation of the cape's historic, scenic, recreational, and scientific values. It cited Henry David Thoreau as author of the name Great Beach, and of these words about it: "A man may stand there and put all America behind him."

The proposed national seashore would encompass 28,645 acres, stretching from Provincetown at the end of the cape to the tip of Nauset Beach at the elbow—a distance of about 40 miles. For the most part, the seashore would be a strip along the Atlantic side of the cape, averaging a mile in width. At its mid-point and at Provincetown, it would extend across the cape to Cape Cod Bay.

Almost 18,000 of the acres are privately owned; 7,000 State owned (including 20 ponds totaling 70 acres); 1,000 are owned by towns, and 2,500 are owned by the Department of Defense.

A national seashore is essentially the same thing as a national park, with beach. There is only one other, Cape Hatteras. It was authorized by Congress in 1937. Its cost—less than $2 million—was financed almost entirely by State and private contributions. An act of Congress also would be necessary for the Cape Cod seashore.

OUTGROWTH OF 1955 STUDY

The Cape Cod proposal is an outgrowth of the Park Service's mile-by-mile study of the Atlantic and Gulf coasts, "Our Vanishing Shoreline," published 4 years ago. That study described 54 undeveloped seashore areas worthy of local, State, or Federal preservation, and stressed 3 for Federal attention—Padre Island, Tex.; Cumberland Island, Ga., and Cape Cod.

In the thirties the Park Service proposed the creation of national seashores in 12 places. One of them was Cape Hatteras. In the words of a Park Service official, "the rest have vanished."

The vanishing shoreline study and the more detailed Cape Cod study that followed it were financed by an unidentified friend of the National Park Service.

Today's report noted among other things, that "nowhere on the continent is the story of glacial deposition, combined with the violent action of the sea upon a land mass, so vividly illustrated as on Cape Cod."

Mr. NEUBERGER. Mr. President, I also think there should appear with my remarks a comprehensive article about the Oregon Dunes from the Oregonian of Portland of March 22, 1959, written by John Armstrong, Sunday editor of that newspaper. Mr. Armstrong's article describes in detail the unique and scenic beauty which would become part of the national seashore reserve which we have in mind, as part of the national park system of the United States. I would like to call attention to the fact that William M. Tugman, editor of the Port Umpqua Courier, is quoted in Mr. Armstrong's article as describing some of the dunes as among "the tallest in the world." This affords an idea of the remarkable qualities of this seacoast which we seek to protect and preserve.

I also ask unanimous consent that there appear in the RECORD an Associated Press article from San Francisco, which likewise was published in the Oregonian of March 22. This article summarizes a report of the National Park Service which describes as "worthy of national park status" the Sea Lion Caves and Oregon Dunes along the southern Oregon coast.

The Oregonian of March 22 published an editorial entitled "State or Federal Park?" This editorial cites the fact that some members of the Oregon Legislature would like to have the Sea Lion Caves made a State park. I have no quarrel with this whatsoever, and I think these members of the Oregon Legislature are to be commended for their position. My main purpose is to safeguard the Oregon Dunes, and I think it would be logical that the nearby Sea Lion Caves could well come under national park custodianship at the same time. For example, the headquarters of the Oregon Dunes Seashore Park would certainly have biologists and wildlife experts competent enough to exercise supervision over the Sea Lion Caves, which are so closely related geographically. But I do not intend to be adamant about this, and if the Oregon State Legislature would prefer that the Sea Lion Caves be a State park and the Oregon Dunes a national seashore park, that separation is certainly agreeable with me. I merely have thought that National Park Service custodianship might be logical for both places, particularly because they are definitely linked together in the Pacific coast report of the National Park Service, which was released by Park Service regional offices in San Francisco on March 22.

I wish it were possible to reproduce in the pages of the CONGRESSIONAL RECORD the magnificent page of photographs of the Oregon Dunes which was published in the Oregonian of March 22. These pictures make strictly evident the magnificence and grandeur of the area which we seek to protect for countless future generations. I also ask unanimous consent that the master caption, which was published with the outstanding photographs taken by John Armstrong of the Oregonian, be printed in the CONGRESSIONAL RECORD at the conclusion of my remarks.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

STATE OR FEDERAL PARK?

Two proposals are in the works for public acquisition of Oregon's famed Sea Lion Caves and the concession on Highway No. 101, now owned by a private firm, which guards the rookery. One is for State ownership, the other for Federal.

Senate joint resolution No. 31, introduced in the Oregon Legislature by Senator Monroe Sweetland and six "U.S. 101 senators," would direct the State highway commission to consider acquisition and development of the sea lion rookery as a feature of the park system of this State.

U.S. Senator RICHARD L. NEUBERGER is preparing legislation to convert Sea Lion Caves and 33,000 acres of sand dunes in Lane and Douglas Counties into a national park which would be the first on the Oregon coast.

Assuming the private owners wish to sell their property providing access to Sea Lion Caves at a fair price, this great tourist attraction could presumably be a self-sustaining venture under either State or Federal sponsorship. The Oregon Legislature should have the determining voice in this after a thorough study of the alternatives. Our own preference is for State acquisition and operation unless there are disadvantages now unknown.

Unlike the States on the Atlantic seaboard, Oregon has reserved its beaches for the public benefit. It has other State parks on the coast. Sea Lion Caves and Oregon Dunes would be valuable additions to these facilities and increase Oregon's stature as a State of many parks and public playgrounds.

PARK SERVICE FAVORS DEAL FOR CAVES, OREGON DUNES

SAN FRANCISCO.—The National Park Service, reporting Saturday on a year-long survey of public seashore needs on the Pacific coast, recommended preserving "the few remaining undeveloped seashore areas still in the pure wilderness or primitive state."

Secretary of the Interior Fred A. Seaton said the recommendations still are being reviewed.

The Pacific coast survey, made by Park Service teams, was intended "to inventory * * * important remaining undeveloped areas * * * along the Pacific coast."

POINT REYES INCLUDED

Five areas considered worthy of national park status are Cape Flattery, in northern Washington; Sea Lion Caves and Oregon Dunes, in southern Oregon; Point Reyes Peninsula, in north-central California; and San Miguel Island and Santa Cruz Island, both off southern California.

Congressional action would be required to give them national park status.

Two areas considered outstanding State park caliber were Point Brown, in south-central Washington, and Leadbetter Point, in southern Washington.

FEW FIT PATTERN

The survey report commented:

"Although the Pacific coast has many remaining undeveloped seashore areas * * * relatively few still are in the pure wilderness or primitive state, where man has not altered the general landscape to varying degree with roads, grazing, timber harvest, or other man-inflicted modifications.

"Broad-scale planning should provide for all possible consideration and protection of these great and valuable seashore areas.

"Further, the intense competition for use of the seashore in general makes it imperative that such planning recognize as a major consideration the recreation, scientific, and esthetic values connected with the natural resources of the Pacific coast, thus insuring optimum benefit and enjoyment to present and future generations."

OTHERS STUDIED EARLIER

The Pacific coast survey was similar to recreational studies of the Atlantic and gulf coasts completed by the Park Service in 1955.

The survey covered 1,700 miles of shoreline from Mexico to Canada and the Channel Islands off southern California.

The Park Service's specific recommendations included:

The Channel Islands collectively constitute the greatest single remaining opportunity for conservation and preservation of representative seashore values, including areas of interest to biology, geology, history, archaeology and paleontology, and wilderness preservation. Careful consideration should be given to any future opportunity to acquire or preserve for public purposes any or all of the group off southern California.

MILITARY HOLDS KEYS

A large segment of the Pacific coast, with high recreation and biologic values, is now under military jurisdiction. Consistent with military needs, the agencies responsible for the administration of these lands may become surplus to military requirements. If natural or recreation qualities then warrant, they should be retained in public ownership at the appropriate level of government.

There is a definite need for local authorities, whether city, county or regional, to take the initiative in acquiring and administering

seashore recreation areas of local significance.

There is a definite need for more small-craft harbors along the Pacific coast and it is important to the welfare of the public that this need be considered.

SLANT DRILLING EMPLOYED

Some local governments are successfully concluding agreements enacting legislation to keep certain industrial developments off the immediate shoreline and beaches. Prime examples are setbacks of powerplants near the shoreline, and of oilwells by use of slant drilling for tideland petroleum. Thus, additional seashore is left available for recreation without undue sacrifice to industries. More of this type of cooperation should be encouraged.

One of the most pressing problems associated with the waters of the Pacific seashore is abatement of pollution. The importance of the biologic and recreation aspects of the coastal waters, both fresh and salt, makes it mandatory that sewage and industrial waste disposal be further controlled and restricted to adequately protect and conserve such values. The future of sport fishing, coastal and aquatic recreation, coastal waterfowl abundance, and commercial fishing may well depend on prompt action being taken on this problem.

TOWERING SAND DUNES OF OREGON COAST AREA SWALLOW LAKES, VEGETATION ON MOVE INLAND

(By John Armstrong)

The towering, moving sand dunes which may become Oregon's—and the Pacific coast's—first national seashore recreation area are a problem.

They won't stand still.

Year in and year out they have been moving inland, smothering and blotting out vegetation, swallowing up warm water lakes and encroaching on U.S. highway 101, the Oregon coast's main artery.

The dunes may move eastward as much as 60 feet during a single storm, covering everything in their way, according to Wilbur Ternyik, formerly of the Soil Conservation Service, and now Florence nurseryman, whose main interest is stopping the dune movement.

SHRUBS, TREES PLANTED

Ternyik contracts to plant grass, shrubs, and trees on various troublesome areas in the dunes in an effort to stabilize them. The conservation program is a cooperative venture participated in by the Forest Service, Soil Conservation Service, Bureau of Land Management, and Lane County.

Most of the planting is done during the period mid-October until April, with up to 50 people employed in the planting. In some spots, clumps of European beachgrass, three plants to a clump, are planted 12 inches deep, 18 inches apart. Planting times are carefully planned, for the temperature must remain below 60° for 72 hours following planting to insure germination.

PLAN FOUND SUCCESSFUL

Under such conditions the grass will multiply threefold within a year, at which time it will be supplemented with woody species, shore pine with scotch broom as a protective crop.

The planting program, while not as extensive as it should be due to limited appropriations, has been relatively successful, according to Ternyik. A little over 100 acres were planted this winter, with possibly another 60 to be planted this spring and 300 acres more next fall.

Two emergency plantings have been made, under contract to the State, to stop dunes from moving across Highway 101.

U.S. HELP WANTED

Though man has gained control of the dunes in spots, they continue to move in others. Little Bear Lake, one of the sparkling warm water lakes of the dune area, seems destined to be blotted up; Cleawox Lake, major attraction of Honeyman State Park, may be cut in half, its outlet stopped up and the park flooded.

Some interested parties, including Lane County Commissioner Bob Petersen, feel that the conservation job can best be done by the Federal Government and give this as one reason for supporting Senator NEUBERGER's proposal to have the National Park Serice take over the area.

NEUBERGER's proposed bill, now being drafted by the National Park Service, would authorize creation of a 33,140-acre national seashore recreation area in two segments—32,800 acres lying between the mouths of the Siuslaw and Umpqua Rivers and 340 acres surrounding and including the Sea Lion Caves, north of Florence.

Most of the dunes area, west of highway 101, now belongs to the U.S. Forest Service. Between $2 and $3 million would be spent to acquire private lands around Siltcoos and Woahink Lakes and at the Sea Lion Caves.

FLORENCE AREA EXCITED

A Friday news story announcing the proposed bill created considerable excitement and some controversy in the Florence area. Opinion on the proposal is fairly evenly divided, according to Dave Holman, editor of the Florence News Advertiser.

Florence Mayor A. E. Davidson is reserving his opinion until there is more to go on.

The Siuslaw Port Commission is unanimously opposed to the proposed recreation area.

Petersen, speaking for the county court, stated that in general it seems a good idea, though there may be some details of the plan with which the court would take exception.

In the Florence area, unfavorable opinion seems to center around uncertainty as to: (1) What would happen to privately owned homes in the proposed recreation area; (2) what would happen to private businesses along the highway and around the lakes in the area, and (3) whether the stores of fresh water in the dunes would be available for industrial purposes.

In Reedsport, opinion seems to favor the establishment of the recreation area. Mayor Jack Unger said, "On the face of it, it seems to be a worthwhile project."

The Reedsport Chamber of Commerce has sent Senator NEUBERGER a telegram encouraging his efforts and expressing appreciation of his interest.

DETAILS GIVEN

Editor William Tugman, of the Umpqua Courier, said Saturday that "personally I am inclined to think it is a fine idea. I'd like to see the area extended south of the Umpqua to include some of the dunes there, which I understand are some of the tallest in the world."

Senator NEUBERGER Saturday gave the Oregonian more details of his plan.

"As a member of the Public Land Subcommittee of the Senate Interior Committee, which controls all national parks and monuments, I have long felt that Oregon has fared very poorly as regards location of national parks and monuments, compared with Washington and California," NEUBERGER said. He pointed out that Oregon has only two, Crater Lake and the Oregon Caves, and they are very small.

A Pacific coast recreation area survey released this week by the National Park Service describes the 23 miles of dunes lying between Florence and Reedsport as possessing many superlative values of such high importance as to warrant permanent preservation for the Nation as a whole.

PROCEDURE SET

Familiar with area and the report, NEUBERGER said he had asked the Park Service to draft legislation authorizing setting it aside as a national seashore recreation area, the third in the Nation, and first on the west coast. Similar areas are located at Cape Hatteras and Cape Cod on the east coast.

A national seashore recreation area is similar to a national park, but its hunting restrictions are not as rigid, NEUBERGER said.

If the Oregon coastal area is taken over by the Park Service, the following things would happen, according to NEUBERGER:

1. Private lands, homes, and businesses would be purchased by the Government, at a negotiated price, or if necessary, a condemnation price.

2. Owners of private homes or summer homes purchased by the Government would be permitted to live in and use them for the rest of their lives or duration of their leases, paying rent to the Government.

3. Owners of private businesses, such as resorts, fishing camps, restaurants, would have to negotiate with the Government for concessions. Some probably would be permitted to operate; some, not.

TOURISM SAID INCREASED

4. The Park Service would continue and no doubt accelerate conservation programs now underway in the area, to include dune planting and protection of wildlife and natural beauty.

5. Logging and lumbering would be prohibited.

6. The Park Service would build a headquarters with rangers, naturalists, historians, biologists as is done in every major national park.

7. Fresh water in the dune area probably would be available for domestic consumption, but not for commercial exploitation or industrial purposes.

8. There would be some Park Service regulations of hunting, but the only restrictions on fishing would be those set up by the State of Oregon.

"Wherever a national park or national seashore recreation area has been created, it has increased tourism from one to four times," NEUBERGER emphasized. "I don't know of any area that has not profited and been happy with National Park Service developments."

NEUBERGER said he was aware of the proposal to make Sea Lion Caves a State park, but he said he felt that the Federal Government would be in a position to spend more money and to give it more national attention.

Hearings on the bill to authorize the recreation area probably will be held in Washington in May or June, the Senator said. If authorized, appropriations will be dependent on future congressional action.

THRILL-SEEKING BEACH RESIDENTS ENJOY RACING ACROSS DUNES

The great Oregon sand dunes, which stretch for miles along the Pacific Ocean south of Florence, are to most Oregonians as remote and mysterious as the sands of the Sahara.

Motorists can catch glimpses of them from U.S. Highway 101. Their existence is known to many thousands of visitors who are attracted annually to the area's outstanding parks—the 522-acre Honeyman Park, pride of the State system, and three forest camps—and to the warm water lakes with strange sounding names—Woahink, Cleawox, Siltcoos and Tahkenitch.

But only a few of the more hardy visitors venture afoot into the dune area, and then not far.

To residents of the Florence area, the dunes are another story. They're a favorite spot for a Sunday afternoon drive—an unusual type of Sunday afternoon drive.

The natives like nothing better than to race merrily over the dunes in a ride that

offers more ups and downs, tight turns and thrills than the Jantzen Beach roller coaster.

The big thrill is getting up enough speed to launch a jeep into space off the top of one of the more precipitous dunes.

This is not a drive to be recommended to the average motorist. First, it requires a special-type of vehicle—a jeep, beach buggy, or truck outfitted with oversize tires. Second, it takes a special kind of driving skill known only to the natives of the area. Third, treacherous areas of quicksand are a driving hazard.

Aside from this, a driver unfamiliar with the dune area is apt to tear up some of the vital areas of beach grass, planted to prevent the shoreward march of the moving hills of sand, which extend over a mile inland in spots.

Attention of the State was focused on the dune area this week when Senator RICHARD L. NEUBERGER announced he will introduce a bill in Congress to make a national seashore recreation area of the dunes and the Sea Lion Caves north of Florence.

ALASKA OMNIBUS ACT

Mr. MURRAY. Mr. President, as chairman of the Committee on Interior and Insular Affairs which had initial responsibility in the Senate for legislation for Alaska statehood, I introduce, for appropriate reference, a bill to amend certain laws of the United States with respect to the former Territory of Alaska, now the great State of Alaska. Joining me as cosponsors of this measure are the distinguished ranking majority member of the Committee, the Senator from New Mexico [Mr. ANDERSON], the chairman of the Subcommittee on Territories, the Senator from Washington [Mr. JACKSON], the ranking minority member of the Territories Subcommittee, the Senator from California [Mr. KUCHEL], the able Senator from Arizona [Mr. GOLDWATER], who is a very conscientious member of the Territories Subcommittee, and the distinguished Senator from Wyoming [Mr. O'MAHONEY] who was chairman of the Committee on Interior and Insular Affairs in the 81st Congress when the first bill for statehood for Alaska was reported to the Senate in 1950.

The bill I am introducing, is the so-called Alaska Omnibus Act. It is designed to make those changes in Federal laws which have become necessary and desirable because of the change in Alaska's status from a great Territory to a great State of the United States. Much of the proposed legislation is technical, such as the elimination of inappropriate reference to the "Territory of Alaska" in Federal statutes.

Other provisions are substantive, such as the termination of certain special Federal programs in Alaska, and enabling our newest State to participate in other programs on "an equal footing with the other States in all respects whatever."

Mr. President, this bill was drafted by the executive agencies concerned with the administration of Federal responsibilities in Alaska. I ask unanimous consent that a sectional analysis of the measure, as submitted by the Bureau of the Budget, appear at the conclusion of my remarks, as well as the letter of transmittal from Director Stans of the Bureau.

The PRESIDING OFFICER (Mr. BARTLETT in the chair). The bill will be received and appropriately referred; and, without objection, the section-by-section analysis and letter of transmittal will be printed in the RECORD.

The bill (S. 1541) to amend certain laws of the United States in light of the admission of the State of Alaska into the Union, and for other purposes, introduced by Mr. MURRAY (for himself and other Senators), was received, read twice by its title, and referred to the Committee on Interior and Insular Affairs.

The section-by-section analysis and letter of transmittal presented by Mr. MURRAY are as follows:

SECTIONAL ANALYSIS

SHORT TITLE

Section 1 provides that the act may be cited as the Alaska Omnibus Act.

FEDERAL JURISDICTION

Section 2 would amend section 4 of the Statehood Act. Section 4 now provides, in pertinent part, that Alaska and its people disclaim any right (a) to any lands in Alaska the right or title to which is now held by the United States, except for land granted to Alaska by the Statehood Act, and (b) to land and property held by Alaska natives or held in trust by the United States for such natives. The section further provides that "all such lands * * * shall be and remain under the absolute jurisdiction and control of the United States." It was intended that such absolute jurisdiction would apply to native lands only ((b) above), but the language actually enacted appears to comprehend the lands described in both (a) and (b). The amendment would make clear that "the absolute jurisdiction and control of the United States" does not apply generally to land held by the United States in Alaska, but only to land and property held by natives or by the United States in trust for natives.

TERMINATION OF APPLICATION OF CERTAIN FEDERAL LAWS

Section 3 provides a date on which certain laws enacted by the Congress, relating to the regulation of commerce within Alaska, shall cease to apply to the State of Alaska. Section 8(d) of the Statehood Act provides that a law "enacted by the Congress the validity of which is dependent solely upon the authority of the Congress to provide for the government of Alaska prior to the admission of the State of Alaska into the Union" shall be regarded as a "Territorial law" and that such a law shall continue in force and effect throughout the State except as modified or changed by action of the State legislature. The foregoing language has been interpreted by the executive branch of the Federal Government as continuing in effect in the State of Alaska those portions of U.S. laws which provide for the regulation of intraterritorial commerce by agencies of the United States. In the language of section 8(d), such laws will continue in effect "except * * * as modified or changed by the legislature of the State." In order to make explicit the date such laws of the United States shall cease to be applicable, this section of the bill provides that, either (a) on July 1, 1961, or, if it occurs earlier, (b) on the effective date of any State law relating to the same subject matter as the pertinent law of the United States, such law of the United States shall cease to apply. In the absence of an explicit date, considerable confusion might arise as to the continued responsibility of a Federal agency. The section makes clear that such Federal responsibility will cease whenever the State takes legislative action in a field formerly regulated by the United States.

SUGAR ACT

Section 4 amends the Sugar Act by providing a definition of the term "continental United States." In the absence of such a definition, the term has been administratively construed to exclude the Territory of Alaska. The new subsection would make clear that it includes the 49 States and the District of Columbia. As a result, the determinations by the Secretary of Agriculture concerning sugar requirements in the continental United States will henceforth include the requirements of Alaska. Thus, sugar either imported or marketed for shipment into Alaska will be charged against a quota.

SOIL BANK ACT

Section 5 would perpetuate in the State of Alaska the treatment accorded to the Territory of Alaska under the conservation reserve program of the Soil Bank Act. The act has no practical application to Alaska at this time and is not now being administered there. This condition is likely to continue for the foreseeable future. Consequently, the amended provision concerning the geographical application of the program would make clear that the conservation reserve program of the Soil Bank Act applies to Alaska only if the Secretary of Agriculture determines that such application would be in the national interest.

ARMED FORCES

Section 6 would provide in subsection (a) a perfecting amendment to Title 10 of the United States Code by amending the definition of the term "Territory" to delete the existing reference to Alaska. Subsection (b) would amend two definitions in Article 2 of the Uniform Code of Military Justice which describe persons subject to the code. Under the definitions in existing law, "persons serving with, employed by, or accompanying the Armed Forces" and "persons within an area leased by or otherwise reserved or acquired for the use of the United States" are subject to the code if they are outside that part of Alaska east of longitude 172 degrees west, the Canal Zone, Hawaii, Puerto Rico, the Virgin Islands, and Guam. The amendments in subsection (b) would have the effect of according the same treatment to such persons in Alaska west of the 172d meridian as is already accorded to those east of it. Subsection (c) strikes the special and now unnecessary reference to Alaska in a section which comprehends all of the States.

NATIONAL BANK ACT

Section 7 relates to the reserve balances required of national banks that are not members of the Federal Reserve System and that are located in Alaska or outside the continental United States. Because section 19 of the Alaska Statehood Act requires that all national banks in Alaska be members of the Federal Reserve System, secton 5192 of the Revised Statutes no longer has application to Alaska, and this section of the proposed bill would thus eliminate the reference to it.

FEDERAL RESERVE ACT

Section 8 provides two perfecting amendments to the Federal Reserve Act, to reflect Alaska's inclusion in the Federal Reserve System pursuant to section 19 of the Statehood Act.

HOME LOAN BANK BOARD

Section 9 would provide perfecting amendments to two statutes administered by the Federal Home Loan Bank Board. The Federal Home Loan Bank Act and the Home Owners' Loan Act of 1933 would each be amended by striking references to Alaska as a Territory.

NATIONAL HOUSING ACT

Section 10 provides amendments to the National Housing Act. The amendments would have the effect of perpetuating in the State of Alaska the treatment received by Alaska as a Territory.

COAST GUARD

Section 11 would amend the provision of law authorizing the appointment of commissioned officers of the Coast Guard as U.S. commissioners or U.S. deputy marshals in Alaska. The amendment is perfecting only and removes references to "the Territory of" Alaska.

SECURITIES AND EXCHANGE COMMISSION

Section 12 provides amendments to certain statutes administered by the Securities and Exchange Commission. Those contained in subsections (a) through (d) are perfecting only, merely removing unnecessary references to Alaska in definitions of the term "States." Subsection (e) would amend a section of the Investment Company Act of 1940 which provides an exemption from the provisions of the act to companies organized under the laws of the Territories and possessions which confine offerings of their securities to residents of such Territories or possessions. The effect of the amendment would be to remove Alaska from the areas (all of which are Territories and possessions) to which the special exemption applies, and to accord to it the same treatment as the other States receive.

SOIL CONSERVATION

Section 13 would amend two provisions of the Soil Conservation and Domestic Allotment Act. Section 8(b) of that act requires that, in the administration of the law "in the continental United States", the Secretary of Agriculture must use county committees, and that no committee may represent more than one county or parts of different counties. Heretofore the term "continental United States" has been administratively construed to exclude Alaska, with the result that in Alaska, three committees only are now in operation, each serving an area which includes more than one county or parts of different counties. With statehood, Alaska may now be regarded as within the continental United States. If so, adherence to section 8(b) would require the establishment of far more committees in Alaska than would be suitable for Alaska's relatively small program. Therefore, subsection (a) of this section of the bill would remove the requirement with respect to the areas represented by committees in the case of Alaska. Subsection (b) is a perfecting amendment, designed only to reflect Alaska's new status.

BALD EAGLES

Section 14 amends the statute providing protection to bald eagles. Existing law protects the bald eagle "within the United States or any place subject to the jurisdiction thereof, except the Territory of Alaska." Because the bald eagle is now virtually extinct except in Alaska, the protection afforded by the statute should apply to Alaska as well. The amendment contained in this section would achieve that result.

WILDLIFE RESTORATION

Section 15 would amend the statute providing grants to the States and Territories for wildlife restoration in order to remove references to the Territory of Alaska from the section relating to grants to the Territories. The amendments are perfecting only, since Alaska will necessarily be accorded the treatment of a State as a result of the Statehood Act.

FISH RESTORATION

Section 16 would amend the statute providing grants to the States and Territories for fish restoration in order to remove references to the Territory of Alaska from the section relating to grants to the Territories. The amendments are perfecting only, since Alaska will necessarily be accorded the treatment of a State as a result of the Statehood Act.

CRIMINAL CODE

Section 17 provides amendments to the Federal Youth Corrections Act and to a 1958 statute relating to parole, which, under the terms of existing law, apply "in the continental United States other than Alaska." When the U.S. District Court for the District of Alaska is established, pursuant to the Statehood Act, such laws should apply to the State. Subsection (c) provides that the application of the laws in question to Alaska will commence on that date.

EDUCATION

Section 18 provides certain amendments to the laws relating to education.

Subsection (a), relating to the National Defense Education Act of 1958, amends section 103(a), section 302(a)(3), and section 1008 of the act (20 U.S.C.A., secs. 403(a), 442(a)(3)(B), and 588), so as to eliminate the special treatment of Alaska. The amendment to section 302(a)(3) would eliminate the exclusion of Alaska from the continental United States for purposes of determining the allocation of funds to States for acquisition of mathmatics, science, or modern foreign-language equipment. The amendments to sections 103(a) and 1008 would put Alaska on the same basis as the other States for purposes of allocations of funds for the acquisition of such equipment, allocations of funds for State programs of expansion or improvement of public-school supervisory services in mathematics, science, or modern foreign language, and allocations of funds for counseling and guidance and testing programs.

Under section 43, these amendments would be effective in the case of allotments for acquisition of equipment based on allotment ratios which are promulgated after per capita income data for Alaska for a full year are available from the Department of Commerce. They would be effective in the case of allotments for State programs of expansion or improvement of supervisory services, or for counseling and guidance and testing programs, for fiscal years beginning July 1, 1959.

Subsection (b), in paragraph (1), relating to vocational education, amends section 4 of the Smith-Hughes vocational education law. This section provides for allotments to the States for teacher-training in agriculture, trades, and industries, and home economics, and includes an authorization of separate appropriations for the $10,000 minimum allotment provided for the States for this purpose. The $90,000 authorized for the latter purpose would be insufficient to provide the minimum for Alaska as well as the other States, and hence it would be increased by the bill to $98,500.

In order to qualify for funds allocated under this law for vocational education in the field of agriculture, trades and industries, or home economics, a State must "have taken advantage of" an amount at least equal to the minimum allotment for teacher-training in that field. In addition, the law requires at least 20 percent of a State's allotment for teacher-training to be expended in each of the three fields and places a limitation of 60 percent of the teacher-training allotment on the amount which may be expended in any one of the three fields. These requirements and limitations would be made inapplicable to Alaska until the third fiscal year which begins after the enactment of the bill. Similar treatment was accorded the other States when the law was first enacted at which time they were given a 3-year grace period during which these provisions were not applicable.

Subsection (b), in paragraphs (2) and (3), also amends the Vocational Education Act of 1946 to eliminate from the definitions of "State" and "States and Territories," the specific mention of Alaska. These are purely technical amendments.

Subsection (c), relating to school construction assistance in federally affected areas, amends paragraph (13) of section 15 of Public Law 815 (81st Congress), as amended (20 U.S.C.A., sec. 645(13)), which defines the term "State." The amendment would eliminate the specific reference to Alaska. This is a purely technical amendment.

Subsection (d), relating to school operation assistance in federally affected areas, amends section 3(d) of Public Law 874 (81st Congress), as amended (20 U.S.C.A., sec. 238(d)). This section of the law sets forth the method of determining the local contribution rate used in computing the amount of the payments to local school districts on account of federally connected children attending their schools. The determination of the rate for the Territories, including Alaska, is, however, separately provided for, with the Commissioner of Education authorized to make the determination consistent with the policies and principles provided for the determination of the rate in the case of school districts in other States.

The amendments to this section of the law would eliminate the specific mention of Alaska as one of the "States" to whom the specific provision applies, but would make the special provision applicable to any State in which a substantial portion of the land is in unorganized territory for which a State agency is the local educational agency. This would include Alaska at the present time and probably for the next 15 or 20 years. It might conceivably include also other States, although this is not likely. Consequently, the amendments will not have any practical effect upon Alaska in the foreseeable future. These amendments would also specifically include Alaska in the continental United States for purposes of determining the average per pupil expenditure therein, which is used, in turn, in determining the minimum local contribution rate.

These amendments would, under section 43, be applicable beginning with the next fiscal year.

Subsection (d)(4) of section 18 of the bill also amends paragraph (8) of section 9 of Public Law 874 which defines the term "State." The amendment would eliminate the specific reference to Alaska. This is a purely technical amendment.

IMPORTATION OF MILK AND CREAM

Section 19 would make clear that the act of February 15, 1927, which regulates the importation of milk and cream into the "continental United States," applies to Alaska.

OPIUM POPPY CONTROL

Section 20 would provide a perfecting amendment to the Opium Poppy Control Act of 1942. It would strike a now superfluous reference to the Territory of Alaska.

HIGHWAYS

Section 21 would provide for the assumption by the State of Alaska of the functions now performed by the other States in connection with the construction and maintenance of roads. It would direct the Secretary of Commerce to transfer to Alaska without compensation, but subject to conditions which he may deem desirable, all of the real and personal property now held by the Bureau of Public Roads in connection with its current responsibilities in Alaska, except for such property as the Bureau will require in continuing to perform in Alaska, as elsewhere in the States, its usual Federal functions and functions for which the State may contract under section 40(c), and except for lands which must be retained for purposes other than or in addition to road purposes. It is intended that the date of transfer be July 1, 1959, if practicable, or as soon thereafter as would be practicable. Henceforth Alaska will be responsible for road

maintenance, as it has not been in the past. However, Alaska would be able to utilize Federal-aid funds apportioned for the fiscal year ending June 30, 1960, and prior years, and unobligated on the date of passage of this act, for maintenance during fiscal years 1960, 1961, and 1962. To assist it in road construction, the section further provides for the extension to Alaska of the laws relating to Federal aid for highways on the same terms as are applicable to the other States. Citations within the section are keyed to Public Law 85–767, approved August 27, 1958.

INTERNAL REVENUE

Section 22 contains amendments to the Internal Revenue Code of 1954. All, except for that contained in subsection (b), are perfecting in nature, merely removing references to Alaska which are now superfluous. Subsection (b) relates to the definition of the phrase "continental United States" for purposes of the transportation tax. The explicit terms of existing law (i.e., the "continental United States" means "the existing 48 States and the District of Columbia"), excluded the Territory of Alaska, with the result that a partial exemption from the tax was permitted for trips between the Territory of Alaska and the States. The effect of the amendment contained in subsection (b) will be to accord to Alaska, as a State, the same treatment it received as a Territory, and thus to preserve a distinction between Alaska and the other States. The Treasury Department has concluded that it would be contrary to the intent of the Congress, as expressed in 1956, to remove this partial exemption. The exemption was inserted in the law in 1956 in recognition of the fact that Alaska (and Hawaii) were far removed from the States and that transportation between the States and those two Territories involved travel over the high seas and/or a foreign country. When the exemption amendment was considered in the Senate, the possible effect of future statehood was discussed in a memorandum submitted by Senator MORSE (Cong. Rec., March 29, 1956, p. 5212). His statement asserted that statehood should not change the exemption. On this basis, the Treasury Department considers that the partial exemption continues, notwithstanding Alaska's admission to the Union. Enactment of subsection (b) would confirm that conclusion.

COURTS

Section 23, in subsection (a), amends the Judicial Code so that the Court of Appeals for the Ninth Circuit will be required to hold sessions in Anchorage annually. That court is now by law required to hold sessions each year in San Francisco, Los Angeles, Portland, and Seattle. Subsection (b) amends the Judicial Code to provide that the Federal District Court for the District of Alaska shall be held in Ketchikan. Subsection (c) would perpetuate the authority of the Attorney General to fix fees and allowances for witnesses in connection with the Federal court in Alaska. Current fees and allowances, established pursuant to 48 U.S.C., section 25, are set forth at 28 CFR 21.3. Fees and allowances for witnesses in Federal courts, excluding Alaska, are set forth at 28 U.S.C., section 1821. Under the provision of subsection (c) of this section of the bill, Alaska would continue to be excluded from section 1821 of title 28. Subsection (d), in effect, provides for the transfer to the State of moneys, derived from court fees and fines, held by the clerks of the district court of Territory.

VOCATIONAL REHABILITATION ACT

Section 24 relates to vocational rehabilitation.

Subsection (a) amends section 11(g) of the Vocational Rehabilitation Act. This section of the act defines the term "State." The amendment would eliminate the specific reference to Alaska and is a technical amendment.

Subsection (b) amends subsections (h) and (i) of section 11 of the Vocational Rehabilitation Act. These subsections define the terms "allotment percentage" and "Federal share." The amendments would eliminate the special provisions under which the allotment percentage for Alaska is set at 75 percent and the Federal share at 60 percent, and would provide for the determination of these to be made in accordance with the relative per capita income of Alaska, as is done in the case of other States. The amendments would also eliminate the exclusion of Alaska from the continental United States for purposes of determining the allotment percentages and Federal shares for the States. Under section 43 of this bill, the above amendments would be applicable to allotment percentages and Federal shares promulgated after there are available per capita income data for Alaska for a full year from the Department of Commerce, and following a short transition period.

GOLD RESERVE ACT

Section 25 would remove a now obsolete reference to the Territory of Alaska contained in the Gold Reserve Act of 1934.

SILVER PURCHASE ACT

Section 26 would remove a now obsolete reference to the Territory of Alaska contained in the Silver Purchase Act of 1934.

NATIONAL GUARD

Section 27 would provide a perfecting amendment to the definition of "Territory" for purposes of title 32 of the United States Code, relating to the National Guard.

WATER POLLUTION CONTROL ACT

Section 28 provides certain amendments to the Water Pollution Control Act.

Subsection (a) of this section amends section 5(h)(1) of the Federal Water Pollution Control Act. This section defines the term "Federal share" which is used for determining the portion of the cost of the water-pollution control program in each State which will be borne by the Federal Government. The amendments would eliminate the special treatment for Alaska so that Alaska would, for purposes of the definition, no longer be excluded from the continental United States and would have its Federal share determined, as in the case of the other States, on the basis of its relative per capita income.

Under section 43, these amendments would be effective for promulgations of the Federal shares made after per capita income data for Alaska for a full year are available from the Department of Commerce.

Subsection (b) of this section of the bill amends section 11(d) of the Federal Water Pollution Control Act, which defines "State," to eliminate the special mention of Alaska. This is a purely technical amendment.

VETERANS' ADMINISTRATION

Section 29(a) relates to the authority of the Veterans' Administration under section 903(b) of title 38 (Public Law 85–857), to transport the bodies of veterans who have died in VA facilities. Existing law provides that (a) when a death occurs in the continental United States, transportation may be provided to the place of burial in the United States; (b) when a death occurs in the continental United States, transportation may be provided to the place of burial within Alaska if the deceased was an Alaskan resident and if he had been brought to the United States for VA hospital care; and (c) when a death occurs in a Territory, Commonwealth, or possession, transportation may be provided to the place of burial within such Territory, Commonwealth, or possession. Under existing law, therefore, no explicit provision is included for the transportation of deceased veterans from Alaska to the other States, although the statute might reasonably be construed, as a consequence of Alaska's admission, to permit this result. Similarly, there is no explicit provision for the transportation of deceased veterans from the other States to Alaska, in the absence of a finding that the deceased was an Alaska resident brought to another State for care. Section 29(a) of the proposed bill would make both of these results certain, and in so doing would remove the statutory distinctions between Alaska and the other States. Subsection (b) is a perfecting amendment only.

FEDERAL PROPERTY AND ADMINISTRATIVE SERVICES ACT

Section 30 provides two perfecting amendments to the Federal Property and Administrative Services Act. The first would make clear that the term "continental United States" includes Alaska, and the second would remove an unnecessary reference to Alaska in the definition of the term "State."

PUBLIC HEALTH SERVICE ACT

Section 31 provides certain amendments to the Public Health Service Act.

Subsection (a) amends section 2(f) of the Public Health Service Act which defines the term "State" for purposes of the act. This is a purely technical amendment eliminating the specific inclusion of Alaska as a State.

Subsection (b) would repeal section 371 of the Public Health Service Act relating to the Alaska mental health program. Section 371 authorizes grants totaling $4 million for the fiscal years 1960 through 1967 for the administration of Alaska's mental health program. The subsection also amends section 372 of such act, relating to the grant already made for the construction of a hospital and related facilities for the care of the mentally ill. The amendments to section 372 eliminate references to Alaska as a Territory.

Subsection (c), relating to hospital and medical facilities construction, amends section 631(a) of the Public Health Service Act. This section describes the method of determining allotment percentages which are used in the allocation of the appropriations for hospital and medical facilities construction under title VI of the Public Health Service Act. They are also used in connection with determining the Federal share of the cost of construction. The amendments would eliminate the special treatment for Alaska so that Alaska would, for purposes of determining the allotment percentages, no longer be excluded from the continental United States and would have its percentage based, as in the case of the other States, on its relative per capita income. Its Federal share would also be determined in the manner provided for the other States.

Under section 43, these amendments would be applicable in the case of promulgations of allotment percentages and Federal shares made after per capita income data for Alaska for a full year are available from the Department of Commerce.

Subsection (c) also amends section 631(d) of the Public Health Service Act, which defines the term "State," to eliminate the specific reference to Alaska. This is a technical amendment.

SOCIAL SECURITY ACT

Section 32 provides certain amendments to the Social Security Act.

Subsection (a), relating to public assistance, amends section 1101(a)(8) of the Social Security Act (20 U.S.C.A., sec. 1301(A)(8)). This section defines the term "Federal percentage" which is used in determining the portion of the expenditures in each State for old-age assistance, aid to dependent children, aid to the blind, or aid to the permanently and totally disabled which will be borne by the Federal Government. The amendments would eliminate the special treatment for Alaska so that Alaska would,

for purposes of the definition, no longer be excluded from the continental United States and would have the determination of its Federal percentage made, as in the case of the other States, on the basis of its relative per capita income.

These amendments to section 1101(a)(8) of the Social Security Act would, under section 43 of the bill, be effective for promulgations of the Federal percentages made after per capita income data for Alaska for a full year are available from the Department of Commerce.

Subsection (b), relating to child welfare services, amends section 524 of the Social Security Act (42 U.S.C.A., sec. 724). This section defines the terms "allotment percentage" and "Federal share" for purposes of determining the allocation of the appropriations for child welfare services under part 3 of title V of the Social Security Act among the States and the portion of the expenditures for this purpose in each State which will be borne by the Federal Government.

The amendments would eliminate the special treatment for Alaska so that Alaska would, for purposes of the definitions, no longer be excluded from the continental United States and would have the determinations of its allotment percentage and its Federal share made, as in the case of the other States, on the basis of its relative per capita income.

The amendments made by this subsection of the bill would, under section 43 of the bill, be effective for promulgations of allotment percentages and Federal shares made after per capita income data for Alaska for a full year are available from the Department of Commerce.

Subsection (c), relating to old-age, survivors, and disability insurance, amends the last sentence of section 202(i) of the Social Security Act. This section of the act provides for lump-sum payments in certain cases of death of an individual insured under the old-age, survivors, and disability insurance program. The application for such payments must be filed within 2 years of the date of death, except that, in the case of the death outside the 48 States and the District of Columbia of a member of the Armed Forces (including commissioned officers of the Public Health Service and the Coast and Geodetic Survey) who is "returned" to any of the 48 States, the District, or any United States Territory or possession for interment or reinterment, the 2-year period begins with such interment or reinterment. This special treatment would no longer be provided in the case of deaths in Alaska. It should be noted that the 2 years may be extended for as much as an additional 2 years if good cause for the failure to file within the initial 2-year period is shown.

The subsection (c)(1) amendment would, under section 43 of the bill, be effective in the case of deaths occurring on or after January 3, 1959.

Subsection (c) of the bill also amends subsections (h) and (i) of section 210 of the Social Security Act which define "State" and "United States" for purposes of the old-age, survivors, and disability insurance program. These are purely technical amendments, eliminating the specific inclusion of Alaska as a State, since this inclusion became automatic upon Alaska's admission to the Union.

Subsection (d) amends paragraphs (1) and (2) of section 1101(a) of the Social Security Act which define "State" and "United States" for the purposes of the act. These are technical amendments.

CONGRESSIONAL RECORD

Section 33 amends the law relating to the gratuitous distribution of copies of the CONGRESSIONAL RECORD. Existing law provides that the Governors of the States shall receive one copy in both daily and bound form, while the Governors of the Territories receive five in both daily and bound form. The amendment would strike the reference to Alaska in the latter provision so that the Governor of the New State would be accorded the treatment of a State Governor rather than a Territorial Governor.

FEDERAL REGISTER

Section 34 amends the Federal Register Act so that henceforth publication in the Federal Register of notice of hearing will be regarded as notice to persons residing in Alaska, as well as elsewhere in the mainland of the United States. Under circumstances described in the statute, such publication is, under existing law, adequate with respect to residents of the continental United States excluding Alaska. The amendment would extend the provision to Alaska as well.

AIRPORTS

Section 35(a) would authorize and direct the Administrator of the Federal Aviation Agency to convey to the State of Alaska, without reimbursement, the airports at Anchorage and Fairbanks which were constructed and have been operated and maintained by the United States under the act of May 28, 1948. Subsection (b) would permit completion of certain FAA contracts following such conveyance.

SELECTIVE SERVICE

Section 36 would remove an unnecessary reference to Alaska in the section of the Universal Military Training and Service Act which defines the term "United States." The amendment is perfecting only.

REAL PROPERTY TRANSACTIONS

Section 37 amends the statute which requires the Director of the Office of Civil and Defense Mobilization to come into agreement with the Armed Services Committees of the Congress with respect to certain real property transactions. The amendment would merely remove a superfluous reference to Alaska.

RECREATION FACILITIES

Section 38 relates to the statute which authorizes the Secretary of the Interior to construct public recreation facilities in Alaska. As enacted in 1956, the law authorizes the appropriation of $100,000 each year for the 5 fiscal years ending June 30, 1961, for the construction and maintenance of such facilities, and provides for their transfer to Alaskan agencies or communities. The effect of the provision contained in section 38 is to terminate the existing authorization for appropriations and to substitute for it an authorization of funds for 1 fiscal year only. Such funds could be expended only for the completion of projects begun prior to June 30, 1959, but not completed by that date, and for the maintenance of facilities constructed under the act pending their transfer to Alaska.

AIRCRAFT LOAN GUARANTEES

Section 39 would provide a perfecting amendment to the 1957 statute (set out as a note following 49 U.S.C., Supp. V, sec. 425) which authorizes loans for the purchase of aircraft and equipment.

TRANSITIONAL GRANTS

Section 40 in subsection (a) authorizes the appropriation to the President of funds to be used for transitional grants to the State of Alaska for fiscal years 1960 through 1964. A $10,500,000 grant is authorized for 1960, $6 million for 1961 and for 1962, and $2,500,000 for 1963 and for 1964. The grants would not be earmarked and would be available as a general supplement to the financial resources of the State. The amounts appropriated for transitional grants would be offset to a large extent by the elimination of appropriations for a number of activities which the Federal Government would have continued to finance in Alaska had it remained a Territory. Those include appropriations for capital improvements at Anchorage and Fairbanks Airports; operation and maintenance of intermediate airports; special grants for mental and general health; and construction of recreational facilities. There was also taken into account the fact that Federal-aid highway funds allocated to Alaska after 1960 will not be available for road maintenance and that Alaska would receive revenues from the Federal airports transferred to it.

Subsection (b) would allow the Governor of Alaska to request that a Federal agency continue to provide services and facilities in Alaska for a limited period, pending the taking over of such responsibilities by the State. In the event that the Governor's request is approved, funds for the provision of the services or facilities by the Federal agency would be allocated to it from the grants appropriated under subsection (a), and the grant Alaska receives for the pertinent fiscal year would be correspondingly reduced.

Subsection (c) would authorize the head of a Federal agency, who has transferred to the State of Alaska property or functions pursuant to either the Statehood Act, this bill, or another law, to contract with the State for the continued performance by his agency of functions authorized to be performed by it in Alaska preceding such transfer. The authority would expire June 30, 1964. The State would be required to reimburse the Federal agency for the functions performed by it under contract.

TRANSFER OF PROPERTY

Section 41 would authorize the President to give to the State of Alaska any property owned or held by the United States in Alaska and used in connecttion with functions performed by the Federal Government which have been taken over by the State. The authority would terminate July 1, 1964.

CLAIMS COMMISSION

Section 42 provides for the establishment, should the need arise, of a temporary three member commission to hear and settle any dispute between the Federal Government and Alaska concerning the transfer of Federal property to the State. In both the Statehood Act (notably section 6(e)), and this bill (see sections 21, 35, and 41), provision is made for the transfer or conveyance of certain Federal property to Alaska. If the respective governments should not agree as to what property is comprehended by such sections, the President would be authorized to appoint a temporary commission to settle the dispute. The commission would make no money settlements, but would merely decide which jurisdiction is entitled to the disputed property. Members would receive $50 per day, would be reimbursed for travel, and would receive a per diem allowance when away from their usual places of residence.

EFFECTIVE DATES

Section 43 contains the effective dates for the various amendments to the laws establishing the grant programs of the Department of Health, Education, and Welfare. Most of these provisions have been discussed in relation to the sections amending the pertinent statutes. In addition, subsection (a) of this section provides that where the statutory provisions amended require the allotment percentage, allotment ratio, Federal percentage, or Federal share to be based on per capita income data for a specified period, the determinations will be based, prior to the time when data for the required period are available, on data for the one-year or two-year period for which such data are available.

DEFINITION OF "CONTINENTAL UNITED STATES"

Section 44 provides that, when the phrase "continental United States" is used in Federal laws enacted after the date of enactment of this bill, the phrase shall mean the 49 States of the North American Continent and the District of Columbia.

SEPARABILITY

Section 45 provides a separability clause.

EXECUTIVE OFFICE OF THE PRESIDENT,
BUREAU OF THE BUDGET,
March 24, 1959.

Hon. RICHARD M. NIXON,
President of the Senate,
Washington, D.C.

MY DEAR MR. PRESIDENT: There is forwarded herewith a draft of legislation "To amend certain laws of the United States in the light of the admission of the State of Alaska into the Union, and for other purposes," together with a section-by-section analysis thereof.

This proposal is designed to make those changes in Federal laws which have become necessary and desirable because of Alaska's admission into the Union "on an equal footing with the other States in all respects whatever." The President recommended in his 1960 budget message that, where necessary, changes should be made in Federal laws "to apply to Alaska the same general laws, rules and policies as are applicable to other States." The proposed legislation would (1) make Alaska eligible to participate in a number of Federal grant-in-aid programs on a comparable basis with the other States; (2) terminate certain special Federal programs in Alaska; (3) authorize Federal financial assistance to Alaska during an interim period, transfers of Federal property to the State and other measures required to facilitate an orderly transition; (4) clarify the applicability of certain laws to Alaska, and (5) eliminate inappropriate references to the "Territory of Alaska" in Federal statutes.

Alaska already participates in the majority of Federal grant-in-aid programs on the same basis as other States. There are a number of Federal grant-in-aid programs, however, where Alaska is still accorded, as it was when a Territory, treatment different from that of other States. We believe that Alaska, as a full and equal member of the Union, should not receive more or less favorable treatment than other States under these programs. The proposed legislation, therefore, would amend pertinent laws providing Federal assistance for national defense education, vocational education, school construction and operation in federally affected areas, highway construction, vocational rehabilitation, water pollution control, hospital and medical facilities construction, old-age assistance, aid to dependent children, aid to the blind, aid to the permanently and totally disabled, and child welfare services to bring Alaska under the apportionment and matching formulas applicable to all other States as soon as possible. Since the 1960 apportionments have already been made, Alaska would not participate in the Federal aid highway program on an equal basis until 1961. Transitional provisions have been included in the proposed amendments to the Smith-Hughes Act, which authorizes grants for vocational education, and the Vocational Rehabilitation Act so as to minimize the effects of any program adjustments which may be required during the transitional period. These special Federal grants which apply only to Alaska for general and mental health and construction of recreation facilities would be terminated.

The Federal Government at present constructs and maintains highways, operates commercial airports and provides a number of other services and facilities in Alaska normally furnished by State and local governments. The President stated in his 1960 budget message that, in the long-run interest of both the State and the Nation, "the Federal Government should not continue special programs in Alaska which, in other States, are the responsibility of State and local govments or of private enterprise." Since some time necessarily will elapse before Alaska can benefit fully from the revenues to be derived from public lands and other resources to be made available to the State by the Statehood Act, the President recommended that "the Federal Government should provide such financial assistance as is necessary to facilitate transfer to the State of such programs as highway construction and maintenance, airport operations, and public health services." If such assistance were not provided, the Federal Government would be faced with the undesirable alternative of postponing transfer of these functions to the State for an indefinite period. The proposed legislation, therefore, would authorize the payment of transitional grants to the State of Alaska in an amount of $10.5 million for the fiscal year 1960 and in declining amounts for the subsequent 4 years. In addition, to assist the State in establishing its court system, the draft bill would transfer to the State any oustanding balances in the accounts of the clerks of the territorial courts at such time as the Federal District Court for Alaska is established. Under the proposed legislation Alaska could choose between receiving the entire transitional grant and administering the transferred programs directly or by contract with a Federal agency, or requesting that a portion be used for financing continued Federal operations during an interim period. Expenditures for the transitional grants to Alaska would be offset to a large extent by the elimination of existing special Federal programs in Alaska.

It is recognized that Alaska will require not only financial assistance, but also facilities and equipment, if it is expeditiously to assume responsibility for functions now performed by the Federal Government. The Statehood Act provides that U.S. property situated in Alaska which is used for the purpose of conservation and protection of fisheries and wildlife in Alaska shall be transferred to the State without reimbursement. The proposed legislation would authorize the President to make similar transfers of property and equipment in any case where the State assumes responsibility for functions formerly performed by the Federal Government. In the event of differences between the Federal Government and Alaska concerning property transfers, the President would be authorized to appoint a temporary three member commission to hear and settle the disputes.

As a consequence of Alaska's changed status, it is believed appropriate to require the Court of Appeals for the Ninth Circuit to hold sessions in Alaska annually. Under the proposed legislation that court, which is now required by law to hold sessions each year in San Francisco, Los Angeles, Portland and Seattle, would be required to hold sessions in Anchorage. The proposed legislation further provides that the U.S. District Court for the District of Alaska shall hold sessions in Ketchikan, as well as at Anchorage, Fairbanks, Juneau and Nome.

The proposed legislation would extend the applicability of certain Federal laws to Alaska. These include the Sugar Act, a portion of the Investment Company Act of 1940, not hitherto applicable to certain Alaska companies, the act of June 8, 1940 (protection of bald eagles), the Federal Youth Corrections Act, certain provisions relating to parole, a statute relating to the transportation of bodies of veterans who have died in Veterans' Administration facilities, and section 29 of the Federal Register Act (notice of hearings). The draft bill would also amend the Statehood Act to clarify Federal jurisdiction over public domain lands; provide for the termination of certain "Territorial laws" administered by Federal agencies; and clarify the applicability to Alaska of the statute regarding the importation of milk and cream and the nonapplicability of the tax on transportation; provide for the transfer of the Anchorage and Fairbanks airports to the State; and provide a definition to be applicable in the future to the term "continental United States." Several of the provisions of the draft bill are essentially technical and perfecting in nature and either eliminate inappropriate references to Alaska or make other language changes which are considered appropriate because of Alaska's changed status.

The Bureau of the Budget urges early and favorable consideration of the proposed legislation, since its enactment is required to assure continuity of a number of essential public services in Alaska and to provide for the orderly transition of Alaska from territorial status to statehood.

Sincerely yours,

MAURICE H. STANS,
Director.

PROPOSED LEGISLATION RELATING TO CIVIL AERONAUTICS BOARD

Mr. MAGNUSON. Mr. President, by request, I introduce, for appropriate reference, a series of bills relating to the Civil Aeronautics Board. I ask unanimous consent to have printed in the RECORD a letter from the Chairman of the Civil Aeronautics Board, dated March 17, 1959, requesting the proposed legislation, together with the statements of purposes of each bill.

The PRESIDING OFFICER. The bills will be received and appropriately referred; and, without objection, the letter of transmittal and the statements of purposes of each bill will be printed in the RECORD.

The bills, introduced by Mr. MAGNUSON, by request, were received, read twice by their titles, and referred to the Committee on Interstate and Foreign Commerce, as follows:

S. 1542. A bill to amend the Federal Aviation Act of 1958, so as to authorize the imposition of civil penalties in certain cases; and to increase the monetary amount of fines for violation of the criminal provisions.

The statement of purpose accompanying Senate bill 1542 is as follows:

STATEMENT OF PURPOSE AND NEED FOR PROPOSED LEGISLATION TO AMEND THE FEDERAL AVIATION ACT OF 1958, SO AS TO AUTHORIZE THE IMPOSITION OF CIVIL PENALTIES IN CERTAIN CASES; AND TO INCREASE THE MONETARY AMOUNT OF FINES FOR VIOLATION OF THE CRIMINAL PROVISIONS

The purpose of that part of the proposed amendment which authorizes the imposition of civil penalties in certain cases is to provide a statutory tool for the more effective enforcement of the provisions of title IV of the Federal Aviation Act and of the Board's economic orders and regulations issued thereunder and under section 1002(i) of the act.

At the present time violations of these provisions are subject to criminal prosecution under section 902(a) of the act. This sanction is an effective deterrent in serious cases involving knowing and willful violations. With respect to many cases of minor infractions, violations of a less serious nature, and actions falling short of knowing and willful misconduct, the conventional criminal proceedings are either too drastic, too cumbersome or altogether inappropriate. It is in acting upon these less serious but

more numerous violations that the Board believes it could avail itself of the remedy of civil penalty in a constructive manner toward improving the enforcement program.

The availability of the remedy of civil penalty would enable the Board to attack violations speedily and avoid situations such as have existed in the past where offenders have been able to persist in violations during the time required to prosecute a formal proceeding of court action.

The availability of the remedy of civil penalty would afford an adequate remedy as a substitute for criminal action except in serious cases where willful and knowing violations involving the necessary degree of criminal responsibility may be established. Moreover, the imposition of civil penalty would, in many cases, have a salutary effect comparable to that of criminal penalties without subjecting the offender to the serious stigma which follows imposition of criminal penalties.

The modifications proposed in existing section 901(a) of the act have been drafted primarily for the purpose of making available this additional sanction. In regard to section 902(a), such changes have been made to preserve the effectiveness and applicability of the criminal penalties as are made necessary in view of the amendment of section 901(a).

It is also proposed (1) to add to section 901(a) a provision, that if the violation is a continuing one, each day of the violation shall constitute a separate offense, and (2) to amend section 902(a) to increase the monetary amount of fines which may be imposed thereunder.

The amendment of section 901(a) to provide that each day of violation shall constitute a separate offense is believed desirable in the interest of effective enforcement of the civil penalty procedure. Section 902(a) already contains such a provision with regard to criminal violations.

With respect to the proposal to increase the monetary amounts of the fines which may be imposed for violation of the criminal provisions, the Board feels that the current provisions are no longer adequate. Knowing and willful violations of the Civil Aeronautics Act are serious offenses for which there should be a more effective deterrent than the present maximum of $500 for the first offense. Likewise, it is suggested that repeated offenses should carry a higher penalty than the $2,000 fine now specified as the maximum, and that there should be a mandatory minimum fine in all cases.

Accordingly, the attached draft incorporates: (1) amendments to authorize the Board to impose civil penalties in additional cases, (2) amendment of section 901(a) to provide that each day of violation shall constitute a separate offense, and (3) amendment of section 902(a) to provide for the imposition of a mandatory minimum fine of $100, with a maximum of $5,000 both for the first offense and for each subsequent offense.

There is attached an analysis of the proposed amendments and a comparison of the proposed amendments with existing law.

ANALYSIS OF PROPOSED AMENDMENTS TO SECTIONS 901(A)(1) AND 902(A) OF THE FEDERAL AVIATION ACT OF 1958

The Federal Aviation Act as now written authorizes the imposition of a civil penalty not to exceed $1,000 for each violation of (1) Any provision of title III (powers and duties of Administrator); (2) any provision of title V (nationality and ownership of aircraft); (3) any provision of title VI (safety regulation); (4) any provision of title VII (aircraft accident investigation); (5) any provision of title XII (security provisions); (6) any rule, regulation, or order issued under titles III, V, VI, VII, and XII; (7) any rule or regulation issued by the Postmaster General under the act.

The act further provides that any such civil penalty may be compromised by the Administrator in the case of violations of titles III, V, VI, or XII, or any rule, regulation, or order issued thereunder, and by the Board in the case of violations of title VII, or any rule, regulation, or order issued thereunder, or by the Postmaster General in the case of regulations issued by him.

There has been added, and this is the principal purpose of the bill, language to make persons violating the provisions of title IV (air carrier economic regulation) of the act, and orders, rules, and regulations of the Civil Aeronautics Board issued thereunder, or violating any term, condition, or limitation of any permit or certificate issued under title IV, subject to a civil penalty of not to exceed $1,000. Air carriers violating Civil Aeronautics Board orders under section 1002(i) of the act will likewise be subject to such civil penalty. The power to compromise such penalties is also included in the proposed bill. In addition, a provision has been added to section 901(a), similar to that already contained in section 902(a), that if the violation is a continuing one, each day of such violation shall constitute a separate offense.

The amendment to section 902(a) has two aspects. The first is for the purpose of preserving the existing law. Under that section as it exists today, a knowing and willful violation of certain titles of the act, including title IV, and of orders, rules, regulations, certificates, and permits issued thereunder, are made misdemeanors, but only in those cases where no penalty is otherwise provided by the act. Since the proposed amendment to section 901(a) provides civil penalties for violations of title IV, the proposed amendment to section 902(a) to refer to penalties provided "in this section," is necessary in order to continue knowing and willful violations as criminal offenses.

The second aspect of the revision of section 902(a) is to increase the monetary amount of fines imposed for the violation of the criminal provisions so as to more effectively deter knowing and willful violations of the Federal Aviation Act. Therefore, provision is made for the imposition of a mandatory minimum fine of $100, with a maximum of $5,000 both for the first offense and for each subsequent offense.

COMPARISON WITH EXISTING LAW

Title IX. Penalties

Civil Penalties

Safety, economic, and postal offenses

Section 901 (a): (1) Any person who violates (A) any provision of titles III, IV, V, VI, VII, or XII of this act, or any rule, regulation, or order issued thereunder, or under section 1002(i), or any term, condition, or limitation of any permit or certificate issued under title IV, or (B) any rule or regulation issued by the Postmaster General under this act, shall be subject to a civil penalty of not to exceed $1,000 for each such violation. If such violation is a continuing one, each day of such violation shall constitute a separate offense: *Provided*, That this subsection shall not apply to members of the Armed Forces of the United States, or those civilian employees of the Department of Defense who are subject to the provisions of the Uniform Code of Military Justice, while engaged in the performance of their official duties; and the appropriate military authorities shall be responsible for taking any necessary disciplinary action with respect thereto and for making to the Administrator or Board, as appropriate, a timely report of any such action taken.

(2) Any such civil penalty may be compromised by the Administrator in the case of violations of titles III, V, VI, or XII, or any rule, regulation, or order issued thereunder, and by the Board in the case of violations of titles IV and VII, or any rule, regulation, or order issued thereunder, or under section 1002(i), or any term, condition, or limitation of any permit or certificate issued under title IV, or the Postmaster General in the case of regulations issued by him. The amount of such penalty, when finally determined, or the amount agreed upon in compromise, may be deducted from any sums owing by the United States to the person charged.

Criminal Penalties

General

Section 902(a): Any person who knowingly and willfully violates any provisions of this act (except title III, V, VI, VII, and XII), or any order, rule, or regulation issued under any such provision or any term, condition, or limitation of any certificate or permit issued under title IV, for which no penalty is otherwise provided in this section, shall be deemed guilty of a misdemeanor and upon conviction thereof shall be subject for each offense to a fine of not less than $100 and not more than $5,000. If such violation is a continuing one, each day of such violation shall constitute a separate offense.

S. 1543. A bill to amend the Federal Aviation Act of 1958 to authorize the Civil Aeronautics Board to include in certificates of public convenience and necessity limitations on the type and extent of service authorized, and for other purposes.

The statement of purpose accompanying Senate bill 1543 is as follows:

STATEMENT OF PURPOSE AND NEED FOR PROPOSED LEGISLATION TO AMEND THE FEDERAL AVIATION ACT OF 1958 TO AUTHORIZE THE CIVIL AERONAUTICS BOARD TO INCLUDE IN CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY LIMITATIONS ON THE TYPE AND EXTENT OF SERVICE AUTHORIZED, AND FOR OTHER PURPOSES

The fourth sentence of section 401(e) of the Federal Aviation Act provides that "no term, condition, or limitation of a certificate shall restrict the right of an air carrier to add to or change schedules, equipment, accommodations, and facilities for performing the authorized transportation and service as the development of the business and the demands of the public shall require."

Under this provision it is not entirely clear as to the extent to which the Board may impose on certificates of public convenience and necessity effective limitations or restrictions with respect to schedules, equipment, accommodations, or facilities. Without some clarification this provision may result in preventing the Board from issuing certificates to carriers which request authority to perform air carrier operations on a limited scale. The purpose of the proposed legislation is to make it clear that a carrier may request and be authorized to perform limited services.

S. 1544. A bill to amend the Federal Aviation Act of 1958 in order to (1) assure for the Civil Aeronautics Board independent participation and representation in court proceedings, (2) provide for review of nonhearing Board determinations in the courts of appeals, and (3) clarify present provisions concerning the time for seeking judicial review.

The statement of purpose accompanying Senate bill 1544 is as follows:

STATEMENT OF PURPOSE AND NEED FOR PROPOSED LEGISLATION TO AMEND THE FEDERAL AVIATION ACT OF 1958 IN ORDER TO (1) ASSURE FOR THE CIVIL AERONAUTICS BOARD INDEPENDENT PARTICIPATION AND REPRESENTATION IN COURT PROCEEDINGS, (2) PROVIDE FOR REVIEW OF NONHEARING BOARD DETERMINATIONS IN THE COURTS OF APPEALS, AND (3) CLARIFY PRESENT PROVISIONS CONCERNING THE TIME FOR SEEKING JUDICIAL REVIEW

The purpose of the proposed amendment is to correct demonstrated deficiencies in the judicial review provisions governing the

Board, to clarify them in certain respects, and to bring them into harmony with the statutory scheme for review applicable to most other comparable agencies.

1. Existing law is susceptible to the interpretation that the Board's right of participation and of independent representation through its own counsel in court proceedings involving the validity of its own orders is dependent upon the consent and acquiescence of the Attorney General.[1] The working relationship between the Board and the Department of Justice in litigation matters generally has been satisfactory, so that practical problems rarely arise. However, in some instances there have been conflicts of opinion on matters pertinent to pending Board litigation, with the result that the Board has been deprived of the opportunity in such situations of making its views known to the court. The proposed amendment would resolve difficulties of this nature by providing for participation as of right by both the Attorney General and the Board where it may become necessary because of differences in position.

The Board's proposal for independent participation and representation is no more than a reflection of the situation as it exists today with respect to comparable Government agencies. Some agencies defend their orders in Federal courts other than the Supreme Court without any control by the Attorney General;[2] others, which are covered by the provisions of the Hobbs Act (5 U.S.C. 1031 et seq.), continue under the general control of the Attorney General, but have the statutory right to appear and be represented as a separate party in the manner which the Board advocates.[3] It is the Board's opinion that the existence of a similar right in the Board is essential to a proper recognition of its status as an independent regulatory agency, and to assure that the Board at all times will be free to express its position in court concerning the proper interpretation of the statute which it administers.

The foregoing reasons also support the Board's proposal that existing law be amended to make clear that the Board may, on its own initiative, institute and fully prosecute all necessary court proceedings to compel compliance with the act and the Board's actions taken thereunder, for it is of equal importance that independence of action on the part of the Board be assured in enforcement matters. The proposed amendment permits the Board to proceed independently or through the Attorney General in such cases, and provides that the Attorney General may, in any event, participate as of right.

2. The review provisions of the Civil Aeronautics Act, now incorporated in the Federal Aviation Act, have been judicially interpreted to the effect that certain Board actions taken without an evidentiary record, such as regulations promulgated without evidentiary hearings are directly reviewable, if at all, in the Federal district courts.[4] Since determinations of the Board are normally reviewable as orders by the courts of appeals, this interpretation has led to some uncertainty and confusion, which should be corrected. Appropriate corrective action has been taken with respect to similar problems of other agencies and departments within the coverage of the Hobbs Act, which act specifically provides that nonhearing determinations shall be reviewable in the courts of appeals (5 U.S.C. 1037).

The Board's proposal is to substantially incorporate in relevant part provisions of the Hobbs Act on this point into the review provisions of the Federal Aviation Act. The Board believes that the proposed amendment will not only alleviate the confusion and uncertainty as to the proper forum for review in these cases, but will also provide for more effective and expeditious review. The courts of appeals generally are more familiar with the Board's functions, and cases before such courts generally are processed more quickly than those in the district courts. Since, under the Hobbs Act procedure, nonhearing cases are transferred to the district courts only in those instances where there is a genuine issue of material fact, delays incurred in the course of completing the review process should be minimized.

This particular part of the amendment is specifically designed to cure the problem raised in the Arrow case, supra, where the Court of Appeals declined to review as orders Board regulations which were of general applicability and prospective effect. Under the amendment, regulations of this type which have immediate impact would be reviewable in a court of appeals. It is not designed to change or alter the existing situation with respect to rules or regulations having no immediate application, as to which a person affected may, for example, raise the question of invalidity of such rules by way of a defense in an action brought to enforce them, nor is it designed to make any orders reviewable that are not subject to review under existing law.

3. The law pertaining to the proper computation of the 60-day period for seeking judicial review of Board orders is unclear. In *Consolidated Flower Shipments* v. *Civil Aeronautics Board* (205 F. 2d 449 (1953)), the Court of Appeals for the Ninth Circuit held that the 60-day period is not extended by the filing of a timely petition for reconsideration with the Board although the Board's procedural rules permit such petitions. Although the Supreme Court has never passed on the question, there is authority for the position that, contrary to the Ninth Circuit's view, the filing of such a petition tolls the time for seeking judicial review, so that the 60-day period is to be computed from the date of entry of the order denying reconsideration rather than from the date of entry of the initial order. The Board has always supported the latter position, on the ground, inter alia, that the legislation evidences no intention to deprive a private party of the opportunity of first seeking, at his election, reconsideration from the Board where its rules permit petitions for reconsideration, and then resorting to court review. The proposed amendment eliminates the present uncertainty concerning the properly applicable rule under the Federal Aviation Act by specifically recognizing that such an election is available to substantially interested persons.

4. Section 1006(c) of the Civil Aeronautics Act of 1938 was amended by section 18 of Public Law 85–791, approved August 28, 1958, by adding the words "as provided in section 2112 of title 28, United States Code," but the Federal Aviation Act of 1958, approved August 23, 1958, was not so amended. To correct this obvious inadvertence the quoted phrase was added to section 1006(c) of the proposed bill.

It should be emphasized that no attempt has been made to affect existing law otherwise than in the specific respects noted in paragraphs 1 through 3 hereof. To that end, the language of the statute remains substantially in its present form. It may be noted that the sections of the act proposed to be amended apply generally both to the Civil Aeronautics Board and to the Administrator of the Federal Aviation Agency. To the extent that actions of the Administrator may be reviewable under section 1006(a), and insofar as the Administrator may be empowered to institute enforcement proceedings pursuant to section 1007(a), the proposed amendment effects no change in those respects.

The amendment as proposed by the Board incorporates changes, deletions, and additions in sections 1006 and 1008 of the act, many of which are minor in nature. The differences, which are shown graphically in the attached "Comparison With Existing Act," are briefly described below:

(a) The word "Circuit" has been added after the words "United States Court of Appeals for the District of Columbia," in sections 1006(a) and 1006(b) in order to accurately reflect that court's present status.

(b) Section 1006(a): Three additional changes have been made:

(1) For a description of the type of orders subject to review, the amendment substitutes the words "any final order" for the phrase "any order, affirmative or negative" now in the statute. This change embodies the judicial interpretation of the present language (*Chicago & Southern Airlines* v. *Waterman Steamship Corp.* (333 U.S. 303) [1948] and accords with the phraseology used in the Hobbs Act (5 U.S.C. 1032)).

(2) The sentence dealing with late filed petitions for review has been deleted as unnecessary.

(3) The sentence added at the end of the section makes clear the option in a petitioner to seek judicial review either within 60 days after the entry of the order complained of or within 60 days after disposition has been made of a petition for reconsideration timely filed pursuant to an applicable rule of the Board or Administrator.

(c) Section 1006(d): The section has been amended by adding, after its present provisions, additional provisions concerning the procedure to be followed with respect to hearing and nonhearing determinations. The language employed follows closely that used in section 7 of the Hobbs Act (5 U.S.C. 1037).

(d) Section 1006(f): The principal change made here is the addition of language to assure that the Board and any aggrieved party, as well as the Solicitor General, may file a petition for writ of certiorari with the Supreme Court. The same general purpose has been achieved with respect to other agencies and departments by section 10 of the Hobbs Act (5 U.S.C. 1040).

(e) Section 1008: A new subsection (b) has been added. The net effect of this particular portion of the proposed amendment is to provide (1) that the Board may, on its own responsibility, institute and prosecute enforcement proceedings brought under section 1004(c) or section 1007(a), with full rights in the Attorney General to participate in such proceedings; and (2) that in other

[1] Sec. 1008 of the act provides "Upon request of the Attorney General, the Board, or Administrator, as the case may be, shall have the right to participate in any proceeding in court under the provisions of this act."

[2] Agencies of this type are the Federal Trade Commission (15 U.S.C. 45 (c)); the Federal Power Commission (15 U.S.C. 717r, 717s; 16 U.S.C. 825, 825m(c)); the National Labor Relations Board (29 U.S.C. 160(e), 160(f)); and the Securities and Exchange Commission (15 U.S.C. 77i(a), 77vvv, 78y(a), 79(x)). The Federal Communications Commission is in the same category with respect to actions for review of its orders brought under sec. 402(b) of the Communications Act (47 U.S.C. 402(b)).

[3] The Federal Communications Commission, where review is sought under sec. 402 (a) of the Communications Act (15 U.S.C. 402(a)); the Secretary of Agriculture; the U.S. Maritime Administration and the Federal Maritime Board; and the Atomic Energy Commission (see 5 U.S.C. 1032, 1038). The Interstate Commerce Commission long has had similar independence of participation and representation (28 U.S.C. 2322, 2323).

[4] See *Arrow Airways, Inc.* v. *Civil Aeronautics Board*, 182 F. 2d 705 (1950).

than section 1007(a) proceedings, the Attorney General will have general supervisory direction and control of Board litigation, but with a statutory right in the Board itself to independent participation and representation (except in criminal proceedings).

S. 1545. A bill to amend the Federal Aviation Act of 1958 so as to authorize elimination of a hearing in certain cases under section 408.

The statement of purpose accompanying Senate bill 1545 is as follows:

STATEMENT OF PURPOSE AND NEED FOR PROPOSED LEGISLATION TO AMEND THE FEDERAL AVIATION ACT OF 1958 SO AS TO AUTHORIZE ELIMINATION OF A HEARING IN CERTAIN CASES UNDER SECTION 408

Under section 408(b), the Board may not grant its approval of any of the acts enumerated in section 408(a) without first conducting a hearing upon an application presented to the Board. The purpose of the proposed amendment is to relieve the Board and the parties to an application submitted under section 408(b) from the necessity of going through a hearing in those cases where the Board determines that a hearing is not necessary in the public interest and no person disclosing a substantial interest requests a hearing.

Many of the acts which require Board approval under section 408(b), such as a proposed merger of airlines or the acquisition of control of an airline, are transactions which substantially affect the public interest, and of course relief from the mandatory hearing requirement is not being sought in respect of them. However, experience has shown that in many other cases a hearing serves no useful purpose. These are cases involving relatively simple transactions which by reason of their limited nature (1) cannot conceivably affect the control of a direct air carrier or result in creating a monopoly, restraining competition, or jeopardizing another air carrier not a party to the transaction; (2) do not involve an objection by any interested party; and (3) where a hearing would provide no further significant information concerning the transactions.

Examples of such transactions are purchases and leases of a limited number of aircraft (often only one aircraft and seldom more than three) where it appears that the transaction will prove beneficial to both parties and the public and where no person not a party to the transaction is concerned with it. Another example is a transaction directly affecting only a small air freight forwarder, where the impact of the transaction on the public interest can only be considered de minimus. In cases such as these where a hearing serves no useful purpose and no interested person requests a hearing, it is believed that Congress would desire that the Board have authority to act on the matter without a hearing. Congress has granted authority similar to that being here requested to the Interstate Commerce Commission (sec. 5 of the Interstate Commerce Act, as amended by the act of Aug. 2, 1959) and to the Federal Communications Commission (sec. 221 of the Communications Act of 1934, as amended by the act of Aug. 2, 1956).

In the absence of authority in section 408(b) to dispense with a hearing, the Board has on various occasions followed the procedure of exempting the parties to an application from the requirements of section 408 pursuant to the exemption authority contained in section 416(b) of the act. However, this procedure can be followed only in cases where the Board finds that the enforcement of section 408 would be an undue burden on an air carrier applicant "by reason of the limited extent of, or unusual circumstances affecting, the operations of such air carrier * * * and is not in the public interest." In cases where the applicant or one of the applicants for approval of a transaction under section 408 is not an air carrier, then the Board cannot grant such applicant an exemption for the reason that section 416(b) gives the Board exemption authority only with respect to air carriers. In such cases the Board has had no choice other than to hold hearings, even in cases where it was apparent that such hearings would serve no useful purpose so far as enabling the Board to protect the public interest is concerned.

It is estimated that enactment of the proposed amendment would enable the Board to eliminate as many as 10 hearings each year which are now required to be conducted at considerable expense in terms of time, effort, and money expended by the Board's staff and by the applicants.

S. 1546. A bill relating to the use of Civil Aeronautics Board reports and testimony of Board personnel regarding aircraft accidents.

The statement of purpose accompanying Senate bill 1546 is as follows:

STATEMENT OF PURPOSE AND NEED FOR PROPOSED LEGISLATION RELATING TO THE USE OF CIVIL AERONAUTICS BOARD REPORTS AND TESTIMONY OF BOARD PERSONNEL REGARDING AIRCRAFT ACCIDENTS

Pursuant to sections 701 and 702 of the Federal Aviation Act, the Civil Aeronautics Board is charged with the responsibility for investigating and determining the probable cause of accidents involving civil aircraft and making reports concerning such accidents. This function is discharged in large measure by expert accident investigators employed by the Board's Bureau of Safety. Written reports are prepared by these investigators on all accidents investigated by them, which embody their factual observations as well as their conclusions and these reports are submitted to the Board. The accident investigators also testify in the Board's accident investigation hearings.

The purposes of the proposed amendment to the Federal Aviation Act are (1) to preserve the integrity of the Board's function to determine the probable cause of accidents involving aircraft; (2) to this end, to prevent the kind of involvement of the Board and its personnel in litigation arising from such accidents which would result from their testifying as expert witnesses or from the use in such litigation of Board reports or records; and (3) to make factual information pertaining to accidents developed by Board personnel, available to litigants to the extent it is not reasonably available elsewhere and in the manner which reduces to a minimum the time Board personnel are kept away from their regular duties.

These purposes are fully consistent with established public policy and with the underlying intent of the enabling statute. Undesirable involvement of the Board or its personnel in the issues arising in litigation would result from their giving expert or opinion testimony. The opinions of these experts, upon which the Board relies heavily in making its findings as to probable cause and recommendations in accident reports, are so inextricably entwined with the report that this basic purpose would be defeated were such opinion testimony permitted. Furthermore, the use of Board investigators as experts to give opinion testimony in civil suits between private parties would impose a serious burden on the Board's investigative staff, and would seriously interfere with the functioning of the Board's investigative processes. The proposed amendment would not impinge upon the policy of the law to make factual information and proof available to litigants who need it, but would reconcile that policy with the interest of the Government not to have the time and efforts of persons on the public payroll unnecessarily diverted from their tasks. The Board and its personnel would be assured of uniform rules and procedures governing their testimonial duties in accident litigation, which would enable the Board to more reliably plan the use of its limited staff of accident investigation experts.

The need for this legislation is shown by experience. Present section 701(e), continued without change from section 701(e) of the Civil Aeronautics Act of 1938, does not explicitly prohibit expert testimony by Board personnel and does not regulate the taking of their factual testimony. The Board has promulgated regulations which express the principles of the proposed legislation in this respect, 14 CFR 311.3, but they have not always proved effective.

It should be pointed out that the proposed legislation constitutes a minimum program. Thus this legislation would not overrule those court decisions which have permitted use of the transcript of testimony in the Board's accident investigation hearings for purposes of cross-examination in private litigation, nor those which have held that accident reports made to the Board by operators of aircraft are not privileged. The Board at this time is limiting its legislative proposal to the areas of the most pressing need.

S. 1547. A bill to amend the Federal Aviation Act of 1958 so as to prohibit certain practices regarding passenger ticket sales and reservations.

The statement of purpose accompanying Senate bill 1547 is as follows:

STATEMENT OF PURPOSE AND NEED FOR PROPOSED LEGISLATION TO AMEND THE FEDERAL AVIATION ACT OF 1958 SO AS TO PROHIBIT CERTAIN PRACTICES REGARDING PASSENGER TICKET SALES AND RESERVATIONS

The purpose of the proposed amendment is to protect the right of the public to purchase airline tickets at the lawful tariff rates and to prevent the purchase of tickets by brokers or other persons with the intent of selling the tickets to travelers at a premium.

Section 403(b) of the Federal Aviation Act prohibits carriers from charging more or less than the effective tariff rate. This provision is supplemented by section 902(d) specifically penalizing ticket agents as well as carriers, or the personnel or representatives thereof, for rebating or charging less. There is no parallel penalty against ticket agents or persons other than carriers for scalping—charging more. To deter scalping effectively, passage of such a penalty provision is necessary.

The practice of "ticket scalping," so-called, has grown to such an extent as to constitute a substantial burden on the orderly development of interstate air transportation. The adverse effects of the practice are particularly evident on the most heavily traveled routes, such as that between New York and Miami. However, with the increasing demand for air transportation throughout the country, it may be expected that these practices will increase, to the expense and annoyance of the traveling public, unless effective measures are taken to put a stop to them.

A common pattern of "ticket scalping," as revealed by investigations conducted by the Board's Office of Compliance, is for an individual to make ticket reservations in anticipation of heavy travel demand. As it is required that the prospective passengers' names be given, the tickets are reserved in the name of a person not intending to use the space. Upon being approached for assistance in obtaining travel accommodations by a bona fide prospective passenger, the individual picks up one of the tickets he has received, and delivers it to the prospective passenger, charging a substantial premium or gratuity, commonly ranging from $5 to $50. The purchaser is advised, of course, that he must travel under the name of a person who did not intend to use the

space which appears on the ticket. The individuals engaging in these ticket selling practices are frequently hotel employees and others similarly situated to come in frequent contact with travelers.

Certain travel agencies themselves may knowingly issue tickets to persons with names other than those in which the space was previously reserved, not necessarily to extract a premium price from the purchaser, but to get the commissions paid them by carriers for the ticket sales. The space reservations may actually have been made in fictitious names or may have been made for people later deciding not to buy the space reserved.

It is also essential that the above amendment be supplemented by a prohibition against purposely making reservations in the name of a person not intending to use the space or selling tickets knowing that they were issued for the use of a person other than the buyer or were issued pursuant to a reservation made for the use of a person other than the buyer. This prohibition, coupled with a penalty, would further deter scalping schemes at inception and prevent a few unscrupulous individuals from monopolizing unsold space which should always be available through any legitimate agency or the carrier to those seeking accommodations.

There would seem to be no doubt that the recommended provisions would go far to prevent scalping and the usurpation of space which causes an undue burden on an anxious public seeking to obtain air travel accommodations. Federal legislation is needed to provide an effective remedy for a general situation which cannot be adequately corrected by the carriers, by local enforcement of such State statutes or ordinances as are in effect, or by the Board under its present authority.

S. 1548. A bill to amend the Federal Aviation Act of 1958 to include a declaration of policy relative to the use of civil aircraft in meeting the needs of the Government for transportation by air.

The statement of purpose accompanying Senate bill 1548 is as follows:

STATEMENT OF PURPOSE AND NEED FOR PROPOSED LEGISLATION TO AMEND THE FEDERAL AVIATION ACT OF 1958 TO INCLUDE A DECLARATION OF POLICY RELATIVE TO THE USE OF CIVIL AIRCRAFT IN MEETING THE NEEDS OF THE GOVERNMENT FOR TRANSPORTATION BY AIR

The Board believes that the Government, the Nation's largest single user of transportation, in providing for transportation by air, should, whenever practicable, utilize the services and facilities of operators of civil aircraft offering such transportation. In particular, the policy of the Department of Defense not to engage in competition with the operators of civil aircraft should be continued and encouraged by statutory sanction.

The value to the Nation of civil aircraft operators as a means of providing a reservoir of aircraft and trained personnel which can be utilized by the military in time of emergency has been pointed out many times. By utilizing the services of such operators the Government can not only strengthen them, but even in marginal cases can assure their continued existence. In the case of a subsidized air carrier, the advantages of making use of its facilities, where it is practicable to do so, may be even more pronounced, by reason of the additional advantage of reducing or eliminating the need of the air carrier for Government subsidy.

The addition of the proposed new policy statement would be responsive to the recommendations made by the President's Air Policy Commission in 1954 (Report on Civil Air Policy, May 1954, p. 17), and the recommendation of the Comptroller General in his report to the Congress on the Civil Aeronautics Board in 1955 (Audit Report to the Congress of the United States, Civil Aeronautics Board, October 1955, p. 30). However, the Board's proposal is broader, and would not be limited to the certificated air carriers.

ANALYSIS OF PROPOSED AMENDMENT TO TITLE I OF THE FEDERAL AVIATION ACT OF 1958

The proposed amendment consists simply of the insertion of a new section to title I. The new section is numbered section 104, and the present section 104 entitled "Public Right of Transit" is renumbered as section 105.

Primarily, the purpose of the amendment is to assure, by declaration of congressional policy, the continuance by the Department of Defense, the Nation's largest single user of transportation, of its policy not to engage in competition with the operators of civil aircraft. However, considerations prompting such a declaration of policy also apply, in lesser degree, to other agencies of the Government. The proposed amendment therefore has been made of general applicability but includes specific reference to the Department of Defense.

Likewise, the legislation has been drafted so as not to limit the expression of congressional policy to utilization of the services of the certified air carriers, as distinguished from other operators of civil aircraft willing and able to furnish transportation by air.

S. 1549. A bill to amend section 407 of the Federal Aviation Act of 1958.

The statement of purpose accompanying Senate bill 1549 is as follows:

STATEMENT OF PURPOSE AND NEED FOR PROPOSED LEGISLATION TO AMEND SECTION 407 OF THE FEDERAL AVIATION ACT OF 1958

Section 407(e) of the Federal Aviation Act provides that the Board shall have access to all accounts, records, and memoranda kept by air carriers and may inspect and examine the same. However, under the language of the section as written there is doubt as to the authority of the Board to examine the books and records of persons controlled by an air carrier, under common control with an air carrier, or of service organizations controlled by groups of air carriers. The activities of such persons and organizations are known to the Board in varying degrees from information presented at hearings and common carrier pooling agreements relating thereto submitted to the Board for approval. The Board has no means of determining the accuracy of financial data relating to such persons included in submissions to it, and, specifically, of compliance with the terms of agreements and the equity of formulas included therein.

The legislation herein proposed would implement the recommendation of the Comptroller General of the United States contained on pages 3 and 91 of his "Audit Report to the Congress of the United States, Civil Aeronautics Board, October 1955."

Accordingly, the Board believes that section 407(e) should be amended to make it clear that the Board's authority under section 407 embraces persons controlled by an air carrier, under common control with an air carrier, and service organizations controlled by groups of air carriers.

There is attached a detailed analysis of the proposed amendments and a comparison with existing law.

ANALYSIS OF PROPOSED AMENDMENT TO SECTION 407 OF THE FEDERAL AVIATION ACT OF 1958

Section 407 of the Federal Aviation Act provides for the filing of reports, the prescription by the Board of the forms of accounts, and for the inspection of accounts and other records of air carriers by the Board. In addition, section 407(e) provides that "the provisions of this section shall apply, to the extent found by the Board to be reasonably necessary for the administration of this Act, to persons having control over any air carrier, or affiliated with any air carrier within the meaning of section 5(8) of the Interstate Commerce Act, as amended."

Thus the provisions of this section are limited in application to (1) air carriers, (2) persons having control over an air carrier, and (3) persons affiliated with any air carrier within the meaning of section 5(8) of the Interstate Commerce Act. "Affiliates," as defined in section 5(8), now section 5(6), of the Interstate Commerce Act does not specifically make reference to persons controlled by an air carrier, persons under common control with an air carrier, or to associations controlled by groups of air carriers. Consequently, there is doubt as to whether the provisions of section 407(e) extend to such persons or associations.

It is proposed to clarify this matter by amending the last sentence of section 407(e) of the Federal Aviation Act as heretofore indicated.

Precedent for the enactment of legislation along the lines here recommended may be found in the action taken by Congress relative to the auditing and inspection powers of the Interstate Commerce Commission.

Originally, the accounting and inspection provisions of the Interstate Commerce Act with respect to regulation of railroads extended only to real carriers. In November, 1938, the Interstate Commerce Commission recommended to the Congress that noncarrier railroad subsidiaries be brought within its jurisdiction with respect to accounting. See the 52d Annual Report of the Interstate Commerce Commission, page 121. In 1940, and 1949, the Interstate Commerce Act was amended so as to greatly enlarge the scope of section 20(5) relating to the keeping of accounts and their inspection. The Commission was given authority to inspect the accounts of "carriers, lessors, and associations" and to inspect the accounts of "any person controlling, controlled by, or under common control with any such carrier." Further, "association" was defined in section 20(8) to mean "an association or organization maintained by or in the interest of any group of carriers subject to this part which performs any service, or engages in any activities, in connection with any traffic, transportation, or facilities subject to this act."

These changes were brought about, in part at least, as a consequence of the decision of the Commission in Refrigeration Charges on Fruits, etc., from the South (151 ICC Reports, pp. 649, 651, 693 (1929)). That case involved the Fruit Growers Express Co., which was not a common carrier but all of its stock was owned by 18 railroads. The Commission stated that the express company was not subject to its jurisdiction, and further stated on page 693:

"We are further of the opinion that when the carriers perform a part of their transportation service through a separate agency having a monopoly and not subject to the restraint of competition, they should, as they do here, control that agency, but its accounts and the contracts which it makes with the carriers should be subject to our jurisdiction. The investigation which we have made in this proceeding is essential to the determination of reasonable charges for a special service which by statute has been included in the transportation duties of respondents. Yet this investigation, so far as it involves the accounts and records of the express company, has been made as a matter of favor. Under the present law we have no access to the records of that company which we could have enforced as a matter of legal right. Plainly this is an indefensible situation which ought not to be permitted to continue."

S. 1550. A bill to amend the Federal Aviation Act of 1958 to provide for the separation of subsidy and airmail rates, and for other purposes.

The statement of purpose and analysis accompanying Senate bill 1550 are as follows:

STATEMENT OF PURPOSE AND NEED FOR PROPOSED LEGISLATION TO AMEND THE FEDERAL AVIATION ACT OF 1958 IN ORDER TO PROVIDE FOR THE SEPARATION OF SUBSIDY FROM AIRMAIL RATES, AND FOR OTHER PURPOSES

The purpose of the proposed amendment is to eliminate the confusion which still arises in the public mind as to the difference between subsidy and service mail pay and to create greater administrative flexibility and other technical advantages in the administration of the Federal Aviation Act.

Under existing law the establishment and payment of compensatory rates for the carriage of airmail are merged in section 406 of the Federal Aviation Act with the establishment and payment of subsidy to air carriers operating under certificates authorizing the transportation of mail by aircraft. Although Reorganization Plan No. 10 of 1953 (67 Stat. 644, effective October 1, 1953) and the incorporation of the substance thereof in section 406(c) of the Federal Aviation Act of 1958 accomplished a major part of the objectives of subsidy separation, by placing responsibility for subsidy payment in the agency which determines the subsidies and by enabling the Congress and the President to maintain effective review of the subsidy program, there still exists some misapprehension in the mind of the general public as to the distinction between payment in compensation for the service of transporting the mail and payment in support of the development of air transportation. Legislative separation will help to eliminate this misunderstanding. Under the proposed legislation, in place of fixing, determining and publishing a single rate which includes an element to be paid by the Postmaster General as service pay and an element to be paid by the Board as subsidy, a separate subsidy rate exclusive of the compensatory pay element would be fixed, determined and published by the Board for payment by the Board.[1]

It should be noted that the proposed legislation does not alter the basic national policy of promoting the sound development of air transportation through Federal aid, nor does the legislation change the aggregate amount of revenue for which any airline is eligible. Moreover, the legislation enhances the opportunity for congressional and public review both of subsidy rates and of service rates. (See "Message from the President of the United States Transmitting Reorganization Plan No. 10 of 1953," H. Doc. No. 160, 83d, Cong., 1st sess.)

To be emphasized is the fact that no attempt has been made to affect existing law otherwise than in the specific respects stated above. To that end, the language of the new statutory provision closely parallels the language of section 406 of the act. However, it has been deemed desirable to make a clarifying change by substituting for the words "each holder of a certificate authorizing the transportation of mail by air" in section 406(a) the words "air carrier authorized to transport mail by air." Inasmuch as the Board has construed the present provision of section 406(a) authorizing it to fix service rates for the transportation of mail to include carriers not holders of certificates, the language of the section has been amended to clarify this point. In the Board's opinion this will not add to the Board's powers but will recognize the practice which prevails under this section.

By retaining the present pattern of section 406 the interpretation and standards which have governed the old section 406 will continue to be generally applicable to the amended provision.

ANALYSIS OF PROPOSED AMENDMENTS TO SECTION 406 OF THE FEDERAL AVIATION ACT

1. Present section 406(a): This is the basic provision authorizing the Board to fix reasonable rates of compensation for the transportation of mail by aircraft. The Board has construed this provision as authorizing it to fix such rates for carriers authorized to transport mail by exemption order as well as carriers holding certificates. The only change proposed in this subsection is to delete the words "holder of a certificate authorizing the transportation of" and inserting in lieu thereof "air carrier authorized to transport." The purpose of this amendment is not to enlarge the Board's powers but to give recognition to the practice which prevails under this section. In addition, language from present subsection (b) is added to make subsection (a) complete in itself as the provision under which service mail pay is to be determined and paid.

2. Present section 406(b): This is the provision under which subsidy is now paid to the air carriers. It also specifies certain factors which the Board shall take into consideration in fixing the service mail rate as well. Under this provision the Board has applied the so-called cost standard. That part of section 406(b) which provides for subsidy compensation in addition to the service rate has in substance been transferred to the proposed new section 406(b) entitled "Subsidy for Essential Aircraft Operation." This new section provides for determination of subsidy as a separate matter. It empowers the Board to fix reasonable rates providing subsidy for any air carrier operating under a certificate authorizing the transportation of mail by aircraft. To the extent applicable, provisions of present sections 406(a), (b) and (c) have been incorporated. Thus existing standards, interpretations, and practices in determining "need" under present section 406(b) will continue to be applicable.

The "need" clause in the present section 406(b) is broken into two parts. The first part provides for the consideration of "need" for compensation for the transportation of mail sufficient to insure the performance of such service. This provision is similar to the normal ratemaking standard found in public utility statutes and, standing alone, would not authorize the inclusion of a subsidy element in mail rates. (See the Board's decision in *Pan American Airways Co.* (of Delaware); *Mail Rates* (1 C.A.A. 220, 252) (1939)). However, if this part of the "need" clause were included in the new section 406(a) as a ratemaking standard, it is conceivable that the language could be construed as granting the Board authority to include subsidy support in service mail rates. In order to clarify the intention not to grant such authority and inasmuch as the provision is not applicable to subsidy, it has been deleted. The second part of the "need" clause, under which subsidy is paid is continued in the new section 406(b) without change.

3. Present section 406(c): The provisions of this section have been incorporated in new sections 406(a) and 406(b).

4. Present section 406(d): This has been carried over substantially unchanged, but has been renumbered section 406(c).

5. Present section 406(e): This has been carried over substantially unchanged, but has been renumbered section 406(d).

6. New section 406(e): This provides that the amendments shall become effective 60 days after enactment, but only with respect to services rendered on and after such date. Provision is made for carrying over pending rates until superseded by new rates under the amended provisions.

S. 1551. A bill to amend the Federal Aviation Act of 1958 in order to authorize free or reduced-rate transportation for certain additional persons.

The statement of purpose accompanying Senate bill 1551 is as follows:

STATEMENT OF PURPOSE AND NEED FOR PROPOSED LEGISLATION TO AMEND THE FEDERAL AVIATION ACT OF 1958 IN ORDER TO AUTHORIZE FREE OR REDUCED-RATE TRANSPORTATION FOR CERTAIN ADDITIONAL PERSONS

The purpose of the proposed amendment is to provide statutory authority to air carriers and foreign air carriers to provide free or reduced-rate air transportation to certain categories of persons in addition to those now specifically provided for in the Federal Aviation Act of 1958.

Section 403(b) of the act permits air carriers and foreign air carriers, under such terms and conditions as the Civil Aeronautics Board may prescribe, to provide free or reduced-rate transportation to certain persons, including their directors, officers, and employees, and their immediate families, as well as persons injured in aircraft accidents and physicians and nurses attending such persons. The proposed amendment would expressly permit such transportation for three additional categories of persons, namely (1) directors, officers, and employees who are retired and their immediate families, (2) the parents of officers and employees (whether or not living in his immediate household), and (3) the members of the immediate family of any person injured or killed in an aircraft accident for the purpose of traveling to and returning from the place in which the accident occurred.

It is to be noted that the proposed legislation is permissive and would permit appropriate carrier action subject to Board control. Hence each carrier would be reasonably free in its discretion to offer the subject transportation free, at reduced rates, or at full fares as it saw fit. Furthermore, carriers would be reasonably at liberty to set up certain restrictions, such as allowing carriage on a space-available basis, which would be consonant with economic considerations.

The Board recommends that the Congress give favorable consideration to the amendment of section 403(b) of the act so as to authorize air carriers and foreign air carriers to provide free or reduced-rate air transportation to the three categories of persons described. The Board believes that provision of such free or reduced-rate transportation will not burden the carriers unduly, that it will allow the carriers to continue practices of long standing which have become imbedded in the industry's public and labor relations structure, and that it would be in the public interest.

S. 1552. A bill to amend section 1005(c) of the Federal Aviation Act of 1958 to authorize the use of certified mail service of process, and for other purposes.

The statement of purpose accompanying Senate bill 1552 is as follows:

STATEMENT OF PURPOSE AND NEED FOR LEGISLATION TO AMEND SECTION 1005(c) OF THE FEDERAL AVIATION ACT OF 1958 TO AUTHORIZE THE USE OF CERTIFIED MAIL FOR SERVICE OF PROCESS, AND FOR OTHER PURPOSES

Section 1005 of the Federal Aviation Act of 1958 specifies the manner in which service of notices, processes, orders, rules, and regulations may be made. Subsection (c) thereof provides that such service may be made (1) by personal service, (2) upon an agent designated in writing, or (3) by registered mail.

When this provision was enacted as a part of the Civil Aeronautics Act in 1938, certified mail was not in existence, and the only method provided by the Post Office for proof

[1] Under existing law, the Board now fixes separate compensatory rates for payment by the Postmaster General, but, in order to arrive at the amount of the subsidy payments the Board must fix, determine, and publish a single, inclusive rate and deduct the amounts paid by the Postmaster General.

of mailing and delivery was through the use of registered mail.

The registered mail service was primarily established to provide greater security for the transmission of valuable mail such as jewelry. In providing such security the Post Office Department has required that registered mail be accounted for as it passes through the various stages of transportation and delivery, and records are kept at the point of origin for 3 years.

In 1955 the Post Office Department determined that a new service should be provided for mail of no intrinsic value but for which a proof of mailing was required by the sender. The new service was established on June 6, 1955, and is known as "Certified Mail." This mail is not given the special protection provided for registered mail, but in other respects it provides essentially the same service as registered mail. Certified mail thus affords a cheaper means for the transmission of documents or other matter now permitted to be served or transmitted by registered mail. Proof of mailing is available through the system of receipts given at the time of mailing.

During the 12-month period August 1956 through July 1957 the Board dispatched some 6,000 pieces of registered mail in connection with service of processes. Service could have been accomplished just as well, and at less expense to the Government, if the documents could have been sent by certified mail. The fee for registered mail is 50 cents as compared with 20 cents for certified mail.

Precedent for the proposed legislation may be found in the recent enactment by Congress of Public Law 85-259, approved September 2, 1957, which authorizes the use of certified mail as well as registered mail for summoning persons for jury duty.

It should be emphasized that the proposed amendment would merely authorize the use of certified mail as an additional or alternative method for service of process. Registered mail could continue to be used at the agency's discretion.

S. 1553. A bill to amend the Federal Aviation Act of 1958 to provide for the regulation of rates and practices of air carriers and foreign air carriers in foreign air transportation, and for other purposes.

The statement of purpose accompanying Senate bill 1553 is as follows:

STATEMENT OF PURPOSE AND NEED FOR PROPOSED LEGISLATION TO AMEND THE FEDERAL AVIATION ACT OF 1958, TO PROVIDE FOR THE REGULATION OF RATES AND PRACTICES OF AIR CARRIERS AND FOREIGN AIR CARRIERS IN FOREIGN AIR TRANSPORTATION, AND FOR OTHER PURPOSES

The proposed legislation would grant to the Board regulatory authority over passenger and property rates and practices in foreign air transportation which it now lacks.

Title IV of the Federal Aviation Act of 1958 (formerly the Civil Aeronautics Act of 1838) imposes upon every air carrier the duty of providing interstate and overseas air transportation at reasonable rates. Title X of the act authorizes the Board under certain circumstances to prescribe the rates for interstate air transportation, to prescribe maximum or minimum or maximum and minimum rates for overseas air transportation, and to suspend operation of new tariffs for interstate or overseas air transportation pending determination of the lawfulness of such tariffs. But the act gives the Board practically no direct authority over the rates and practices of either United States or foreign air carriers engaged in foreign air transportation. The sole power now possessed by the Board (apart from the Board's power to disapprove agreements among air carriers and foreign air carriers fixing rates and practices in foreign air transportation) is that of ordering a carrier in foreign air transportation to remove a discrimination in its rate structure if, after notice and hearing, such a discrimination is found to exist. Thus, the Board has no summary power to stop any carrier in foreign air transportation from placing into effect any rate, fare, or practice it elects; and even after full hearing its power to order any change is restricted to the limited area of removing discrimination.

Over the years, the United States together with other nations has participated in conferences and negotiations seeking the orderly development of international air services. However, in negotiations in which efforts have been made to improve the position of the United States in meeting foreign air transportation competition, this Government has found on numerous occasions that its international bargaining power has been restricted by the limited authority over rates and practices in foreign air transportation which is now possessed by the Board.

The increased necessity for vesting in the Civil Aeronautics Board the power to regulate rates and practices in foreign air transportation arises in part from a course that the bilateral air transport agreements with foreign countries have taken in recent years. Foreign countries, like the United States, assert complete national sovereignty in respect of the air space overlying their respective territories. Such claims have been internationally recognized in the convention on international civil aviation drawn up at Chicago in December 1944. Under the provisions of that convention, each contracting country retains complete freedom of action with respect to the admission into its territory of foreign flag scheduled airlines.

One of the conditions which many of the countries have placed on the entry into their territories of American-flag carriers is that passenger and cargo rates must be fixed at fair and reasonable levels. The United States has found itself handicapped in the past in entering into negotiations with foreign governments because of the lack of statutory power in the Civil Aeronautics Board to require that United States air carriers operating into foreign countries establish just and reasonable rates and practices. If the act is amended as proposed, the United States could fully undertake the obligation to see to it that its carriers adhere to a reasonable rate structure.

In the absence of such power in the Board, foreign countries have insisted on retaining the summary right to prevent U.S. carriers from operating into their territory at any rate which they deem to be unfair or unreasonable. While provision is made in the various agreements to which the United States has become a party for the review of such a decision on the part of a foreign country by an arbitral tribunal or by the International Civil Aviation Organization, the foreign country has uniformly retained the right to prevent operations at the disputed rate pending such review. If the act were amended as proposed so as to give the Board the power to prescribe the rates and practices of air carriers in foreign air transportation, it is believed that foreign countries would be willing to permit the continued operation of an American carrier at the rates determined by the Board, even where such rates were thought by the foreign country to be unreasonably high or low, pending final review by an arbitral tribunal or by the International Civil Aviation Organization.

The consequence of the Board's lack of authority under present law is that U.S. air carriers, far from being independent to fix whatever rates they choose, are subject to almost complete rate control by the foreign countries to which they operate. The enactment of rate control legislation would bring into force benefits in the negotiating of bilateral agreements by placing such control in large part in the hands of the U.S. Government. In effect, passage of this legislation would give the United States control over the rates and practices of our carriers which is now in foreign hands.

Likewise, passage of this legislation would give the United States the same degree of control over the rates and practices of foreign air carriers operating into U.S. territory as the foreign countries now have in respect of the rates and practices of U.S. air carriers which fly into their territories, namely, the right to insist that the passenger and cargo rates of such foreign air carriers operating into U.S. territory be fixed at fair and reasonable levels and that the practices or conditions of carriage which are embodied in the tariffs, waybills and tickets of such foreign air carriers be free from objectionable provisions.

The Board believes that there is no basis for a contention that bringing the Board's statutory authority over international rates and practices on a par with that of other governments will derogate or be in variance from this country's support of the International Air Transport Association (IATA) as the primary instrument for establishing and maintaining a sound and fair rate structure for international air services. On the contrary, the Board believes that the possession of effective regulatory power over international air rates and practices by the respective governments is the only proper basis for the delegation of initial ratemaking powers to an organization of international air carriers, and that neither the United States nor any other government should delegate or has delegated to IATA the governmental responsibility of insuring that the international rate structure is fair to the traveling and shipping public and in other respects is in the public interest. In summary, the Board believes that effective Government control over the international rate structure, rather than being an obstacle to multilateral air-carrier action though IATA, is essential to the proper and successful operation of the carriers' multilateral rate machinery. In this connection, it is pointed out that need for Board regulatory action might arise from failure of IATA to achieve agreement in respect of certain rates and practices, from governmental disapproval of IATA agreements, and also from rate actions by air carriers not members of IATA.

Under the present act, the Board lacks authority to regulate the rates charged by carriers for military contract air transport services between the United States and foreign points. Under conditions of excess capacity, it is possible for destructive competition for military contracts to develop, leading to the performance of air transport services at uneconomic rate levels. On the basis of recent information, it appears that such a situation may now be developing. Although full regulatory control over carriers performing military contract air transport services will require additional legislation not embodied in the present request, a prerequisite is that the Board be granted the control authority over the rates and practices of air carriers and foreign air carriers in foreign air transportation, which is the subject of the present request.

For the reasons outlined above the Board believes that it should be given authority over rates and practices of air carriers and foreign air carriers in foreign air transportation. However, while under section 1002(d) the Board's function to determine and prescribe rates and practices in interstate and oversea air transportation is mandatory in that it must be exercised if on the basis of a record made in quasi-judicial proceeding the Board is of the opinion that a rate or practice is contrary to statutory standard, greater flexibility is required in the national interest in the field of international air transportation. Such additional flexibility

is assured by stating the Board's rate-fixing powers in foreign air transportation in a separate subsection which uses discretionary rather than mandatory terms.

The Board should also be given the same discretionary power to suspend the rates and practices of air carriers and foreign air carriers in foreign air transportation pending hearing as it now has in respect of domestic transportation. Most foreign governments have the power to suspend U.S. air carrier rates, and the United States should not voluntarily continue to tie its own hands so as to prevent it from taking like action where it is needed in the public interest.

In addition to giving the Board discretionary power to control the rates and practices of air carriers and foreign air carriers in foreign air transportation, the proposed bill makes other changes affecting the duties and obligations of air carriers and affecting the Board's regulatory authority in respect of such duties and obligations. Specifically, the provisions of subsection 1002(i) of the act, giving the Board power to prescribe through services and joint rates, are made applicable to air carriers in interstate, oversea and foreign air transportation. These changes, affecting air carriers but not foreign air carriers, are considered desirable by the Board for the reason that the Board believes that air carriers should be subject to the same duties and obligations and regulatory control in respect of services, rates, and divisions in foreign air transportation as in interstate and oversea air transportation.

There is attached a section-by-section analysis of the proposed bill and a comparison with existing law.

SECTION BY SECTION ANALYSIS OF PROPOSED BILL TO AMEND THE FEDERAL AVIATION ACT OF 1958

1. Section 1 of the bill amends subsection (d) of section 1002 of the act, which gives the Board authority to prescribe rates and practices of air carriers in interstate and overseas air transportation, with a proviso that as to overseas air transportation the Board may prescribe only a "just and reasonable maximum or minimum or maximum and minimum rate, fare, or charge," by changing the colon following the word "effective" to a period and striking out the following: "*Provided*, That as to rates, fares, and charges for overseas transportation, the Board shall determine and prescribe only a just and reasonable maximum or minimum or maximum and minimum rate, fare or charge." The effect of the above changes is to give the Board the same authority to prescribe the rates and practices of air carriers in overseas transportation as the Board now has in respect of interstate transportation. The elimination of the proviso is necessary to prevent the anomaly of the Board's having less authority over rates and practices in overseas air transportation than in foreign air transportation.

2. Section 2 of the bill amends subsection (e) of section 1002 by inserting the words "foreign air carrier" and "foreign air carriers" after the words "air carrier" and "air carriers" where they appear in the subsection. Section 1002(e) constitutes the rule of ratemaking and sets forth various criteria for the determination, inter alia, of the justness and reasonableness of rates and fares for the transportation by air of persons and property. Since other sections of the bill confer upon the Board the power to pass upon the justness and reasonableness of foreign air carrier rates, it is appropriate to make the standards of section 1002(e) applicable to foreign air carriers as well as U.S. flag carriers. This is accomplished by section 3 of the bill. In this connection it may be noted that under section 1102 of the act, the Board is directed to exercise and perform its powers and duties consistently with any obligation assumed by the United States in any treaty, convention, or agreement, and to take into consideration any applicable laws and requirements of foreign countries.

3. Section 3 of the bill amends subsection (f) of section 1002 of the act. This subsection now permits the Board to exercise the limited power of ordering an air carrier or a foreign air carrier to remove a discrimination, preference, or prejudice in its foreign air transportation rate structure if, after notice and hearing, such a discrimination, preference, or prejudice is found to exist. It is predicated upon the fact that the Board does not now have the power to otherwise regulate the rates and practices of air carriers and foreign air carriers in foreign air transportation. It, therefore, has been rewritten to grant the Board the power to hold a hearing in respect to the question whether a rate or practice in foreign air transportation is unreasonable or unjustly discriminatory or preferential. In case, upon such a hearing, the Board is of the opinion that the rate or practice is contrary to statutory standards, the Board is given discretionary authority to alter the rate or practice to the extent necessary to correct unreasonableness or discrimination, and to order discontinuation thereof by the carrier. The Board also has further discretion to prescribe the lawful practice or rate, or the maximum and/or minimum of the rate.

4. Section 4 of the bill amends subsection (g) of section 1002 of the act, which gives the Board power to suspend the rates and practices of air carriers in interstate and overseas air transportation pending hearing, (1) by striking out the words "interstate or overseas", (2) by changing the parenthetical phrase following the word "joint" to read "(between air carriers, between foreign air carriers, or between air carriers and foreign air carriers)" and (3) by inserting following the words "air carrier" wherever they appear in the subsection the words "or foreign air carrier." The effect of the above changes is to give the Board the same authority to suspend the rates and practices of an air carrier or foreign air carrier in foreign air transportation pending hearing as the Board now has in interstate and overseas air transportation. By striking the words "interstate and overseas" the Board is given authority to suspend, pending hearing, the operation of any tariff filed by an air carrier, and this would include tariffs to be effective in foreign as well as in interstate and overseas air transportation. The change in the parenthetical phrase is necessary to give the Board suspension authority in respect of joint rates between air carriers and foreign air carriers and between foreign air carriers in foreign air transportation as well as between air carriers. By inserting the words "or foreign air carrier" following the word "air carrier" wherever they appear in the subsection, the Board is given the authority to suspend the rates and practices of foreign air carriers in foreign air transportation pending hearing.

5. Section 5 of the bill amends subsection (i) of section 1002 of the act, which gives the Board power to prescribe through services and joint rates, by inserting the words "for air carriers" after the word "establish"; by striking out the words "interstate or overseas"; and by changing the colon following the word "operated" to a period and striking out the following: "*Provided*, That as to joint rates, fares, and charges for overseas transportation the Board shall determine and prescribe only just and reasonable maximum or minimum or maximum and minimum joint rates, fares, or charges." The effect of inserting the words "for air carriers" and of striking the words "interstate or overseas" is to make the provisions of the subsection applicable to air carriers in interstate, overseas and foreign air transportation but not to foreign air carriers in foreign air transportation. The elimination of the proviso is necessary to prevent the anomaly of the Board's having less authority to establish through service and joint rates in overseas air transportation than in foreign air transportation.

Section 6 of the bill provides that the changes made in the act shall take effect 90 days after enactment of the legislation.

S. 1554. A bill to amend the Federal Aviation Act of 1958 so as to authorize the Civil Aeronautics Board to regulate the depreciation accounting of air carriers.

The statement of purpose accompanying Senate bill 1554 is as follows:

STATEMENT OF PURPOSE AND NEED FOR PROPOSED LEGISLATION TO AMEND THE FEDERAL AVIATION ACT OF 1958 SO AS TO AUTHORIZE THE CIVIL AERONAUTICS BOARD TO REGULATE THE DEPRECIATION ACCOUNTING OF AIR CARRIERS

In common with other regulatory acts, and carrying forward the provision of section 407(d) of the Civil Aeronautics Act, the Federal Aviation Act of 1958 directs that the Board shall prescribe a system of accounts to be kept by air carriers.

Under the authority of section 407(d) to "prescribe the forms of any and all accounts," the Board has proceeded, since its establishment, to prescribe the uniform system of accounts required to be kept by all certificated air carriers. The controlling purpose of such a uniform system of accounts is to provide the Board with financial statements which fairly reflect the financial condition of the air carrier, on the one hand, and the operating results of the carrier for a given period of time, on the other hand. The purpose of the system of accounts is to prescribe uniform practices which will provide, in general substance, comparable information in respect to each of the various carriers subject to the accounting regulations. Financial statements would, of course, be useless to the Board unless they fairly reflected the actual financial condition of the carriers and the actual operating results of the services performed for the period reported.

In the past, the Board has, in general, prescribed rates of depreciation as a part of its ratemaking process. The depreciation rates so prescribed through the ratemaking proceedings of the Board have generally been used by air carriers for accounting purposes. So long as the depreciation rates used by the various air carriers for accounting purposes fairly reflected the depreciation costs as determined in the rate proceedings, further prescription of these rates through accounting regulation would have served no useful purpose. Moreover, until recent years, the widespread dependence of the industry upon Federal subsidies necessitated the frequent review by the Board of the operating results of the carriers, including an appraisal of the reasonableness of charges to expense for depreciation on property and equipment which resulted in bringing the depreciation practices of the carriers under frequent review by the Board. However, with the emergence of a large part of the industry from dependence upon subsidy, the opportunity for such frequent review of the reasonableness of depreciation charges to expense by the Board no longer exists. Nevertheless, the need for reliable financial data from which to appraise the true financial condition and operating results of the various air carriers continues. In recognition of this need, the Board undertook to prescribe the depreciation accounting practices of air carriers by the issuance of appropriate regulations. (E.R. 224, adopted Nov. 18, 1957.) However, the Board's authority to issue such a regulation was challenged and appealed to the courts. The U.S. District Court for the Dis-

trict of Columbia sustained the action of the Board, but on appeal to the U.S. Court of Appeals for the District of Columbia Circuit this decision was reversed. The Board sought review of this decision by the Supreme Court, but that Court declined to take the case and the Board's application for writ of certiorari was denied on November 10, 1958.[1] Consequently, in order that the Board may effectively carry out its functions with respect to the depreciation accounting practices of air carriers, legislation is essential.

The requested legislation would not involve any departure from well established concepts pertaining to the regulated industries generally. On the contrary, it would bring the powers of the Civil Aeronautics Board in this field in line with similar powers already expressly given to other agencies such as the Interstate Commerce Commission, the Federal Power Commission, and the Federal Communications Commission. (See 49 U.S.C., sec. 20(4), sec. 220(c), and sec. 913(d), 15 U.S.C. 717h(a), 16 U.S.C. 825a(a), and 47 U.S.C. 220(b).)

Depreciation expense constitutes probably the most critical elements in the determination of the financial condition of a business inasmuch as, unlike virtually all other elements, it does not lend itself to objective physical measurement. Unless uniformly reported by the carriers in the manner recognized by the Board for regulatory purposes the Board will be left unprotected against potential misinterpretation of the reported data. This would necessarily follow from the fact that the Board's staff could not be reasonably expected to independently recast each carrier's report each and every reporting period on a time basis which would meet the Board's recurrent operating needs.

The amount of depreciation charged to expense involves the substance of the accounts, the control over which is necessary to provide financial statements that produce a fair presentation of the carriers' financial condition and operating results for the periods reported to the Board. Insofar as the impact upon the carriers' financial condition and operating results is concerned, improper charges to expense for depreciation would undermine the integrity of the financial statements in exactly the same manner as inaccurate charges for salaries, rents, and other operating expenses of the carriers. Depreciation is becoming an increasingly important operating expense for air carriers with the addition of new and more expensive aircraft equipment. Errors in the reporting of depreciation tend to accumulate over a period of years and are difficult to correct in the accounts of carriers once the inaccuracies have become rooted over an extended period of time. Improper reporting of depreciation expense will distort the accounts and financial statements of air carriers to such an extent that comparability will be seriously undermined or completely destroyed. Since the property and equipment on which depreciation is computed will continue in service over a period of years the distortion from misstatement of depreciation charges accumulates with the passage of time. Accordingly, the prescription of depreciation rates by the Board will prevent such comparative distortion and thus increase proportionately the relative reliability of the financial statements of certificated air carriers from the point of view of both the industry and the Board as well as the general public.

Vice Chairman Gurney is opposed to any legislation which would empower the Board to prescribe depreciation accounting practices of the air carriers. He believes that depreciation practices are primarily a function of management and any regulatory supervision over the details thereof constitutes an unnecessary interference with the operation of an air carrier. In view of the provisions of the Internal Revenue Code which afford business a choice of different methods of depreciation for tax purposes, he sees no reason for any additional legislation.

The letter presented by Mr. MAGNUSON is as follows:

CIVIL AERONAUTICS BOARD,
Washington, March 17, 1959.

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce, U.S. Senate, Washington, D.C.

DEAR SENATOR MAGNUSON: Pursuant to your request the Civil Aeronautics Board is pleased to submit to you its legislative program for the 86th Congress. The Board's program consists of 13 items as follows:

Item 1: To give the Board jurisdiction to impose civil penalties in additional cases.

Item 2: To authorize the issuance of certificates for supplemental service.

Item 3: To amend the judicial provisions of the act so as (a) to assure opportunity for the Board's participation and representation in court proceedings through its own counsel as a matter of right, and (b) to provide that nonrecord determinations of the Board shall be reviewable in the Court of Appeals.

Item 4: To authorize elimination of hearing in certain cases under section 408.

Item 5: To provide that Board investigators shall not give (1) expert testimony in private damage suits or (2) factual testimony with respect to aircraft accidents officially investigated by them if the information is reasonably available elsewhere or such testimony could have been given by a deposition.

Item 6: To prohibit certain practices regarding passenger ticket sales and reservations.

Item 7: To provide that the policy of the Department of Defense and other agencies of the Government, in arranging for air transportation, should be to utilize the facilities of civil aircraft to the maximum extent consistent with economical operations, the national defense, and national security considerations.

Item 8: To clarify and broaden the provisions of the Federal Aviation Act relating to the power of the Civil Aeronautics Board to audit the books and records of the domestic affiliates and associates of air carriers.

Item 9: To separate mail pay and subsidy.

Item 10: To amend the Federal Aviation Act in order to authorize free or reduced rate transportation for certain additional persons.

Item 11: To authorize the use of certified mail in place of registered mail.

Item 12: To give the Board authority over rates and practices in foreign air transportation.

Item 13: To authorize the Board to regulate the depreciation accounting of air carriers.

The Board appreciates your interest in its legislative program and hopes that expeditious consideration can be given to the enactment of these proposed bills during the current session of Congress.

The Bureau of the Budget has advised that it has no objection to the submission of these items.

Sincerely yours,

JAMES R. DURFEE,
Chairman.

LABOR-MANAGEMENT REPORTING AND DISCLOSURE ACT OF 1959

Mr. KENNEDY. Mr. President, on behalf of myself, and Senators ERVIN, HILL, COOPER, JAVITS, CHURCH, WILLIAMS of New Jersey, RANDOLPH, MURRAY, MORSE, MCNAMARA, CLARK, SPARKMAN, HUMPHREY, and ENGLE, I introduce a clean bill on labor-management reform. This morning the Committee on Labor and Public Welfare ordered this bill reported to the Senate by a vote of 13 to 2. Soon after the Easter recess, the report will be filed in the Senate, and I am hopeful that we shall be able to proceed promptly to its consideration.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1555) to provide for the reporting and disclosure of certain financial transactions and administrative practices of labor organizations and employers, to prevent abuses in the administration of trusteeships by labor organizations, to provide standards with respect to the election of officers of labor organizations, and for other purposes, introduced by Mr. KENNEDY (for himself and other Senators), was received, read twice by its title, and referred to the Committee on Labor and Public Welfare.

HOME GARDEN PROGRAM FOR NEEDY FAMILIES

Mr. COOPER. Mr. President, I introduce, for appropriate reference, a bill to provide a home garden program for needy families; and I ask unanimous consent that an explanatory statement be printed in the RECORD, and be followed by the text of the bill; and that the bill lie on the desk through Friday, March 27, in case other Senators desire to join in sponsoring it.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD, and lie on the desk, as requested by the Senator from Kentucky.

The bill (S. 1561) to establish a home gardening program to assist needy persons in supplementing their food supplies, introduced by Mr. COOPER, was received, read twice by its title, referred to the Committee on Agriculture and Forestry, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of Agriculture (hereinafter referred to as the "Secretary") is authorized to establish a program for making grants to States to enable the States to assist needy persons to supplement their diets by growing home gardens.

SEC. 2. Grants under this Act shall be made only to States which shall have submitted to the Secretary a satisfactory plan for administration of such grants which shall—

(1) provide for the use of the funds so granted to make available to needy persons, particularly persons receiving or eligible to receive agricultural commodities under surplus food distribution programs authorized by section 32 of Public Law 320, Seventy-fourth Congress (7 U.S.C. 612c) or section 416(3) of the Agricultural Act of 1949 (7 U.S.C. 1431), supplies, materials, and technical advice and assistance necessary to enable them to plant and care for home gardens;

(2) designate one or more agencies or officials of the State to be responsible for carrying out such plan;

(3) provide that any agency or official so designated will make such reports as may be required by the Secretary concerning the expenditure of funds granted under this Act; and

(4) provide for cooperation with interested public or voluntary nonprofit organizations in carrying out such plan.

SEC. 3. (a) The Secretary shall apportion the sums appropriated pursuant to section 5 among the States on the basis of the number of needy persons, as estimated by the Secretary, in such States receiving agricultural commodities under surplus food distribution programs authorized by section 32 of Public Law 320, Seventy-fourth Congress (7 U.S.C. 612c) or section 416(3) of the Agricultural Act of 1949 (7 U.S.C. 1431).

(b) The Secretary shall from time to time certify to the Secretary of the Treasury the amounts to be paid to the States under the apportionments made pursuant to subsection (a). The Secretary of the Treasury shall, through the Fiscal Service of the Treasury Department and prior to audit or settlement by the General Accounting Office, make payments of such amounts at the time or times specified by the Secretary of Agriculture.

SEC. 4. The Secretary is authorized to make available to State agencies or officials designated under section 2(2) such technical and other assistance as may be necessary to enable them to carry out the provisions of this Act.

SEC. 5. There are hereby authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act.

SEC. 6. This Act shall terminate on June 30, 1960.

The explanatory statement presented by Mr. COOPER is as follows:

STATEMENT BY SENATOR COOPER

Thousands of people in eastern Kentucky and West Virginia, and in many other States, are hungry today. In the United States as a whole, over 5 million persons are receiving packages of cornmeal, flour, rice, and dried skim milk from Government surplus stocks. In Kentucky some 250,000 persons are among this number. Without these meager supplies, many would be starving. Even with this food from Government surplus stocks, the situation of many families is appalling—especially in a country known for its production of food and its general prosperity.

Hunger, and actual starvation, at any time and place requires us, as a people of religious belief, living in a land of plenty, to extend help. And where hunger exists at home, it is intolerable, and cannot be ignored.

The fact remains that many thousands are unemployed, and have exhausted their unemployment compensations. Others are old and infirm, incapacitated, or otherwise must depend on relief. Their first requirement is food.

Since last fall, I have urged the Secretary of Agriculture, and since January I have urged the Congress, to provide a better variety of food to needy persons in this country—to supplement the drab and meager staples available from Government-owned stocks, which is all that many of these people have to eat, day after day. I hope that action to do so will be taken promptly.

Now it is spring. Most of these needy people are not helpless. They want to work, and to help themselves. In Harlan County, Kentucky, for example, officials in charge of the food distribution program are asking 17,000 recipients of surplus food if they will grow a garden—provided seed and other minimum essentials can be obtained. Magistrates are organizing plowing teams to prepare the ground for home gardens among the needy in their communities.

We all recall the victory gardens of World War II—when 20 million family gardens produced 42 percent of the fresh vegetables consumed in this country. Eight million tons of fresh vegetables were produced annually in victory gardens during the war, and in 1945 housewives canned nearly 3½ million tons of fruits and vegetables. This tremendous program was carried out by local and individual initiative, under the guidance and leadership of the Department of Agriculture.

I urge that this approach be used to help our thousands of hungry families help themselves. I propose home gardens—from which needy persons and families can add to their means homegrown fresh vegetables and greens. Such home gardens could also provide fruits and vegetables for canning, to supplement their diets next winter.

I ask the Secretary of Agriculture to immediately explore means of encouraging such an effort—and to provide information and assistance to needy families who wish to raise a family garden.

It may be that no new authority or appropriation is needed for such a worthwhile program. But because these people are known to have few, if any, resources, I believe in most cases they will need to be given seed, perhaps some fertilizer, and certainly advice and information. The cost of these minimum essentials is small. A few pennies will buy seed which can provide a second helping of food—fresh garden vegetables to put on their plates alongside the first helping of cornmeal mush or rice they now have.

I propose that a modest sum—perhaps amounting to $1 per person on surplus food rolls last year—be allocated to the States so that they can immediately take steps to make available to needy counties and needy persons the minimum essentials for planting and growing home gardens. I can think of no expenditure which could produce such proportionately large results—no modest effort which could do more real good—than encouraging home gardens for hungry families.

There may already be funds available in the Department of Agriculture which could be used for this purpose. Or the President may have funds which could be allocated to assist the States which wish to launch a home garden program this spring. We already provide emergency feed for livestock in disaster areas. I ask that we at least provide seed to grow food for people in emergency areas like that declared by the Governor in 25 eastern Kentucky counties.

If authority and funds cannot be found, I will introduce a bill to provide them. I have already talked to a number of leaders who were associated with the victory garden program. I believe civic and community groups, clubs, farm groups, private business, and State and local organizations would be glad to help in such a human effort.

I have in mind a home garden program under the leadership and guidance of the Department of Agriculture, carried out by the States, which are most familiar with the problems of their communities and the needs of their people. In extending a home garden program to needy people, the State agencies already handling the food distribution program could be used. I am sure that the land-grant colleges in each State could give advice as to the kind of gardens most suitable for each area, and as to the essentials which may need to be supplied for successful home gardens. The Extension Service, through the county farm agents, could provide invaluable advice and guidance locally. I have no doubt that many others will want to help, and that the States can coordinate the efforts of civic and private groups.

Home gardens for needy families would provide food—and food of exactly the kinds needed to supplement the few staples they now receive. Home gardens would give these people hope—not only the satisfaction and hope of helping themselves, but through the very act of working with the miracle of growth. In many cases, garden projects would add the dignity of constructive effort to the lives of those confronted by lack of work.

People who know how to produce their own food are never defeated, for they have a source of strength which springs from the soil. We need to support that tradition of self-reliance, and that independence of spirit which meets the future with confidence—but which is eroded by lack of work, and especially by hunger.

I hope the Secretary of Agriculture, or the Under Secretary, who also has a special regard for people in need, will proclaim a home garden program for surplus food recipients. I know he can mobilize the Extension Service and other interested agencies to carry it forward successfully, just as was done with the much more ambitious victory gardens. In fact, I believe there is a garden program now for each State, maintained by the Extension Service, which could quickly be adapted for this purpose.

I congratulate the people of Harlan County, Ky., for their initiative in coming forward with this great idea. And I commend to my colleagues the merits of such a self-help program for the needy persons and unemployed in their own States.

AMENDMENT OF FEDERAL COAL MINE SAFETY ACT

Mr. COOPER. Mr. President, on behalf of myself, the senior Senator from Virginia [Mr. BYRD], the junior Senator from Virginia [Mr. ROBERTSON], and my colleague from Kentucky [Mr. MORTON], I introduce, for appropriate reference, a bill to amend the Federal Coal Mine Safety Act. I ask that the text of the bill be printed at this point in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1562) to amend the Federal Coal Mine Safety Act in order to remove the exemption with respect to certain mines employing no more than 14 individuals, introduced by Mr. COOPER (for himself, Mr. BYRD of Virginia, Mr. ROBERTSON, and Mr. MORTON), was received, read twice by its title, referred to the Committee on Labor and Public Welfare, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. That section 201(b) of the Federal Coal Mine Safety Act be amended to read as follows:

"This title shall not apply to any mine in which no more than fourteen individuals are regularly employed underground, except that the following provisions shall apply to such mines: Sections 201; 203(a); 204; 205; 207 (a), (b), (c), (d), (e), (f), (i), and (j); 208; 210; 211; 212(c); 213; 214; 215. The provisions of section 203 (e) and (f) shall be applicable to such mines without regard for the requirement of a State approved plan."

SEC. 2. Add a new title III as follows:

"TITLE III—STUDY AND SURVEY OF MINE SAFETY BY BUREAU OF MINES

"SEC. 301. (a) The Bureau of Mines is directed to make a survey and study of mine

safety for all mines covered by this Act. Hearings shall be held in each State which produced as much as two million tons of coal during either the years 1955 or 1956. Appropriate notice shall be given to the Governors of such States, the official in charge of the mine safety program of such State, and to employers and representatives of employees. Hearings shall also be held in the District of Columbia after giving appropriate notice.

"(b) The Bureau of Mines will prepare separate tables for title I and title II mines, by States, showing among other things:

"(1) Number of mines;

"(2) Number of employees;

"(3) Number of man-hours of work in mines under each title;

"(4) Production of coal in mines under each title;

"(5) Fatalities and causes of each for each year beginning with the calendar year 1946, where records are available;

"(6) Injuries in title I and title II mines with their causes, for each year beginning with the calendar year 1946;

"(7) Number of violations reported for title I and title II mines, for each year beginning with the calendar year 1946.

"(c) The Bureau of Mines will in conjunction with State mine safety agencies, make a study of (1) the incidence and causes of roof and rib falls, and measures which it recommends to reduce and prevent such rib and roof falls; and (2) educational training programs. The findings and recommendations of the Bureau shall be submitted to the appropriate State officials and to the appropriate committees of the Congress.

"(d) The Bureau of Mines will make a study of safety conditions in mines employing fourteen or fewer employees to determine if the provisions of the Act now applicable to title II mines are properly applicable to title I mines in the sense that they would materially improve safety conditions in such mines, safety being the primary consideration of such study, but taking into account the cost of said measures, the economic effect on such mines, including their ability to remain in production and compete with title II mines, if all or any part of the provision of this Act or the Mine Safety Code should be made applicable to title I mines.

"(e) The Bureau of Mines shall report its findings and recommendations to the President, the Secretary of Interior, the President of the Senate, and the Speaker of the House within 6 months after enactment. It shall provide copies of its findings and recommendations to the Governors and mine safety agencies of all affected States within four and one-half months after enactment, with the request that they report to the Bureau their comments and recommendations on such reports by thirty days thereafter. Copies of such State reports shall be included in the report of the Bureau."

Mr. COOPER. Mr. President, section I of the bill would make applicable to all coal mines—regardless of the number of employees—the provisions of the Federal Coal Mine Safety Act, which authorizes a Federal mine inspector to order the withdrawal of all miners from a mine when he finds "danger that a mine explosion, mine fire, mine inundation, or man-trip or man-hoist accident will occur in such mine immediately or before the imminence of such danger can be eliminated," and to prohibit their reentering the mine until the danger has been eliminated.

Such power to withdraw miners and to keep a mine closed cannot today be exercised by a Federal mine inspector in mines employing 14 or less persons, even though imminent danger exists—danger which could cause injury or death to miners.

According to the table submitted in the course of hearings last year by the Honorable Marling J. Ankeny, Director, U.S. Bureau of Mines, there were in 1957, 7,659 mines employing 14 or less persons; and thousands of miners are employed in such mines. Section I of my bill would extend to these miners the protection against imminent danger that the Federal Coal Mine Safety Act now extends to larger mines—those employing more than 14 persons.

Questions always arise as to procedures by which a mine may be reopened and its miners returned to work, after it has been closed because of conditions which create imminent danger.

Under the Mine Safety Act, unless the State has a safety plan which has been approved by the Bureau of Mines, exclusive jurisdiction and power to reopen a mine or to order it to remain closed is maintained by the Federal Government through the Bureau of Mines, subject to review by the courts.

In all such cases, a mine owner and miners who had taken steps to correct the dangerous conditions, and who believed the mine safe for reopening, would be compelled to present their case, if reopening was denied by a Federal inspector, through a difficult and expensive chain of procedures. In many instances the small mine owner would be unable to undertake this very complicated procedure.

The bill I introduce provides a speedy and fair procedure for determining whether conditions of imminent danger in a closed mine have been corrected, and whether the mine is ready for reopening. It is the exact procedure now provided in the Federal Mine Safety Act for mines employing over 14 persons, when the State has a mine safety plan that has been approved by the Bureau of Mines.

I shall explain this procedure by referring to the language used by the Committee on Labor and Public Welfare in Senate Report No. 1963, dated July 25, 1958, which states that presently, under section 203(e) of the act, if a State has a State plan that has been approved by the Bureau of Mines, the operator of a mine that has been closed because of danger of imminent disaster may request an inspection of the mine by a State inspector. If the State inspector does not concur in the closing order, the mine must remain closed; but the owner of the mine may make application to the chief judge of the U.S. district court for the district in which the mine is located for the appointment of an independent inspector to inspect the closed mine. Unless the appointed inspector concurs in the closing order, it ceases to be effective, and the mine may be reopened. The committee amendment makes this review procedure applicable to presently exempted mines ordered closed under the provisions of the amendment, without requiring, as a condition of resorting to this procedure, that the State in which the mine is located have or adopt a State plan approved by the Bureau of Mines.

Section II of the bill I now introduce is very clear. It would direct the Bureau of Mines to make a study of safety conditions for all mines, regardless of the number of miners employed. Hearings would be held in the major coal-producing States, so that State mine-safety officials, miners, unions representing miners, and mine operators in each of said States would have the opportunity to testify about conditions in the mines of their State, and to make recommendations to improve mine safety.

In addition, this bill would direct the Bureau of Mines to conduct a study of mine safety, with special emphasis on the major cause of mine accidents—namely, roof and rib falls. It would also require a study of educational and training programs for mine employees on safety measures.

During the hearings last year on amendments to the Federal Mine Safety Act, one amendment proposed would have applied all the provisions of the Federal Mine Safety Act to every mine. Small mine owners testified that many of these provisions were not applicable to small mines, and that they would not increase safety. They testified that to require by law small mines to undertake unnecessary expenditures would put many small mines out of business and would throw thousands of miners out of work.

I cannot say definitely that this would be the case; but I believe that the Congress should not take drastic action without knowing whether it is necessary to improve mine safety. Unemployment, hunger, and every other element of want and distress prevail today in the coal-mining areas of Kentucky and other States. If, before we obtain the facts, other mines are closed unnecessarily by our action, we shall contribute to this distress, and we may deny to the States an opportunity to recover their natural wealth in coal.

Mr. President, I do not believe that any responsible Member of this Chamber or, indeed, any other responsible person in the United States does not honestly and sincerely support the principle of increased mine safety. Only last year the Committee on Labor and Public Welfare found that there was a lack of reliable and convincing statistics upon which to base constructive legislation on this very important and vital subject. We concluded that it would be most useful—and in fact essential—to have the Bureau of Mines conduct hearings in the States with the Nation's heaviest concentration of coal mines, and to report its findings, in order that we might legislate intelligently on the matter. We recognized, however, that Federal inspectors should not be hindered when, in their judgment, there was a danger of serious disaster in permitting operation of any mine—without regard to its number of employees.

Mr. President, that was why we included the provision to enable a Federal inspector to close a mine whenever a condition of imminent danger was found to exist. I am sorry that provision was not enacted. If it had been, some of the disasters which recently

have occurred might have been prevented.

Only a few days ago there occurred in Tennessee a mine disaster in which eight or nine lives were lost. I cannot say that if the bill we reported last year had been enacted, that accident would have been prevented; but I can say that the enactment of that bill or the enactment of a similar bill will help prevent similar accidents in the future.

Mr. President, the problem of amending the Coal Mine Safety Act was before the Committee on Labor and Public Welfare in the last session of Congress, and was thoroughly debated and considered. The committee concluded, on the basis of its study that the steps outlined above were essential and it reported to the Senate a bill identical to the one I have introduced today. The sole change that has been made is in the date by which the Bureau of Mines must conclude its study and must report to the Congress. Whereas the bill reported last year called for a report to be submitted by February 15, 1959, our bill requires a report within 6 months after enactment.

I am proud to sponsor this proposed legislation which, when enacted, will improve and make safer the conditions under which the Nation's miners work, and will authorize the best and the quickest study possible, in order to make further improvements in mine safety.

Mr. President, the report issued by the Committee on Labor and Public Welfare during the last session of the Congress summarizes succinctly and completely the provisions of our bill. I ask unanimous consent that excerpts from that report be printed at this point in the RECORD, in connection with my remarks.

There being no objection, the excerpts from report No. 1963, 85th Congress, 2d session, were ordered to be printed in the RECORD, as follows:

AMENDING THE FEDERAL COAL MINE SAFETY ACT

The Committee on Labor and Public Welfare, to whom was referred the bill (S. 3290) to amend the Federal Coal Mine Safety Act (30 U.S.C. 471), having considered the same, report favorably thereon with an amendment and recommend that the bill do pass.

BACKGROUND OF THE BILL

Congress has since 1865 recognized the hazardous nature of coal mining. In 1910 on the heels of a number of serious coal mine disasters, Congress established in the Department of the Interior, the Bureau of Mines, and assigned as one of its important functions the promotion of health and safety in the minerals industries.

Despite the efforts which have been made over the years by employers, miners, State agencies, and the Federal Government, mining still remains a hazardous occupation. The prevention of major accidents or disasters requires constant and strict adherence to established safety standards. In recognition of this fact, Congress enacted in 1952 amendments to existing law which directed the Federal Bureau of Mines to undertake certain mine safety inspections and establish standards therefor. The amended Mine Safety Act authorized Federal inspectors to close mines in which there was imminent danger of a mine explosion, mine fire, mine inundation, or man-trip or man-hoist accident. It further authorized Federal mine inspectors to inspect all coal mines with respect to a large number of safety provisions specified in section 209 of the statute. These safety provisions cover such matters as roof supports, permissible equipment, ventilation, permissible explosives, and so forth. When a mine inspector finds a violation of these provisions in mines employing more than 14 men underground, he directs the mine operator to correct the deficiency within a certain time. If this is not done the mine may be closed.

In writing the Federal Coal Mine Safety Act, Congress exempted mines employing 14 or fewer men underground (sometimes referred to as title I mines) from the provisions of the act which authorize Federal inspectors to close a mine if they find—

(1) imminent danger of a fire, explosion, inundation, etc.; or

(2) failure to correct conditions previously indicated as not being in conformity with the safety provisions set forth in the act.

The bill, S. 3290, as originally introduced and upon which hearings were held by the Subcommittee on Labor of this committee, provided for the repeal of this exemption for small mines.

EFFECT OF THE COMMITTEE AMENDMENT

The committee amendment, instead of repealing the exemption for 14-man or smaller mines as proposed by S. 3290 in its original form, retains the exemption, but makes such mines subject to the provisions of section 203(a) which permits the closing of a mine where there is imminent danger of a serious accident, and all of the other sections of the act which are necessary to carry out and give effect to such provisions including the provisions for administrative and judicial review. The committee amendment, therefore, retains the present exemption of title I mines from mandatory compliance with the requirements and standards of section 209. However, if the conditions in any such exempt mine are such as to create an imminent danger of any of the five disasters enumerated in section 203(a) then the provisions of that and other relevant sections of the act requiring the immediate closing down of such mine shall be applicable.

The committee, in its amendment, did provide for one procedural change in connection with exempted mines which might be ordered closed down pursuant to the committee amendment under section 203(a) because of danger of imminent disaster. Presently, under section 203(e) of the act, where a State has a State plan approved by the Bureau of Mines, the operator of a mine closed down because of danger of imminent disaster may request an inspection of such mine by a State inspector. If the State inspector does not concur in the closing order, the mine must remain closed but the owner of the mine may make application to the chief judge of the U.S. district court for the district in which the mine is located for the appointment of an independent inspector to inspect the closed-down mine, and unless he concurs in the closing order, it ceases to be effective and the mine may be reopened. The committee amendment makes this review procedure applicable to presently exempted mines ordered closed down under the provisions of the amendment without requiring as a condition of resorting to this procedure that the State in which the mine is located have or adopt a State plan approved by the Bureau of Mines.

The committee further amended the act by adding a new title III directing the Bureau of Mines to make a detailed and exhaustive study of mine safety for all mines covered by the act, to hold hearings in this connection in the principal coal-producing States, and to report its findings and recommendations to the Congress and the President of the United States by February 15, 1959. Among the matters to be examined and set forth in the course of this study are a comparison by States between mines with fewer than 15 individuals employed underground and those with more, with respect to the number of mines in each category, number of employees, number of man-hours of work, fatalities and their specific causes as well as nonfatal injuries for each year beginning with 1946, and the number of reported violations of established safety standards for the same period.

In addition, the Bureau is directed, in conjunction with the appropriate State agencies, to make a study of the incidence and causes of roof and rib falls, to recommend measures to reduce and prevent such roof and rib falls, and to study existing educational and training programs in mine safety.

Finally, the Bureau is required to make a study of safety conditions in mines employing fewer than 15 individuals underground to determine if the provisions of the act are properly applicable to such mines which are presently exempted, in the sense that such application would materially improve safety conditions in such mines, safety being the primary consideration, but taking into account the cost to the mine owners of applying these provisions, the economic impact on such mines, and their ability to remain in production and compete with nonexempt mines if any or all the provisions of the act should be made applicable to them.

Consistent with its primary concern for the safety of human beings working underground in coal mines, the committee amended bill makes applicable to all underground coal mines, without exception, the summary procedures of the act for closing down a mine which presents an imminent danger of serious accident or disaster while providing an equally summary procedure to guard against arbitrariness in the issuance of such closing orders.

In so doing, the bill as amended makes it possible to proceed with an authoritative study to determine whether all of the provisions of the act should be made applicable to the smaller mines which are presently exempted. The testimony which the committee received from those who favored the complete elimination of the present exemption was not conclusive.

Very little authoritative information was presented regarding the economic effects of applying all of the provisions of the act to the smaller mines which are now exempted. The committee, of course, would not hesitate to recommend the application of all of these provisions to such mines, regardless of economic effect, if it were convinced that this would result in increasing safety and eliminating mine disasters with their accompanying injuries and fatalities.

In the light of the inconclusive character of the testimony in support of the proposal to repeal completely the present exemption, the committee preferred to take the steps safeguarding against dangers of imminent disaster while simultaneously providing a method to secure the data necessary for the Congress to legislate intelligently in the near future. The committee believes that the bill as reported accomplishes these purposes.

DESIGNATION OF THE BLACK-EYED-SUSAN AS THE NATIONAL FLOWER

Mr. BEALL. Mr. President, I introduce, for appropriate reference, a joint resolution designating the black-eyed-susan as the national flower of the United States.

Today, Mr. President, is Maryland Day, and it is fitting that on this day Maryland's State flower be proposed as our national flower.

This is the 325th anniversary of the birth of the great Free State of Mary-

land. Maryland became known as the Free State for good reason. It was founded by colonists who landed on March 25, 1634, at a Potomac River island just off where St. Marys City now stands—and one of the first edicts by which the colonists were governed was that every person had the right to worship according to the dictates of his own conscience. This emphasis on freedom of religion became an important part of the ideals and principles of our people. As a matter of fact, the idea of freedom which permeates the American Constitution came from the Maryland Act of Toleration of 1649. The Free State of Maryland celebrates its birthday today, and freedom loving Americans everywhere recognize the importance of this day in American history.

Symbolic of the spirit of our forefathers is the flower, the black-eyed-susan. Our forefathers were immigrants; so is the black-eyed-susan—an immigrant in Maryland from the West. In 1918, it was designated the State flower of Maryland, birthplace of our national anthem.

The black-eyed-susan is symbolic of the spirit of women and of their helpfulness in the founding of our great Republic. It is suggestive of man's appreciation of the peaceful influence of women in world affairs. Black-eyed-susans are beautiful flowers. The black and gold and red, white, and blue make a magnificent color combination. Black-eyed-susans grow well in every State of the Union.

We have heard proposed here the subsidized corn tassel; the lowly grass; the poor, overworked rose; the tough, repelling marigold. But we need look no further. Here I suggest the black-eyed-susan, an appropriate and worthy national flower for the United States.

The PRESIDING OFFICER. The joint resolution will be received and appropriately referred.

The joint resolution (S.J. Res. 82) designating the black-eyed-susan as the national flower of the United States, introduced by Mr. BEALL, was received, read twice by its title, and referred to the Committee on the Judiciary.

ADVISORY COUNCIL ON NATIONAL SECURITY

Mr. JAVITS. Mr. President, I am about to introduce a joint resolution, and I ask unanimous consent that I may speak on it in excess of the 3 minutes allowed under the order which has been entered.

The PRESIDING OFFICER. Without objection, the Senator from New York may proceed.

Mr. JAVITS. Mr. President, on behalf of myself, the Senator from Kentucky [Mr. COOPER], the Senator from Illinois [Mr. DOUGLAS], and the Senator from Minnesota [Mr. HUMPHREY], I introduce, for appropriate reference, a joint resolution to provide for the establishment of an Advisory Council on National Security, to be composed of 25 of—I hope—the most distinguished people in the country, including all living former Presidents, which means, of course, former President Hoover and former President Truman.

Mr. President, I introduce the joint resolution because it seeks to address itself to one of the very grave fundamental problems we face, namely, how best to arouse the American people to a realization of the real issues and the real sacrifices and the actions of a major national character which are required in order effectively to deal with the cold war struggle.

Most observers are satisfied that we are not in that posture, which in our case might be called a form of moral rearmament, for the course of freedom deserves this kind of support. But, somehow or other, people simply are not alerted to it.

A survey was made of the critical situation in Berlin. It shows that a majority of the people support the President, but many people are misinformed or uninformed in that connection.

Mr. President, the critical position in which the United States finds itself today has already called for a mobilization of our youth, our scientists, and the best abilities of citizens from every sector of our national life. Today, we find ourselves in a world position which requires such a utilization, at the very least, of all our intellectual capabilities and resources. The time has come to look for means by which we can make available to the President, the executive department, and the Congress the best minds of the Nation, with the widest range of experience secured through distinguished service in the past, the specialized abilities developed in varied aspects of human activity, and a continuing evaluation of national viewpoints and developments.

Our times are exposing some of the tremendously vexing problems which face the people of the United States as our country necessarily takes up the role of free world leadership. Among these problems are:

First. Is our total defense posture geared to a level which will deter a potential aggressor from launching a nuclear war in the years ahead?

Second. What growth rate, in terms of national productivity, will sustain an adequate rise in the standard of living in the United States, while enabling us to meet our responsibilities for defense and for winning the peace abroad?

Third. What policy toward colonial areas and dictatorial governments within the free world must the United States evolve to keep the perimeter of the non-Communist world from shrinking and to safeguard Africa, Asia, and Latin America from Communist subversion or infiltration?

Fourth. What should be the United States position, in order to bring about a disarmament agreement, or an agreement on testing of nuclear weapons or on surprise attack?

Our attitude toward Red China; East-West trade; foreign aid and technical assistance; international exchanges with the satellite nations; the future of NATO, which now is entering its 10th year; disengagement or a nuclear free zone in Central Europe—all these are important and complex parts of the total cold war challenge which must be met now.

In order to help the activities of our President, our National Security Council, and all our other governmental bodies we need—because apparently the job has not been done—to utilize in the cold war struggle the vast reservoir of skill and experience which is not in the Federal Government at any given time. Our ex-Presidents, Mr. Truman and Mr. Hoover, are the best examples of this. To them may be added military leaders, now retired, of outstanding capacity who enjoy great national prestige, civilians who have held important places in our Government, and others who are high in the estimation of the people.

Their names will be on the lips of everyone, when a matter of this importance is considered. Such an advisory council could be of indispensable aid to the President, in addition to the National Security Council which is the President's staff agency on these very matters, and therefore cannot make available its conclusions to the public. Yet there is a deep need on the part of our citizens for a high-level advisory view on just what is needed to win the cold war.

Therefore, I have introduced the joint resolution to establish an Advisory Council on National Security, consisting of all living ex-Presidents of the United States and 25 other leading citizens, 13 to be appointed by the President of the United States, and 6 each by the President of the Senate and the Speaker of the House of Representatives. The bipartisan membership of the Council is to consist of citizens from the professions, public service, management, labor, agriculture, the sciences, education, investors and consumers.

In other words, Mr. President, there are available in our country outstanding persons of very great ability. Many of them formerly served in the Government Some never have. It is time for us to use them in this struggle. The joint resolution which I have introduced, on behalf of myself and the colleagues I have mentioned, who have so graciously joined me in introducing it, is a suggestion.

Under the terms of the joint resolution, the Council is to recommend to the President, and other executive officers designated by him, programs for the establishment and implementation of national policies to meet the responsibilities and dangers faced by the United States in the world struggle for free institutions. In addition, it is required to file semiannual reports of its activities and recommendations to the President and to the Congress.

During the two World Wars in which this Nation has been engaged, we have called upon executives of industries, leaders of labor and of the press, scholars from the universities, and men in every walk of life and field of experience whose abilities could serve the Nation in its hour of need. We are again in a time of crisis and should again avail ourselves of such assistance.

The organizational problem which I am trying to meet is one of the most difficult we have in the organization of our Government. I have consulted with many outstanding authorities about this matter and the solution which I suggest is by no means free from difference of opinion. But the need is also considered to be indispensable. Accordingly, I hope that it will be considered a contribution if the discussion can now take up a practical idea such as this one as a starting point for endeavoring to ascertain how we can best introduce what seems to be a missing link in our total cold war effort, and it may be that some will prefer a form or organization involving the State Department's Policy Planning Staff or the National Security Council. Legislation will in any case probably be required. I therefore urge congressional consideration of this whole question with a view toward more effectively conducting the cold war and more intimately engaging in it the people of the United States, and that is, I emphasize, the whole purpose of this approach.

It has been emphasized time and again that we should pursue our international policy not solely in reaction to the cold war effort but out of the need to help build a just, prosperous, and peaceful world with equality of opportunity for all and the enjoyment of the highest values of which we are capable in cultural, moral, and ethical experience. It is upon this level that the American people, I know, wish to pitch their effort and I submit that we need to work out governmental techniques which will call forth this kind of spirit. I am making a suggestion along this line in the hope of stimulating congressional consideration which will lead to a wise solution.

I am deeply convinced that the prophets of doom who believe that the American people have lost their interest, courage, and enthusiasm for the cold war struggle, are dead wrong. Yet, Admiral Rickover who has warned of softness in our national life and organization as a serious danger in the cold war struggle is obviously right because we face the peril of not knowing exactly what each of us can and should do in the cold war.

The President of the United States, whom I highly honor, and I have been one of his most devoted followers, has often said the implications of this struggle are apparent to many Americans who live hundreds of miles from Washington, D.C. However, there remains a vital need on the part of our citizens to clearly understand the means necessary to the achievement of our objectives in this struggle. They can best be presented to our citizens through the coordinated viewpoint of an advisory body on the highest level of American public life. The time has come for the United States to mobilize the brainpower, the vitality, the vigor, and the skills of outstanding Americans from every field of endeavor who have broad experience and proven judgment in matters involving the national interest.

We have in a number of areas much more limited than those I propose to cover established such advisory councils. We have advisory councils on foreign information and education programs, on atomic energy development, on foreign aid, and on education. The President himself has established by Executive order on March 13, a Federal Council for Science and Technology, which, similar to the National Security Council, gathers the abilities and facilities of governmental agencies in the field, to recommend policies and measures dealing with this area of national activity.

However, this approach is again limited, not only in area, but also by restricting its membership to intragovernmental personnel. This is also the problem of the Security Council, and I proposed, last year, to have the National Security Council contain some public members to overcome this deficiency. The Advisory Council which I now propose is, I believe, an approach to this national need well worth considering.

I ask unanimous consent that the joint resolution may lie on the desk until the close of business tomorrow, so that other Members of the Senate who may feel so moved may join in it.

The PRESIDING OFFICER. The joint resolution will be received and appropriately referred; and, without objection, the joint resolution will lie on the desk, as requested by the Senator from New York.

The joint resolution (S.J. Res. 83) to provide for the establishment of an "Advisory Council on National Security," introduced by Mr. JAVITS (for himself, Mr. COOPER, Mr. DOUGLAS, and Mr. HUMPHREY), was received, read twice by its title, and referred to the Committee on Armed Services.

DESIGNATION OF MARCH 25 OF EACH YEAR AS GREEK INDEPENDENCE DAY

Mr. HUMPHREY. Mr. President, today marks the 138th anniversary of the beginning of the Greek War of Independence in which the people of Greece undertook the struggle to achieve their freedom from the Ottoman Empire. In 1827 victory was achieved and Greece was set up as an independent nation.

The basic ideals of the Western World can in large measure be traced back to Greece. At this time when the traditions of freedom are being challenged by the forces of communism, it is appropriate that we salute this fine country.

To mark this occasion I introduce, for appropriate reference, a joint resolution authorizing and requesting the President to designate March 25 of each year as Greek Independence Day. A companion resolution is being offered in the House of Representatives by JOHN BRADEMAS, of Indiana who is the first person of Greek descent to serve in the Congress.

The PRESIDING OFFICER. The joint resolution will be received and appropriately referred.

The joint resolution (S.J. Res. 84) providing for the issuance of a proclamation designating March 25 as Greek Independence Day, introduced by Mr. HUMPHREY, was received, read twice by its title, and referred to the Committee on the Judiciary.

TRIBUTE TO ROBERT FROST ON HIS 85TH BIRTHDAY

Mr. PROUTY. Mr. President, on behalf of myself and 60 other Senators, I submit a resolution which represents a tribute to Mr. Robert Frost, one of the Nation's most illustrious and best loved men of letters. I ask unanimous consent that the resolution be read by title, for the information of the Senate.

The PRESIDING OFFICER. The clerk will read, as requested.

The CHIEF CLERK. A resolution extending birthday greetings of the Senate to Robert Frost.

Mr. PROUTY. Mr. President, on Thursday of this week America's great poet-philosopher, Robert Frost, will celebrate his 85th birthday.

He is a distinguished citizen, not only of my State, but also of the Nation and the world.

During the past half century, Robert Frost has become perhaps the best known poet now writing in the English language. His life and his works have become a part of the contemporary American story, and need no added glorification on this occasion.

"As poet and as man, Frost has proved himself native to the grain of the American idiom." These words of Prof. Lawrance Thompson, of Princeton University, explain one reason for my resolution.

A predecessor of Mr. Frost as Consultant in Poetry in English to the Library of Congress, Mr. Randall Jarrell, has said:

> Frost's virtues are extraordinary. No other living poet has written so well about the actions of ordinary men.

That explains another reason for my resolution, Mr. President.

Writing in the New York Times Book Review of March 22, 1959, J. Donald Adams describes Frost as "one of the most lovable of men and, though he would be the first to disclaim the adjective, one of the most admirable in character also."

That explains the third reason for my resolution, Mr. President.

Mr. Adams concludes his article with the following paragraph:

> I can think of no better tribute to Frost on his coming birthday than for every American who admires his work to write a letter to the Nobel Prize Committee, asking why our foremost poet has not yet been recognized in Stockholm. It is a recognition long past due, and time flies on ever swifter wings.

Mr. President, the awarding of the Nobel Prizes is outside the prerogatives of the U.S. Senate. But the unanimous adoption of this resolution will inform Mr. Frost and the world of the esteem in which this great American poet is held by the Members of this body.

Mr. President, I ask unanimous consent to have my remarks immediately followed by an article entitled: "A Native to the Grain of the American Idiom." The article was written by Lawrance Thompson, and appeared in the March 21, 1959, issue of the Saturday Review.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Saturday Review, Mar. 21, 1959]

A NATIVE TO THE GRAIN OF THE AMERICAN IDIOM

(By Lawrence Thompson, a professor of English at Princeton University and has been for years a biographer of Frost)

Ten years ago, when the U.S. Senate helped celebrate Robert Frost's 75th birthday by extending to him the formal "felicitations of the Nation which he has served so well," many of his friends urged that the bard had earned his right to retire from any further demands of an adoring public so that he might tend his own Vermont and Florida gardens in peace. They should have known better than to wish him that kind of retirement or to imagine that even if he had tried to escape he would have been left alone. Instead, during the past 10 years, he has extended his value to us in so many new ways and with such characteristically saucy wit and seriousness as to bring new glory not only to himself but also to his country. So with gratitude as well as love we salute him on his 85th birthday as our most renowned and our most cherished poet.

If we wonder why the Nation at large has responded, as it has with new warmth to Robert Frost in recent years after we might have assumed he had already achieved an enviable zenith of esteem, one answer might be that during this our latest period of national uncertainty and self-doubt, he has remained ("though by a world of doubt surrounded") a steadfast witness tree to that kind of traditionally guarded Yankee optimism and confidence that we have so largely lacked and needed.

At such a time, if his cautious affirmations had sounded to us like merely cheerful whistlings in the dark he could have done nothing for us except annoy. Yet the older he has grown, the more widespread our national conviction that he has always looked steadily at the worst and yet, while becoming well acquainted with the night, has never lost his knack for seeing beyond. The contagious element of that courage based on 85 years of tough experience has become written so deeply into the lines of his face and his poetry that we now should know the two are one.

So perhaps the most genuine form of tribute we can pay Robert Frost on his 85th birthday is to improve our awareness of his life work as a double metaphor. Without trying to tackle the involved problem of relationships between simplicity and complexity in either the man or his art we can at least rediscover the perennial pertinence of his basic poetic themes. But before we take bearings in that restricted direction we may proudly glance back over just a few highlights of what has happened to him during the past decade.

Last year, when Frost was named Consultant in Poetry to the Library of Congress, that appointment was hailed by some as the equivalent of naming him our Poet Laureate even though a few of his critics publicly expressed the fear that the growing popularity of his personality might eclipse the significance of his poetry. The ambiguous banter of his wit during his few press conferences at the Library of Congress ought to reassure anyone that there is no danger of his taking himself too seriously: "My ironies don't seem to iron anything out. Things stay about the same after I'm finished talking."

Almost 10 years ago, shortly after his 75th birthday, his "Complete Poems" received the award of a gold medal because a poll of leading critics had voted it a work "most likely to attain the stature of a classic." While few poets have thus been honored by such a prediction during their lifetime, the hazard of that guess involved no great risk because many of his lines have already passed over into our language as familiar quotations. Having expressed the modest hope that a few of his poems might "stick like burrs not easily dislodged," Frost may find this reflexive tribute more meaningful to him than all the recent awards of medals and prizes.

Collectors of rare books provided another memorable measure of esteem for him in December of 1950 when a unique copy of his first volume of poems ("Twilight," privately printd in 1894) brought $3,500 at public auction. Quite clearly, his works have already attained the classic stature among the collectors.

While his countrymen were variously honoring him at home, and while he was becoming better known to both younger and older generations as he continued his readings on television and also to capacity audiences across the country, Robert Frost was invited to extend his bardings overseas. During the summer of 1954 he spoke and read as a representative of the United States at a commemoration of the 400th anniversary of the University of Sao Paulo, in Brazil. Three years later, Oxford and Cambridge invited him to England to receive honorary degrees. That pair of invitations helped him round out one phase of his career in that he was thus able to return with acclaim to the soil where he had been completely unknown when he had published his first book of poems in London, in 1913. This time, he stayed long enough to read and talk before enthusiastic listeners in always crowded halls, not only at Oxford and Cambridge, but also at the University of Durham (which had previously awarded him an honorary degree in absentia), at the University of Manchester, and at the University of London. English poets and prose writers arranged many cordial receptions for him. Climatically, the English Speaking Union spread a banquet in his honor and the toast of praise was there made with genuine affection by his own former countryman and fellow-poet, T. S. Eliot. But Frost did not come directly home from England. Priding himself on his inherited Scotch-Gaelic background, he also took pleasure in crossing the Irish Sea to receive an honorary degree from the University College in Dublin. As an informal ambassador of good will during these various occasions he served his nation with distinction.

(A typical side-view: While Frost has very little use for any academic regalia, his Yankee practicality has found sensible service for all those multicolored silk hoods heaped on his broad shoulders while he has been acquiring some forty honorary degrees. He has had the hoods cut up into appropriate-sized squares and sewn together as elegant coverings for a pair of patchwork quilts. His explanation is tart: "It's knowing what to do with things that counts.")

All of the events involving Robert Frost during the past decade make most sense if viewed poetically as metaphors. But what grounds for confidence could Frost have claimed during those upsetting days of Sputnik I? None new or untried, yet many that are closely related to his recurrent themes of courageous carrying on in the face of discouragement. His poems and his life provide complementary dramatizations of certain essentials in the idiom of American history: A descendant of nonconformist Puritans, Frost has acted out the principle of even heretical nonconformity while defending against all criticism the rigor and self-discipline of certain pioneering Puritan virtues. He likes to say that there are two post-Puritan books that are never quite out of his mind, Thoreau's "Walden" and Defoe's "Robinson Crusoe." He sees and hears a rhyme, there, in that while Crusoe was cast away and Thoreau self-castaway, each found self-sufficient. Fear of lostness or defeat gets counterbalanced, for Frost, by man's persistent and metaphorical demonstrations of difficulties overcome, starting and ending with the great problems as to how the limited can make snug in the limitless.

In his poems, many of his metaphors are closely related to the theme of the individual's necessary pioneering, in any age. For him, the greatest reward of daring is still to dare, initially through individual assertion of energy and skill buttressed by a combination of self-belief and God-belief. He views the moral build soil of man and nation as constituting a blend of those opposites of self-fulfillment and self-surrender. Such insights are partially reflected in the metaphorical retrospect of his poem on American history entitled "The Gift Outright." But insofar as those insights involve repeated beginnings of individual self-discovery and self-expression they also find oblique reflection within such a metaphor as that which lies at the heart of "The Axe-Helve":

"He showed me that the lines of a good helve
Were native to the grain before the knife
Expressed them, and its curves were no false curves
Put on it from without. And there its strength lay
For the hard work."

As poet and as man, Frost has proved himself native to the grain of the American idiom. But if we ask what right a mere poet has to invoke metaphors of strength for hard work we can find the answers in the creases of his face. His entire life might be taken as a gathering metaphor of confronting and overcoming difficulties (physical, mental, emotional, spiritual) by setting himself an ideal goal and then by working up the skills to hew purposefully toward that goal.

Consider a few of the separate images that went to make up that life metaphor. What were his own chances when he played as a boy in the streets of his native San Francisco while his father, having failed as a gambler, was dying of tuberculosis? What were his chances when he worked at odd jobs in Lawrence, Mass., while clinging to his apparently futile belief that artistic achievement was all that mattered to him? What were his chances when this city-bred young man was sent by doctor's orders to a backwoods farm in Derry, N.H., because his failing health seemed to indicate tuberculosis? What were his chances, after 6 years of desultory farm life, when he was stricken by a severe attack of pneumonia and had good reason to fear that he would not recover? What were his chances when he failed for 15 years to achieve any recognition as a poet other than those notes of polite refusal and those printed rejection slips that accompanied poems returned from major literary magazines in the United States? What were his chances when he reached his 40th year before publishing his first thin book of lyrics in England under the retrospective title "A Boy's Will"? These are all metaphors in which fear is met and answered and overcome by courage and daring and action and skill. Shades of Horatio Alger? All right, Call it what you like, for nothing can belittle that accomplishment.

"I stay," is the gamblerlike beginning of that poem about chances and possibilities entitled "An Empty Threat." Just because these poems talk back and forth to each other, put with that beginning the conclusion of another relatively early poem entitled "Acceptance":

"Now let the night be dark for all of me.
Let the night be too dark for me to see
Into the future. Let what will be be."

In considering Frost's life as a poem we can see that he had his own reasons for thinking he knew what he was talking about when he said in print just over a year ago, "Courage is the human virtue that counts

most—courage to act on limited knowledge and insufficient evidence. That's all any of us have, so we must have the courage to go ahead and act on a hunch. It's the best we can do."

Because he thinks in terms of metaphors, Frost can view that homely gambler's word "hunch" as interchangeable with (or at least inseparable from) such words as "faith" and "belief." Part of his courage has always been rooted in his hunch that there must be a larger design relating the ideal goals of any individual with those of his neighbors, his State, his Nation, and ultimately his God. All of his poems invoke what he likes to call "ulteriorities" within and through the hard facts of immediate daily life. During the past 5 years he may have seemed to become more explicit in both poetry and prose concerning the ideal predicament of any person or nation as involving the venture of spirit into matter. But there is nothing new for him about that particular theme because he began exploring it affirmatively when he published in his first book of lyrics the poems entitled "The Trial by Existence" and "A Prayer in Spring." Years later, he touched on the same existential theme when he tucked into one of his prose prefaces this metaphor on metaphors: "every poem is an epitome of the great predicament; a figure of the will braving alien entanglements." On his 60th birthday, in an open letter to "The Amherst Student," he talked again in terms of metaphors concerning the individual's God-given capacity to assert some limited degree of order and form and meaning on the chaos and confusion of immediate human experience.

There is no getting around it: Robert Frost is (among many other things) a didactic poet who is not ashamed of his Puritan heritage. While certain critics continue to decry his didacticism, the average reader seems to be able to bear Frost's way of letting an observation or insight pick up its images and then crystallize themes into epigrammatic conclusions. That kind of idiom is particularly welcome today because it turns out that Frost has so much that is pertinent to say to us in our personal and national confusion. Let the cynical belittlers of the present American scene question the Nation with the old sneer, "Are all thy conquests, glories, triumphs, spoils, shrunk to this little measure?" What Frost has kept saying from the start of his poetic career is that there is yet room for even "sheer morning gladness at the brim" provided we keep earning the right to enjoy it. For him there is still justification for believing that "earth's the right place for love" if we take the trouble to keep earning that. As for the future of his country he suggests that even there we are morally obliged to keep earning our right to measure her future in terms of her past: "Such as she was, such as she would become."

So when a man and poet like Robert Frost is able to renew these old insights convincingly in both verse and action, even while completing his 85th year of tough experience, we can take pride in extending to him, once again, and with ever increasing gratitude, the felicitations of the Nation he has served so well.

Mr. PROUTY. Mr. President, I ask unanimous consent for the immediate consideration of the resolution.

There being no objection, the resolution (S. Res. 95) submitted by Mr. PROUTY (for himself and Senators AIKEN, ALLOTT, BARTLETT, BENNETT, BIBLE, BRIDGES, BUSH, BUTLER, BYRD of West Virginia, CANNON, CAPEHART, CARROLL, CASE of South Dakota, CASE of New Jersey, CHAVEZ, CHURCH, CLARK, COTTON, DODD, DOUGLAS, EASTLAND, ENGLE, GOLDWATER, GREEN, GRUENING, HARTKE, HENNINGS, HOLLAND, HRUSKA, HUMPHREY, JACKSON, JAVITS, JORDAN, KEATING, KEFAUVER, KENNEDY, LANGER, LAUSCHE, MAGNUSON, MANSFIELD, MCCARTHY, MCNAMARA, MORSE, MUNDT, MURRAY, MUSKIE, NEUBERGER, PASTORE, PROXMIRE, ROBERTSON, SALTONSTALL, SCHOEPPEL, SCOTT, SMATHERS, SMITH, SYMINGTON, TALMADGE, WILEY, WILLIAMS of New Jersey, YARBOROUGH, and YOUNG of Ohio) was considered and, by unanimous consent, agreed to, as follows:

Whereas in the words of the poet Shelley "Poets are the unacknowledged legislators of the world"; and

Whereas poets have been described as "the movers and the shakers of the world forever"; and

Whereas art, which includes the making of poetry, is said to be "the conscience of mankind"; and

Whereas the Congress, although compelled by the necessities of our time to concentrate its primary attention on things material, nevertheless is fully cognizant of the value and importance to our citizens as long as our Nation shall endure of things of the spirit contained in our national literature, art and culture; and

Whereas Robert Frost, the present Consultant in Poetry in English to the Library of Congress is one of America's and the world's best loved and best known poet-philosophers; and

Whereas throughout his long and distinguished career in the field of letters his poetry and his philosophy have enhanced for many throughout the world their understanding of the United States and its people; and

Whereas for almost half a century Robert Frost has been writing poetry which has brought pleasure, comfort, inspiration, thoughtfulness, keener awareness of nature and greater understanding of fellow human beings to thousands of people in all parts of the civilized world; and

Whereas he has unselfishly devoted many years of his life to teaching and bringing to the youth of our land an appreciation of the finer things of life; and

Whereas his work has brought him more recognized honors than have come to any other contemporary American poet, including four Pulitzer prizes in poetry, the Helen Haire Levinson Prize, the Russell Loines Memorial Fund Prize, the Mark Twain Medal, the Gold Medal of the National Institute of Arts and Letters, the Silver Medal of the Poetry Society of America, and the Theodore Roosevelt Medal; and

Whereas the Senate of the United States in a resolution on the occasion of his seventy-fifth birthday extended Mr. Frost the "felicitations of this Nation which he has served so well"; and

Whereas on the 26th of March 1959 he will attain the venerable age of 85 years, still enthusiastically carrying forward his writing, his teaching, his philosophizing, his lecturing and his public poetry readings throughout the land: Now, therefore, be it

Resolved, That the Senate of the United States extend to Robert Frost its good wishes on the occasion of his anniversary and salute him as a citizen, as a man, as a poet, and as a representative of our Nation's art and culture, and that the Secretary of the Senate is authorized and directed to transmit to Mr. Frost an engrossed copy of this resolution.

TAXATION OF CERTAIN NONRESIDENTS—ADDITIONAL COSPONSOR OF JOINT RESOLUTION

Mr. CASE of New Jersey. Mr. President, on March 5, 1959, I introduced Senate Joint Resolution 67 to amend the Constitution so as to limit the right of States or their political subdivisions to tax the incomes of nonresidents. The Senator from Connecticut [Mr. DODD] has asked to be added as a cosponsor of my resolution. I ask unanimous consent that his name be added as a cosponsor.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. PASTORE:

Address by Senator DODD delivered at the Jefferson-Jackson Day dinner in Hartford, Conn., March 19, 1959.

By Mr. HUMPHREY:

Address delivered by him entitled "The Challenge of the Soviet Economic Offensive," before the Economic Club of Southwestern Michigan, at St. Joseph, Mich., February 12, 1959.

By Mr. JAVITS:

Address delivered by Senator KEATING at the ninth annual conference of national organizations called by the American Associations for the United Nations.

By Mr. KEATING:

Address delivered by Senator SCOTT, of Pennsylvania, before Fellows of American Bar Foundation, Chicago, Ill., February 22, 1959.

Address delivered by Secretary of Agriculture Benson at Farm and Home Week meeting, Cornell University, Ithaca, N.Y., March 24, 1959.

NOTICE OF HEARING ON NOMINATION OF POTTER STEWART TO BE AN ASSOCIATE JUSTICE OF THE SUPREME COURT OF THE UNITED STATES

Mr. KEFAUVER. Mr. President, on behalf of the Committee on the Judiciary, I desire to give notice that a public hearing has been scheduled for Thursday, April 9, 1959, at 10:30 a.m., in room 424 Senate Office Building, before the Committee on the Judiciary, upon the nomination of Potter Stewart, of Ohio, to be an Associate Justice of the Supreme Court of the United States.

At the indicated time and place persons interested in the above nomination may make such representations as may be pertinent.

VERMONT MAPLE WEEK BEGINS MARCH 30

Mr. PROUTY. Mr. President, the week beginning March 30 is Maple Week in Vermont. Special events are being planned in many of the ski areas of the State and in other communities.

These events are sponsored by the Greater Vermont Association and the Vermont Maple Industry Council. Also cooperating are the Vermont Development Commission, the State department of agriculture, the extension service of the University of Vermont, and the Vermont Sugar Association.

Mr. President, the sugar maple is the official tree of the State of Vermont. This is appropriate, because on no other continent in the world can the sugar

maple be found, and nowhere on this continent does it thrive more healthfully and happily than in Vermont.

Vermont leads all other States in the number of farms producing this crop, in the number of trees tapped annually, and in total production. Here are found the largest manufacturers of sugar-making equipment, the most inventors of improved methods of sugaring and of producing a variety of maple products, and more than 5,000 of the best-equipped producers.

The first official grades ever to be established on maple sugar and sirup were established by the Vermont Department of Agriculture; and today Vermont maple sugar and sirup are not only the best tasting in the world, but are the purest.

For all these reasons, Vermont invites all our citizens to visit the Green Mountain State during Maple Week. Not only will they be received with warm-hearted Yankee hospitality, but they will breathe pure mountain air uncontaminated by fog, smog, or radioactive dust; they will be able to enjoy unexcelled skiing; and their palates will be tickled by the sweetest taste, next to a sweetheart's kiss, that the good Lord ever invented.

CALL OF THE ROLL

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

U.S. DELEGATION TO THE INTERPARLIAMENTARY UNION EXECUTIVE COMMITTEE AND COUNCIL

Mr. MANSFIELD. Mr. President, I should like to announce, for the information of the Senate, that next week three distinguished Members of this body, the Senator from Oklahoma [Mr. MONRONEY], the Senator from South Dakota [Mr. CASE], and the Senator from Maryland [Mr. BUTLER], together with two able Members of the House of Representatives, Representatives HAROLD COOLEY and BOB POAGE, will leave for France to take part in the annual spring agenda meeting of the Interparliamentary Union's Executive Committee and Council.

As Senators know, the United States is one of 55 member nations of the Interparliamentary Union. This year's regular meeting is to be held in Warsaw in September—the first time the Union has ever met behind the Iron Curtain.

It is for this reason—and because of the critical months that lie ahead for the world—that the agenda meeting next week will be particularly important. Questions of disarmament, of international development and of cultural exchange, among others, will be considered for the agenda.

I think it is extremely fortunate that the United States will be represented at the agenda meeting by MIKE MONRONEY, FRANCIS CASE, and JOHN BUTLER, and by HAROLD COOLEY and BOB POAGE. I extend to them the Senate's best wishes in their work.

Mr. KUCHEL subsequently said: Mr. President, next week, in France, representatives of the member nations of the Interparliamentary Union will meet.

From the U.S. Senate the delegate will be the distinguished junior Senator from Oklahoma [Mr. MONRONEY]. The distinguished junior Senator from South Dakota [Mr. CASE] and the distinguished senior Senator from Maryland [Mr. BUTLER] will be present as alternates.

The problem before the members will be the preparation of agenda for the meeting of the Interparliamentary Union to be held in Poland during the coming summer. Thus the men and women who will meet together next week in France, in the preparation of agenda, will consult together in the background of a grave and great international crisis, which continues to rage over Berlin.

We shall be ably represented by those who will travel to the meeting from the Senate.

My point in rising, and in joining with my friend, the able Senator from Montana [Mr. MANSFIELD], is merely to say that with our delegation go the best wishes of the Members of the Senate that, with the representatives of the parliaments of other nations which belong to this great international organization, they may foster the cause of peace with justice in this weary world.

AUTHORITY FOR MR. MERRILL MURRAY TO BE PRESENT IN THE SENATE CHAMBER

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent that Mr. Merrill Murray, Assistant Director of Employment Security of the Department of Labor, be authorized to be present in the Chamber today.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Virginia? The Chair hears none, and it is so ordered.

MANDATORY QUOTAS ON IMPORTS OF RESIDUAL OIL

Mr. RANDOLPH. Mr. President, the order issued March 10, 1959, by President Eisenhower which imposed mandatory quotas on imports of residual oil has been sharply criticized by some of my colleagues. I should like to hope that some of this criticism results from misunderstanding of pertinent facts. In any event, it is my opinion that the mandatory restrictions ordered by the President were overdue.

In any discussion of this subject, we should first of all consider the question: What is residual oil?

The product is a heavy, black oil remaining after the processing of crude. It is known in the trade as No. 6, No. 5, bunker C, or "black oil."

Almost all the imports of residual to this country originate in Venezuela, or refineries on Dutch islands off the coast of that country. The oil is used principally in the east coast industrial fuel markets of this country and inland approximately 100 miles.

The product is, as I have indicated, primarily a boiler fuel for industrial installations. It is not—and this is very important—used in the ordinary residential home. Apparently, some of my colleagues believe the restrictions ordered on residual fuel oils affect the average householder. This is not the case.

Some residual is burned to supply heat energy in large apartment buildings or hotels, but this use is almost negligible in comparison with its utilization by industry.

Perhaps, at this point, there should be some discussion of statistics which obviously had important bearing upon the President's decision to order mandatory quotas on imports of residual oil.

In 1946, direct residual oil imports were the equivalent of nearly 11 million tons of bituminous coal.

In 1958, they were the equivalent of approximately 44 million tons of coal. But in order to obtain the true picture we must add to the 44 million figure some 6 million tons, coal equivalent, of residual made from imported crude. Thus, the total for 1958 was approximately 50 million tons.

Since 1954, the increase in terms of coal equivalent of imported residual oil and residual made from imported crude is about 19 million tons.

Throughout January and February of this year virtually a tidal wave of residual oil was reaching our shores, that fuel having been imported at the coal equivalent of over 70 million tons on an annual basis.

Most of the coal which supplies the east coast comes from southern fields. The injury in this area from residual is both substantial and grave. Since 1947, employment in the coal industry in West Virginia has fallen by over 50,000 jobs. During that time coal's payrolls have dropped by about $21 million—or 5½ percent—while employment and payrolls in every other major industry, except lumber, showed overall increases until 1958. To a greater or lesser degree the somber story of coal repeats itself in other coal-producing States. The implications are ominous.

The mere fact that coal has been displaced by residual oil is, admittedly, no reason by itself for the Presidential action. The issue goes far beyond that.

Authoritative spokesmen for the coal industry contend that the residual oil is being dumped. It is sold at whatever price is necessary to gain markets for that product. This type of competition from foreign sources is unfair. The evidence bears out the contention.

The PRESIDING OFFICER (Mr. BARTLETT in the chair). The time of the Senator from West Virginia has expired.

Mr. RANDOLPH. Mr. President, I ask unanimous consent to proceed for 2 additional minutes.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and the Senator may proceed.

Mr. RANDOLPH. Indeed, the inroads made by residual oil on domestic fuel markets are a serious threat to our national security. In any period of crisis which may involve war risk, the bituminous coal industry would be called

upon to produce mightily. A weak and declining coal industry could not fulfill such an obligation.

Then, too, an ailing coal industry hurts the railroads, since coal is their most substantial customer.

A stable and prosperous coal industry is defense insurance of the best kind for the Nation.

I have no doubt that these facts were in the mind of the President when he decided to impose mandatory quotas on residual oil.

It seems to me, furthermore, that under the law, the Chief Executive had an obligation to issue the March 10, 1959, order which he caused to be promulgated as a proclamation.

Broadly speaking, section 8 of the Trade Agreements Act provides that the President shall take action to prevent imports from impairing the national security if the Director of the Office of Civil and Defense Mobilization finds that such conditions exist. The legislation was amended in 1958 to include imports of derivatives of raw materials or products. Residual is a derivative of crude.

The reliance by the east coast of the United States upon foreign residual oil is dangerous. As has been proved in the past, residual rates will be raised quickly and substantially if conditions permit. But if war comes, the oil simply will not continue to be available.

During World War II, oil shipments by tanker from the gulf coast and overseas dropped 65 percent. Bituminous coal was called upon to supply most of the resultant fuel deficiency—and did so.

The Soviet submarine fleet today reportedly is much larger and more efficient than was the German fleet which wreaked so much havoc on shipping during World War II. There is every reason to believe, therefore, that our potential enemy's submarines would pose a very grave threat to oceanic vessels carrying oils to our domestic ports.

Foreign sources supplied about 26 percent of the east coast's residual oil requirements in 1940; they now supply in excess of 70 percent of residual consumption in the Eastern United States.

The best estimates—governmental and private—are that the energy requirements of the east coast area would increase at least 12 percent during the first year of a major war. This estimate does not take into account any interruption of oil imports. Even so, all durable industries probably would have to operate at peak capacity. At present, the east coast energy sources are as follows:

[Million tons in coal equivalent]

		Percent
Petroleum	274	52
Bituminous coal	161	31
Natural gas	58	11
Anthracite	20	4
Hydro	11	2
Total	524	100

If the demand rose 12 percent and there was no interruption in supplies, energy requirements in the first year of war would be as follows:

[Million tons in coal equivalent]

	Percent
Petroleum	303
Bituminous coal	188
Natural gas	63
Anthracite	23
Hydro	11
Total	588

Today, coal experts tell me that the bituminous coal industry probably could produce 520 million tons annually if called upon so to do. The fields supplying the east coast area might be hard pressed to mine the 27 million additional tons—coal's share of the 12 percent—if war came, but they probably could meet such a challenge.

But if tanker sinkings should affect imports the situation would become critical almost immediately. Let us assume that residual oil availability should be reduced 25 percent, as compared to its 1957 level. The residual supply then would drop from an equivalent of 274 million tons to 206 million tons.

The only source for the major part of this deficit would be bituminous coal. Gas could not help; it already is pushed to pipeline capacity. Anthracite could supply only a few million tons of the new need. Hydroelectric power could offer no additional energy.

I have said that bituminous coal might be able to supply an additional 27 million tons annually to the east coast if it were asked to do so. However, a 25 percent reduction in residual oil imports would mean that coal mines would be called upon to furnish 68 million tons additional. As matters stand now, bituminous coal could not supply this required tonnage. In this connection, we must also take into account the fact that the coal fields which supply the east coast sell half their output elsewhere. These other sources would be clamoring for more fuel in the event of war.

What about the assumption that residual imports would be cut 25 percent in time of war? This estimate seems much too conservative. The decline in residual imports and in coastwise shipments of the product was much more than 25 percent during World War II. Coastwise residual oil shipments fell 60 percent between 1940 and 1942; residual imports from Venezuela dropped some 59 percent in 1942 as compared to 1941.

There also is the possibility of enemy attack on the areas of oil production, refining and loading in Venezuela and the Dutch West Indies. An H-bomb, or A-bomb at the entrance of Lake Maracaibo, for example, would mean there would be no oil imports from Venezuela for a long, long time.

Once again, there is no reason to expect that enemy submarine forces would not do as much damage, or more, to oil imports and coastwise oil shipments during a future war involving the United States than the damage in World War II caused by the Germans.

Nor should we forget the recommendation of the Presidential Advisory Committee on Energy Supplies and Resources Policy made in 1955.

As its name indicates, the function of this Committee is to study energy supplies and resources and to make recommendations on national policy.

With regard to crude oil and residual oil, the Committee's report of February 26, 1955, said:

> The Committee believes that if the imports of crude and residual oils should exceed significantly the respective proportions that these imports of oils bore to the production of domestic crude oil in 1954, the domestic fuels situation could be so impaired as to endanger the orderly industrial growth which assures the military and civilian supplies and reserves that are necessary to the national defense. There would be an inadequate incentive for exploration and the discovery of new sources of supply. * * *
>
> The Committee recommends, however, that if in the future the imports of crude oil and residual fuel oils exceed significantly the respective proportions that such imported oils bore to domestic production of crude oil in 1954, appropriate action should be taken.

In 1958, imports of foreign residual, and residual made from imported crude oil, exceeded the 1954 imports by over 19 million tons coal equivalent.

Obviously, the increase in imports at coal's expense has been tremendous and, from the standpoint of defense, threatening indeed.

The rising tide of residual imports along the east coast then constitutes a definite threat to national security.

The President, in my opinion, had no choice other than his order of March 10, 1959.

Further—and this should be kept in mind—his was only the first move in the series of steps which must be taken to recover coal's east coast markets. Much more needs to be done before there is the balance that we need for internal stability and national defense.

There is no question that the bituminous coal industry would be expected to expand production very rapidly in the event of armed conflict. All industry would be operating at capacity. New plants would go into operation as soon as they could be constructed. Not only would residual oil imports be curtailed or cut off; all petroleum imports would be restricted. Perhaps there would be a program to shift home furnaces from oil and gas to coal, as there was during the World War II period.

I have mentioned that bituminous coal, in wartime, probably could supply 27 million tons additional annually to the east coast area, but might find it impossible to supply 40 million tons additionally. Let us review the coal situation.

The coal industry has gone downhill since World War II, being one of the few major industries to do so. The alltime high of production was reached in 1947 when approximately 631 million tons were produced. In 1958, production approximated 400 million tons, and, in all likelihood, the entire industry operated at a loss. In 1954, when production was slightly more than 390 million tons the industry's loss, after taxes, was not far from $1 million.

From 2 to 4 years are required to develop a modern deep coal mine, and the industry must depend primarily on this type of mine for the future. During previous emergencies, much of coal's quick expansion came from strip mines—with surface coal or coal near the surface. Today, about 74 percent of bituminous production comes from deep mines and this proportion will increase in the future.

Since 1950, the number of operating bituminous mines has dropped from 9,429 to an estimated 7,588 in 1958, a loss of almost 2,000 mines. Comparatively few of these were strip mines since these are the most profitable and the last to be discontinued unless the coal is exhausted. Many of the deep mines which have closed will not reopen. Many concerns cannot afford the costs of keeping them in standby operations. Equipment is removed, the mine becomes flooded, the roof falls, and it is cheaper to start a new operation altogether than to reopen the old shaft.

Last year, employment in the mines was only about 190,000 men as compared to more than 400,000 in 1947. A part of this decline doubtless was due to mechanization, but a larger factor was the steady drop in coal production.

Incidentally, bituminous coal has steadily increased its productivity until it is around 11 tons per man per day, as compared to about 6½ tons in 1947, a most astonishing record.

Few persons realize that today the price of bituminous coal at the mine is just about what it was in 1946. This is truly amazing. No other major industry has had such an experience in these inflationary times. The stability of coal prices should help reassure my colleagues and others who are fearful that the quotas on residual oil will substantially increase fuel costs in the east coast area.

A modern mine is very costly to build, requiring an investment of from $6 to $10 per ton of annual capacity. Experts figure it will require an investment of at least 6 percent to remain a going operation; it requires an investment of at least 10 percent to be attractive in view of the uncertainties attending coal mining in this era. Every cost is high. It is estimated that depreciation, plus supply costs, range from $1.25 to $1.50 per ton annually. This does not take wages into account, nor other items, the welfare fund, social security, electric power, property taxes, and selling and administration costs.

I have stated that current capacity is around 520 million tons. In all probability, the industry's capacity to produce declined in 1958. The improvement in 1959 may not be pronounced. Residual oil imports in January and February were pouring in at the tremendous rate of around 70 million tons annually. The mandatory quotas will help some, but we must wait to see how they will be administered and how much improvement, if any, can be expected from an industrial upturn beneficial to coal. It is highly questionable whether depreciation and depletion will even be covered this year. Or, to state the situation another way, a part of the bituminous mine plant will be given away with each ton of coal sold.

About one twenty-fifth of the mine plant depletes each year, which means that about 20 million tons of the plant capacity must be replaced every year. This requires an expenditure of from $120 million to $200 million yearly. This is a sizable sum to an industry which operated with little or no profit last year.

It is conservative to estimate that the coal industry would be asked to produce 100 million tons, over and above present capacity of 520 million, in wartime. To place the industry in a position to supply this added tonnage, from $600 million to $1 billion will be needed. With coal limping along as it is today, where is this money coming from?

The Congress then, instead of assailing the quotas on residual, should consider other steps to place coal in a stable and prosperous condition, and insure that it will be able to furnish the Nation the indispensable tonnage needed.

Some critics of the residual order have expressed the fear that it, through increasing costs, may increase unemployment in east coast areas. I think their fears are groundless.

But, while we are discussing unemployment, there is no question about the effects of these rising imports on West Virginia and other coal States. This foreign oil already has caused unemployment. Thousands of miners, American citizens, are out of jobs and are forced to live on handouts. This is not a theory. It is a fact, and to add to our bitterness it is our belief that the imports are dumped, ruthlessly and unfairly.

Recently, the bituminous coal industry formed the national coal policy conference—an overall organization. The factors that I have talked about here today are the reasons why the coal producers, the United Mine Workers of America, coal-carrying railroads, coal equipment manufacturers and coal-burning utilities have joined together. They feel the time has come for a united effort on behalf of an indispensable product. They would dispel the idea that coal is outmoded. They will insist that the industry be given fair treatment. One of their aims is to stop the dumping of residual oil at the expense of coal.

I congratulate the coal industry and the related groups upon the formation of the conference. I am confident it will be a most salutary and constructive force.

The coal-carrying railroads have, in many respects, the same problems as the coal industry. The drop in coal production creates a serious problem for the railroads from the standpoint of revenue, because coal, for many years, has been a most important revenue-producing customer.

Another problem is created because of the heavy costs of maintaining locomotives, coal cars, and other facilities. In the last 3 years almost 50,000 hopper cars, used to haul coal, have been scrapped—several thousands more than the roads have put into service. In 1958, the number of bad order hoppers—coal cars which require extensive repair work before they can be used again—increased by more than 35,000.

The railroads know also that wartime operations would impose heavy burdens upon them, including the hauling of millions of additional tons of coal. They also want to be ready to do their part and they are wondering whether or not they would be able to do so.

The coal crisis, then, has two major fronts from the standpoint of national security. One is its effect on the ability of the coal industry to meet defense needs. The other is its effect upon the ability of the railroads to meet these same requirements.

I have outlined the predicament of the bituminous coal industry, as I understand it, and the part which residual oil has had in creating the problem. Even if the competition from residual imports were fair in every respect, protection of the domestic coal industry is imperative.

But, in the opinion of the coal industry spokesmen, the competition is not fair. Residual oil is being dumped. It is sold for the price necessary to expand residual consumption when that expansion becomes desirable to the producers of the product.

As has been stated, imports of residual have gone up and up since World War II. The displacement of coal has been particularly marked during periods of recession. In 1949 and 1950, for example, the residual level was high at a time when the demand for energy was declining. Residual prices were cut sharply and, naturally, coal markets were the victims. While some concerns have multi-purpose equipment, which can use both oil and coal, many shift from coal to oil on the basis of favorable long-term arrangements. Even if the price of residual is higher than coal, which occasionally happens for short-term periods, residual-using firms tolerate this condition and coal continues to be the loser.

In 1953 and 1954, another period when industrial activity declined, residual repeated its performance of 1949 and 1950, undercutting coal and taking away markets which never returned.

During the recession of 1958, the volume of residual oil was maintained at 1957 levels, much of it being sold at distress prices. Residual was priced as low as $2 per barrel in New York, which is the equivalent of about $8.40 per ton of coal. Coal has learned by bitter experience that reducing its prices will not save its markets.

Coal prices remain relatively stable. Residual prices fluctuate. For example, in 1948, the average price of a barrel of residual oil in the New York harbor was $3 per barrel, or the equivalent of $12.50 per ton of coal. During 1949, the average price at the same location averaged $1.90 per barrel, the equivalent of $7.91 for a ton of coal—a $4.50 change in only a year. In 1946, the average price for a barrel of residual was $1.76 or $7.34 coal equivalent—a $5.16 a ton

change in terms of coal. This $5 variance per ton equivalent is almost as great as the price of coal at the mine, which averages between $5 and $6 per ton—and which has varied little since 1946. Also, the residual salesmen have numerous special deals which are designed to facilitate the shift away from coal and which accomplish their objective.

The concern expressed over higher prices because of quotas on residual does not take into account the history of oil price movements. When it appeared there would be a world shortage of oil during the Suez crisis, the price of residual went up immediately. The history of residual prices indicates that the oil interests have no hesitancy in charging all that traffic will tolerate. The real guarantee of protection against gouging to the east coast area is the stability of coal prices.

Furthermore, the coal industry and the railroads already have moved to insure that fuel prices remain stable by arranging to reduce both coal prices and rail rates on the product to major industrial users in the East. The price reduction approximates $1 per ton.

How do we explain the rise in residual imports, no matter the economic conditions? Why the tremendous variance in oil prices, at coals' expense? Could it be that the oil interests can manage these prices at will, and that they have larger objectives in view than residual profits?

In this connection, I would call attention to an announcement of Herbert Brownell, former Attorney General, on April 14, 1953, that he would file a civil complaint charging the maintenance of a world petroleum cartel in violation of the antitrust laws. At the time, a District of Columbia Federal grand jury was investigating the activities of the oil companies with a view to possible criminal charges of antitrust violations. Mr. Brownell said he intended to drop the criminal charges, commenting this was "because existing world tensions require that, in the interests of national security, enforcement of the antitrust laws in this case be pursued through civil proceedings."

On April 21, 1953, a civil suit which charged violations of the antitrust laws on the part of five major oil companies was filed. The companies were Standard Oil of New Jersey, Socony-Vacuum Oil Co., Inc., the Texas Co., Standard Oil Co. of California, and the Gulf Oil Corp. These five are giants, indeed, having assets of more than $10 billion.

Two of the companies mentioned, Standard Oil of New Jersey and the Gulf Oil Corp., have extensive interests in Venezuela. A report by the Federal Trade Commission says that the two, together with Royal Dutch Shell, "have jointly maintained a pervasive control and influence over the Venezuelean industry in all its aspects, from exploration and development to the marketing of the end products."

In 1952, the FTC made a staff report to the Senate Select Committee on Small Business called the International Petroleum Cartel. The report said that seven major oil companies, Anglo-Iranian Oil Co., Ltd., Gulf Oil Corp., Royal Dutch Shell, Standard Oil of New Jersey, Standard Oil of California, Socony-Vacuum Oil Co., and the Texas Co., dominated the world's production, distribution and marketing of oil.

The civil suit filed in April 1953—just about 6 years ago—against the five oil companies charged that the corporations had been engaged, since 1928, in a continuing agreement and concerted action to maintain control over foreign production and supplies of petroleum and products, to regulate imports in order to control prices, and to divide world producing and marketing territories.

What has happened to this suit? Nothing, so far as I can determine. It has not been dismissed, but insofar as I have been able to find out, no effort has been made to press it. Queries to the Department of Justice elicit no information. Inquirers have been told it is in the live-inactive file, which seemingly is a most notable contribution to bureaucratic nomenclature. In March 1955, Joseph E. Moody, president of the Southern Coal Producers' Association, discussed the suit in detail and urged a congressional inquiry to determine what had happened to it. He reports that he did not receive a response, either from the Government or from the oil companies concerned.

Mr. Moody, who also now is executive director of the national coal policy conference, asserted in positive terms, that the residual was being dumped. Others have made similar charges. Silence on the part of the accused has been maintained.

One of the protests made in connection with the mandatory quotas on residual oil is the alleged harm done to our relations with the friendly nation of Venezuela. I agree we should do everything possible to keep on the best of terms with our neighbors to the south. Yet, I find that Venezuela maintains most effective tariffs and quotas against certain imports, including U.S. products. Obviously, Venezuela feels it must protect its own economy and security. I am certain that country will understand action to protect our vital economic interests and security—particularly when no real injury to her interests is involved.

I am wondering, however, just how much benefit Venezuela has had from these residual oil imports. As anyone familiar with the petroleum industry knows, the lighter products—gasoline, the lubricating oils, home heating oils, etc.—bring higher prices and more profits than residual oil. A very high percentage of residual results from the cracking of the Venezuelan product.

Some informed persons feel this is deliberate on the part of the oil giants and that the percentage of residual from the Venezeulan oil could be reduced substantially if it were not for the fact that the market is shared by a cartel. As a part of that alleged cartel operation, residual oil apparently is dumped on the east coast at the expense of the coal industry and coal miners—as well as American coal-hauling railroads and their employees. Moreover, and here I repeat for emphasis, the deterioration of the coal industry threatens the national security.

Many persons are heard to express the belief that coal is obsolete and is rapidly being replaced by other fuels. Actually, the foundation for our energy market in the future is coal. Fortunately, we have tremendous quantities of it, enough to last for a 1,000 years or more. Coal, if necessary, can be turned into oil and into gas, and today it is the base of many valuable chemicals and other products. On the other hand, many informed persons insist the demand for coal will grow and grow. We may, they say, be using more than 1 billion tons by 1975, which is only about 15 years away.

What we need to be concerned about now is the present and the months and years which lie just ahead. Our own safety dictates that we keep the coal industry healthy, prosperous, and ready to expand quickly and substantially in times of crisis.

The mandatory quota system ordered by the President was only a first step—and a modest one—in that direction. We need to do much more.

Now to summarize this situation as I see it:

First. The President's action in imposing mandatory quotas on residual oil clearly was justified from the standpoint of national security.

Second. The average householder is not directly affected by the order, inasmuch as residual oil is not used in the home.

Third. There is little likelihood that increasing prices for residual oil will adversely affect consuming interests on the east coast, because coal is available at prices that have remained stable since 1946.

Fourth. The order likewise was justified in the interest of fair play and the domestic economy, inasmuch as evidence indicates that residual oil was being dumped at the expense of American bituminous coal.

Fifth. The Congress should investigate reasons why the Department of Justice civil suit against five large petroleum companies, alleging violation of the antitrust laws through the division of markets and the fixing of prices, has remained inactive since it was filed approximately 6 years ago.

THE SEARCH FOR WORLD PEACE

Mr. WILEY. Mr. President, we shall soon be leaving to go back to our constituents for Easter.

Easter symbolizes peace. It also is an answer to the eternal question, "What is life? Has it any termination?"

I wish for all my colleagues in the Senate, when they go home and meet with their constituents, that they will find the answers for which they are looking to the questions which confront us.

We know that through understanding, and following the precepts of the Man of Peace, we can find the answers.

There was published in the March 1959, issue of Club Woman magazine an

article entitled "World Peace: Can It Be Achieved in Our Day?" written by myself, in an effort to answer some of these questions.

I have suggested that world peace can be found only through an effective utilization of the principles I have outlined—the exchange of information and ideas—right ideas, if you please—cultural exchange, people-to-people contacts, international education, mobilization of religious faiths, perhaps through an international "Geospiritual year." I believe that if we demonstrate in our own living in America that we can give to each other the benefit of being sincere and honest in our convictions, we can carry through that idea in the world at large.

I ask unanimous consent that the article to which I have referred be printed in the RECORD at this point as a part of my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WORLD PEACE: CAN IT BE ACHIEVED IN OUR DAY?

(By Hon. ALEXANDER WILEY, U.S. Senator from Wisconsin)

Today we are only 35 minutes away from Moscow by intercontinental ballistic missile. These lightning-fast, giant bullets, equipped with nuclear warheads, can fly along at the frightening speed of almost 11,000 miles per hour. Even with the facilities of our NORAD Command (North American Air Defense), and our intelligence system, operating at peak efficiency, we would have a maximum warning time of an ICBM attack from Russia of less than 1 hour. In the next 2 or 3 years, the warning time will be zero to 15 minutes. The killing effect of a thermonuclear blast would probably be a radius of 5 miles; but, in addition, if a 20-megaton bomb (the equivalent of 20 million tons of TNT) were dropped on St. Louis, for instance, radioactive fallout would blanket Illinois, Indiana, and even Ohio, if the wind were right. Our Office of Civil Defense Mobilization has classified over 100 major cities as probable target cities of such a thermonuclear attack. Chicago is a target city; Detroit, New York, Los Angeles, and just about every major industrial area. It can happen here.

Therefore, if it can happen here, we must predicate our thinking on the presumption that it will happen here—unless we dedicate our entire thinking, and consequent action, to the promotion and maintenance of world peace—a positive peace, safeguarded with justice and durability. The unprecedented horror of a war in the future lends an urgency to this task that is inescapable. Civilization, as we know it, could literally vanish from the earth in the incandescence of a thermonuclear explosion. Man is truly balanced between extinction and world harmony. Hence, as never before, and especially in the nuclear age, there is no alternative to peace.

THE POSITIVE APPROACH TO WORLD PEACE

However, in emphasizing the vital necessity for world peace, I prefer not to suggest that our primarly stimulus for its achievement is that of fear; although the threat and prospect of the self-destruction of civilization, and probably the human race, in a thermonuclear holocaust should certainly be incentive enough. Instead, I should like to adopt the perspective of the positive approach; an approach which is guided by the vision of a finer and nobler world than has ever been before—a world without warring states and where all men can be brothers.

Throughout modern history, mankind has pursued a concept of peace, achieved through various means, which might ultimately put an end to the recurring tragedy of warfare among nations. But a long progression of efforts toward universal peace has, almost wholly, failed. Unless we are to lapse once again into utter barbarism, sooner or later some nation must blaze a new trail along which other nations will follow—a pathway which will lead to that utopia of peace where wars shall no longer curse mankind. I want the honor for that leadership for our own beloved Nation.

OUR ATTITUDES TOWARD OTHER PEOPLES OF THE EARTH

If Americans are to take an active part in the promotion of world peace, one of the first things which must be done is to reorient our thinking with regard to other peoples of the world. Perhaps America's most outstanding native philosopher, William James, stated: "The greatest discovery of my generation is that human beings can alter their lives by altering their attitudes of mind." That was a half century ago. A few years later, another great thinker, Aldous Huxley, paraphrased a divine truth stated by the Teacher of Galilee when he said: "Love casts out fear; but conversely, fear casts out love. Fear also casts out intelligence; casts out goodness; casts out all thought of beauty and truth. Fear is the very basis and foundation of modern life—fear of the war we don't want, and yet do everything we can to bring about." By allowing the emotion of fear to replace that of brotherly love toward our neighbor—and in this jet age every nation in the world is our neighbor—we lose the ability to understand him, and the inevitable result is the temptation to hate him. Hate and mistrust are the children of blindness—to understand and love our neighbor we must open our eyes and see him; not fear and hate him.

PEACE THROUGH THE EXCHANGE OF INFORMATION AND IDEAS

I believe that world peace can be promoted through the effective exchange of information and ideas among all peoples of the earth. That is why I am wholeheartedly behind the views expressed by our President when he addressed the heads of Government of the United Kingdom, France, and the U.S.S.R. at Geneva on July 22, 1955. While speaking on the topic of normalizing and increasing East-West contacts, he stated: "To help achieve the goal of peace based on justice and right and mutual understanding, there are certain concrete steps that could be taken to lower the barriers which now impede the interchange of information and ideas between peoples." To help implement this forward-looking program in connection with our relations with the people of Russia, shortly thereafter arrangements were made by the U.S. Embassy in Moscow to publish and distribute within the Soviet Union 50,000 copies per month of the magazine Amerika. This illustrated magazine is published in the Russian language and gives an objective presentation of our American way of life; emphasizing the cultural and nonpolitical. I have been reliably informed that the response to this magazine, on the part of the Russian people, is tremendous; that invariably there are insufficient copies to meet the demand, with long lines queuing-up at newsstands the moment "Amerika" is put on sale; and that available copies are dogeared and worn from much handling and passing around. Reciprocally, the Soviet Embassy also publishes and distributes a like number of copies of an English language magazine, U.S.S.R., here in the United States.

THE UNITED STATES-RUSSIAN CULTURAL EXCHANGE AGREEMENT

Subsequently, as most of us are aware, an important milestone in the history of relations between the United States and Soviet Russia occurred on January 27, 1958, when, after 3 months of quiet negotiation, the Lacey-Zaroubin cultural exchange agreement was signed. At that time, I went on record as expressing the hope that this agreement would be but the first step in a chain reaction of peace. I stated that we have nothing but good will for the people of Russia, that we want to get to know the Russian people better. An indication that this view is at least partially shared by the Russian leaders was given in a recent exclusive interview between Soviet Premier Khrushchev and another U.S. Senator. During the course of this interview, Khrushchev said that he believes as strongly as we do that both our countries stand to benefit from the maximum exchange of visitors and knowledge and that he would do his powerful best at the Moscow end to remove bureaucratic and political obstructions in the way of the cultural exchange program.

A dramatic example of this United States-Russian cultural exchange was the front-page story last April describing the acclaim in Moscow of a young American, Van Cliburn, who triumphed over 48 other contestants in an international piano competition based upon the works of the great Soviet composer, Peter Ilyitch Tchaikovsky. This incident graphically demonstrated the truth to the Russian people that the only type of guided missile we ever want to send to Moscow is the human missiles who will go straight to the hearts of the Russian people; the masters of the keyboard, of art, of literature, and of drama.

At about the same time Van Cliburn was taking Moscow by storm, the famous Moiseyev dance company was being greeted by enthusiastic New Yorkers at the Metropolitan Opera. Performers such as these will bring about the jubilation of American cheers, instead of the sound of tears and suffering.

These heart-warming illustrations of cultural exchange are but a few examples of the effectiveness of contact between peoples and are but a partial indication of the tremendous power for good that such exchange can bring about.

THE PEOPLE-TO PEOPLE PROGRAM

I have been pleased, on many occasions, to publicly comment on the outstanding progress toward effective international contact made by the people-to-people program. This program had, as its origin, the White House conference held 2½ years ago on the inspiring initiative of President Eisenhower. At that time, spokesmen for major segments of the American way of life joined together voluntarily in this great private movement; the purpose of which was, and is, to increase the warm bonds between American individuals and organizations and counterpart groups of similar backgrounds and interests throughout the world. Since that time, the people-to-people program has made remarkable progress toward the achievement of this goal; demonstrating how private citizens who work voluntarily can best solidify the ties with other countries on a warm, human, individual-to-individual basis.

EDUCATION FOR PEACE

One of man's greatest needs is to learn; for to learn is to grow, and to grow is to live. Recognizing, then, this need to learn in order to grow, civilized man has developed the educational process into ever-higher levels of thinking. By expressing his aspirations through such development, man has created a great art; for, in order to mold human beings into their finest possibilities, the same epic struggle to create beauty and harmony out of stubborn material limitations is involved which is the foundation of all great art. I believe that we can use the art of education as a mighty force for the purpose of encouraging international understanding and good will. To effectively accomplish this,

constructive educational experimentation should go on universally, both at home and abroad. That is why I proposed, in a recent public address, that one or more educational institutions in the United States, representing the very best in the American educational process, consider the possibility of submitting plans to the Soviet Government leading toward the establishment of experimental American schools inside Russia for Russian youngsters. These schools would be intended genuinely for progress in education—not for hostile propaganda or subversion—and would demonstrate in action that the United States is interested in friendly, productive relations with the present and future generations of Russia. They would be educational lighthouses from which would emanate beacons of understanding—beacons to a brighter tomorrow. Truly, education for peace can prove to be more powerful than atoms for peace.

AN INTERNATIONAL GEOSPIRITUAL YEAR

A concept which I believe has tremendous potential for improving understanding and cooperation among men and nations is the idea expressed in the recommendation by prominent clergymen for the establishment of an International Geospiritual Year. This proposal, inspired by the constructive achievements of the recent International Geophysical Year, suggests that 1960 be set aside as a period when each religious group would present the moral and spiritual resources it felt were necessary for the religious development of mankind and would seek a proper relationship between religion and science. Motivated by the desire to know the nature of God and the ultimate purpose behind the universe, such a Geospiritual Year could unite men in their age-old longing to believe in, and better understand, their relationships with the Supreme Being. This unity would be strengthened by the universal desire to find better ways and means by which men can live together in love, mutual respect, and freedom—rather than in fear and oppression. By emphasizing the things which all faiths have in common, religion can be made a great force for world understanding, justice, and peace.

THE ACHIEVEMENT OF PEACE

If, then, world peace is to be achieved in our day, I am convinced that it will result only through a genuine understanding of our neighbors. This understanding can be brought about by an effective utilization of the principles I have outlined above; the exchange of information and ideas, cultural exchange, people-to-people contacts, international education, and a mobilization of religious faiths—perhaps through an international geospiritual year. These methods all stress direct or indirect contact with the peoples of other countries; but, in so doing, a distinction must be made between a government and its people. For example, the fact that there are friendly, and even cordial, relations between the Russian people and the American people does not mean that we have altered our basic belief in our own way of life or that we have diminished in the slightest our feelings against the official ideology of Soviet Russia. But the ideology of a government is one thing—friendship with its people is another.

With the quest for peace the chief objective of our foreign policy, these instrumentalities for understanding our neighbors can be used as working bases to achieve that peace so that problems which inevitably arise may be solved at council tables—not on battlefields. By effectively applying these principles—the United States can nobly demonstrate to the rest of the world our desires for peace—to free mankind from the burden of armaments and to awaken man to the need for turning his energies into raising low standards of living, combating deadly diseases, building schools, and freeing men from hate and war.

Mr. RANDOLPH. Mr. President, will the Senator yield?

Mr. WILEY. I yield.

Mr. RANDOLPH. I recall that in the middle 1940's the Senator from Wisconsin was the author of proposed legislation for the establishment of a Department of Peace within the U.S. Government. It was my privilege at the same time to sponsor a similar proposal in the House.

The measure I introduced—H.R. 3628, 79th Congress, 1st session—was the subject of hearings on November 8, 1945, by the Committee on Foreign Affairs of the House of Representatives. I testified extensively on that day and the record of the hearings show, also, that I caused to be published in the RECORD on that occasion an address delivered in the Senate by the distinguished Senator from Wisconsin [Mr. WILEY] in which he spoke about the necessity for a Department of Peace and called attention to the measure I had introduced in the House and to a bill he introduced in the Senate July 6, 1945, along the same line.

I hope that during the 86th Congress the very able Senator from Wisconsin may find it possible to devote the creativeness of his mind to this subject once again. I believe it is most important, and I hope these remarks are in keeping with the spirit of the search for peace which the Senator from Wisconsin has so well explained as the objective of all men and women of good will.

Mr. WILEY. Mr. President, I am very grateful to the Senator from West Virginia for his remarks. The Department of Peace was contemplated in my mind—and I am sure in the mind of the Senator from West Virginia—at a time when we were actually in an all-out war. The need for a Department of Peace still exists. There must be a diagnosis of the causes of war. That means analyzing the fears, doubts, hatreds, and economic needs of the peoples of the world. It means seeking to find the answers. We try to do that in some of our programs, but I feel that what we need more than anything else is what I have outlined in the article which I have asked to have printed in the RECORD.

Mr. DODD. Mr. President, will the Senator yield?

Mr. WILEY. I yield.

Mr. DODD. I should like to join my colleague from West Virginia in commending and thanking the distinguished Senator from Wisconsin for his edifying remarks. It is good that in this great body we pause at least for a short time to mark this spiritual occasion. It is good for our country that the distinguished Senator from Wisconsin [Mr. WILEY] and the distinguished Senator from West Virginia [Mr. RANDOLPH] have spoken in this tone today.

TEACHER OF THE YEAR

Mr. MONRONEY. Mr. President, it is with real pride that I call the attention of the Senate to Miss Edna Donley, of Alva, Okla., "Miss E. D." as many friends call her, who has been chosen National Teacher of the Year by McCall's magazine, in an annual project honoring all teachers.

As all America tries to improve the quality of its mathematics and science teaching to meet today's challenges, it is particularly gratifying to my colleague from Oklahoma [Mr. KERR] and to me to find an Oklahoma mathematics teacher at the top of a very distinguished honor roll.

I am proud for Miss Donley, who has tried to make math irresistible 30 different ways in 30 years of teaching it in high school, and who also has made a record for herself as a debate and speech teacher and a leader in professional and civic activities. I also am proud of all Oklahoma teachers who made her president of the Oklahoma Education Association last year. I especially congratulate the city of Alva, Okla., and its school board, for finding and keeping Miss Donley and giving her an opportunity to teach in her own way, even during those years before a good tough math course returned to fashion generally.

I ask unanimous consent to have printed in the body of the RECORD McCall's article and its honor roll of 10 other U.S. teachers.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

McCALL'S TEACHER OF THE YEAR

HOW M'CALL'S NATIONAL TEACHER OF THE YEAR IS FOUND

Miss Donley was selected by McCall's from a list of teachers nominated by State departments of education in all parts of the country at the invitation of Dr. Lawrence G. Derthick, U.S. Commissioner of Education, and Dr. Edgar Fuller, executive secretary of the National Council of Chief State School Officers. The nominees were observed at work over a period of months and their work was evaluated by representatives approved by McCall's and the U.S. Office of Education. From the recommendations, McCall's chose Miss Donley to receive the eighth citation in this annual project honoring all teachers.

In the 30 years that Miss Edna Donley has been teaching mathematics to high school students of Alva, Okla., she has heard the value of teaching real math to American children challenged and deprecated by both parents and educators. Her answer has been to work harder in her classroom at making the subject irresistible. "It was tough occasionally, but I stuck to the subject," she says, "and now math suddenly has become very fashionable again."

If since the end of World War II all high school teachers had followed Miss Donley's example in stressing subject matter, there would be less wringing of hands today among college professors over the lack of preparation of the freshmen crowding their doors. As much as any teacher possibly can, Edna Donley bridges the gap that has existed in our country between traditional scholars and modern psychologists. She is both. In hearty agreement with the committee and observers who rated her "an inspiration to us all," McCall's is proud to salute her as the eighth National Teacher of the Year.

Miss Donley is not an easy teacher—"students often think I'm a little hard on them," she says. However, she is, judging by the comments of her former pupils, the kind of teacher everyone later wishes he had had. One of them, now a successful engineer, says: "She gave me more of a background in and understanding of math than most students in other schools receive before they enter college."

Former students of the speech and debate classes which she also teaches are equally enthusiastic about what she has done for them. Nancy Denner, a finalist in the 1957

Miss America Contest, came home from college to be coached by Miss Donley. The following year Miss Denner was asked to speak in Atlantic City about Miss America scholarships because the sponsors felt she had had excellent training in public speaking.

A native Oklahoman and proud of it, Miss Donley comes from a family of teachers. Her father, the late W. A. Donley, made "the run" to become a first settler in Woodward County. Her mother was a teacher, and so are her brother and two sisters. Today she and her mother live in the home to which the family moved so that the children could get a good education. "My parents scouted other places but settled on Alva," Miss Donley says.

An energetic and beautifully groomed "young 50," Miss E. D., as most of Alva affectionately calls her, rates as high with the citizenry as with her students. For proof, here are just a few of the extracurricular honors to come her way in recent years: the Rotary Anns named her Woman of the Year in 1950 for her work with youth. The chamber of commerce made her its treasurer. Several civic clubs have appointed her an officer, and nearly everyone in Alva was a volunteer campaign manager when 20,000 teachers last year elected her president of the Oklahoma Education Association.

A pioneering spirit constantly plunges her into new activities and assignments. "I am not tolerant of monotony," she explains, and her students agree with her. Her classes may be difficult at times but they are never dull. She believes that 30 years of experience should be 30 new experiences, not the same one repeated 30 times.

"I only wish," says a parent who studied with Miss Donley 20 years ago, "that my two sons had the opportunity to learn from this talented, kind and lovable woman. I am confident they would be better able to face the problems of their adult world."

M'CALL'S HONOR ROLL OF TEACHERS FOR 1959

The following teachers, from 10 States, earned special mention for their significant contributions to the improvement of national teaching standards:

Martha C. Bigley, fifth grade, East Side School, Magnolia, Ark. With serenity and patience she guides this young age group into orderly learning habits. Teaching individually as much as possible so that neither the brightest nor the slowest is neglected, she gets exceptional results—particularly in reading classes.

Dorothy S. Ellison, science, Dora High School, Alabama. She has the rare gift of quality teaching despite crowded classrooms and limited facilities. Through workshops, individual projects and field trips her students keep ahead in science, particularly biology. For her stimulating class procedures she became Alabama's 1959 Teacher of the Year.

Dorothy N. Green, Latin, French, and English, Wells High School, Maine. She answered an S O S and returned to the classroom after 15 years of being housewife, bookkeeper, and mother. Crowding the hours with personal attention and piling on the homework, this "born teacher" convinced her students that if she could work that hard, so could they.

Mary M. Hawkes, science and photography, Hood River High School, Oregon. Although her career began in a 1-room school, she teaches brilliantly in the era of nuclear physics. Her students learn to live intelligently in a scientific world and to contribute to its advancement.

Fayna C. Kennedy, principal, Sewanee Elementary School, Tennessee. While managing a community school, she engages the help of university professors in pilot studies designed to enrich primary schools throughout her State. For her far-reaching ideas she was made Tennessee's 1959 Teacher of the Year.

Helen S. Knight, speech correction and counseling, Evanston Township High School, Illinois. She blazes trails in a new field, the education of handicapped children, helping the students solve career problems. Her work became part of a program to improve the State curriculum.

Willimina S. Lindsey, librarian and English teacher, Tolleson Union High School, Arizona. After special training this experienced teacher helped develop a library guide and book list for Arizona schools, and wrote the chapter on library instruction for high-school students. She also helped develop a policy manual for teachers.

Loretta Lynch, English and journalism, Bonners Ferry High School, Idaho. She teaches English to 135 freshmen, and journalism to juniors and seniors. She also is adviser for the school paper and yearbook. The paper has rated all State superior for 10 consecutive years—and that is how parents, students and associates rate this perfectionist teacher.

Vira F. Oswald, mathematics and science, Ouray High School, Colorado. Accelerated work for bright students is her specialty. This year her experiments include giving equal time and individual instruction to each geometry student, and providing double algebra content—with extra credit—to some of the sophomores. These and other experiments are part of a Ford Foundation project to improve small high schools of the area.

Donald W. Rasmussen, English and speech, Vermillion High School, South Dakota. A blending of literature, composition, oral reading and grammar all the way marks the work of this talented teacher. Four years of required English in his school, more efficient learning and improved standards of language are resulting.

NEW YORK EGG MONTH

Mr. KEATING. Mr. President, living as we are on the threshold of an age being ushered in with all manner of nucleonics, electronics, swivel seats, and spray cans, we sometimes lose sight of the fact that we Americans pretty regularly sit down at least once a day to a meal which appropriately includes eggs. In the course of a year our consumption amounts to an astounding 29 dozen eggs for each of us, man, woman, and child. It would seem appropriate, then, that we pause during this New York Egg Month to reflect a little on this bounty of ours which, by comparison with other peoples of the world, and with other periods of time even in our own country, approaches the fantastic.

For the egg, like so many of the blessings which are enjoyed by Americans, is all too often just another item of food which arrives at our table, we hardly know how. And some of us, I fear, do not care. Its availability, as well as its marvel as an almost perfect food, is taken for granted. But we should note its values and how it comes to us, as well as the fact that the days of the men and women who grapple with the great issues of politics and science probably started over a serving of scrambled eggs.

The egg ranks close to the top of the list of foods which contain large quantities of the amino acids which make up the bodybuilding blocks we know as protein. Proteins are vital to growth, they help to build immunity to disease and they control many of the body's processes. Eggs supply all the proteins necessary to growth and well-being, as well as most of the essential minerals. More than that, the egg is one of those delightful exceptions to the rule that what is good for us is too often somewhat disagreeable. It tastes good, whether it is "over easy" or in an elegant, mysterious French souffle, or in an angelfood cake.

While the egg has been around the world with man for a long, long time, its abundance is something relatively new. Today, it is the product of a vast and complicated array of production facilities and techniques which would stagger the imagination of the poultryman of 25 or 30 years ago.

Production of eggs in this country has jumped in the short space of 25 years from 3 to more than 5½ billion dozen a year, and the laying hen has become an efficient factory, using scientifically prepared feeds and receiving the attention of an army of highly skilled and trained technicians to produce the marvelous egg. Today the poultryman is less the farmer and more the factory manager, carefully balancing production input, checking the production line, applying the latest scientific findings, and keeping a weather eye on the intricacies of the markets.

While we laud the egg this month, we also pay tribute to the poultryman, for it is through his success as a businessman-farmer that the egg has found its way to us. New York poultrymen can take pride in knowing that our State, through their efforts, ranks in the upper quarter in the Nation of egg producers, and that they, in keeping the hens that produce nearly 2 billion eggs a year, account for more than $70 million of cash receipts to New York farmers—upwards of 10 percent of total cash receipts from farm marketings in the State. Because of their entrepreneurship with respect to quality and quantity, Americans are buying better eggs today for less money than 10 years ago.

Mr. President, I am pleased to take this opportunity to salute the men and women of the poultry industry during this month's celebration of New York Egg Month. I am pleased to salute the poultryman, the hen, and the egg.

FORTY-FIRST ANNIVERSARY OF INDEPENDENCE OF BYELORUSSIA

Mr. LAUSCHE. Mr. President, March 25 marks the 41st anniversary of National Independence Day by the Byelorussian peoples, and although at the present time these people are the slaves of their Communist leaders, and will have little opportunity to express their national traditional love of liberty and freedom, it is essential that those of us in the free world remember and honor the peoples of this captured nation.

A struggle for freedom has been an essential part of Byelorussian history since 1795, when Byelorussia was, by force of arms, conquered and annexed to Russia. In 1831, and again in 1863–64, the Byelorussians revolted against Russian colonialism, but each time were subdued by the Russian oppressors.

However, in 1917, when the Russian Empire collapsed, a Byelorussian Republic was formed, and endured until August of 1920, when it was occupied by Soviet forces.

Today the present Byelorussian Soviet Socialistic Republic, which has been accorded membership in the United Nations, retains only a fiction of sovereignty. Actually, the Byelorussians still remain slaves to the fearful colonial Communist Russian regime. Today, the peoples of this unhappy land suffer mass forced labor, chronic famine, and religious and cultural persecution. Mass arrests and deportations to Siberia all are indicative of their present lack of freedom.

In these days of Byelorussian trial and trouble, we can but extend our sympathy and good wishes to those Byelorussians who still hope for a republic truly free and democratic. Surely, in divine providence, the time will come when the Byelorussian dream of national independence will be realized. Until that day comes, Americans will continue to hope and pray with their brother seekers of truth and freedom.

Mr. KEATING. Mr. President, the pursuit of freedom has generated great conflicts among peoples and nations. But self-determination remains the dream of men everywhere. Acceptance of anything less means encroachment of a philosophy and system which submerges national expression. This can only result in the elimination of human dignity and the rights of man.

Few people are more aware of this than the Byelorussians, or White Russians as they have become known to us. For centuries the Byelorussians have been denied control of their own destiny. Here are a people, 15 million of them, in the area east of the old Polish border and west of Moscow, constituting a distinct national entity, united by cultural traditions, a common language, and a history of struggle, who repeatedly have been denied freedom. History reveals their plight.

From the late 1300's down to the 18th century and the partition of Poland, the Byelorussians were tossed between the Lithuanians, Poles, and Russians. Their homeland was the center of continuous strife and struggle. Through this entire period the Byelorussians were the unfortunate victims of alien interests and ambitions. They were subjected to harsh and cruel treatment and suffered indescribable tribulations under the rule of foreigners.

During these years of trial and suffering, they not only retained national identity but maintained their language and customs. After 3½ centuries of slavery the Byelorussians still desire to show the world they had a will to live as a free and independent people.

The chance came toward the end of the First World War when the ancient Russian regime was overthrown and the Czar's empire fell. At last, the Byelorussians were able to assert their national identity, and on March 25, 1918, their leaders established a government and proclaimed the independence of the National Republic of Byelorussia.

The Republic, so proclaimed, was destined to have a short existence. By March 1921 the Red armies had overrun the nation and ruthlessly subdued all resistance. The cherished light of freedom was extinguished, and once again Byelorussians suffered under the yoke of oppressors. Nevertheless, March 25 is recalled as the day when a dream was realized and when a freedom-loving people announced their independence to the world.

This earliest victim of Soviet aggression knows well the vicious and atrocious methods of the Communists. National independence has been denied. Her people have been dispersed. Attempts to assert freedom have met with brutal retaliation. An entire nation has been subjugated and made destitute, and her helpless people forced to bear witness to the mutation of their way of life.

Mr. President, Byelorussians are not allowed to celebrate their independence day. But, today, we along with many others, pause and pay tribute to this determined and courageous people. America stands before the entire world as the embodiment of the continued realization of freedom and independence. We, and the rest of the free world, must offer hope and extend encouragement to the valiant Byelorussians. We must work and pray for the day when these brave people will be able to practice openly the concept of liberty, free from the fear of oppression and tyranny. Until that great day, no true lover of freedom can rest.

Mr. JAVITS. Mr. President, today, March 25, marks the 41st anniversary of the proclamation of independence of the Byelorussian Democratic Republic in 1918. This independent state was relatively short lived, as it was partitioned between Poland and Russia by the Riga Treaty in 1921. During World War II, the people of Byelorussia again asserted their independence, but this freedom was also short lived, and Soviet domination was again asserted over the approximately 10 million inhabitants of that unhappy land.

On the anniversary of the declaration of Byelorussian independence we recall again the continuing valiant struggle of enslaved peoples behind the Iron Curtain. This struggle for independence stands as a tribute to all who believe in the principles of freedom and individual dignity, and reminds us again of the suppressed people denied their freedom who are behind the Iron Curtain.

GREEK INDEPENDENCE DAY

Mr. KEATING. Mr. President, today is the 138th anniversary of Greek independence.

Greece: The word alone invokes many images. We think of gods and goddesses, great battles and great heroes, sunlight, architectural beauty, and Byron. And too, the struggle for freedom in the land of freedom's birth, civil warfare, Cyprus, and a noble, proud and wise King and Queen.

These things and many more come to mind when one thinks of Greece. The whole Western World owes to Greece a debt that can never really be paid. In the largest sense, nations build upon each others' knowledge in the eternal struggle for the enlightment of man. This process is the mainspring of what we call civilization. It is to the ancient men of Greece that we owe the debt of formulating the practical philosophies of logic and education within the mind and on a communicative level. What gift could be more precious?

The Greek tradition has remained firm in its homeland and has spread over the rest of the world.

It is true that modern history has not always been kind to Greece. There was a long period of subservience to the Ottoman Empire before the archbishop of Patras raised the standard of revolt in 1821. The days that have followed have been a mixture of joy, destruction, hope, and frustration.

The agony of World War II took a heavy toll of the Greek nation in every sense of the term. Then came the bloody civil war, when the legitimate government had literally to fight for its life against the Russian-trained guerrilla bands that had infiltrated from the north. The United States came to the aid of Greece at once and our backing was a decisive factor in driving the Communists out of the country.

Now, at last, Greece is free. Under the inspired leadership of King Paul and Queen Frederika the country is slowly gaining back its strength and reasserting its place among the great nations of the world.

In relation to the present schism of ideologies within the world, Greece's attachment to the Western allies is a very important one. As a member of NATO, Greece acts as a bulwark against Communist aggression in the eastern Mediterranean. The Government has granted the United States the use of airfields and naval facilities within its confines and the Greek Army is supplied with modern arms and equipment under the NATO agreements. Thus, Greece's role within the free world is a vital and significant one.

The "glory of Greece" today may not consist of material wealth and military power. But the greater glory of the perceptive use of man's intellect—by which these other material manifestations gather meaning—is as alive and dynamic today as in the time of Plato and Pericles.

Mr. President, as a final tribute, I want to acknowledge the important contributions that Greco-Americans have made to the growth and diversity of American culture. There are roughly 600,000 Americans of Greek origin living in the United States. In every area of human endeavor, from expert cancer specialist to military hero, from the genius of Dimitri Mitropoulos in music to the stable ethic of the Greek Orthodox Church, from the friendly candymaker and congenial restaurateur we all have known to the Skouras brothers of the theater, the Greek people have contributed their unique, spirited, and excellent qualities of talent and leadership to the United States.

The United States has been in existence for 183 years. During that entire time we have lived under democratic freedom. Greece has been Greece for many centuries, but her modern freedom and territorial integrity has been in existence for only 138 years. However—and this is the important thing—

with all the slings and arrows of fate, Greece has remained. The ideals of liberty and justice—first nurtured by their forefathers—are no less strong in the Greek people today than they were during the time of Aristotle.

To the people of Greece, I send my greetings; to all that is Greek, I give my thanks.

Mr. DODD. Mr. President, all episodes in man's struggle for freedom are by their nature significant in the history of his long battle against the forces which would enslave him. But there are some soils of the earth in which liberty has thrived, blossomed, and fought for its existence in a peculiarly dramatic way. And it seems as if the people in those lands, having been born there, have absorbed into their very beings a far larger share than most of the inherent love of liberty which is in the souls of all men.

Greece is one of those lands.

Today is the 138th anniversary of that nation's independence.

And may I take this occasion to congratulate them first, on the part they have played in the new freedom milestone achieved by their neighbor nation, Cyprus, in her goal of eventual independence.

May I also congratulate the Greek nation on the new economic development program which she has launched during the past year in an attempt to give even greater economic freedom to her people.

And may I also take the occasion of this Greek Independence Day to recall for my colleagues a few highlights in this Mediterranean country's history which are connected in a special way with our own history.

On March 25, 1821, Bishop Germanos of Patras raised the flag of liberty over the Church of Aghia Laura near Kalavryta in Greece, which began the Greeks' war for independence from the Turks. To begin with, it was the ideas of liberty inculcated in the American and French Revolutions which inspired the Greeks anew to fight the Sultan of Turkey for their freedom. At first, Europe was indifferent, and it was men like Lord Byron, the English poet, dying at Messalonghi, who brought European forces around to a realization that this cradle of Western civilization—the Greek nation—must not remain enslaved. Americans were also fighting for Greek freedom 138 years ago, including Dr. Samuel Gridley Howe, Gen. George Jarvis, Capt. Jonathan Peckham Miller, Lt. William T. Washington, and a host of others. And when the fighting was over and the tragic debris of war cleared away, America shipped relief supplies to the Greek people.

Since that time the Greeks have stood shoulder to shoulder with the Americans, when freedom was threatened, and something could be done about it. When we were fighting Mussolini's dictatorship in Italy, the outnumbered, badly equipped Greek Army took on the Fascist legions and defeated them. It took Hitler's forces to temporarily conquer Greece. Some military historians believe—and I believe it, also—that the Greeks actually dealt a fatal blow to the Nazi dictatorship by resisting Mussolini's army so well, for the diversion of Hitler's forces into the Mediterranean country seriously impaired the striking force of his Russian invasion.

Americans and Greeks, again standing together under the Truman doctrine, defeated the Communist attempt to subjugate Greece. Today, when the United States, the Western World, and all the countries of the world, for that matter, are threatened by Communist slavery, the Greek nation is our outpost.

And as I examine the past I feel a deep confidence in this outpost and in the men and women who are manning it.

Before closing these remarks, I wish to comment about one of the principal sources of courage and faith in the Greek nation—their religious leaders.

In the Second World War, Bishop Damashinos, of Athens, restrained the Germans.

In Cyprus the Greek people have found an important leader in Bishop Makarios.

The Greek Orthodox Church itself has been the nucleus for the uninterrupted Greek tradition, despite the influx of the Goth, the Vandal, the Bulgar, the Turk, and the Nazi. I believe it will be a sturdy bulwark in maintaining that tradition in the face of current Communist threats.

We have good reason, therefore, to note this anniversary, and to congratulate the people of Greece on this occasion.

Mr. COTTON. Mr. President, I ask unanimous consent to have printed in the RECORD a statement which I have prepared to commemorate the 138th anniversary of Greek independence.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

GREEK INDEPENDENCE DAY—STATEMENT OF U.S. SENATOR NORRIS COTTON

Today, Wednesday, March 25, is Greek Independence Day, and it is a happy occasion for citizens of Greece, and for all who love freedom.

But it has a deeper significance and a meaning which must not be lost on the world today. Greek independence came in 1821, after 400 years of domination and tyranny under the Ottoman Empire. It is a clear warning that even 400 years of foreign domination is not a long enough time to strip the love of freedom from the hearts of a brave people. Courage, spiritual graces, and dogged determination enabled the Hellenic citizens to endure the centuries of foreign rule while preserving their hopes for eventual freedom. These same characteristics, encouraged by the example of the anniversary we observe today, will inevitably produce an end to the present Communist tyranny over Eastern Europe. This anniversary should give the masters of the Kremlin good cause for reflection as they plot their next moves.

This day also gives us an opportunity to acknowledge the great gifts which have come to us from Greece and from Americans of Greek ancestry. The influence of Greece, ancient and modern, on our civilization and our culture can hardly be overlooked. We in New Hampshire are proud, too, of our fellow citizens whose roots go back to Greece, and grateful for their contributions to our State.

My interest in Greece and in Americans of Greek descent has always been particularly keen because of my association with Senator George H. Moses many years ago. Senator Moses, of course, had been Minister to Greece before being elected to the U.S. Senate. He spoke fluent Greek and was an ardent admirer and stanch supporter of Greek culture and character. My association with him sharpened my awareness and understanding of Greek influence on our civilization and our way of life.

Mr. BRIDGES. Mr. President, during these days when so many of the peoples of the world are forced to live under the heel of communism, I think it well that we take time to reflect on the courageous efforts of the Greek patriots who fought against overwhelming odds to gain their independence 138 years ago.

March 25 marks the beginning of the valiant fight for freedom by the Greek people from Ottoman rule, in 1821. The countries which today are living under the yoke of an oppressive power can gain new hope from a brief review of this portion of Greek history. Although dominated for centuries by Ottoman rulers, the freedom-loving people of Greece never lost sight of the hope that some day they might free themselves.

The first great step in that direction was taken on March 25, 1821, when the revolutionary banner was blessed nd the call to battle issued. Patriots who had banded together in secrecy several years before, joined the fray. Greeks by the thousands answered the call. Peasants and fishermen, weary of the rule of a foreign empire, initiated guerrilla warfare as the beginning of a long campaign to wear down their oppressors.

The efforts of those courageous Greeks impressed the freedom-loving people of the United States; but only the supreme optimists believed that the revolution would ultimately bring independence to Greece. Because of the tremendous odds, the general feeling was that the uprising would soon be crushed, and that the Greek people would see a return to the days of oppression.

This country took a firm stand in favor of the Greek patriots. President James Monroe, in a message to Congress in 1822, expressed America's sentiment in favor of having Greece regain her rightful place among the civilized nations. In 1824, from the very desk where I stand today, the great New Hampshire statesman, Daniel Webster, delivered his celebrated oration on Greek independence.

The determination of the Greek people was not to be denied. With the aid of sympathetic volunteers from all over the world, Greece shook off the yoke of Ottoman rule, and gained complete independence in 1832.

America owes much to Greece, not only for her great contributions to culture and education, but also for the important role that Greek-Americans have undertaken in our society today. New Hampshire has every reason to be proud of her citizens of Greek ancestry. They have made, and continue to make, outstanding contributions to the enrichment of my great State. At this time, I wish to extend to these New Hampshire citizens and to the Greek people throughout the world congratulations on this 138th anniversary of the independence of their motherland.

SPECIAL REPORT OF ZELLERBACH COMMISSION ON EUROPEAN REFUGEE SITUATION

Mr. JAVITS. Mr. President, I wish to draw attention to the special report of the Zellerbach Commission on the European refugee situation, which was published earlier this month.

Under the leadership of Harold L. Zellerbach, one of this country's outstanding businessmen, and Angier Biddle Duke, president of the International Reserve Committee, and former U.S. Ambassador, to El Salvador, this Commission has carried out two surveys of the European refugee problem. Its most recent study is focused on the salient aspects of the problems which confront the free nations as they prepare to embark on World Refugee Year, which begins in June 1959.

The Commission has proposed that the western nations, accepting the refugees from communism as a collective responsibility, should meet in conference and work out a united plan of attack on the problem of the residual refugees. It believes that if each nation were prepared to accept its fair share, there would be no difficulty in resettling over a 2-year period the 165,000 nonsettled refugees estimated to be in Europe, the 10,000 European refugees who remain in mainland China, and the influx of some 25,000 refugees which may be anticipated over the next 2-year period, provided, of course, that there is no emergency comparable to that resulting from the suppression of the Hungarian revolution. The Commission's report points out that since the end of the war approximately 1,900,000 refugees have been settled; that just over 50 percent of these have been integrated into the European economy; and that America has absorbed approximately 25 percent, and Australia, Canada, and Latin American and other countries the remaining 25 percent. In addition, during this period Israel absorbed some 200,000 European Jewish refugees. Applying this rule of thumb formula, the Commission recommends legislation that would admit approximately 50,000 refugees to this country over the next 2 years.

What would a crash program of the magnitude proposed by the Commission cost? After weighing the matter carefully, the Commission informs me that it would cost approximately $6 million per annum for 2 years over and above our current commitments to various refugee programs. This is broken down roughly as follows:

Additional contribution to ICEM to cover cost of increased volume of movement, $1 million.

Additional appropriation for U.S. escapee program for integration projects in Europe, $1 million.

Grants to American voluntary agencies to finance economic rehabilitation of 1,500 handicapped refugees, $1,500,000.

Additional contribution to ICEM for movement of European refugees from mainland China, $300,000.

Additional contribution to United Nations High Commissioner for Refugees to make possible integration programs for out-of-camp refugees on the same scale as those now planned for in-camp refugees, $2 million.

In connection with the last-named item, I believe it is important to point out that our contributions to the United Nations Refugee Fund have been matched on a very generous scale by the other free nations. Of the total of $14,485,000 of governmental contributions to programs of the U.N. High Commissioner through 1958, the United States contributed $5,333,000, or just over one-third. Of the governmental contributions received by the U.N. High Commissioner for Refugees, $12,935,000 was disbursed by the U.N. Refugee Fund through 1958 for integration projects in the asylum countries—Austria, Belgium, France, Germany, Greece, Italy and others. This, in turn, was matched by supporting contributions from the governments of the asylum countries in the amount of $19,100,000. Thus, an investment of some $5 million on the part of the United States has, with contributions from the asylum governments and other Western governments, snowballed into a total program for the integration of refugees, costing over $32 million. As of September 30, 1958, the United Nations Refugee Fund reported that over 26,000 refugees had been firmly resettled through these projects and that some 20,000 others had been beneficiaries in varying degree. This accomplishment becomes all the more impressive when one remembers that the majority of the refugees resettled through the UNREF program had been static over a period of years and were, in one degree or another, difficult to resettle. Because of this, it has required an average expenditure of almost $1,000 per capita to bring about firm resettlement.

Through the work of the American voluntary agencies overseas and in this country; through the U.S. escapee program; through our support of the United Nations High Commissioner for Refugees; through the Intergovernmental Committee for European Migration; through the Displaced Persons Act; through the Refugee Relief Act; through Public Law 85–316; through the admission of more than 37,000 Hungarian refugees; through all these things, we have established since the end of the war a record of generosity of which we may be proud as a Nation.

I should like to say a few words in particular about the U.S. escapee program, since it was 7 years ago this month that the U.S. Government established the escapee program to assist newly arriving escapees from Communist tyranny. Working with the governments of asylum countries and with the United States and international voluntary agencies, USEP has in these 7 years made an outstanding contribution in helping these refugees to establish themselves as useful and productive members of society.

In almost every country bordering the Iron Curtain the refugee reception centers have been improved and the refugees are now given a warm and generous welcome and are assisted on their way to a decent life in the free world.

A total of 205,452 persons have been registered for USEP assistance. Of this number 117,779 have been assisted in resettling overseas in a country of their choice while 37,044 have been integrated as self-sustaining residents of communities in the asylum countries. To accomplish this goal, thousands of refugees have been given medical care, trained in languages and vocations, and placed in employment and private dwellings.

These refugees and thousands of other persons, including people still behind the Iron Curtain, are aware that these accomplishments are a direct and practical demonstration of U.S. concern for those who flee Communist oppression. I believe I voice the sentiments of all my colleagues in tendering congratulations to the U.S. escapee program on its seventh anniversary.

But we cannot rest on our past laurels. As of this moment, there is no legislation in force under which refugees from Communist tyranny can be admitted to this country. Meanwhile, the problem of the residual refugee, although reduced in magnitude, becomes more difficult—and more urgent—with every passing month.

Our own Government and the other Western governments have recognized the need for a special effort to deal with the refugee problem through their sponsorship of the U.N. General Assembly resolution calling for the observance of World Refugee Year, to commence July 1959. The purpose of this resolution—which the free world owes to the inspiration of the Crossbow Group of the British Conservative Party—is: First, to focus interest on the refugee problem; second, to encourage additional financial contributions from governments, voluntary agencies, and the general public; third, to encourage additional opportunities for permanent refugee solutions.

It is my honest hope that, having made the moral commitment implicit in the U.N. resolution on World Refugee Year, the United States will provide the moral leadership which our world position demands in the practical implementation of this proposal. This will, of course, involve both a substantial increase in our contributions for refugee purposes and legislation admitting a fair share of the refugees to this country.

I am convinced that such a program would have the sympathy and support of the American people. I am encouraged in this belief, among other things, by the recent formation of the U.S. Committee for Refugees, a broadly based independent citizens group, embracing representatives of the voluntary agencies, the AFL–CIO, the American Red Cross, and many prominent private individuals. The first function of this Committee will be to coordinate planning for the observance of World Refugee Year in the United States. The Committee proposes to carry on an educational and informational program to be developed through civic and fraternal organizations, industry, labor, and religious groups, as well as through mass media.

The formation of the U.S. Committee for Refugees has been given the encouragement of the Government. The Com-

mittee is in consultation with Government officials and Members of Congress on plans for the implementation of World Refugee Year. It is my understanding that they will shortly make their recommendations public.

Mr. President, I ask unanimous consent to have printed in the body of the CONGRESSIONAL RECORD a condensed résumé of the findings and recommendations of the Zellerbach Commission on the European Refugee Situation. I do so because I feel it contains many significant and stimulating proposals which deserve the close attention of legislators and members of Government.

The Zellerbach Commission, I should like to point out, was originally set up as an ad hoc body of private citizens for the purpose of trying to do something about the problem. After 18 months of pioneering activity in the fields of research and public education, the Commission is now about to disband. I should, therefore, like to take this opportunity to pay tribute to Mr. Harold L. Zellerbach. Hon. Angier Biddle Duke, and the other members of the Commission—Hon. Eugenie Anderson, Mr. Irving Brown, Mrs. David Levy, Mr. Eugene Lyons, and Bishop James A. Pike—for their public spirit in initiating the undertaking, and for their good services in the interest of our country and of the refugees from totalitarian tyranny.

There being no objection, the résumé was ordered to be printed in the RECORD, as follows:

THE PROBLEM OF THE EUROPEAN REFUGEES

Resumé of current information and of revised finding and recommendations of the Zellerbach Commission on the European Refugee Situation, March 1959

As of January 1, 1959, there still remained some 175,000 nonsettled European refugees. The great majority of these were concentrated in the so-called reception countries, Austria, Germany, Italy, and Greece. In Communist China there were some 10,000 European refugees, for the most part White Russians who had fled before the Bolsheviks decades ago, awaiting for exit permits and for opportunities to migrate overseas.

Most of the nonsettled refugees are either people who escaped from Communist Europe at various times since the end of the war or displaced persons who refused to return to their Communist-dominated homelands when the war was over. Represented among them is the entire roster of peoples enslaved by communism—Poles, Yugoslavs, Czechoslovaks, Balts, Hungarians, Bulgarians, Rumanians, Albanians, and a score of nationalities of the U.S.S.R. The totals given above also include some 15,000 postrevolution Hungarians who still remain in Austria and some 10,000 Yugoslav escapees who are concentrated in Austria and Italy.

The postwar period witnessed a massive refugee resettlement effort by the Western nations. All told, almost 2 million nonethnic refugees have been resettled, either through immigration or integration since the end of hostilities in Europe. Of this number, the Western European countries have between them absorbed more than 900,000. The United States has taken approximately 450,000; and the other countries of overseas reception have between them taken some 575,000. But although these statistics are impressive, they serve as no consolation to the refugees who have been waiting their turn for so many years. Nor do they serve as any deterrent to the Communist redefection movement—which is highly organized, conducts an unceasing propaganda campaign in many languages, feeds primarily on the accumulated despair of refugees who have waited too long, and utilizes each redefector as a witness for communism in the war of the radio waves.

THE "DIFFICULT TO RESETTLE" REFUGEES

In dealing with the Hungarian refugee influx that followed the revolution and with the European refugees in mainland China, the Western community has been flexible and generous in its attitude. But on the whole, the selection criteria of the overseas countries of resettlement have been rigid, with an emphasis on youth and strong backs. Many refugees in Europe lost out on resettlement opportunities because they were past 40, or because they had tuberculosis scars on their lungs, or because of some minor physical defect, or because a single member of their family suffered from a condition which made them unacceptable to the immigration countries. The result has been an accumulation, both in-camp and out-of-camp, of refugees who used to be referred to in the old days as hard core, but who are now referred to, in official parlance, as difficult to resettle.

The High Commissioner's survey of last year listed some 53,000 refugees as members of households which, for one reason or another, were difficult to resettle—this, of a total of 178,000 nonsettled refugees in Europe as of midsummer 1957. Since then some hundreds of old and tubercular people have been accepted by Norway, Sweden, France, and other countries. But because the hard core refugees are generally static there is little reason to believe that this total has been substantially reduced.

The problem is a large one—but not as large as the figure 53,000 might suggest. The clearly institutional cases among the difficult to resettle refugees are a tiny minority—about 2,500 all told, with several hundred dependents. Many of those listed as difficult to resettle suffer from no incapacitating defects and are quite capable, with some assistance, of becoming self-supporting either as individuals or as family units. This category in particular would benefit if the immigration countries could relax their rigid physical requirements. The third category consists of people who suffer from more serious handicaps; but even these can, with special effort, be rehabilitated and made self-sustaining or partially self-sustaining members of society. This has been conclusively demonstrated by projects for hard core refugees in Norway, Sweden, Germany, Belgium, and other countries. Some of these projects were described in our first report. Others are described in this supplement.

The problem of the difficult to resettle refugees can be solved if it is shared. But it cannot be solved if the entire burden, or the major part of it, is left on the shoulders of the several countries where the refugee residues are concentrated—West Germany, which is still coping with the problem of the 10 million ethnic expellees and refugees it has received since the end of the war, and poorer countries like Austria, Italy, and Greece, who have sizable ethnic refugee problems of their own.

THE YUGOSLAV REFUGEE PROBLEM

In 1957 some 26,000 Yugoslav refugees crossed the frontiers into Austria, Italy, and Greece; in 1958 some 12,000. There has been a tendency in the West to regard these escapees as economic migrants rather than as political refugees. The Commission believes that this definition is meaningless and that the Yugoslav refugees, like the refugees from other Communist-dominated countries, escape for a complex of political, economic, and personal motivations. This definition has, however, been used to rationalize a double standard for Yugoslav refugees and other refugees. Perhaps the most alarming aspect of this double standard is that almost 60 percent of the Yugoslav escapees who crossed the frontier into Austria during the course of 1958 were classified as economic migrants, denied asylum, and returned to the country from which they had escaped. Those not returned, though theoretically eligible for USEP assistance, are, by virtue of the same definition, denied certain categories of assistance available to refugees of other nationalities. (There have been some minor exceptions to this rule—most notably the decision in November 1958, to make the several hundred Yugoslavs in Camp Valka eligible for broader USEP assistance so that their movement could be expedited and the closing of Valka by the German authorities facilitated.)

The Commission was greatly impressed by the youth of the escapees, almost 80 percent of whom are under 25. They are not delinquents, but for the most part workers, peasants, and students. They have made their decision to flee apparently for the reason that they are part of the generation that is in ferment throughout the Communist world.

The Commission found indications that the treatment meted out to Yugoslav refugees was weakening the principle of asylum in general, so that there has been a small but perceptible tightening up in the treatment of refugees of other nationalities.

The Commission feels that the fact that it is considered in the national interest to support the Yugoslav Government financially does not, ipso factor, mean that this Government has abandoned the oppressive features of communism—or, to use the official terminology, that Yugoslavia has ceased to be a refugee-producing country. The question of aid to the Yugoslav Government and that of assistance to the Yugoslav refugees must be kept separate; one must be decided on the plane of political expediency, the other on the plane of morality and humanitarian considerations.

EUROPEAN REFUGEES IN MAINLAND CHINA

There remain in mainland China at the present time some 10,000 refugees of European origin who have asked for the assistance of the U.N. High Commissioner. The great majority of these refugees are white Russians and their descendants who fled from the present territory of the Soviet Union during and after the Revolution. They constitute the remnant of a much larger white Russian population, some thousands of whom accepted repatriation to the Soviet Union since the end of the war, but most of whom were able to migrate overseas. Those who remain in China today have demonstrated the strength of their personal convictions by resisting for 13 years the various pressures and inducements to accept repatriation to the Soviet Union. Though the Chinese Communist Government has thus far been willing to permit white Russian refugees in its territory to migrate to overseas countries, the position of the 10,000 who remain has become economically disastrous and politically perilous.

Between 1952 and the end of 1958, ICEM, in cooperation with Church World Service, was able to move European refugees from China to overseas destinations at an average rate of approximately 1,800 per year. At the recent meetings of the UNREF Executive Committee and the ICEM Council, there was talk of a 3-year program costing $4,500,000 to clean up the refugee situation in China.

The United States and other Western nations have responded generously to the emergency, so that ICEM already had assured to it sufficient funds for the movement of 3,200 refugees from Hong Kong to countries of overseas resettlement. In the light of this initial reaction, and of the very

real danger that exists, the Zellerbach Commission joins its voice to the several voices which have already urged that the planned 3-year program be accelerated, and that visas and transportation be made available for the refugees as rapidly as they can be moved from China to Hong Kong.

FINDINGS AND RECOMMENDATIONS

1. The refugee problem can be solved: The handling of the Hungarian refugee emergency demonstrates how much can be done when the will and the unity are there. Within the space of 10 months, some 170,000 were resettled. It is noteworthy that the number of unresettled refugees remaining in Europe is roughly comparable to the number of Hungarians resettled in so short a period after the mass flight from their country. While the 165,000 nonsettled refugees remaining in Europe include many difficult-to-resettle cases, there is every reason to believe that, given a concerted effort by the Western nations, the problem can be solved humanely and expeditiously.

2. There must be no more palliatives: We have, in effect, thrown lifebelts to the drowning, but left them in the sea. We now have to pull them to land. We must put an end to the flow of unproductive millions that have gone into camp upkeep, small subsidies, parcels, etc.—without helping the refugee to reestablish himself. The refugee must be given constructive aid that will enable him to become self-supporting and self-respecting, instead of being compelled to exist on alms.

3. The refugees from Communist rule are a collective Western responsibility: As things stand today, those countries which, by virtue of political accident, have common frontiers with the Iron Curtain, must bear the brunt of the burden. This is unfair to the refugees and unfair to the receiving countries. It represents a serious burden on the already strained economies of Austria, Italy, and Greece in particular. It is a source of unnecessary friction within the Western community of nations; and, since it impedes the expeditious processing of escapees, it also plays into the hands of the Communist redefection agents and the Communist radio.

4. The basic need—a crash program to be planned by a Western Nations Conference: To liquidate the residual refugee problem in Europe on a crash basis, the Commission proposes the convening of an international conference involving UNHCR, ICEM, and the free nations most concerned with the refugee problem, either as countries of first asylum or countries of immigration. It would be impossible to find a more appropriate occasion for the convening of such a conference than the scheduled launching of World Refugee Year in July 1959. The corollary of this position is that the World Refugee Year would be empty of meaning without collective action to deal with the refugee problem—and such collective action cannot be effectively organized unless the Western nations come together in some kind of conference at which the problem is examined and each nation assumes responsibility for a fair share of the refugees.

The Conference, ideally, should be reconvened on an annual basis to reexamine the situation and to renew agreements on the voluntary allocation of responsibilities among the participating nations.

It is to be hoped that such a conference would establish the principle of collective responsibility for the reception, care, and resettlement of all those who escape from the tyranny of communism in the years to come. In granting political asylum to escapees, the countries bordering the Iron Curtain cannot turn back a man simply because he has a TB scar on his lung, or turn back a family because one of several children is mentally defective. They must take them as they come—and, by and large, they have done so, in the spirit of the Geneva Convention. At the point of reception, the percentage of so-called difficult to resettle cases is very small indeed. If each of the resettlement countries were prepared to receive a fair share of the difficult cases among the new refugees, the problem could be broken down into portions of insignificant size—but if the difficult cases are permitted to accumulate year after year in the countries of asylum, the problem will again become as massive and burdensome as it is today.

It is the hope of the Commission that the Western Nations Conference, if convened, would deal broadly and generously with the refugee problem in an effort to wipe the slate clean. This would involve, first of all, preparing estimates covering all those categories of refugees who require assistance in one degree or another—the in-camp refugees, the out-of-camp refugees, the unintegrated refugees in the nonsurvey countries, the economically self-supporting refugees who are basically unintegrated and for whom emigration is the indicated solution, the institutional cases, the cases that lend themselves to rehabilitation, etc. Provision should also be made for the anticipated influx, if the 2-year cleanup program is really to succeed in cleaning up. Subject to some modification, here is a rough estimate of the scope of the problem confronting the Conference:

Nonsettled refugees, UNHCR survey countries	145,000
Nonsettled refugees, nonsurvey countries	20,000
Economically self-supporting refugees who are not integrated and for whom emigration is indicated solution	10,000
European refugees in China	10,000
Anticipated refugee influx over 2-year period	25,000
Total	210,000

5. The United States must enact legislation to admit a fair share of the residual refugees: If the United States is to initiate or participate in the initiation of a conference, it must come to the conference with its own commitment unequivocally stated. To provide the leadership which the Western World expects of us and to live up to our own tradition of asylum for the oppressed, the United States must enact legislation permitting a substantially greater number of Iron Curtain refugees to enter our country.

There is no mathematical formula for establishing what constitutes a fair share. In the light of past experience, it would be reasonable to assume that, even with enhanced opportunities for migration, at least one-half of the nonsettled refugees will remain in Europe. This means that the countries of oversea resettlement should be prepared to assume responsibility, as they have in the past, for approximately one-half of the residual refugees and of the anticipated refugee influx. Accepting this rough formula, a fair share for the United States would involve the admission of approximately 50,000 refugees over a 2-year period.

There are several ways in which the necessary legislation might be drafted. The most direct way perhaps would be to provide for the issuance of 50,000 nonquota visas to refugees over a 2-year period. Perhaps it would be possible, although this appears unlikely, to provide for the refugees within the framework of a rewritten immigration law. Perhaps the powers that be in Washington might find it simpler to bring in the refugees as parolees, as they did during the Hungarian emergency. (It should be pointed out here that the voluntary agencies working with refugees all have serious misgivings about the disabilities imposed on refugee immigrants by the parole provision.) The means are of secondary importance. What is essential is that our country provide moral leadership for a planned attack on the refugee problem during World Refugee Year by taking effective action on an appropriate scale.

As a variant which might conceivably provide more incentive for the other nations, the Zellerbach Commission has suggested legislation which—

(i) Authorizes the Secretary of State to convene a Western nations conference for the purpose of planning and taking concerted action to liquidate the residual refugee problem in Europe.

(ii) Authorizes the issuance within 1 year of 10,000 special nonquota visas to refugee escapees, with 1,000 reserved for difficult-to-resettle refugees.

(iii) Authorizes the Secretary of State to enter into arrangements at the conference under which the United States would admit two refugee escapees for every five refugee escapees (2 to 5) which the other participating nations commit themselves to admit or to absorb—with the understanding that the 2-to-5 commitment would also apply to the "difficult to resettle" refugees.

(iv) Authorizes the issuance of nonquota visas to refugees in the stipulated ratio of 2 to 5, if a satisfactory agreement is reached at the conference.

6. European refugees in mainland China: The Commission applauds the exemplary manner in which the Western nations have cooperated in the resettlement of European refugees from mainland China. To meet the present emergency, it urges that the remaining 10,000 refugees be moved out of mainland China to Hong Kong as fast as exit permits can be procured and that the United States and the other cooperating nations commit themselves to whatever additional funds may be required for maintenance in Hong Kong and for augmenting the volume of movement to overseas countries. In this instance, the United States should be prepared, if necessary, to make a special grant to ICEM in excess of the matching contribution to which it is already committed.

7. Yugoslav refugees: The Commission urges the U.S. Government, the United Nations High Commissioner, and the Governments of Austria, Germany, Italy, and Greece, not to apply one standard to refugees from other Communist countries and another standard to refugees from Yugoslavia. This means (1) that USEP should provide the same support for Yugoslav refugees as it does for others; (2) that overseas resettlement opportunities for them must be expanded; (3) that Austria, in anticipation of such relief, should revert to her more liberal refugee policy of the postwar years.

8. Reevaluation of the Geneva Convention: The Yugoslav refugee situation also points up the need for a restatement or reevaluation of the key definitions contained in the Geneva Convention on Refugees. As the Convention reads, a refugee is someone who has been persecuted or has well-founded fear of being persecuted. The fact is that the great majority of the refugees from all the Communist countries have fled not because they were personally persecuted or because they feared imminent arrest, but simply because life under communism had become intolerable to them. They have fled, in short, from the actuality of everyday oppression rather than from the fear of personal persecution.

9. The resettlement of escapees must be put on a current basis: Because of the accumulated refugee backlog and because of complicated screening and immigration procedures, the refugees escaping to the West since the end of the war have had to wait 4 to 5 years, on an average, for resettlement. (The Hungarian refugees were, of course, an exception.) This long waiting period is wasteful financially, imposes unnecessary suffering on the refugee, saps his morale and provides fertile grounds for Soviet propaganda and Soviet redefection agents. It

would be in the interest of the receiving countries and of the West in general to develop programs and procedures that would make it possible to resettle escapees within 6 months to 1 year of their arrival in the West—and, once the slate has been wiped clean of the residual refugee problem which exists today, there is no reason why this goal cannot be achieved.

10. The reception of new escapees should be humanized: As matters stand, the escapee's first real experience of the free world is not a pleasant one. In Germany, he has to endure a prolonged stay in Camp Valka, which looks more like a rundown concentration camp than a refugee reception center. In Italy, he will probably pass through San Sabba in Trieste, another dismal walled compound that once served as a concentration camp. In Austria, he is held incommunicado in a special detention center while his eligibility is being decided; in Greece and Turkey, he may have to spend many months under detention while he is being interrogated by the military who are in charge of the frontier area.

The Commission recommends:

(a) That the other countries of reception give serious consideration to the possibility of granting the refugees limited freedom of movement, as is the case in Germany and Italy, rather than imprisoning them or quarantining them pending a decision on their eligibility.

(b) That reception centers should not have a concentration camp atmosphere like Valka, but should, rather, be modeled after nearby Camp Zirndorf, which was set up with USEP assistance. The liquidation of the residual refugee problem in Europe and the closure of a majority of the camps now in existence should certainly make it possible to operate a few of the very best camps as model reception centers.

(c) That in the reception centers the greatest effort be made to provide the refugee from the very first with vocational training, part-time employment, and adequate recreational facilities. Refugees who are kept active in this manner will make much better material either for immigration or integration than those who have suffered from the blight of prolonged idleness.

11. Eligibility criteria and procedures:

(a) Screening procedures should be carefully reexamined with a view to providing the refugee with the same degree of protection as is accorded an accused person. The Commission believes that the joint government-UNHCR eligibility commission existing in Italy affords substantial protection to the refugees and provides a model that the other countries of reception should seriously study. To make the protection as complete as possible, the Commission also believes that the refugee who is denied status should have the ultimate right of appeal to the civil courts, as he does in Germany.

(b) Eligibility criteria should, insofar as possible, be made uniform for the countries of reception. The language of the Geneva Convention should be broadened as suggested in recommendation No. 8.

(c) Legal counselors should be available to all escapees during the period of their eligibility screening and afterwards.

(d) Finally, we recommend the establishment of a commission of internationally prominent jurists to study eligibility procedures and criteria in the various countries of reception, and to formulate more detailed recommendations for the protection of the legal and human rights of escapees.

12. The refugee backlog in Europe cannot be wiped out without a concerted and generous attack on the central problem of the so-called difficult to resettle refugees. Too much emphasis cannot be placed on this point. An international program of resettlement and rehabilitation for hard core refugees would, in the long run, be good humanitarianism, good economics, and good politics.

13. Greater support for UNHCR and ICEM: UNHCR, in addition to providing international protection for refugees, has been one of the two intergovernmental agencies actively concerned with their resettlement.

UNHCR has embarked on a "clear the camps" campaign, designed to shut down all the camps, with the exception of the reception and processing centers, by the end of 1960. This is one of the most imaginative proposals that has yet been put forward, and it merits the unstinting support of the community of free nations. The Commission would be happier if the same degree of attention as is planned for the in-camp refugees could be made available to the out-of-camp refugees. In many cases, indeed, the plight of out-of-camp refugees is more desperate than that of the in-camp. If, however, UNHCR's crash program is to be expanded to include the liquidation of the out-of-camp refugee problem simultaneously with the in-camp refugee problem, the general tempo of resettlement will have to be stepped up and the Office of the High Commissioner will require greater support from the contributory nations.

ICEM is the other intergovernmental agency concerned with the resettlement of refugees. Although it was set up for the primary purpose of organizing the transport of European migrants, it provides an entire range of supplementary resettlement services—documentation and processing, transportation, vocational training, etc.

Since ICEM is the only organization with the machinery and know-how for moving large numbers of migrants, any crash program to liquidate the refugee problem would require a proportionate increase in government contributions to ICEM.

14. Greater support for USEP: The U.S. escapee program since its inception has made a wide range of assistance possible for almost 150,000 refugees. With the exception of the Hungarian emergency, it operated from 1952 to 1958 on an annual budget of approximately $5½ to $6 million. The Commission was greatly impressed by the scope and effectiveness of the USEP program. By channeling its aid through voluntary agencies, it has given it the people-to-people quality which direct Government aid cannot give. From the standpoint of the concrete benefits and the happiness it has brought to those who have escaped, as well as from the standpoint of the ideological conflict with communism, the program is worth many times its cost in dollars. If the USEP budget were increased by several million dollars, as the Commission believes it should be for the duration of the 2-year crash program proposed, it would still be a minor item compared with the many millions that are being spent for cold war purposes.

This would enable USEP—

(a) To extend its assistance to several categories of refugees who are at present not eligible for its support;

(b) Where additional support is necessary for effective integration or resettlement (for example, students nearing completion of their university courses), to continue its support beyond the cutoff date now stipulated;

(c) To grant equality of support to Yugoslav escapees.

STRENGTHENING OUR LIBRARY SERVICES PROGRAM

Mr. WILEY. Mr. President, we recognize that today the expansion and improvement of our educational program is a matter of individual, State, and National concern.

The technological age demands, more and more, that our people have an opportunity to keep up to date on new developments in our economic, social, cultural, ideological, and other aspects of local, national, and international progress.

Throughout America, a splendid program is helping a great many of our citizens to fulfill their personal, civic, and patriotic responsibilities. I refer specifically to our library system, which is of tremendous value in meeting the educational needs of more than 70 million people in this country. However, I wish to stress that there are still about 26 million people in the Nation without library services at all, and about 86 million who do not have adequate service.

We recall that in 1956 Congress enacted the Library Services Act to strengthen the overall library program, particularly in rural areas. As enacted, the legislation authorized a maximum appropriation of $7.5 million for 5 years to be used for grants to the States. However, during no fiscal year since its enactment has the full appropriation been granted. For example, the recommendations in the 1960 budget provide for an appropriation of $5,150,000, an amount substantially short of the authorized limit.

Today I received a message from S. Janice Kee, secretary of the Wisconsin Free Library Commission, urging approval of the full $7.5 million for fiscal 1960, to help provide for continuous growth, expansion, and improvement of our library services.

I respectfully call this matter to the attention of our colleagues on the Departments of Labor, and Health, Education and Welfare Subcommittee of the Appropriations Committee for consideration in conjunction with the overall appropriations for the Office of Education.

Secretary Kee also sent along an outline entitled "Here's How the Wisconsin Free Library Commission Is Using Federal Aid To Help Rural Communities Have Better Public Library Service," illustrating the excellent way in which this fine program is serving our citizens in Wisconsin.

I request unanimous consent to have the article printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HERE'S HOW THE WISCONSIN FREE LIBRARY COMMISSION IS USING FEDERAL AID TO HELP RURAL COMMUNITIES HAVE BETTER PUBLIC LIBRARY SERVICE

Books: The 66-year-old traveling library, because of the availability of Federal funds under the Library Services Act, has a greatly increased number of, and more suitable, books to fill requests from all parts of the State that have increased 29 percent this year. These requests for books come from people who do not have access to a local public library and from existing libraries which need supplementary materials.

Staff: The traveling library and field services staff has been increased from 26 to over 30 to meet the service demands. In addition to the necessary employees for classifying, cataloging, and processing the increased number of books, other employees have been added. These include: a research associate, to observe and study existing rural library programs and to help formulate recommendations for improving them; a public library

consultant to give special attention to helping local libraries improve services to adults; a bookmobile driver, and special experimental and study project supervisors.

Bookmobile: A modern demonstrator bookmobile, with a collection of 2,200 books for adults, young people, and children, is available (1) to exhibit locally, or (2) to put into operation in a bookmobile project.

A bookmobile exhibit gives the people of a locality a chance to see and examine a bookmobile and its content for a period not shorter than 1 day, nor longer than 1 month, at no expense to the locality. Bookmobile exhibits of 1 month's duration have been sponsored by the people of Waukesha, Ashland, Bayfield, Iron, and Price Counties in 1957–58. One-week exhibits have been held in Dodge and Barron Counties. The vehicle has been shown at county fairs and other special meetings in La Crosse, New Richmond, Amherst, West Bend, Madison, Stevens Point, Eau Claire, Fennimore, Fort Atkinson, Oconomowoc, and Menasha.

A bookmobile project provides people in a locality the actual experience of using bookmobile service for a period of not less than 3 months nor for longer than 1 year. Bookmobile projects now in advanced planning stages by local people include (1) one 6 months to 1 year project in Ashland, Bayfield, Iron, and Price Counties; and (2) a 1½-year project in Langlade, Lincoln, Oneida, Vilas, and Forest Counties.

With grants made to the library boards in Milwaukee and Shawano, additional bookmobiles will be put into service this year.

Special projects: Wisconsin's State plan provides for four different patterns of local library development, and Federal funds under the Library Services Act may be used in any of these ways: (1) developing federations of libraries by contract, (2) establishing county or multicounty public libraries, (3) demonstrating improved quality of service on a county basis where county government supports library service, and (4) developing contractual library service for rural areas from existing strong urban libraries. All of these patterns are now being tested in Wisconsin, using Federal funds.

1. Southwest Wisconsin library processing center: Eighteen independent, small public libraries in the five counties of Grant, Lafayette, Iowa, Richland, and Crawford have signed an agreement with the Free Library Commission to participate in a centralized ordering, classifying, cataloging, and processing book project, aimed to benefit the small libraries, both financially and professionally.

2. County library committees have been appointed by county boards of supervisors to study library conditions and make recommendations in the following counties: Waukesha, Barron, Jackson, Chippewa, Eau Claire, Walworth, Ozaukee, Ashland, Bayfield, Iron, Price, Green Lake, Waushara, Lafayette, and Kenosha.

3. Shawano City-County Library Board will receive grants of Federal funds for 3 years (totaling $44,700) to improve their countywide library service, with emphasis on services to adults.

4. Milwaukee Public Library has received a grant of $38,700 for the purpose of extending bookmobile service in five rural political subdivisions of Milwaukee County.

In-service training: Eight regional workshops were held in 1957 to study the provisions of the Library Services Act and Wisconsin's State plan for the further extension of library services to rural areas. With the use of Federal funds for travel of public library consultants, a greatly stepped-up program of in-service training programs for librarians and library board members in rural areas has been carried out in 1958–59; some 27 different 1-day training sessions have been conducted for people in one or more counties. In 1958, a statewide 2-day training program for library board members (a Governor's conference) was financed in large part by Federal funds under the Library Services Act.

Scholarship program: In 1958–59, 2 $1,000 scholarships were awarded to qualified residents of Wisconsin for graduate study in library science, and 15 $50 scholarships to librarians for taking a directed study course (DS–300) in library science offered by the extension division, University of Wisconsin, in 5 different locations around the State. The library commission will offer scholarships again in 1959–60.

Statewide survey: Beginning in 1959, the University of Wisconsin will conduct a study of the role of the public library in the educational development of the State, the most effective local unit of administration, and possible ways of improving library service. This study will be financed by Federal funds under the Library Services Act.

Public information program: The Wisconsin Library Bulletin has been enlarged to include full information on the State plan for developing public library service and for reporting fully all activities under the Federal grants program. An increased number of leaflets and brochures on various aspects of library service and development have been published and distributed, and special mailings to librarians and library board members have been made more frequently as a result of having Federal funds available. A concentrated effort is being made to acquaint localities with the potential use of the Federal money in the implementation of the State plan.

SOVIET MISSILE BASES

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the body of the RECORD an article entitled "Soviet's Missile Bases," written by Hanson W. Baldwin, and published in the New York Times of March 25, 1959. The article is extremely interesting, and should be important to all our citizens.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOVIET'S MISSILE BASES—WASHINGTON FINDS NO PROOF MOSCOW HAS CAPABILITY OF LAUNCHING ICBM's

(By Hanson W. Baldwin)

Despite the repeated alarms in Washington, hard evidence of Soviet capability of launching long-range missiles is still absent. No verification has reached this country of numerous reports published here and abroad of the identification of ballistic missile launching pads. Several such reports have been investigated and were found to be erroneous. Launching sites for both intermediate range and intercontinental ballistic missiles could, of course, be hidden in deep forests, or placed underground or deep in mountainous valleys, or they might be mobile.

But extensive underground construction would probably be detected, at least in the case of some sites, after a lapse of time. And intermediate range ballistic missiles—the Soviet types of these have ranges of 700 and 1,100 miles—would have to be emplaced, if they were to reach Allied targets, somewhere near the periphery of the Communist heartland.

The satellite areas have never been as thoroughly sealed off as Russia itself, so that sooner or later any extensive missile emplacements in Eastern Europe probably would be detected.

Many observers believe that Russia expects to utilize mobile launching sites for at least her intermediate range ballistic missiles: at sea, submarines, and on land, specially designed railroad flatcars. But again there is no conclusive evidence, as yet, of any such launching systems.

If Russia had hundreds of 700 or 1,100-mile ballistic missiles mounted on flatcars, some of them almost certainly would have been seen by now. One or more of the Soviet Z-class submarines, the largest submarines yet built in Russia, apparently have been modified to launch what some experts believe may be short-range ballistic missiles. But so far this is the only hard evidence of Soviet missile-launching sites anywhere.

This purely negative evidence cannot be construed to mean, of course, that the Russians have no operational ballistic missiles. In fact, other hard evidence suggests that they have a significant number, probably in the hundreds, of 700-mile missiles in the hands of troops.

It is probable that these missiles can be fired from mobile launchers, from hard-surfaced roads or quickly improvised launching sites. In any case, no fixed permanent installations have been discovered.

Available evidence suggests that the Russians have few, if any, 1,100-mile rockets in operation. Originally, it was believed that the 700 and 1,100-mile rockets were part of the same "family," but it is now believed the two are distinct types.

The importance of the 1,100-mile missile is that its additional range would enable it to reach a few bases and missile sites that are beyond the range of the 700-mile rocket. Because of its increased range its launching sites could be moved well back behind the Communist frontiers.

In the intercontinental ballistic missile field, we have detected the firing of only one Soviet missile this year at a range of more than 3,000 miles.

This brings the total recorded firings of Soviet long-range missiles (beyond 3,000 miles) to seven. It is possible, though this possibility is not rated too highly, that the Russians have established an Arctic test range, beyond the reach of our two long-range surveillance radars in Turkey and the Aleutians.

In any case, best estimates are that the U.S.S.R. now has, or soon will have, a few ICBM's in operation (though not too reliable). If present estimates of Soviet capabilities are correct, and if the Russians utilize those capabilities to the maximum, the Russians may have roughly 100 ICBM's some time in 1960 and perhaps 500 by late 1961, more probably some time in 1962.

Contrary to popular impression, the Russians are still producing piloted bombers, though at a slow rate. They now have about 150 heavy bombers, and are believed to be producing one Bison a month.

The Bison is Russia's standard heavy bomber, with four jet engines. Apparently none of the turbo-prop Bear bombers has been produced for the last 2 years.

Small production of the Badger two-jet medium bomber, roughly comparable to our B–47, is continuing. The U.S.S.R. may have built up its total number of mediums to more than 1,000 by some time this spring.

THE AGRICULTURAL AND UNEMPLOYMENT PROGRAMS

Mr. BRIDGES. Mr. President, we are confronted again this year with reviewing our farm program, as well as the extension of unemployment benefits. These two programs unfortunately have something in common. Both provide payments for nonproduction and both situations have arisen in part through automation. Congressional intention has been and continues to be the seeking of a practical solution in the present dilemma.

Two recent newspaper articles point out the experiences of two persons who enrolled in these respective programs. The first article appeared in the March 9, 1959, issue of the Detroit Free Press. It tells of one man's experience with the farm-support program. The experiences of the author of that article are not unique, I am told. I commend its reading to my colleagues, and ask, Whither are we going?

In our unemployment program we are attempting to be equally as helpful in extending unemployment compensation to those who are separated from their positions through no fault of their own. Separation from one's employment by entering the state of holy matrimony now has a dubious distinction. A news item in the Washington Star of March 13, 1959, indicates that that status, as far as unemployment benefits are concerned, should be treated as an illness or other event of such consequence as to qualify the participant. Undoubtedly, there exists adequate legal argument which would sustain this position. I have no doubt the granting of benefits in both the instances that I have cited is legally defensible. What is of grave concern to me is whether, irrespective of their legality, they are morally defensible to the American public.

Legislation extending unemployment benefits, as well as the farm-support program, will soon be considered by Congress, and careful scrutiny should be given to eliminating obvious defects which make possible the carrying of these programs to the ridiculous extent which these news articles highlight.

I ask unanimous consent that the news articles I have mentioned be printed in the RECORD at this point.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Detroit Free Press, Mar. 9, 1959]

GOVERNMENT GENEROSITY OK AS LONG AS IT'S FREE

(By Royce Howes)

When a subject like Stanley Yankus comes along and the talk turns toward farmers who get paid for not growing wheat, I speak from experience—and shush everyone while I do.

I, too, have been a beneficiary of that delightful taxpayer generosity which enables the Department of Agriculture to pass around money the way Congressmen once distributed free seeds.

You might say, in fact, that I was a beneficiary doubled in spades. I got paid for not growing wheat without even being a farmer.

It only lasted 2 years, but it might have run on in perpetuity except that the Government infuriated me with its arrogance.

All this happened a long yesterday ago when, as a favor to a pinto saddle horse, I moved my household to the country. Not suburbs, understand. The real thing.

On the tick of H-hour, D-day, the van stopped under the driveway's cedars. At H-hour plus 2 minutes, I drew my car in behind the van and alit. At H-hour plus 4 minutes another car pulled in behind mine and a man with a thick dossier in his hand got out.

The man spread his dossier on the fender of my car, indicated a dotted line, offered a pen and asked me to sign. Alertly, I asked why. He said it would be my pledge not to raise more than my quota of wheat.

At some time quite past, the former owner of my acres (about 30) had raised poultry (like Mr. Yankus) and had grown wheat to feed them (also like Mr. Yankus). So the land had a quota, and if you stayed inside the quota you got money.

On principle, I sparred a little. The man beguiled me with the back page of the dossier. It carried an aerial photograph of just what you saw when you flew over my new home.

I took it right kindly that the taxpayers had footed the bill for an airplane to take a photographer up and make such a neat little picture—with the orchard trees showing as dots, the buildings as rectangles and the county ditch as a meandering thread.

It was a conspicuously worthwhile expenditure for any government buying conversation pieces.

In gratitude, and for the money, I gave in and signed. The only risk seemed to be that I might go to jail or have my chattels confiscated as the result of buffoonery on the part of Nature.

If wheat somehow began to spring up all over the place there would be almost no chance of my recognizing it in time to start combing the atlas for a country with a weak extradition treaty.

That winter and the next winter I received checks in exchange for my signature—and marveled at the unbounded good will of the taxpayers who put up the money and the Congressmen they sent down to Washington to spend it.

Then came the third year and there appeared that Government arrogance previously mentioned. It wanted me to put up a buck of my own. If there is anything unbearable to a man riding the gravy train it's to be asked to put up a buck of his own money.

It worked this way. The man who had gotten me aboard the gravy train said I'd be put off at the next stop if I didn't keep up the productive capacity of the land on which I did not produce.

The requirement to keep qualifying, he said, was that I buy one ton of fertilizer. Through governmental arrangements, I could get the ton for one dollar, fee simple.

I tried to get out from under by arguing that I wouldn't know where to put the fertilizer. All traces of where wheat had grown in yesteryear were long since gone.

To that he had a rule-book answer. I wasn't required to spread the fertilizer anywhere. All I needed was a receipt showing I'd laid out my buck for it.

That's the Department of Agriculture—lead you on with fair words and fancy promises, and then spring one like that. I withdrew from the wheat program in a dollar's worth of high dudgeon.

I might have gone on getting those checks for years. The chap who bought the place from me might be getting them yet. But a man who's been getting something for nothing develops a hard pride which forbids parting with what is his.

Sometimes people ask if memory of those checks doesn't embarrass me. Of course not. The taxpayers and the Congress wanted me to have that money, else why would they have provided funds and a law?

And I'm not one to rebuff kindness with scorn—at least not until a supposed benefactor shows his true face the way the Government did in the matter of that dollar's worth of fertilizer.

[From the Washington Star, Mar. 13, 1959]

JOBLESS BENEFITS DUE WOMAN WHO QUIT TO MARRY

ALBANY, N.Y., March 13.—A woman who quit her job to get married is entitled to unemployment insurance, the Court of Appeals says.

The State's highest tribunal, in a 5–2 decision yesterday, said a lower court was right in allowing benefits to Mrs. Keith I. Shaw, of North Tonawanda.

Mrs. Shaw quit work as a clerk-typist at an Albany insurance company in July 1956, saying she planned to be married and move to western New York.

Her employer contested her claim for unemployment insurance in court.

The appellate division decided 3–1 in Mrs. Shaw's favor, ruling that marriage "ought to be treated as illness or other events of important personal consequence to the worker."

ANALYSIS OF 1958 ELECTIONS

Mr. BRIDGES. Mr. President, there appeared in a recent edition of the Washington Sunday Star an article which I am sure will be of more than passing interest to Senators on both sides of the aisle.

The article concerns an analysis of the 1958 election returns by Congressional Quarterly. For the first time, the analysis makes available a district-by-district breakdown of the 1958 races for Governor, Senator, and Representative.

This analysis appears to be highly significant in the light of the 1960 elections, for it indicates that the Republican candidate for President can or will win even if the party as a whole fares no better than it did in 1958.

Admittedly, to a certain degree the article is based on supposition, but it certainly bears out the plain fact that the Republican Party is alive and kicking and not about to write off the 1960 elections because of any previous setbacks.

I ask unanimous consent that this very interesting article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FIGURES SHOW GOP CAN WIN PRESIDENCY

A Republican candidate can be elected President in 1960 even if the party as a whole does no better than it did in 1958.

He can be elected without carrying a single State of the once-solid South. He can win without carrying one of the border States.

He can also lose Alaska, California, Colorado, Connecticut, Hawaii, Massachusetts, Montana, Nevada, New Mexico, Oregon, and Rhode Island to the Democratic nominee—and still he will win.

All he has to do is run between 1 and 5 percent ahead of the Republican congressional ticket in the 23 remaining Northern States, and he will win—even if the congressional Republicans in those States do no better than they did in 1958.

That is the surprising fact that is demonstrated by an analysis of official 1958 election returns by Congressional Quarterly.

BREAKDOWN OF RETURNS

The analysis makes available for the first time a breakdown by congressional districts of the official returns on the 1958 races for Governor, Senator, and Representative.

Is it reasonable to suppose that anyone the Republicans nominate in 1960 can run 1 to 5 percent ahead of the GOP congressional ticket?

This is what the CQ figures show:

Mr. Eisenhower ran 5.6 percent ahead of the Republican congressional ticket in his 1952 victory, and 8.7 percent ahead in 1956.

More to the point. New York's Gov. Nelson A. Rockefeller ran 5.8 percent ahead of the State's congressional ticket in 1958.

Four other Republicans—Senator Goldwater, of Arizona, Gov. Mark Hatfield, of Oregon, Senator Beall, of Maryland, and Gov. Christopher Del Sesto, of Rhode Island—ran even farther in front of the GOP ticket in their States in 1958, but none of them is considered a presidential hopeful.

NIXON RACE CITED

In his last solo race, when he ran for the Senate in California in 1950, Vice President NIXON ran an even 7 percent ahead of the Republican congressional ticket. But that showing is marred somewhat by the fact that Mr. NIXON'S 1950 running mate, then Governor, and now Chief Justice Earl Warren, ran 12.8 percent ahead of the congressional ticket and 5.6 percent ahead of Mr. NIXON.

Governor Rockefeller, Senator Goldwater, Governor Hatfield, Senator Beall, and Governor Del Sesto, on the other hand, all topped the tickets in their own States in 1958.

Here is exactly how a Republican presidential victory could be achieved without any basic improvement in the party strength:

In 1958, when the Republicans took a fearful drubbing in the congressional races, GOP candidates for the House received a majority of the statewide vote in only six States, with 30 electoral votes. Those States were Nebraska, New Hampshire, North Dakota, Utah, Washington, and Wyoming.

First, suppose that in 1960, Republican congressional candidates do not improve their showing anywhere, and suppose the GOP presidential nominee runs exactly even with the congressional ticket.

Obviously, he would win only the same six States and 30 electoral votes.

Next, suppose he runs 1 percent ahead of the congressional ticket. Immediately dramatic things happen. He wins Arizona, Delaware, Iowa, Kansas, New Jersey, Ohio, and Pennsylvania, with an additional 98 electoral votes, bringing his total to 128.

MORE FOOD FOR THOUGHT

If he runs 2 percent ahead of the ticket, he gains Idaho, South Dakota, Vermont, and the big prize of New York—another 56 electoral votes.

By running 3 percent ahead of the ticket he gains Minnesota's 11 electors, and his total is up to 195.

He runs 4 percent ahead of the ticket and he gains 50 more electoral votes in Indiana, Maine, Michigan, and Wisconsin.

Finally, he runs 5 percent ahead of the ticket in Illinois, wins its 27 electoral votes and has 272 in all—three more than he needs for election.

A numbers game? Perhaps. But remember Governor Rockefeller ran almost 6 percent ahead of the ticket in New York. Mr. NIXON, with a boost from Warren, ran 7 percent ahead of the ticket in California.

It's enough to give pause to the Democrats.

JOINT FOREIGN AID BY WESTERN NATIONS TO UNDERDEVELOPED COUNTRIES

Mr. MONRONEY. Mr. President, today's New York Times carries a story entitled "Joint Foreign Aid Weighed by West," under Harold Callender's byline from Paris, which reports the growing interest among the Western allies in a joint program to promote economic development in underdeveloped countries as a counter to the monolithic and completely regimented offensive of the Soviet Union in this field. This report of a widespread recognition of the necessity for a joint effort among the free nations of the world is a most encouraging development.

As the Members of the Senate know, this is a course many Members have been urging for some time. At the last session, the Senate passed by an overwhelming vote Senate Resolution 264, calling for study by the National Advisory Council on Financial and Monetary Problems regarding establishment of an International Development Association as an affiliate of the World Bank. More recently, the Congress has endorsed the President's proposal for a substantial increase in the resources of the World Bank itself.

I believe that the provision of assistance for economic development on a joint basis through international organizations will represent a significant step forward in achieving more effective results, and in broadening participation in this urgently needed work. This is not the sole burden of the United States, but one which must be borne by free peoples everywhere.

I ask unanimous consent to have Mr. Callender's article inserted at this point in the body of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JOINT FOREIGN AID WEIGHED BY WEST—PROGRAM TO SHARE BURDENS LONG BORNE BY UNITED STATES SAID TO BE UNDER STUDY

(By Harold Callender)

PARIS, March 24.—An official survey published in Washington last weekend showed that economic aid by the Soviet Union and its satellites to underdeveloped countries was increasing. The amounts of this aid were compared with the much greater sums coming from the United States.

The United States was the great pioneer in economic aid, first to Europe, later to the Middle and Far East and Latin America.

But now that Europe has recovered, it also has become a source of capital for needy areas; and there has been much discussion of placing such aid on a combined basis, with Europe taking more of the burden long borne only by the United States.

Michel Debré, Premier of France, in a speech in Constantine, Algeria, said France intended to make Algeria "a model for all of Africa as regards economic development and social progress."

ALGERIAN DEVELOPMENT PLANNED

This means the industrialization of a hitherto mainly agricultural country, a long-range program that is expected to cost France about $5,700 million in the next 4 years. About one-third of this is to come from the French national budget. Private capital is expected to help, notably in developing the oil of the Sahara.

As in the case of U.S. aid, which seeks to check Soviet influence in underdeveloped countries, French aid to Algeria and the rest of the French overseas community has a political aim. It seeks to keep these territories attached to France.

This aim is not dissimilar to that of the United States, since the French believe their presence in Africa is an obstacle to Soviet influence as well as a factor of security for France.

AID BY BRITAIN CITED

Sir David Eccles, president of the British Board of Trade, said in a speech at Capetown, South Africa, that the Western nations should cooperate economically as well as politically in resisting communism. Their resources are greater but communism has the advantage of regimentation, he remarked.

Apart from such special aid projects as the Colombo plan for Asia, Britain has been helping underdeveloped countries by exporting capital to them. It has been officially estimated that since World War II 70 percent of the flow of capital into the sterling commonwealth area came from Britain. In the 3 years 1953–56, this capital amounted to about $1,400 million.

The sterling commonwealth area includes not only Australia and New Zealand, underdeveloped industrially, but such nations as India and Ceylon, which also have received financial aid from the Soviet Union, according to the Washington survey. Canada is excluded.

British officials say Britain seeks to gain from foreign transactions everywhere about $900 million a year to build up her monetary reserves, to pay foreign debts and to lend overseas. This overseas lending is a traditional British practice. It is a form of aid to the underdeveloped areas that began long before it acquired special interest from the cold war.

Another form of aid for underdeveloped areas is the development fund for overseas territories that the six European common market nations will set up in the next 5 years. The fund will be $581 million.

Except for the Belgian Congo and the small territories of Italy and the Netherlands, the underdeveloped areas to benefit from this European fund are French.

THE COLD WAR DILEMMA FACING THE UNITED STATES TODAY—EDITORIAL FROM THE MANCHESTER UNION

Mr. BRIDGES. Mr. President, I should like to bring to the attention of Members of the Senate a very fine editorial which was published on March 18 in the Manchester (N.H.) Union. The editorial entitled "On Borrowed Time," goes right to the heart of the cold war dilemma facing the United States today.

In the words of William Loeb, the publisher, "If we do not arm the United States adequately, none of us will be around to enjoy anything."

To assure our future capability to strike a devastating blow at any enemy who dares attack America, the editorial urges we build a large fleet of Polaris submarines and missiles and construct underground missile launching sites for ICBM's loaded with hydrogen bombs.

I heartily agree that these are two things, among many which we must certainly do, to assure our military preparedness against the future threats from the Soviet Union.

I also agree with the view that the American people are not willing to gamble their lives away in order to keep a balanced budget. Certainly, the American people would rather pay more taxes or cut down on other Government spending so as to assure unquestioned national security.

Mr. President, the time has come for some straight talk about our national survival and the civilian economy. These are not ordinary days. We are engaged in a daily struggle with Communist empire builders who have challenged America to a fight to the finish.

Both the Communists and ourselves possess weapons of vast destructiveness and terrifying horror. If America did not have these weapons and the means to deliver them to enemy targets, it is doubtful that there would be a United States of America today. It is this very

military strength that has so far spared us from attack, in my opinion.

For the foreseeable future, belligerent communism will pose a steady threat to our survival. New means of attack will put us in ever more deadly peril. We must have in being at all times the forces to withstand an attack and to carry the battle back to the enemy's homeground. Only in this way can we hope to deter the Communists from striking our homeland.

In order to have such military strength, we are not faced with an "either/or" decision. We do not have to choose between adequate national defense or a balanced budget.

There is no question to my mind, Mr. President, that this Nation can have the strength it needs for security. I agree with President Eisenhower that the "American people want, are entitled to, can indefinitely pay for, now have, and will continue to have, a modern, effective, and adequate Military Establishment."

I likewise agree with the President that "a balanced budget in the long run is a vital part of national security."

I say we can have both.

We can do it by putting first things first. Our defenses come first, to my way of thinking.

We can do it by withholding our dollars from such Communist countries as Poland and Yugoslavia and from so-called neutral countries such as India and Indonesia.

We can do it by stopping the waste in some of our foreign economic aid.

We can do it by holding the line against creating new Government agencies, new Government programs, new Government functions—except where they are vitally needed for our survival.

We can do it by economizing in everyday Government operations, by cutting out waste and frills.

We can do it by postponing all but the most urgently needed Government programs. We cannot do everything we would like to do in civilian programs, and still provide sufficiently for our national security.

Even the richest nation in the world cannot finance every desirable project simultaneously. We must channel our resources into the most necessary programs.

When a family faces the need to live within its income, it does not decide to do without the food the baby needs. Instead, it does without pie, cake, and candy.

As a nation, we can live within our income, and can still provide amply for the deterrent forces we need in order to survive, if we just cut out the frills, the extras, the things we can do without for the moment.

The shield which today protects our freedoms from outside attack is our strong, prepared, alert Military Establishment. If we are to keep our freedom, we must be willing to keep our shield strong and our sword sharp.

A contemporary observer summed up the situation when he wrote:

> If a nation values anything more than freedom, it will lose its freedom; and the irony of it is that, if it is comfort or money that it values more, it will lose that, too.

Mr. President, the sooner the American people realize the defense needs we face for years to come, the sooner they will be willing to moderate their demands for larger civilian programs financed out of the Federal Treasury.

The sooner the American people realize the need for modern armaments, the sooner they will be willing to tighten their belts and make the sacrifices necessary to sustain our defense effort over the years of peril ahead.

Mr. President, I ask unanimous consent to have printed in the RECORD, as part of my remarks, the Manchester Union editorial which so ably highlights the issue of survival.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ON BORROWED TIME

The present Washington debate between the President and the administration on the one side and leading Democratic experts on defense, such as Senator SYMINGTON, on the other, on the question as to whether or not this Nation is adequately armed, is frightening.

No matter what disagreements there may be between Democrats and Republicans, one question should never have to be debated. That is whether the defenses of this Nation are strong enough to save our national life.

The overwhelming majority of Americans, this newspaper is sure, are not willing to gamble their lives away in order to keep a balanced budget. They would rather pay more taxes or cut down on other Government spending than to have any question whatsoever as to whether this Nation is in a position to defend itself.

One suggestion, recently made, makes a great deal of sense to this newspaper. It is that we spend whatever money is necessary for a large fleet of atomic-powered submarines and the Polaris missiles with which to arm them.

These submarines could stay hidden almost indefinitely. They need not even surface to fire their missiles. Thus the enemy would have a terrible time knowing where they were.

The Russians would then hesitate to destroy the United States by hydrogen bombing because even if the United States were to be destroyed, the hundreds of U.S. submarines cruising undetected under the surface of the water could still destroy every living thing in the Communist slave camps; this is, Russia and China.

This same authority suggests that it is time to stop fooling around with what is known as soft missile bases; that is, above-ground missile bases.

All future missile bases should be buried deep in the earth where they, too, cannot be destroyed, no matter how severe the attack against the United States. With such bases, adequately armed with hydrogen-headed missiles, again Russia would not attack because she would know that no matter what destruction was wrought against the United States, the missile bases would survive and be able to totally destroy the heart of the Communist cancer.

This newspaper believes that the first order of business for this Nation is to produce the submarines, the Polaris missiles, the deep underground bases, and the adequate missiles to arm them.

Talk about fancier health and welfare plans, better education, more elaborate embassies abroad and bigger jet planes for the President is utterly ridiculous.

If we don't arm the United States adequately, none of us will be around to enjoy anything.

It may come as a horrible shock to fat, comfortable Americans, who have been misled for a number of years by their national leaders to believe that everything is just wonderful, to realize that this Nation and all of us are now face to face with the threat of being wiped off the earth—not next year, next month, but tomorrow.

We are all living on borrowed time.

But if we forget about money and get the submarines, the missiles, and the bases that we need, and also the deep bomb shelters to protect our population, we can survive and win.

What are we waiting for?

TRIBUTE TO ANDREW J. KRAMER

Mr. BRIDGES. Mr. President, I wish to pay my tribute to Mr. Andrew J. Kramer, Keeper of Stationery for the U.S. Senate.

Mr. Kramer is observing his 35th year as an employee of the U.S. Senate. I think it is altogether fitting that this be observed as a small tribute to his many years of faithful service. I do not know what Mr. Kramer's politics are; but I know that he has many friends, and that he has served the Senate well for all these 35 years.

Andy, as he is known to his many friends, came to the Senate as a young man of 20. He was born and raised almost within the shadow of the Capitol itself.

He started in the Senate stationery room in 1924, when its operations were comparatively small. Today, its total business volume is close to one quarter of a million dollars annually. Four years after he began in that office he was named Assistant Keeper of Stationery. In 1944, he was elevated to his present position.

March 23 was the anniversary of the exact date on which Andy came to the Senate Office Building 35 years ago. Andy observed the occasion by taking one of his infrequent days off. I know I speak for all Senators when I express my thanks for his long and efficient service, as well as my hope that he will continue to be a popular member of our Senate community, so to speak, for many more years to come.

EFFECT ON AVIATION PROGRESS OF INADEQUATE AIRPORTS

Mr. MONRONEY. Mr. President, an excellent review of studies made by the Federal Government since 1946 on the subject of Federal participation in airport construction appears in a recent issue of Illinois Aviation, under the byline of Arthur E. Abney, Illinois director of aviation.

I especially commend to my colleagues Mr. Abney's observations and the direct benefits of the Nation's most modern transport industry are just beginning to reach the grassroots level, and his suggestion that if development of a nationwide system of airports is retarded the lack of adequate airports in itself may prove to be the limiting factor in the advancement of aviation in the United States.

I ask unanimous consent to have the article printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DIRECTOR'S COLUMN—FEDERAL AID TO AIRPORTS PROGRAM SUBJECT OF MUCH CONTROVERSY

(By Arthur E. Abney)

The Federal aid to airports program has in the past, been the subject of much controversy. Through the years special committees and study groups have been formed to research this one aspect of the aviation problem. Still other groups have touched on the question of Federal participation in airport construction and development projects as a part of their overall investigation of aeronautical facilities planning.

Last year, both the Senate and the House passed, by an overwhelming margin, a Federal aid to airports program calling for $100 million per year for 5 years. The President vetoed this legislation with the promise of a compromise aviation bill for the present session of Congress. The administrator of the Federal Aviation Agency, E. R. Quesada, on January 21, 1959, submitted to Congress draft legislation proposing $200 million in Federal funds to be spent through 1963. Since this represents approximately half the amount contained in the bill vetoed by the President in the last session of Congress, some serious study must be undertaken to determine which, if either, item of proposed legislation succeeds in meeting requirements of national interest insofar as aviation is concerned.

A wag once observed that various peoples of the earth react to emergencies in different but distinct manners and pointed out that when confronted with an emergency, Americans appoint a committee. In this particular bit of Americana the committee has flourished for a good many years; studies have been initiated on how studies should be undertaken. The most significant finding, is that virtually all of the reports agree that it is in the national interest to continue a strong and effective Federal aid to airports program.

In 1946 the Air Coordinating Committee was established to make a report on aviation facilities in traffic control techniques and their finding was that such facilities were marginal even by prewar standards. In 1948 the Air Navigation and Development Board was established to develop new air traffic control tools and air navigation procedures.

In 1952 the President established an airport commission, known as the Doolittle Commission, to investigate conditions associated with the rash of accidents in the areas surrounding airports. The Doolittle Commission report said, in part, "In the short span of 50 years since the invention of the airplane, aviation has become essential to our national defense and indispensable to our national economy. Although only a fraction of our total population is directly engaged in the design, manufacture, or operation of aircraft, every citizen is an indirect beneficiary." The Doolittle report goes on: "The Federal Airport Act of 1946 established a continuing program of Federal airport aid at a rate not to exceed $100 million per year with an authorized total of $500 million. Unfortunately, the implementation of this program by yearly appropriations has lagged; furthermore, it has proved difficult to synchronize the matching of funds, Federal and municipal. National interest requires that airport improvements not be delayed. Both civil and military airport policies require greater funding support and more comprehensive forward planning."

In 1955 the Commission on Intergovernmental Relations reported to the President, In addition, the present Federal aid program by securing free landing rights for military aircraft on airports federally assisted effects, pro tanto, a financial savings to the Federal Government and, even more important in the interests of economy, obviates the necessity for building many additional military airfields. The Commission finds need for active and continuing participation of the National Government in airport development including technical and financial assistance to State and local aviation airport authorities on a substantial scale."

In May 1955, the President through the Director of the Bureau of the Budget instituted a study to be made of aviation facilities. This report, which came to be known as the Harding report, asked these basic questions: (1) Should a study be made of long-range needs for aviation facilities? The Harding report said yes, to cover a period of at least 20 years. (2) What should the study cover? The Harding report indicated the study should cover airspace, civil and military expenditure for research and development and facilities financing, and type of government organization needed. The authors of the Harding report pointed out that the responsibility for financing individual airports and the responsibilities for the management should remain at the local level but that the Federal Government should accept responsibility for overall planning of national airport assistance—including programing of such additional funds both direct and supplemental as may need to be invested in airports in the national interest.

As a result of the report of the Harding Commission, the President in 1957 appointed Special Assistant Edward Curtis to conduct studies of aviation facilities and to recommend future programs. Among other things, the Curtis report recommended the creation of an independent Federal aviation agency headed up by a special Presidential assistant. This has come to pass as of January 1, 1959. Regarding airports, Curtis said, "Unquestionably such financial aid has been valuable in helping many communities to accomplish needed airport improvements more completely or more rapidly than otherwise would have been possible. Recent broadening of the Federal Airport Act increasing the level and stability of the program's authorization, has reflected the sense of the Congress and the President that this Federal aid program continues to be justified for the present. For the longer term future it can be expected that as the aviation industry further matures, more and more airports will become capable of self-support—and consistent therewith the Federal Government should reasonably look forward to the eventual curtailing of direct financial participation in airport construction."

We don't disagree with this concept; however, we feel that much work remains to be done for which Federal aid is necessary and appropriate. Only a few airports are now self-sustaining and until such time as this becomes generally the case, Federal aid is indicated.

The Curtis report pointed out that facilities by 1975 must be adequate to handle an air carrier traffic increase of 150 percent and an itinerant air traffic increase of 400 percent. "This projected increase in aircraft movements means that we must do all that is practical to increase the capacity of existing airports and then plan ahead to provide additional airports as they are needed." By way of pointing out the phenomenal growth of aviation activities the Curtis report shows that in 1936 there were 5 million takeoffs and landings at the Nation's airports, that in 1957 there were 65 million, with 115 million forecast for 1975.

In 1958 a tripartite study was undertaken by the Airport Operator's Council, the American Association of Airport Executives, and the National Association of State Aviation Officials to determine, on a nationwide basis, what airport construction was needed and how much State and local funds were available to accomplish the needed work. The results of this exhaustive study indicated a need for $1 billion worth of airport development for the period ending June 30, 1962. Figures indicated that 1,138 airport projects were planned by U.S. communities during the 4-year period. Of the total cost, almost $590 million is available from local and State sources and the balance was planned for $100 million a year appropriation which was passed by the House and Senate in the last session of Congress.

The result of these studies which bear directly on todays facilities program, date back to 1946. It should be kept in mind that, with the exception of the tripartite study, all the foregong studies were initiated and carried out by the Federal Government. Essentially, they all agree that it is in the national interest to develop a uniform national system of airports. Even the most reserved studies indicate a need for Federal financial participation in airport development, at least until such time as the industry matures to such an extent that airports, generally, are self-supporting. It is true that at the present time many of the large hub airports are self-sustaining. On the other hand, however, let us consider the hundreds of communities which have recently developed aviation facilities or who are in the process and who have also recently begun to attract local service air carriers. In this regard, the direct benefits of the Nation's most modern transport industry are just beginning to reach the "grass roots" level. We in Illinois are proud of the fact that the bulk of the people of this State are within easy commuting distances of an airport which connects, by local air carrier, to the airline routes of the world. Industrial expansion has added its impetus to the ever increasing number of communities who are seeking to establish or improve aviation facilities. As American business and industry continue in their acceptance of the airplane as an essential tool of commerce, this trend will increase and will make the airport a necessary and valuable part of the American economic heritage.

The sponsors of Federal aid to airports legislation which was vetoed during the last session of Congress have established this same legislation as the number one bill before both the Senate and the House. The new bill has passed in the Senate by a large majority. At the time of the veto, the bill, calling for $100 million per year in Federal aid, had bipartisan support and, as I have said, was passed by both the upper and lower Houses by wide majority. The bill's principal advocate, Senator MONRONEY, of Oklahoma, has managed to present this bill as the first bill in the new Senate. Representative OREN HARRIS, of Arkansas, has introduced a companion bill before the House as its first item of legislation.

In regard to his bill, Senator MONRONEY said, "We would be penny wise and pound foolish to be spending some $38 billion on the superhighway system for the 48 States and to assume that the gigantic task of preparing our airports for jets and expanding general aviation operations could be left to the design, planning specifications and sole financing of our municipalities. The 50-50 cost sharing plan long in vogue for ground transportation facilities is a good plan; a national airport program should also be based on cost-sharing and partnership."

At the time of this writing, the first passenger-carrying transcontinental jet flight has just been made. Less heralded and less dramatic, but no less important, is the tremendous growth in aviation in the past few years. In Illinois the number of registered pilots has increased by approximately one-third in 3 years. Illinois business and industry is continually demanding more of the

communities in which they are located in the way of aviation facilities. In the 50-odd years that mankind has known the airplane, it has risen to become our principle means of transportation of vital commercial and military cargoes. It has become one of man's principal forms of defense and one of his foremost means of progress. The leviathan of the air is a marvelous product of Yankee know-how and ingenuity. As important as the machine itself, is a nationwide system of airports which will permit the people of America to enjoy the maximum benefits of the air age. If development along these lines is retarded, the lack of adequate airports may in itself prove to be the limiting factor in the advancement of aviation in the United States.

The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed.

EXTENSION OF TIME FOR RECEIPT OF TEMPORARY UNEMPLOYMENT COMPENSATION

Mr. MANSFIELD. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 125, H.R. 5640.

The PRESIDING OFFICER. The bill will be stated by title for the information of the Senate.

The LEGISLATIVE CLERK. A bill (H.R. 5640) to extend the time during which certain individuals may continue to receive temporary unemployment compensation.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Montana.

The motion was agreed to; and the Senate proceeded to consider the bill, which had been reported from the Committee on Finance with an amendment on page 1, line 11, after the word "such", to strike out "individual's first claim under this Act was filed before April 1, 1959" and insert "individual had exhausted all rights under the unemployment compensation laws referred to in paragraph (3) before April 1, 1959, and his first claim under this Act was filed before April 1, 1959, in States in which unemployment compensation is paid on the basis of flexible-weeks, before April 5, 1959, in States in which unemployment compensation is paid on the basis of calendar-weeks, and before April 7, 1959, in States in which unemployment compensation is paid on the basis of statutory or payroll weeks."

Mr. BYRD of Virginia obtained the floor.

Mr. McNAMARA. Mr. President, will the Senator yield?

Mr. BYRD of Virginia. I yield.

Mr. McNAMARA. Mr. President, I call up my amendment, identified as "3-23-59—A," and ask that it be stated by title only.

The PRESIDING OFFICER. It is not in order for the Senator to offer his amendment in the nature of a substitute at this time, because the committee amendment has precedence.

Mr. MANSFIELD. Mr. President, will the Senator from Virginia yield?

Mr. BYRD. I yield.

Mr. MANSFIELD. Could the committee amendment be considered at this time, so that we may then have laid before the Senate the amendment in the nature of a substitute offered by the Senator from Michigan?

The PRESIDING OFFFICER. The committee amendment is in order at this time.

Mr. BYRD of Virginia. Mr. President, the only committee amendment is a technical amendment. I move its adoption.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

The amendment was agreed to.

Mr. MANSFIELD. Mr. President, I understand the Senator from Michigan now renews his request.

Mr. McNAMARA. Mr. President, I ask unanimous consent that my amendment in the nature of a substitute not be read in its entirety, but be printed in the RECORD.

There being no objection, the amendment offered by Mr. McNAMARA, for himself and other Senators, was ordered to be printed in the RECORD, as follows:

Strike out all after the enacting clause and insert the following:

"SHORT TITLE

"SECTION 1. This Act may be cited as the 'Temporary Unemployment Compensation Act of 1950'.

"TITLE I—INDIVIDUALS WHO HAVE EXHAUSTED THEIR RIGHTS

"Payment of compensation

"Eligibility

"SEC. 101 (a) (1) Payment of temporary unemployment compensation under this title shall be made, for any week of unemployment which begins on or after the fifteenth day after the date of the enactment of this Act and before July 1, 1960, to individuals who have, after June 30, 1957, exhausted (within the meaning prescribed by the Secretary by regulations) all rights under the unemployment compensation laws referred to in paragraph (3) and who have no rights to unemployment compensation with respect to such week under any such law or under any other Federal or State unemployment compensation law.

"(2) Except as provided in section 102(b), payment of temporary unemployment compensation under this title shall be made only pursuant to an agreement entered into under section 102 and only for weeks of unemployment beginning after the date on which the agreement is entered into.

"(3) The unemployment compensation laws referred to in this paragraph are—

"(A) any unemployment compensation law of a State;

"(B) title XV of the Social Security Act, as amended (42 U.S.C. 1361 and the following);

"(C) title IV of the Veterans' Readjustment Assistance Act of 1952, as amended (38 U.S.C. 991 and the following); and

"(D) the Temporary Unemployment Compensation Act of 1958 (72 Stat. 171).

"Maximum Aggregate Amount Payable

"(b) The maximum aggregate amount of temporary unemployment compensation payable to any individual under this title shall be an amount equal to sixteen times the last weekly benefit amount (including allowances for dependents) for a week of total unemployment which was payable to him pursuant to the unemployment compensation law or laws referred to in subsection (a) (3) under which he last exhausted his rights before making his first claim under this title.

"Weekly Benefit Amount

"(c) The temporary unemployment compensation payable to an individual under this title for a week of total unemployment shall be the weekly benefit amount (including allowances for dependents) for total unemployment which was payable to him pursuant to the unemployment compensation law or laws referred to in subsection (a) (3) under which he most recently exhausted his rights. The temporary unemployment compensation payable to an undividual under this title for a week of less than total unemployment shall be computed in the basis of such weekly benefit amount.

"Application of State Laws

"(d) Except where inconsistent with the provisions of this title, the terms and conditions of the unemployment compensation law or laws referred to in subsection (a) (3) under which an individual most recently exhausted his rights shall be applicable to his claims for temporary unemployment compensation under this title and to the payment thereof.

"Relationship to Title II

"(e) An individual who files a first claim under this title shall not thereafter be entitled to receive temporary unemployment compensation under title II of this Act, and his right to receive temporary unemployment compensation under this Act shall thereafter be determined in accordance with the provisions of this title.

"Compensation payable only under agreements

"Agreements With States

"SEC. 102. (a) (1) The Secretary is authorized on behalf of the United States to enter into an agreement with a State, or with the agency administering the unemployment compensation law of such State, under which such State agency—

"(A) will make, as agent of the United States, payments of temporary unemployment compensation to the individuals referred to in section 101 on the basis provided in this title; and

"(B) will otherwise cooperate with the Secretary and with other State agencies in making payments of temporary unemployment compensation under this title.

"(2) Any agreement under this title shall provide that unemployment compensation otherwise payable to any individual under the State's unemployment compensation law will not be denied or reduced for any week by reason of any right to temporary unemployment compensation under this title; except that any State the unemployment compensation law of which provides for a maximum duration of unemployment compensation benefits in excess of twenty-six weeks of total unemployment may, if it elects to do so, defer, in the case of any individual who has received, during his most recent benefit year (as defined by State law), an aggregate amount of unemployment compensation under such law equal to twenty-six times his benefit amount (including allowances for dependents), any additional unemployment compensation benefits otherwise payable to such individual under such law until such time as such individual shall have exhausted any benefits to which he may become entitled under this title. Any individual the payment of whose unemployment compensation benefits under State law is deferred pursuant to this paragraph shall be deemed, for the purposes of this title, to have exhausted all rights under such law during the period with respect to which the payment of such benefits has been so deferred.

"Veterans and Federal Employees in Puerto Rico and Virgin Islands

"(b) (1) For the purpose of paying the temporary unemployment compensation provided in this title to individuals in Puerto

Rico or the Virgin Islands who have, after June 30, 1957, exhausted their rights to unemployment compensation under title XV of the Social Security Act and title IV of the Veterans' Readjustment Assistance Act of 1952, the Secretary is authorized to utilize the personnel and facilities of the agencies in Puerto Rico and the Virgin Islands cooperating with the United States Employment Service under the Act of June 6, 1933 (29 U.S.C. 49 and the following), and may delegate to officials of such agencies any authority granted to him by this title whenever the Secretary determines such delegation to be necessary in carrying out the purposes of this title; and may allocate or transfer funds or otherwise pay or reimburse such agencies for the total cost of the temporary unemployment compensation paid under this title and for expenses incurred in carrying out the purposes of this title.

"(2) Any individual in Puerto Rico or the Virgin Islands referred to in paragraph (1) whose claim for temporary unemployment compensation under this title has been denied shall be entitled to a fair hearing and review as provided in section 1503(c) of the Social Security Act (42 U.S.C. 1363(c)).

"Amendment, Suspension, or Termination of Agreement

"(c) Each agreement under this title shall provide the terms and conditions upon which the agreement may be amended, suspended, or terminated.

"TITLE II—INDIVIDUALS WHO WERE EMPLOYED IN NONCOVERED EMPLOYMENT

"Payment of compensation

"Eligibility

"SEC. 201. (a)(1) Payment of temporary unemployment compensation under this title shall be made for any week of unemployment which begins on or after the forty-fifth day after the date of the enactment of this Act and before July 1, 1960, to qualified individuals who have no rights to unemployment compensation with respect to such week under any other Federal or State unemployment compensation law.

"(2) Payment of temporary unemployment compensation under this title shall be made only pursuant to an agreement entered into under section 202 and only for weeks of unemployment beginning after the date on which the agreement is entered into.

"Maximum Aggregate Amount Payable

"(b) The maximum aggregate amount of temporary unemployment compensation payable to any individual under this title shall be an amount equal to sixteen times the amount produced by multiplying 1¼ per centum by the total amount of the 'wages' (as defined in section 209 of the Social Security Act) and 'self-employment income' (as defined in section 211(b) of such Act) of such individual for whichever period of four consecutive 'calendar quarters' (as defined in section 213(a)(1) of such Act) of the two-calendar-year period referred to in section 203 will produce the largest amount.

"Weekly Benefit Amount

"(c)(1) The temporary unemployment compensation payable to an individual under this title for a week of total unemployment shall be equal to one-sixteenth of the amount provided by subsection (b): *Provided*, That the amount of the weekly benefit shall not exceed the maximum weekly benefit (including allowances for dependents) payable under the unemployment compensation law of the State.

"(2) Notwithstanding paragraph (1), if an individual, after filing his first claim under this title, acquires rights to unemployment compensation with respect to any week under any unemployment compensation law referred to in section 101(a)(3), the temporary unemployment compensation thereafter payable to him under this title for a week of total unemployment shall be the weekly benefit amount determined in the same manner as provided in section 101(c).

"(3) The temporary unemployment compensation payable to an individual under this title for a week of less than total unemployment shall be computed on the basis of the weekly benefit amount determined under paragraph (1) or (2), whichever applies.

"Application of State Laws

"(d) Except where inconsistent with the provisions of this title, the terms and conditions of the unemployment compensation law or laws under which such individual's weekly benefit amount is determined shall be applicable to his claims for temporary unemployment compensation under this title and to the payment thereof.

"Relationship to Title I

"(e) No individual may file a first claim under this title at any time at which he may file a first claim under title I. Any individual who files a first claim under this title shall not thereafter be entitled to receive temporary unemployment compensation under title I of this Act, and his right to receive temporary unemployment compensation under this Act shall thereafter be determined in accordance with the provisions of this title.

"Compensation payable only under State agreements

"Agreements With States

"SEC. 202. (a) The Secretary is authorized on behalf of the United States to enter into an agreement with a State, or with the agency administering the unemployment compensation law of such State, under which such State agency—

"(1) will make, as agent of the United States, payments of temporary unemployment compensation to qualified individuals on the basis provided in this title; and

"(2) will otherwise cooperate with the Secretary and with other State agencies in making payments of temporary unemployment compensation under this title.

"Benefits Under State Law

"(b) Any agreement under this title shall provide that unemployment compensation otherwise payable to any individual under the State's unemployment compensation law will not be denied or reduced for any week by reason of any right to temporary unemployment compensation under this title.

"Amendment, Suspension, or Termination of Agreement

"(c) Each agreement under this title shall provide the terms and conditions upon which the agreement may be amended, suspended, or terminated.

"Definitions

"Qualified Individuals

"SEC. 203. For the purposes of this title, the term 'qualified individual' means an individual who, during the two-calendar-year period most recently preceding the date upon which such individual applies for benefits under this title, and for which necessary data are available from the Secretary of Health, Education, and Welfare or other reliable sources as determined by the Secretary of Labor, has—

"(1) performed, during not less than four of the calendar quarters (as defined in section 213(a)(1) of the Social Security Act) within such period, either services the remuneration from which constituted wages (as defined in section 209 of such Act), or engaged in carrying on a trade or business the earnings from which constituted 'self-employment income' (as defined in section 211(b) of such Act), and

"(2) has been credited under title II of the Social Security Act as having received, during one year of such two-calendar-year period wages (as so defined) or self-employment income' (as so defined), or both, the aggregate of which is not less than $1,000.

"TITLE III—GENERAL PROVISIONS

"Definitions

"SEC. 301. For the purposes of this Act—

"(1) The term 'Secretary' means the Secretary of Labor.

"(2) The term 'State' includes the District of Columbia and Hawaii.

"(3) The term 'first claim' means the first request for determination of benefit status under title I or title II, as the case may be, on the basis of which a weekly benefit amount under this Act is established, without regard to whether or not any benefits are paid.

"Review

"SEC. 302. Any determination by a State agency with respect to entitlement to temporary unemployment compensation pursuant to an agreement under title I or title II shall be subject to review in the same manner and to the same extent as determinations under the State unemployment compensation law, and only in such manner and to such extent.

"Penalties

"False Statements, and So Forth

"SEC. 303. (a) Whoever makes a false statement or representation of a material fact knowing it to be false, or knowingly fails to disclose a material fact, to obtain or increase for himself or for any other individual any payment under this Act shall be fined not more than $1,000 or imprisoned for not more than one year, or both.

"Recovery of Overpayments

"(b)(1) If a State agency or the Secretary, as the case may be, or a court of competent jurisdiction, finds that any person—

"(A) has made, or has caused to be made by another, a false statement or representation of a material fact knowing it to be false, or has knowingly failed, or caused another to fail, to disclose a material fact, and

"(B) as a result of such action has received any payment under this Act to which he was not entitled,

such person shall be liable to repay such amount to the State agency or the Secretary, as the case may be. In lieu of requiring the repayment of any amount under this paragraph, the State agency or the Secretary, as the case may be, may recover such amount by deductions from any compensation payable to such person under this Act. Any such finding by a State agency or the Secretary, as the case may be, may be made only after an opportunity for a fair hearing, subject to such further review as may be appropriate under sections 102(b)(2) and 302 of this Act.

"(2) Any amount repaid to a State agency under paragraph (1) shall be deposited into the fund from which payment was made. Any amount repaid to the Secretary under paragraph (1) shall be returned to the Treasury and credited to the current applicable appropriation, fund, or account from which payment was made.

"Information

"SEC. 304. The agency administering the unemployment compensation law of any State shall furnish to the Secretary (on a reimbursable basis) such information as he may find necessary or appropriate in carrying out the provisions of this Act.

"Payments to States

"Payment on Calendar Month Basis

"SEC. 305. (a) There shall be paid to each State which has an agreement under this Act, either in advance or by way of reimbursement, as may be determined by the Secretary, such sum as the Secretary estimates the State will be entitled to receive

under this Act for each calendar month, reduced or increased, as the case may be, by any sum by which the Secretary finds that his estimates for any prior calendar month were greater or less than the amounts which should have been paid to the State. Such estimates may be made upon the basis of such statistical, sampling, or other method as may be agreed upon by the Secretary and the State agency.

"Certification

"(b) The Secretary shall from time to time certify to the Secretary of the Treasury for payment—

"(1) to each State which has an agreement under this Act sums payable to such State under subsection (a), and

"(2) to each State such amounts as the Secretary determines to be necessary for the proper and efficient administration of this Act in such State.

The Secretary of the Treasury, prior to audit or settlement by the General Accounting Office, shall make payment to the State in accordance with such certification, from the funds appropriated for carrying out the purposes of this Act.

"Money To Be Used Only for Purposes for Which Paid

"(c) All money paid a State under this Act shall be used solely for the purposes for which it is paid; and any money so paid which is not used for such purposes shall be returned, at the time specified in the agreement under this Act, to the Treasury and credited to current applicable appropriations, funds, or accounts from which payments to States under this Act may be made.

"Surety Bonds

"(d) An agreement under this Act may require any officer or employee of the State certifying payments or disbursing funds pursuant to the agreement, or otherwise participating in its performance, to give a surety bond to the United States in such amount as the Secretary may deem necessary, and may provide for the payment of the cost of such bond from funds for carrying out the purposes of this Act.

"Liability of Certifying Officers

"(e) No person designated pursuant to an agreement under this Act, as a certifying officer, shall, in the absence of gross negligence or intent to defraud the United States, be liable with respect to the payment of any compensation certified by him under this Act.

"Liability of Disbursing Officer

"(f) No disbursing officer shall, in the absence of gross negligence or intent to defraud the United States, be liable with respect to any payment by him under this Act if it was based upon a voucher signed by a certifying officer designated as provided in subsection (e) of this section.

"Denial of benefits to aliens employed by Communist governments or organizations

"SEC. 306. No person who is an alien shall be entitled to any benefit under this Act for any week of unemployment if, at any time on or after the first day of his applicable base period and before the beginning of such week, he was at any time employed by—

"(1) a foreign government which, at the time of such employment, was Communist or under Communist control, or any agency or instrumentality of any such foreign government, or

"(2) any organization if, at the time of such employment (A) such organization was registered under section 7 of the Subversive Activities Control Act of 1950 (50 U.S.C. 786), or (B) there was in effect a final order of the Subversive Activities Control Board requiring such organization to register under section 7 of such Act or determining that it is a Communist-infiltrated organization.

"Regulations

"SEC. 307. The Secretary is hereby authorized to make such rules and regulations as may be necessary to carry out the provisions of this Act.

"Authorization of appropriations

"SEC. 308. There are hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, such sums as may be necessary to carry out the purposes of this Act.

Mr. BYRD of Virginia. Mr. President, the bill before the Senate today (H.R. 5640) is one which received unanimous approval by the Committee on Finance. Its purpose is to extend the time from April 1, 1959, to July 1, 1959, during which unemployed persons who have established a claim to temporary unemployment compensation before April 1, 1959, may receive such payments.

The Temporary Unemployment Compensation Act of 1958, which became effective June 19, 1958, provides that unemployment benefits may be extended to individuals who, since June 30, 1957, have exhausted their benefit rights under State unemployment insurance laws and the unemployment programs for Federal workers, ex-servicemen, and veterans. Temporary benefits are payable to claimants under the laws of States which have entered into agreements with the Secretary of Labor to participate in the program. The States have the option of participating fully, partially, or not at all in the temporary Federal program. The 17 fully participating States are Alabama, Alaska, Arkansas, California, Delaware, District of Columbia, Indiana, Maryland, Massachusetts, Michigan, Minnesota, Nevada, New Jersey, New York, Pennsylvania, Rhode Island, and West Virginia. I submit for inclusion in the RECORD a table showing the States participating in the program, either fully or partially.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE II.—*Combined table showing States participating, either fully or partially, in the temporary unemployment compensation program*

State	UI [1]-TUC [2]		UCX [3]-UCFE [4]-TUC		UCV [5]-TUC

[1] Unemployment insurance.
[2] Temporary unemployment compensation.
[3] Unemployment compensation for ex-servicemen.
[4] Unemployment compensation for Federal employees.
[5] Unemployment compensation for veterans.
[6] Fully participating States.
[7] See table III, "Extended benefits under State law."

NOTE.—Prepared by the Bureau of Employment Security, U.S. Department of Labor.

Mr. BYRD of Virginia. The temporary unemployment compensation law will expire on March 31, 1959; that is, temporary benefits will not be payable for any weeks of unemployment beginning after that date. Thus, under present law, many individuals currently entitled to benefits would have their benefits cut off after April 1. House bill 5640 is designed to permit individuals who have already established a claim to temporary unemployment compensation to have an additional period of 3 months in which to obtain these benefits if they continue to be unemployed. The bill is designed to provide a gradual closing out of the existing temporary program, rather than a sudden discontinuance of it.

At the suggestion of the Department of Labor, a technical amendment was adopted by the committee, so that individuals who have reporting days after April 1, 1959, under procedures followed by the State agency, would not be precluded from receiving the benefits of this

act. For example, individuals who file their first claims in States in which unemployment compensation is paid on a flexible-week basis would have through March 31, 1959, to file their first claims; individuals who file in States in which unemployment compensation is paid on a calendar-week basis would have through April 4, 1959, to file their first claims; and individuals who file their first claims in States in which unemployment compensation is paid on a statutory or payroll-week basis would have through April 6, 1959, to file their first claims.

The chairman of the House Ways and Means Committee, the Honorable WILBUR D. MILLS, has expressed his approval of amending the House bill to take care of this technical problem, and stated he would recommend to the House of Representatives that the amendment be adopted without a conference.

Mr. President, I ask unanimous consent to have the letter printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

COMMITTEE ON WAYS AND MEANS,
HOUSE OF REPRESENTATIVES,
Washington, D.C., March 23, 1959.

HON. HARRY FLOOD BYRD,
Chairman, Committee on Finance,
United States Senate.

DEAR MR. CHAIRMAN: It has been called to my attention that the Department of Labor has suggested that H.R. 5640, to extend temporary unemployment compensation benefits in certain cases, needs a technical amendment to deal with a problem presented to the Senate Committee on Finance relating to the cutoff date of April 1, 1959, for filing claims.

I wish to state that if your committee sees fit to amend the House bill to take care of this technical problem, I would recommend to the House that it accept this amendment without a conference.

Sincerely yours,

WILBUR D. MILLS,
Chairman.

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the RECORD the statement I have received as chairman of the Finance Committee from the Assistant Secretary of Labor, expressing approval of the bill as amended.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF NEWELL BROWN, ASSISTANT SECRETARY OF LABOR

Mr. BROWN. Mr. Chairman, I want to express, first, the regret of the Secretary that he was unable to be here to express the administration's position. That is what I would like to very briefly do this morning.

I appreciate this opportunity to discuss with the committee the views of the administration with respect to legislative proposals for the extension of temporary Federal unemployment compensation. As this committee knows, on June 4, 1958, the President approved the Temporary Unemployment Compensation Act of 1958 enacted by the Congress to provide benefits for persons who had exhausted their regular benefits under the various State and Federal unemployment compensation laws. As enacted, no benefits would be paid under this act for any week of unemployment beginning after March 31, 1959.

Seventeen States elected to participate fully in this temporary unemployment compensation program, and 19 others elected to participate with respect to exhaustees only under Federal unemployment compensation laws, that is, Federal employees, veterans, and so on.

Through January 1959, $359 million was paid out for temporary unemployment compensation and it is estimated that $75 million more will be paid out in February and March. By March 31, 1959, approximately 1.5 million persons will have received temporary unemployment compensation under this act. We firmly believe that the Temporary Unemployment Compensation Act of 1958 was necessary. But it was intended to be—and I believe should be temporary.

This was emphasized by the Department in its proposal to the Congress for the enactment of temporary unemployment compensation legislation. For example, the explanation submitted by the Department to accompany its proposal contains the following statement:

"This is a program for a limited period to assist the States in meeting an urgent and immediate need and not a proposal for supplementation of regular benefits on a prolonged basis."

Again and again the Secretary of Labor, in his testimony before the House Committee on Ways and Means, stressed the fact that this legislation was designed to, and should be temporary in nature.

Throughout the consideration of the Temporary Unemployment Compensation Act by the Congress it was also emphasized that the proposed act was designed as a temporary measure to serve as a stopgap in order to afford the States a reasonable opportunity to take appropriate legislative action to meet the problem in their respective States, and that regular sessions of most of the State legislatures would not be held until 1959.

In 1959, 46 State legislatures and the Congress, which acts for the District of Columbia, of course, have convened or will convene. There is significant activity by the States to provide additional benefits, either through the enactment of extended unemployment compensation to be paid in emergencies or through the increased duration of benefits under the regular State systems. As of March 13, unemployment compensation legislation providing additional benefits had passed one or more houses of 12 State legislatures and two of these bills have been enacted into law; in 7 additional States such unemployment compensation bills have been introduced with the support of the Governors; 11 of these States are considering extensions to 30 or more weeks, and 1 has enacted a permanent program providing for the payment of additional unemployment compensation during high levels of unemployment; 37 State legislatures are still in session and 2 will convene later.

I might add there that of the eight legislatures that have gone home since the beginning of the year, five have taken action in this field. In two cases the Governor has signed the recommended bills; in three others the bills are on his desk.

While exhaustions under State law are less than they were last year, they remain at a relatively high level. We do not believe, however, that the answer is a succession of temporary extensions superimposed by Federal legislation on the unemployment compensation systems of the States.

We believe that the program already started should be permitted to taper off. For this reason, we favor the enactment of H.R. 5640 which has already passed the House. This bill as passed by the House would permit individuals who had filed first claims under the act before April 1, 1959, to receive temporary unemployment compensation until they have exhausted their rights or have become reemployed. In no event, however, would benefits be paid for a week of unemployment beginning after June 30, 1959.

If the committee desires to assure that persons whose unemployment began in the week prior to April 1, 1959, but who, under the State law, would report and file a claim after April 1, 1959, should be entitled to receive the benefits of the temporary unemployment compensation program, a technical amendment would be necessary, in the legislation passed by the House.

Mr. BYRD of Virginia. Mr. President, the Department of Labor estimates that this extension of the benefits under the Temporary Unemployment Compensation Act will provide some payments to approximately 405,000 individuals and will involve additional costs of approximately $78 million. At the time when the 1958 program was adopted, an appropriation of $665,700,000 was made to cover benefit payments, grants for administration, and salaries and expenses in the Bureau of Employment Security, in the Department of Labor. It is estimated that as of March 30, 1959, the total expenses under the program will be about $447 million, leaving an unexpended balance of the appropriation of about $218 million. There will be no need for additional appropriations to continue this program, and it will be seen that a considerable portion of the appropriations made for the fiscal year 1959 will not be expended.

Unless this bill is passed by the Congress before the Easter recess beginning tomorrow afternoon, the rights of many persons now on the benefit rolls will terminate abruptly on April 1. For that reason it would be unwise to endeavor to add long-range or controversial amendments to the bill at this time. I earnestly recommend the passage of House bill 5640, as unanimously approved by the Senate Committee on Finance, without additional amendments.

The amendment, as approved by the committee, has already been adopted by the Senate.

Mr. McNAMARA. Mr. President, there is before the Senate an amendment which has been offered on behalf of myself, Mr. CLARK, Mr. HART, Mr. MURRAY, Mr. MANSFIELD, Mr. MORSE, Mr. NEUBERGER, Mr. GREEN, Mr. GRUENING, Mr. BYRD of West Virginia, Mr. RANDOLPH, Mr. HUMPHREY, Mr. MCCARTHY, Mr. DOUGLAS, Mr. KENNEDY, Mr. WILLIAMS of New Jersey, Mr. PASTORE, and Mr. HARTKE.

The amendment is in the form of a substitute for House bill 5640. We believe that House bill 5640 is totally inadequate as a solution for the unemployment problem, which is still as grave as it was last year, when the Congress took remedial action of a much more reasonable and humanitarian nature.

Unemployment in the first 2 months of 1959 is almost equal to that in the same months of 1958. The national total is now 4.7 million. January unemployment was the highest for any January since before World War II—and the Feb-

ruary total was exceeded in that period only by February 1958.

The tables which follow contain a State-by-State breakdown of covered unemployment—as of March 7—and a demonstration of our recent past national experience in employment—and unemployment.

I ask unanimous consent that the tables appear in the RECORD at this point in my remarks.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

Insured unemployment for week ended Mar. 7, 1959

State	Total insured unemployment (excluding railroad)	Rate of insured unemployment (percent)
Alabama	39,959	5.2
Arizona	11,037	4.6

Mr. McNAMARA. Mr. President, these tables contain many interesting facts. Of particular interest is the table which shows what the percentage of covered unemployment is in the various States.

More than half the States, or 27, are confronted by an unemployment rate above 5 percent. In other words, in 27 of our States more than 1 in every 20 workers in covered employment are without jobs.

Unfortunately, there are no comparable figures on a State-by-State basis to show what total unemployment is. The Labor Department rule of thumb to obtain the total unemployed is to increase the covered unemployment figure by 50 percent. I hope that each Senator will undertake that simple mathematical exercise to find approximately the number of persons unemployed in his State.

For example, in my own State of Michigan, taking the covered unemployment figure of 132,000 and adding 50 percent provides a total of 198,000 unemployed. Even this figure is far too low, since our official estimates indicate that we now have approximately 300,000 persons unemployed.

Let me give quickly several other examples of how this works.

Latest available figures show that covered unemployment in California is 250,000, but the total estimated unemployment is 384,000.

Mr. KUCHEL. Mr. President, will my able friend from Michigan yield?

Mr. McNAMARA I am happy to yield to the acting minority leader.

Mr. KUCHEL. I ask the Senator, are those the official figures of the State Department of Employment of California?

Mr. McNAMARA. They were obtained late yesterday afternoon from that source; yes.

Mr. KUCHEL. I thank my friend. I shall ask the Senator some questions a little later with regard to the proposed legislation, but I wanted to be sure about the source of the figures he read.

Mr. McNAMARA. I shall be happy to be interrupted at any time by the Senator from California or by other Senators who may have questions concerning any portion of the remarks I am making.

In New Jersey jobless workers in covered employment number 131,000 while total unemployment is estimated to be 208,000.

Pennsylvania has 325,000 in covered unemployment, but total unemployment of 492,000.

And Connecticut, to give a final example, has 47,000 in covered unemployment and a total of 83,000 unemployed.

As Senators will note, some of these examples show total unemployment far greater than the 50-percent rule of thumb.

Last year the Congress faced a similar national problem. We knew that hundreds of thousands of people would be unemployed for a long period of time and we acted to help those who would exhaust their normal unemployment benefits.

We did not go nearly far enough last year with the Temporary Unemployment Compensation Act, but it should be apparent that even this meager action was a godsend to the people who benefited by it.

Without the assistance they were given through the act of 1958 there would have been incredible hardship and misery for all too many of our working people.

I cannot find a single reason why we should not act to meet this emergency in 1959 as we did in 1958.

Mr. HART. Mr. President, will the Senator yield?

Mr. McNAMARA. I am happy to yield to my distinguished colleague.

Mr. HART. Mr. President, the senior Senator from Michigan made a point which by indirection brings us to the House bill, the bill which the committee recommends. The Senator suggested, as I heard him, that he thought of no single reason why we should not act to meet the emergency in 1959 as we did in 1958.

Late yesterday I inquired of the research director of the Michigan Employment Security Commission, Norman Barcus, to find out what estimate the commission was able to make as to the number of persons unemployed in Michigan now who would benefit if the Congress passed the House bill recommended by the committee. I was informed the estimate was that about 35,000 of the persons presently unemployed in Michigan would benefit. I was also told that there are about 177,000 unemployed persons in Michigan who are currently not eligible for a benefit of any kind.

I think the contrast between 35,000 and 177,000 is startling. It occurs to me that this relationship may be applicable in a good many other States, and during the course of the debate other Senators may think it helpful to add to the RECORD the experience of their own States.

I thank the Senator for yielding.

Mr. McNAMARA. I thank my distinguished colleague for the up-to-date figures he has supplied. I have no reason to believe the figures are not correct as stated, and they again emphasize the need.

Furthermore, the number of persons who will exhaust their unemployment insurance rights in fiscal 1960 is exceeded only by the number for fiscal 1959.

I ask unanimous consent that a table showing the rate of exhaustions be printed in the RECORD at this point in my remarks.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

	State UI and UCFE exhaustions (in thousands), fiscal year—			
	1957	1958	1959	1960
July	86.6	98.9	285.4	210
August	88.1	91.6	255.0	190
September	73.5	82.9	237.4	195
October	73.8	94.5	224.3	195
November	70.4	84.4	177.7	155
December	73.3	110.6	213.1	165
January	106.7	147.1	212.4	170
February	95.2	145.5	195.0	150
March	112.5	191.4	200.0	155
April	115.1	231.2	195.0	150
May	106.5	236.8	175.0	140
June	92.5	254.0	170.0	130
Fiscal year total	1,094.1	1,768.7	2,540.0	2,005

Mr. McNAMARA. Mr. President, second, there is no evidence that this situation is capable of self-improvement. Our experience in 1958 is valid testimony to that fact. All the blithely optimistic statements which have been uttered about the passing nature of this problem will not restore one single unemployed person to work.

In last Sunday's Washington Post and Times Herald there was an article by Bernard Nossiter, which contained what is to my mind conclusive proof that the present recession is not of a passing nature. I ask unanimous consent that this article be printed in the RECORD at this point.

The PRESIDING OFFICER (Mr. GRUENING in the chair). Is there objection to the request of the Senator from Michigan?

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RECOVERY RATE FOUND SLUGGISH

(By Bernard D. Nossiter)

The national economy is moving out of the worst postwar slump at a sluggish pace.

A comparison with the recoveries from the two earlier recessions shows:

The present recovery is much slower than the 1949–50 revival.

The present recovery is somewhat slower than the 1954–55 comeback.

Moreover, a new method of calculating jobless rates—a method which many experts now favor—shows that unemployment has not simply held at an uncomfortably high level in the last 3 months. Instead, it has grown progressively worse.

Under the new method, unemployment, corrected for seasonal factors, was 5.8 percent of the labor force in November; 6 percent in December; 6.2 percent in January; and 6.4 percent in February.

Any five economists will offer at least six mutually exclusive methods of measuring recovery. And some will insist that by any standard the present recovery is satisfactory. This contented group argues that the fact that the recovery appears uninterrupted for 10 months after the recession hit bottom last April is the really significant feature.

Moreover, some contend that a comeback as fast as the one in 1949–50 would breed other evils. A snapback of that sort, it is argued, would quickly press output up against capacity, create shortages, and put pressure on prices.

It is this group also that generally argues (in private) that relatively high unemployment is unfortunate for those out of work but useful to temper union wage demands.

Finally, some economists say that the current recovery is so close to the pace of the 1954–55 affair that the differences are unimportant. However, that earlier comeback followed a mild dip. So, a more proper comparison, another school asserts, is with the first, more severe postwar slide. On that basis, this recovery is substantially slower.

To measure recovery, four key indicators were compared for the three periods: Gross national product or total output, corrected to eliminate price changes; the jobless rate; personal income, the sum of payments to people; and industrial production.

The recent slide in unemployment, reflected in the figures used here and compiled by the Committee for Economic Development, will come as a surprise to some.

Published Government figures show no change between December and February. However, the Census Bureau is privately measuring jobless rates in the same fashion as CED and is expected to publish this new approach.

Some economists argue that the recent worsening in unemployment reflected in the numbers is illusory. This group holds that the figures result from an extraordinary expansion in the labor force—that is, a rush of new job seekers in the last 3 months.

However, in the 9 preceding months, the labor force, corrected for seasonal changes, actually declined. It normally increases by 800,000 over a year; from February 1958, to February 1959, it increased by only 300,000.

Therefore, the rates showing a worsening of unemployment are compiled against a less-than-normal increase in jobseekers. A normal increase would make the picture look blacker.

Another unusual factor is supporting current production, employment and incomes. Perhaps 20 percent of the recent buying of steel is inspired by strike threats. Customers are building inventories to tide them over an emergency predicted by the industry as early as last September. If this scare buying were not in the picture and steel output were tailored to real demand at the current price, the production index would probably show not even the modest increase registered in the past 3 months.

Here's how much each of the three postwar recoveries had come back after each slump had hit bottom as shown in the four indicators. (The numbers are the present gain or loss for the 10th month after each slump hit bottom—February 1959 for the current recovery. Gross national product is measured quarterly so the comparisons are for points three quarters after each slump touched bottom. This gross national product for the first quarter of 1959 is estimated to have increased by 10 billion unchanged dollars from the fourth quarter.)

Industrial production: First postwar recovery, 15.4 percent above the preslump peak; second recovery, 1.5 percent; current, 0.7 percent below the preslump peak.

Personal income: First, 7.9 percent; second, 6.7 percent; current, 3.5 percent.

Jobless rate: First, was 4.5 percent 10 months after trough or 10 percent worse than preslump peak; second, 4.2 percent or 61 percent worse; current, 6.4 percent or 49 percent worse.

Gross national product: First, 9.5 percent above preslump peak; second, 4.4 percent; current, 2.1 percent (estimated).

Another method of comparison would be to measure how much each indicator had climbed from the trough.

On this basis, the first recovery was again the best for all four indicators. But the current recovery is about the same as the 1954–55 comeback in one measurement, faster in one and slower in two others.

To sum up: In all eight measurements, the first recovery was the fastest. The second leads the current comeback in five, is even in one and trails only in two.

Mr. McNAMARA. Mr. President, the article points out that present unemployment rates are measured against a work force which has increased by only 300,000 between February 1958, and February 1959, as compared to a normal increase of 800,000 in standard growth years.

Thus the present rate of unemployment is really more severe than in the past two slumps, since there are about 500,000 less job seekers than we would normally expect.

Industrial production has recovered far more slowly than after the last two recessions. At a similar stage following the worst point of the 1949 and 1950 slump industrial production had risen 15 percent above the preslump peak.

And at the same stage following the worst of the 1954 and 1955 downturn production had risen 1½ percent above the prerecession peak.

As of this month we find that production is still seven-tenths of 1 percent below the prerecession high.

Mr. Nossiter also points to the relative growth in the gross national product following each recession. After the 1949 and 1950 drop at this stage the gross national product had increased 9½ percent above the predrop high. In 1954 and 1955 it had returned to 4.4 percent above, and the present recovery is at 2.1 percent above.

In final summation, the article stated that our so-called recovery, which I submit cannot even be called that, is much slower than following the previous two recessions.

It is true that production in the latter months of 1958 showed some improvement. Unfortunately, this was not accompanied by a comparable increase in employment.

Between April of 1958, the low point of last year's recession, and December of 1958, 84 percent of the manufacturing production loss was recovered. However, there was only a 26-percent restoration of the manufacturing job loss.

The recession which we now face is one which hits all fields of employment.

The table to which I shall now refer is indicative of the inroads which have been made in employment in the major industrial fields.

I invite attention to the fact that one of our major industries, construction, is actually in worse shape this year in terms of employment than it was in 1958. So are mining, transportation, wholesale and retail trade, and the service industry.

Senators will also note that the overall unemployment rate is up two-tenths of a percent between January 1958 and January 1959. These statistics are furnished by the Department of Commerce and are the latest available.

I ask unanimous consent that the full table be printed in the RECORD at this point in my remarks.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Unemployment rates for nonfarm wage and salary workers, by major industry group, January 1957 to 1959

[Percent of labor force in industry who were unemployed; not adjusted for seasonality]

Industry group	1959	1958	1957
Total	7.3	7.1	5.2
Mining	11.7	9.6	5.0
Construction	19.3	18.7	14.8
Manufacturing	7.9	8.9	5.0
Durable goods	8.2	9.9	4.5
Primary metal industries	8.2	11.2	2.6
Fabricated metal products	9.1	8.6	5.3
Machinery, except electrical	7.2	8.0	1.9
Electrical machinery	6.7	7.9	4.0
Transportation equipment	7.7	12.0	3.3
Automobiles	10.3	14.7	4.1
All other	5.6	9.6	2.7
Other durable goods industries	9.7	10.1	8.3
Nondurable goods	7.5	7.7	5.8
Food and kindred products	9.1	9.8	7.8
Textile-mill products	10.3	10.8	4.7
Apparel and other finished textile products	12.5	11.0	10.4
Other nondurable goods industries	5.3	5.7	4.7
Transportation, communication, and other public utilities	6.2	5.5	3.5
Railroad and railway express	8.4	9.0	4.5
Other transportation	8.4	5.7	4.2
Communications and public utilities	2.8	3.0	2.2
Wholesale and retail trade	7.3	6.6	5.8
Service industries	4.7	3.5	3.2
Finance, insurance, and real estate	2.9	2.1	1.5
Professional services	2.8	1.8	2.0
All other service industries	7.6	6.0	5.4
Public administration	2.8	3.1	3.0

Mr. McNAMARA. Mr. President, perhaps one bit of evidence is more impressive than any other in demonstrating the tenacity of the present recession.

It is contained in the document issued by the Department of Commerce entitled "Current Population Reports, Labor Force." In the March 1959 issue, page 3, the following appears:

The recent recession differs somewhat from the two earlier postwar downturns in the pattern of decline in unemployment. The recovery in 1958 was largely compressed into a short span of months in the second half of the year with little change in unemployment since November, except for seasonal fluctuations. As a result, some 10 months after the generally accepted turning point in the 1958 downturn, unemployment was just about halfway back to more typical postwar levels, whereas the job recovery was more nearly complete at the corresponding stage of the previous cycles.

What is the significance of these figures that tell us that 4.7 million persons are unemployed?

They are not mere ink on paper gathered from an unfeeling adding machine.

These figures are easily translated and that translation should make very unhappy reading for every Senator.

Behind each single digit is an unemployed person. And behind each jobless worker is a story of hunger, illness, and degradation.

It is difficult to talk about the problems of the unemployed without sounding like little Eva. The words one must use are inadequate to express the hardship and misery which the unemployed must wake up to morning after morning.

Yet I wonder if we cannot envision the anguish suffered by a father, who watches his children go off to and return from school, knowing that their only decent meal will come as a result of the school lunch program.

I wonder if it is not in us to gage what an experience it must be to face family sickness which must go untreated because of poverty.

And what happens to the pride and self-respect—which keeps most of us going—of millions of American working people? A man has only a few alternatives, once he has exhausted his unemployment benefits.

He can borrow from his relatives, who in most cases are only a short step away from his own perilous circumstances. He can beg from the local welfare agencies. We submit that begging is an accurate description in most instances—primarily because many State and local welfare funds have already been drained—and can give relief only to those in what is termed a disaster classification.

He has another alternative if he has children. He can desert his family and thereby enable his children to become eligible for the joint Federal-State program of aid to dependent children. It is ironic that by past action and inaction we have placed a premium on a father's desertion of his family. Yet in State after State—and in more cases than even the local agencies care to document—this is exactly what is happening.

That these are the several alternatives from which the unemployed can choose is appalling, in a Nation as wealthy as ours.

We have offered this amendment to create another decent and honorable alternative. Ours is a program that would do far more to really meet this emergency than the bill, H.R. 5640, reported by the Finance Committee.

H.R. 5640 would continue temporarily benefits for all those who established their eligibility under the 1958 Temporary Unemployment Compensation Act before March 31, 1959. It would provide a measure of relief for the approximately 265,000 persons who will be drawing benefits as of March 31, plus those who established eligibility at a prior time, returned to work, and again became unemployed during the period from March 31 to June 30, 1959. The outside maximum number that would fall into the latter category is estimated to be 140,000 persons.

Thus, a maximum of 405,000 persons would be affected by H.R. 5640, or less than 10 percent of those now unemployed. The total cost, if 405,000 persons were benefited, would be $78 million.

In short, H.R. 5640 would take care of less than one-tenth of the problem that exists.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. McNAMARA. I yield.

Mr. CLARK. I hope our colleagues will give heed to the most significant statement which the Senator from Michigan has just made. Did I correctly understand the Senator to say that the bill which was reported favorably by the Finance Committee would take care of only 1 out of every 10 unemployed individuals in the United States today?

Mr. McNAMARA. That is correct. The Senator correctly interprets what I said. News releases at the time the bill was passed last year stated the facts.

Mr. CLARK. It is my recollection that at the time the temporary unemployment-compensation bill was passed last year unemployment was not much, if any, higher than it is today.

Mr. McNAMARA. It was approximately the same.

Mr. CLARK. So, if there was a need last year for dealing with the problems of the unemployed people, as the Senator has so eloquently outlined, there should be an equal need today.

Mr. McNAMARA. There certainly is.

Mr. CLARK. Yet the bill before us ignores the needs of 9 out of every 10 unemployed Americans. Is that correct?

Mr. McNAMARA. That is correct. I thank the Senator for placing emphasis on these points which are so important.

Mr. BYRD of Virginia. Mr. President, will the Senator yield?

Mr. McNAMARA. I yield.

Mr. BYRD of Virginia. The Senator understands that the figures he has used include all unemployed persons. They include not only those covered by the unemployment compensation system, but all unemployed persons. The Senator stated that the bill would take care of 1 in 10.

Mr. McNAMARA. That is correct.

Mr. BYRD of Virginia. The 1 in 10 includes all unemployed persons, whether on the farms or elsewhere.

Mr. McNAMARA. That is correct.

Mr. BYRD of Virginia. Does the Senator know what percentage of those covered by the unemployment compensation system would be taken care of?

Mr. McNAMARA. Is the Senator referring to those previously covered by unemployment compensation provisions?

Mr. BYRD of Virginia. Yes.

Mr. McNAMARA. The figure would be about one in seven, if we eliminate people with no previous work record in industry, who came into the work force after completing their education, or came from farms. The figure would be reduced to one in seven. But even one in seven is a horrible situation. The situation is as bad as it was a year ago, when the Congress acted.

Mr. HART. Mr. President, will the Senator yield?

Mr. McNAMARA. I yield.

Mr. HART. Pursuing the point as to what we may anticipate, and to what extent coverage would be applicable under the provisions of the bill recommended by the committee, although I have been a Member of this body only a short time, I have heard mention made of the fact that the automotive industry is basic and essential to our entire economy. Just

how should we anticipate automotive employment in the year ahead, and to what extent are we making provision for unemployment in that basic industry? I ask the Senator if this would not be a clear approach to reason:

During the past year, 1958, there were sold by American automotive manufacturers 4,650,000 new units. If the automobile market should improve by 1½ million units in the calendar year 1959, our employment situation in Michigan, the automotive capital, would be reasonably favorable. But what is the prospect for automotive sales in the current year? It must be remembered, again, that last year 4,650,000 new units were sold.

If the automotive market should absorb 5¾ million cars during the present year, which would be a million more than in the past year, we in the State of Michigan would average about 335,000 unemployed for this year. Is this not a reasonable rule of thumb to use in seeking to determine what the unemployment problem in our State will be?

Mr. McNAMARA. It is a very good rule of thumb to use. I point out also to the distinguished junior Senator from Michigan that this is not a problem which is confined only to Michigan with regard to the automobile industry. The automobile industry is a farflung industry. In fact, one out of every seven persons who works for wages or salary in the United States is employed directly or indirectly because of the automobile industry. It is a farflung industry and a farflung problem, and it affects great areas of our country.

Mr. HART. Would it not include also glass and rubber?

Mr. McNAMARA. Certainly.

Mr. HART. And steel?

Mr. McNAMARA. Certainly.

Mr. HART. Pursuing the point of what we may reasonably anticipate in the automobile industry this year—and because of its influence throughout the economy as to what we may reasonably anticipate in other areas of the country—I should like to ask unanimous consent that there appear at this point in the discussion three paragraphs from the current Ward's Automotive Reports, which is second only to the Bible in importance in Michigan. I read a portion of the excerpt, if I may, as follows:

> Despite the steady sales pace, new car inventories are rising. The volume was 686,600 at the end of January.
>
> This is stock in dealers' hands—
>
> It grew 64,000 units and 9.4 percent to 750,000 at the end of February. It appears that another 80,000 to 100,000 autos will be added by the end of March, making for an 850,000-unit inventory.

If there is any lesson to be learned from history, it would appear to be that with this prospect we can look for very great trouble not alone in the automotive industry, but also in other industries.

I am sure I express the appreciation of the people of Michigan to the distinguished senior Senator from Michigan for his eloquence and leadership in the effort to make meaningful the action which Congress should take with respect to treatment of the unemployed for the next year.

Mr. McNAMARA. I thank the Senator, my colleague, and I join in his request to have printed in the RECORD the excerpt to which he has referred.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

> Despite the steady sales pace, new car inventories are rising. The volume was 686,000 at the end of January. It grew 64,000 units and 9.4 percent to 750,000 at the end of February. It appears that another 80,000 to 100,000 autos will be added by the end of March, making for an 850,000-unit inventory.
>
> The abundant dealer stockpile is beginning to affect factory employment. At the end of last week, Mercury released 301 men at its St. Louis assembly plant in a move to adjust inventories. Starting Mar. 24, Buick will lay off 4,500 out of an 18,000-man force at its Flint operation for the same reason.
>
> Four-day assembly has been prevalent recently at various B-O-P sites, an occasional Chevrolet plant and at Mercury.
>
> Including imports, March sales should crowd 500,000.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator yield?

Mr. McNAMARA. I yield.

Mr. WILLIAMS of Delaware. The unemployment compensation program was adopted, as the Senator from Michigan knows, about a year ago on the basis that it was to be a temporary program. It was to tide things over until the State legislatures could be called in session. The Michigan Legislature has been in session since this program was enacted. I should like to ask what the State of Michigan has done to take care of the unemployment problem in Michigan.

Mr. McNAMARA. I am happy to reply to the Senator from Delaware in this way. The Senator said the program was adopted to give State legislatures an opportunity to meet. That is true. That certainly was a consideration. However, there were other considerations at that time. We had the assurance of the economists who were advising the President of the United States and we had the assurance of the President and his Cabinet that we were out of the severe recession and that we needed only a temporary program to get us over the hump, so to speak.

That prophecy, Mr. President, went down the drain. The State legislatures have struggled with this question. In Michigan, unfortunately, the struggle has been largely on a political basis, with one party damning the other and trying to make politics out of the situation. That is unfortunately true of the problem in Michigan.

Mr. WILLIAMS of Delaware. That is most regrettable. Has the Governor recommended any action which the legislature should take?

Mr. McNAMARA. The Governor has made several recommendations. They were turned down by the legislature. The legislature is now in session, and is in a constant struggle to determine what should be done.

Mr. WILLIAMS of Delaware. Does not the Senator agree with me that this problem is to a large extent a State problem and that the State legislature in Michigan as well as other States should take steps to help the unemployed in their areas? Should not the legislature and the Governor, therefore, get together in trying to solve the problem?

Mr. McNAMARA. I agree with the last part of the Senator's statement, that the Governor and the State legislature should get together. However, in the United States there are nearly 5 million unemployed people and thousands of hungry families. I say it is a national problem. It is a national disaster. It is more than merely a problem for the individual States to solve.

Mr. WILLIAMS of Delaware. I recognize the problem, but is it not strange that a State which is affected as much as Michigan is affected should not also have recognized the disaster to the extent at least of trying to do something to help itself? I do not understand what can be meant by the argument that the State of Michigan has been deadlocked in a political discussion of the problem. Certainly there is some responsibility in this matter on the part of the States. Apparently the State of Michigan is one of the States which has done nothing about it.

Mr. McNAMARA. I do not wish to leave the record at this point with the implication that this is more of a problem for the State of Michigan than it is for the entire country. The Michigan unemployment benefits are among the highest in the country. The trust fund now stands at $197 million, of which $183 million consists of borrowed funds. Therefore, we in the State of Michigan do not agree at all that this is merely a State problem. It is a national problem. It is not a problem for the individual States to solve. It is certainly no more of a problem for Michigan than it is for all the other States. It is a national problem, I repeat. The recession in which we find ourselves is a national problem. It is not a problem which should be shunted to the States. I would not be on the floor of the Senate making these statements and offering my substitute if I thought the States could handle the problem individually.

Mr. WILLIAMS of Delaware. I have been reading the testimony given before the Committee on Finance by Mr. Max Horton, director of the Michigan Employment and Security Commission. During the testimony the chairman asked this question:

> Has anyone in the Legislature of Michigan introduced a bill providing for 39 weeks?
>
> Mr. HORTON. Not for under State law. They have had that would allow us—we have had 26, we have been above the average of most States for many years.

The witness went on to point out that no action has been taken under State law, and that no bills have been introduced. Has the Governor made recommendations in this connection?

Mr. McNAMARA. For 8 years the Governor of our State has been fighting for a program in this area. For 8 years he has met resistance by the Republican legislature. That is exactly what has been happening. It is not correct to say that the Governor has not been trying

to do something about it. For 8 years he has been fighting to bring about some relief.

Mr. WILLIAMS of Delaware. I am merely quoting from the testimony. The witness stated also that the Governor in his inaugural address discussed this subject and that the Governor was preparing a special message on the subject expected to be delivered soon. The RECORD should show, however, that according to the testimony of Mr. Horton, nothing has been done in the State of Michigan to cure this problem.

Mr. McNAMARA. In answer to that testimony, I should like to say that the Governor's record shows that he has been constantly fighting to do something to improve the situation.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. McNAMARA. I am glad to yield to the Senator from Pennsylvania.

Mr. CLARK. I have listened with a great deal of interest to the very pertinent address of my friend from Michigan and to the comments of the Senator from Delaware during the speech. I should like to note that the State of Delaware took advantage of the Temporary Unemployment Compensation Act last year, and that according to the latest figures on insured unemployment the percent unemployed in Delaware is 4.3 percent. I wonder whether the Senator could enlighten us as to what steps the legislature in Delaware has taken to meet this problem.

Mr. WILLIAMS of Delaware. The time payment period was extended on the recommendation of the Governor.

Mr. CLARK. To what period?

Mr. WILLIAMS of Delaware. I think it is now 39 weeks. I do not have the official information before me, but I know action was taken to extend the time. I will get the correct information and place it in the RECORD.

Mr. CLARK. I think it would be interesting to have it, because I thought my own Commonwealth of Pennsylvania had the longest period—30 weeks.

Mr. WILLIAMS of Delaware. I will check the figure; but I know action was taken and I think the above report is correct.

Mr. McNAMARA. Mr. President, the discussion is entering the realm of individual State problems. That is not my desire. I want to return to the thesis of my speech, which is that this is a national problem, one which is virtually verging on national disaster. I do not accept the thesis that it is a problem for Delaware, or Michigan, or Pennsylvania, or the other individual States.

Mr. CARLSON. Mr. President, will the Senator yield?

Mr. McNAMARA. I yield.

Mr. CARLSON. I think the Senator from Michigan is ably presenting the picture nationally, but I also think that he has excellently presented the situation in Michigan. I have the greatest sympathy for those who are unemployed in Michigan and also throughout the Nation. But I think Michigan has a peculiar and a particular problem, as was stated by Mr. Walter Reuther, the president of the United Automobile Workers, when he testified before the Committee on Finance. If the Senator from Michigan will permit me to do so, I should like to quote from Mr. Reuther's statement on page 53 of the hearings.

Mr. McNAMARA. I am happy to have the Senator do so.

Mr. CARLSON. Mr. Reuther said:

> What is happening in the automotive industry, for example? If you take the period of production from 1947 to 1957, we increased the production of automobiles more than 50 percent, but the number of workers required to make that greater production—not only 50 percent more cars but much more complicated automobiles—we only needed 0.5 percent more workers to make more than 50 percent more automobiles.

Mr. McNAMARA. I am happy to have that statement appear at this point in the RECORD. I think it is most important.

Mr. CARLSON. I think the most critical unemployment problem is in the automotive industry and it is a problem which goes much deeper than unemployment compensation, benefit payments, or the duration of compensation.

In the financial page of the Washington Post and Times Herald this morning is an article written by J. A. Livingston which discusses the automotive situation. I should like to read an excerpt from it, because I think it is pertinent to the subject the Senator from Michigan is discussing.

Mr. McNAMARA. I shall be happy to have the Senator place it in the RECORD at this point.

Mr. CARLSON. Mr. Livingston says:

> In boomy 1955, more than 52 percent of the jobs in the automobile industry were in Michigan and 37 percent in and around Detroit. Last year Michigan accounted for only 45 percent of automobile employment and Detroit for only 29 percent. According to U.S. Commissioner of Labor Statistics, here is how this came about:

Automobile employment

	1955	1958	Percent decline
United States	904,000	627,000	31
Michigan	477,000	284,000	40
Detroit	333,000	182,000	45
Rest of United States	427,000	343,000	20

While I deeply sympathize with the situation of the automobile workers, it seems to me the problem goes deeper than unemployment compensation payments and related matters. It is a problem caused by a shift in an industry coupled with automation. It is not simply the matter of providing unemployment compensation, important as that is.

I compliment the Senator from Michigan upon the splendid statement he is making in behalf of unemployed persons, but I think the problem has many aspects which are not affected by the bill.

Mr. McNAMARA. I appreciate the comment of the Senator from Kansas, especially his emphasis on automation and the inroads which it is making on employment in industry, as was so dramatically stated by Walter Reuther, in the quotation which the Senator has placed in the RECORD.

The program proposed by the bill is not designed to provide the basic correction, as the Senator from Kansas has so ably stated. Later in my speech I shall suggest some answers for these ills, taking into consideration automation and the other factors involved.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator yield?

Mr. McNAMARA. I yield.

Mr. WILLIAMS of Delaware. Earlier the Senator from Pennsylvania [Mr. CLARK] raised a question as to the extension of the period for unemployment compensation in Delaware. I wish to make the record clear. Delaware did extend the benefits to 39 weeks.

I may say to the Senator from Michigan that I was not trying to say whether the troubles are the fault of the Governor of Michigan or the Legislature of Michigan. I was simply trying to emphasize the importance of having both political parties work together.

In Delaware we happened to have a somewhat similar political situation. The Governor was of one political party, while both houses of the legislature were controlled by the other party. But both parties were able to work together and design a program at the State level. This, I think, is the responsibility of all political parties in all the States.

Mr. McNAMARA. I agree with the Senator from Delaware that it is the responsibility of both political parties and of all other segments of the economy—employers, charitable institutions, taxpayers' organizations, and the like. Everyone is involved; everyone is concerned. I say that my amendment proposes a program which everybody should support.

Mr. BYRD of West Virginia. Mr. President, will the Senator yield?

Mr. McNAMARA. I yield.

Mr. BYRD of West Virginia. A suggestion has been made to the effect that the individual States should handle this problem themselves. I compliment the Senator from Michigan for taking the position that it is a national problem, one with which the Federal Government will have to deal.

I think it is very important at this point to say, with reference to the statement that the problem should be dealt with by the States themselves, that my State of West Virginia is certainly in no position to cope with the unemployment in the State. Governor Cecil H. Underwood, when he recently appeared before the Subcommittee on Production and Stabilization of the Committee on Banking and Currency, said something which I think is pertinent to our discussion. I quote from his testimony:

> In the last 20 months, more than 50,000 workers in West Virginia have exhausted their regular unemployment benefits. * * *
>
> During the calendar year of 1958 West Virginia paid unemployment benefits totaling nearly $50 million. Payments in this volume have a marked effect not only on the trust fund of the employment security department but on the State's industry.

The tax commissioner of West Virginia, the Honorable John A. Field, Jr.,

made a statement which I think will adequately explain the inability of West Virginia to deal with this problem. I think the statement points up the great need for Federal assistance in this area. Mr. Field said:

> The tax commissioner's office of West Virginia does not reflect the total State revenue, but it does reflect, I think, those sources of revenue that indicate the economy of the State and the condition of its economy. * * *
>
> By December 31 [1957] we showed only a gain of $9,600,000 over the previous calendar year, so our attrition was beginning to appear.
>
> Then at the end of the fiscal year, on June 30, 1958, we showed only a gain of $3,373,000.
>
> So we realized that we were shipping water fast.
>
> That trend continued, and at the end of the calendar year 1958 we showed a loss of general revenue through our office of $4,400,000 compared to the calendar year 1957.
>
> With that picture in mind, the board of public works in the latter part of December felt called upon to invoke the statutory reserve of 5 percent, and that, of course, curtailed every participation of the general revenue appropriation 5 percent of its over-all appropriation for the fiscal year.

LEVYING AND COLLECTION OF TAXES AND ASSESSMENTS

The PRESIDING OFFICER (Mr. McGEE in the chair). The hour of 12 o'clock has arrived, and the morning hour has expired.

The Chair lays before the Senate the unfinished business, which will be stated by title.

The LEGISLATIVE CLERK. A bill (S. 643) to amend the act entitled "An act relating to the levying and collecting of taxes and assessments, and for other purposes," approved June 25, 1938.

EXTENSION OF TIME FOR RECEIPT OF UNEMPLOYMENT COMPENSATION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the unfinished business be temporarily laid aside, and that the Senate resume the consideration of House bill 5640.

The PRESIDING OFFICER. Is there objection?

There being no objection, the Senate resumed the consideration of the bill (H.R. 5640) to extend the time during which certain individuals may continue to receive temporary unemployment compensation.

The PRESIDING OFFICER. The Senator from West Virginia may proceed.

Mr. BYRD of West Virginia. Mr. President, I read further from the testimony given by the tax commissioner of West Virginia, Mr. John A. Field, Jr.:

> Since we only had 6 months to go, in fact, it amounted to a 10-percent curtailment from that time on out.
>
> Of course, while it creates difficulties in State agencies and State departments, by far the most serious effect of that is in our county schools, because their State aid comes from the general revenue fund.
>
> I might say, parenthetically, that there is pending now some litigation as to whether the State can invoke the 5-percent reserve against that.
>
> But regardless of that, realistically, they are now faced with that loss of State aid, and many counties may have to curtail their school term to 8 months or curtail their activities and their curriculum.

That is because their State aid comes from the general revenue fund.

At this time, I merely wish to point out that this problem is one with which my State certainly is not in a position to deal, and I think the Governor's remarks and those of the tax commissioner of West Virginia make this point clear. I compliment the Senator from Michigan for saying that the problem is a national one, and I associate myself with his remarks. I commend him for the excellent work he has done in bringing before the Senate a bill which will treat this problem in an adequate way.

In closing, let me say that although I certainly accord a sincerity of purpose to the authors of House bill 5640, I believe it is a timid, unrealistic, halfhearted approach which is reminiscent of the head-in-the-sand attitude which, so often, has been taken in regard to some of our other problems. I hope that the amendment offered by the senior Senator from Michigan, cosponsored by myself and others, will be adopted.

Mr. McNAMARA. I thank the Senator from West Virginia for his contributions.

Mr. GRUENING. Mr. President, will the Senator from Michigan yield to me?

Mr. McNAMARA. I yield.

Mr. GRUENING. I am very happy and proud to join in sponsoring the amendment. I can think of no more vital way to demonstrate that the Congress is really concerned with the welfare of the American people, as well as with the welfare of the people of the 70-odd other countries in the world.

I wish to point out that in the list which sets forth the number and the percentages of the unemployed in the various States, the 49th State has been omitted. We understand how that happened, because we realize that all agencies of the Federal Government have not yet fully adjusted their reports and records, following the admission of Alaska as one of the States of the Union.

But it is important that Alaska be considered in this connection, because in Alaska unemployment has reached a total of 6,588, or 14 percent. The number of unemployed persons in Alaska—6,588—is larger than that in a number of States more populous than Alaska, larger than the number of unemployed—6,610—in the State of Delaware, whose distinguished senior Senator [Mr. WILLIAMS] I am glad to see on the floor at this time.

Alaska's number of unemployed is also greater than the number of unemployed—5,894—in Nevada. I am happy to see the Senator from Nevada on the floor at this time, also.

Furthermore, Alaska's number of unemployed is greater than the number of unemployed—5,668—in New Mexico; or the number of unemployed—4,118—in South Dakota; or the number of unemployed—4,921—in Vermont; or the number of unemployed—4,264—in Wyoming.

It is alleged that this is a State problem, not a Federal problem. But, Mr. President, it happens that in Alaska the Federal Government has a very special and peculiar responsibility for the large number of unemployed. Alaska's unemployment problem can be laid directly at the door of the Federal Government, inasmuch as a few years ago the Federal Government concluded a treaty with Japan, and did so without any consultation with the people of Alaska or without permitting the people of Alaska to participate in the matter in any way. By means of that treaty, a line was drawn north and south across the Pacific Ocean at a certain meridian, east of which the Japanese were not supposed to fish. But that treaty, which was made without participation by the people of Alaska, was made by the Federal treaty draftsmen in woeful ignorance of the pelagic habits of the Pacific salmon, one of our great natural resources—with the result that today the Japanese are catching large numbers of American-spawned salmon. The result has been disastrous to Alaska's most important fishing area, Bristol Bay, where there is now virtually total unemployment, and as to which the Fish and Wildlife Service has announced that there will be a complete shutdown this year—meaning that the sole livelihood of those persons has been taken away by the Federal Government.

Furthermore, other fishing areas, for many years under the control of the Federal Government, and once great natural resources of Alaska, have declined in productivity, so that from a high pack of more than 8 million cases 25 years ago, the pack today has dwindled to less than 3 million cases.

But during all these years, despite the repeated pleas of the people of Alaska, the memorials of every Alaska Legislature, and the strong representations of the then delegates from Alaska, the Federal Government and its Congress have declined to act, with the result that during the first 3 years of the Eisenhower administration, Alaska's fishing communities had to be declared disaster areas—the first time in my experience that a disaster area has been caused, not by a so-called act of God—in other words, not by a flood, a hurricane, a tornado, an earthquake—but by acts of man.

Mr. President, even if there were now no unemployment in Alaska, I would strongly favor the pending amendment. But under the present circumstances, I think it is clear that the plight of one State is the concern of all, and that this is a national problem. Therefore, I wish to call attention to the fact that owing both to the direct action of the Federal Government and, in other cases, its failure to act, Alaska now has the largest percentage of unemployment of any State under the flag; and the responsibility for it can be laid directly at the door of Federal mismanagement, Federal ignorance in treaty-making, and Federal mismanagement by the agency which had and still has control of our fisheries.

Therefore, I believe it is most necessary that the amendment submitted by my colleague [Mr. McNAMARA] be agreed to. The 3-months provision will be of no use at all.

Mr. BYRD of Virginia. Mr. President, will the Senator from Michigan yield to me?

Mr. McNAMARA. I yield.

Mr. BYRD of Virginia. Let me say that I have visited Alaska, and I enjoyed very much my visit there.

Mr. GRUENING. We were very glad that the Senator from Virginia visited Alaska.

Mr. BYRD of Virginia. I am very much interested in what the Senator from Alaska has had to say about the situation there. How long will the treaty remain in effect?

Mr. GRUENING. On June 12, 1953, it came into force for 10 years.

Mr. BYRD of Virginia. Does it have a termination date?

Mr. GRUENING. It will continue thereafter unless a party gives notice. It is possible therefore for the United States to give notice for expiration June 12, 1963.

Mr. BYRD of Virginia. I understand that the salmon go into what formerly were international waters, and congregate there before they go to Alaska to spawn.

Mr. GRUENING. That is correct.

Mr. BYRD of Virginia. I also understand that the Japanese are catching the salmon in those waters, which prior to this treaty were regarded as international waters. Is that correct?

Mr. GRUENING. Yes; they were regarded as international waters. But the treaty line could have been drawn some 20 degrees to the west, in which case our supply of American-born salmon would not have been impaired, and we would not now have the tragic and disastrous situation which today confronts one of our most important fishing areas.

Mr. BYRD of Virginia. Practically all the salmon to which the Senator from Alaska has referred are spawned in America, are they not?

Mr. GRUENING. Yes. It is somewhat ironical that we should allow fish of American birth to be captured by the Japanese.

Mr. BYRD of Virginia. I am very much interested in the bill, and also in the subject the Senator from Alaska has mentioned.

After the salmon spawn, they travel several thousand miles, do they not?

Mr. GRUENING. Yes—and for 2, 3, or 4 years, depending on the species of the salmon.

Mr. BYRD of Virginia. Eventually they usually return to the stream in which they spawned, do they not?

Mr. GRUENING. That is correct. They return to spawn there, and then die.

Mr. BYRD of Virginia. I understand that the thought of the Senator from Alaska is that the treaty should not have been made, inasmuch as it permits the Japanese to fish for the salmon in these particular areas.

Mr. GRUENING. The treaty should have been made with a different line of demarcation.

Mr. BYRD of Virginia. Prior to the treaty, what was the situation?

Mr. GRUENING. At that time our fisheries were not impaired by Japanese fishing; the Japanese did not fish in our waters, and they did not fish on the high seas for our salmon.

Mr. BYRD of Virginia. In other words, the treaty enlarged the area in which the Japanese could fish for salmon, did it?

Mr. GRUENING. It created a new area in which the Japanese could catch our American-born fish.

Mr. BYRD of Virginia. In other words, it enlarged the area in which the Japanese could fish?

Mr. GRUENING. That is correct. And, of course, this situation applies not only to Alaska, but also to Oregon and Washington.

Mr. BYRD of Virginia. And the fish which are affected are the full-grown salmon which are on their way back to Alaska to spawn; is that correct?

Mr. GRUENING. They are the full-grown salmon which return to Alaska to spawn. However, the Japanese are catching both immature fish and full-grown fish, and consequently are spoiling the runs for both the current year and following years.

Mr. BYRD of Virginia. I thank the Senator. I was very much interested in that subject when I was in Alaska.

Mr. GRUENING. I appreciate what the Senator has said. I wish to emphasize that this is a Federal responsibility if ever there was one. For 40-odd years Alaska, through its voteless Delegates in the House, through its legislature, through referendums of the people of Alaska, which, of course, were only advisory, pleaded with the Federal Government to restore the control of a valuable national resource to the people of Alaska so they could handle it much better. The failure to do so is directly responsible now for the present high figures of unemployment in Alaska. Consequently it is a Federal responsibility to take care of those unemployed and remove the causes of their unemployment. That is why I am supporting the McNamara amendment to substitute Senate bill 1323 for the very much poorer House version.

Mr. McNAMARA. Mr. President, I thank the Senator from Alaska for his contribution to this discussion. I am sure the fishing industry is vital to the economy of his State.

Mr. YOUNG of Ohio. Mr. President, will the Senator from Michigan yield to me?

Mr. McNAMARA. I am happy to yield to my colleague from Ohio, under the same circumstances under which I previously yielded.

Mr. YOUNG of Ohio. Mr. President, the Senator from Michigan has made a fine presentation this morning. He has rendered a real and needful public service in bringing his amendment before the Senate. I express the hope that his proposal will prevail when we vote upon it.

About 28 years ago, Mr. President, the then Governor of Ohio appointed Rabbi Silver, of Cleveland, and several other citizens of my State of Ohio, including myself, as members of the Ohio Commission on Unemployment Insurance.

Following their appointment, which was back in 1931, the commission spent time and effort holding hearings in various cities of Ohio. Then we drafted the Ohio unemployment insurance law. We in Ohio were pioneers among the States of the Union in drafting an unemployment insurance law. It is pleasing to me to recall at this time that some of the paragraphs of the present Ohio unemployment insurance law were originally in my own handwriting.

In this great Nation involuntary unemployment is a great moral wrong. There is great need for legislation such as that proposed by the senior Senator from Michigan. His proposal has my earnest support, and it is my hope that he will meet with success. I wish to compliment him.

Mr. McNAMARA. I thank the Senator from Ohio for his complimentary remarks. It appears to me that as Senators rise on the floor and speak of problems in their own individual States, we hear expressions concerning a problem which exists almost from border to border and coast to coast. So, I repeat, it is a national problem.

To continue with my statement, S. 1323, which is my amendment, would provide a uniform 16 weeks of benefits for all persons who had exhausted their unemployment insurance eligibility under existing programs. It would provide similar benefits for all those who had substantial earnings records in the past 2 calendar years and who had not been in covered employment. The main provisions of the bill are, briefly:

First. Sixteen weeks of benefits for all those who exhausted unemployment insurance rights under any and all existing programs including the Temporary Unemployment Act of 1958.

Second. Sixteen weeks of benefits for all those who worked in uncovered employment and who (a) earned a total of $1,000 during either of the 2 calendar years for which records are available prior to application for benefits; and (b) who worked a total of four quarters during the 2-calendar-year period.

Third. Benefit amounts would be determined as follows: (a) Exhaustees. Weekly benefit would equal that obtained under existing programs; (b) noncovered. Weekly benefit would be equal to 1¼ percent of yearly earnings, with a maximum equal to the maximum granted under the State unemployment insurance program.

These criteria would prevent the imposition of an undue administrative burden on the State agencies.

The Bureau of Old-Age and Survivors Insurance has earnings records which would provide the necessary data, at a cost of 60 cents per application.

Fourth. A State would have the option to enter into that part of the program which provides benefits for those in uncovered employment.

I repeat, this would be optional with the States.

Fifth. All recipients must be ready and willing to work, and must accept reasonable employment openings obtained by the State employment agencies.

We estimate that approximately 3¾ million persons would be benefited by the enactment of this amendment. It would help immediately the 1.8 million who are

now unemployed and who have exhausted their rights under existing programs, or whose jobs, while they had them, were not covered by State programs.

I submit, Mr. President, that a jobless worker can get just as hungry whether his previous employment was covered by an insurance program or was uncovered.

In addition, another approximately 2 million persons who would exhaust their benefits in the coming 15 months would also receive vital assistance.

It is, of course, difficult to measure the precise cost of this program, because we do not have the experience to determine what the uncovered worker will draw in benefits. Our best estimate is that it will cost between $850 million and $950 million.

This assumes that recovery will continue to lag. If the recession ends as quickly as we all hope—and as some leaders have categorically said it would—this expenditure will be considerably reduced.

I point out that an estimated $206 million of the $640 million which Congress appropriated last year for temporary unemployment compensation will be unspent as of March 31 of this year.

This means that any action which we take this year should be measured against the sum remaining from last year's appropriations.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. McNAMARA. I am happy to yield to the Senator from Pennsylvania.

Mr. CLARK. The Senator will recall that a joint statement was prepared by 18 Senators and presented to the Finance Committee in support of the bill of my good friend from Michigan. In that statement, which I caused to be inserted in the CONGRESSIONAL RECORD of yesterday, the following sentence appears on page 5033 of the RECORD:

> We would like to point out that an estimated $206 million of the $640 million which Congress appropriated last year for the TUC Act will be unspent as of March 31 of this year. This means that by carrying this money over into the expenditures for S. 1323, the total new money called for would be approximately $670 million.

I recognize the difficulty in bringing the figures to a high degree of accuracy, but in view of some comments I propose to make later, does the Senator agree that $670 million is as good an estimate as we can make of the cost to the 1960 budget of S. 1323, which is the pending amendment, if enacted into law?

Mr. McNAMARA. Yes. I think that is a fair estimate of the amount of new money—I repeat, new money—which will be needed, unless the optimistic statements by some Senators on the floor and by some persons in the administration that the recession is going to pass soon are fulfilled. Then, of course, my proposal would not cost nearly that much.

Mr. CLARK. I raise the question because I intend to suggest to the Senate a number of ways in which this money, and far more, could be obtained without any general increase in the tax rates.

Mr. McNAMARA. I am certainly glad the Senator is prepared to do that. I shall discuss that phase in my statement a little later.

Mr. President, the cosponsors of this amendment do not offer it as a solution to the basic problem of unemployment. We know it is not that, but only a means to ease the suffering of those most affected by the shortage of jobs during this critical period.

The great majority of us are also cosponsors of a bill which would provide us with an effective attack on this problem of chronic national unemployment. That bill, S. 791, the Kennedy-McCarthy bill, would establish minimum national standards for unemployment insurance considerably more adequate than those standards now in existence throughout the 49 States and Hawaii.

We are of the opinion that the enactment of such legislation is essential. It is the only way to provide realistic protection against the rapid cycle of unemployment which we have experienced in the recent past. Unless we return to the basic philosophy of unemployment insurance which characterized its initiation in 1938—namely, that an unemployed person should receive benefits which equal roughly one-half of his earnings for a realistic period of time—we shall never fully meet this problem.

We believe that if we had the provisions of the Kennedy-McCarthy bill on the books today we would not be faced with such a debate as we now encounter.

In fact, the reason why this amendment is drafted to carry us through July 1960 is that on that date S. 791 would become effective, if we can make a sale to the Congress, and to the gentleman on Pennsylvania Avenue.

It should be apparent that one of the reasons why the recession has not deepened has been the very existence of unemployment compensation, inadequate as it is. We can take additional steps which will insure recovery and prevent future economic crisis.

The Senate passed on Monday the area redevelopment bill which, if properly executed, can help eliminate the pockets of hard-core unemployment which presently exists.

We should work for legislation which will retrain a great part of the chronically unemployed.

It is madness to continue a situation wherein industry is begging for trained technicians while 4.7 million are unemployed.

Certainly the Housing and Airport Acts which we have passed will help to create jobs in the construction industry. The community facilities bills which are now pending or under draft will also help.

But let us rectify our past mistake of failing to insure against the problems which we now face. The enactment of this amendment will give us breathing room to create the legislation which will prevent a recurrence of a situation where 4.7 million Americans are without jobs.

Mr. GORE. Mr. President, will the Senator yield?

Mr. McNAMARA. I am happy to yield to my distinguished colleague, the Senator from Tennessee.

Mr. GORE. I have listened with attention and interest to the able address of the distinguished senior Senator from Michigan.

The problem of unemployment is not a new one. As the Senator stated, we considered the problem a year ago. At that time I characterized the bill then before the Congress as an inadequate, piecemeal and unfair approach.

The record now stands, does it not, that people of only 17 States have been direct beneficiaries of that previous enactment?

Mr. McNAMARA. I recall the Senator's position at the time we debated the temporary extension program last year. I confirm what the Senator says and say to him that he is correct in reference to the condition in the 17 States.

Mr. GORE. I voted against the passage of the bill at that time for the reasons which I have indicated. I may have erred in so doing. The distress of millions of unemployed brings a need for a helping hand not only to the people in 17 States but to the people in all 49 States, and that distress is not to be dealt with lightly. I did not undertake to deal with it lightly. I expressed my exasperation over the failure of the Congress and the administration to adopt and prosecute a vigorous program of economic activity which would promote full employment.

I do not like to support the kind of bill which the Senator is offering as a substitute. I would much prefer programs to provide employment opportunities.

I cannot claim very much credit for the supplemental views contained in the report on the pending bill. I did contribute one paragraph, which I should like to read. I ask the Senator to turn to page 12 of the report. I should like to read the one paragraph which I contributed, and which my colleagues adopted:

> The preferable solution, of course, would be the adoption of programs of action to promote a full employment national economy. Undoubtedly, the unemployed would prefer jobs to unemployment compensation. So would we, but social justice requires emergency action now.

Mr. McNAMARA. I certainly recognize the Senator's viewpoint, as so well expressed even in the one paragraph. I suggest to the Senator, it is a great contribution even though it is short. It is very concisely stated.

Mr. GORE. I thank the Senator. I intend to vote for the substitute the Senator proposes not because it is my preference but simply because of the absence of action to provide employment opportunities to the approximately 5 million people who are totally unemployed, many of whom have been unemployed for a long while. Recognizing the high cost of living for these people and the economic, psychological and personal distress these people suffer, I propose to vote for the substitute offered by the Senator from Michigan.

Then, in the event his amendment is not adopted, I think I shall vote this year for the passage of the bill. Even though it is inadequate, unfair, and

piecemeal, it will provide assistance to some.

Mr. McNAMARA. I point out to the Senator again that about 10 percent of the need can be met by the passage of the bill which came over from the House. We are very much concerned, as the Senator has indicated, with the other 90 percent.

In connection with the remarks of the Senator from Tennessee, I remind the Senate that he was the father of the interstate highway construction program, which is now providing many hundreds of thousands of jobs for people throughout the United States. That, in itself, was a great contribution to the economy of the United States, which is in such a depressed condition at this time. I know of the Senator's concern, and his attempts in the past to do something to meet this problem. I shall join him in any future activities he undertakes to try to create employment, rather than insurance.

Mr. GORE. Mr. President, will the Senator yield?

Mr. McNAMARA. I yield to the Senator from Tennessee.

Mr. GORE. I am grateful for the generous remarks of my able colleague and friend. It was 1 year ago this week that we debated for 3 days and finally passed, by a vote of 84 to 4, a bill to accelerate the highway program. As the Senator recalls, it had been proposed to stretch the program out, to slow it down. That proposal was made at a time of widespread unemployment.

Instead of accepting the slowdown proposal, the committee on which I had the privilege of serving with the able senior Senator from Michigan chose to accelerate.

I point out to the able Senator, who is now chairman of the subcommittee of which it was then my honor and privilege to be chairman, that again a slowdown or stretchout is in prospect unless the Congress acts. I urge the Senator again to refuse to accept a slowdown. I urge him to consider the fact that now—as was the case 1 year ago—there are approximately 5 million totally unemployed, and many other millions partially unemployed. The same social, economic, and national security conditions which impelled the Senate to accelerate the program last year by a vote of 84 to 4 are still present. The same defense needs for better highways exist. I look with confidence to action by the subcommittee on which I no longer have the privilege of serving, but which is now under the able leadership of the senior Senator from Michigan, to bring to the floor of the Senate another bill to accelerate the highway program and provide a stimulus to employment.

Mr. McNAMARA. I thank the Senator. He has very ably stated the current problem in dealing with the roadbuilding program, which was gotten underway under his able leadership.

I wish I could say to the Senator that this year we shall come forward with a further accelerated program, and not a stretchout. The Senator from Tennessee has pointed out that all the elements justifying such action are present. I agree with him.

However, the country has got into a peculiar frame of mind, largely due to the sacredness of a number—$77 billion. In connection with the previous action there was not the psychological situation with which we now must deal. We have already held some hearings in the Subcommittee on Public Roads of which I am now chairman, along the line discussed by the Senator.

We have a little different kind of circumstances from those which characterized the previous situation. Because of that fact, we shall work harder to keep the program on schedule. I can report to the Senate that the Interstate Highway program is on schedule, but we are faced with shortages due to the depression, recession, or whatever one may wish to call it. That situation is affecting our roadbuilding program, because we do not have the revenues which we would have under normal circumstances. The thing we are fighting is the slump in our economy, and the need for doing something about it.

Mr. GORE. Mr. President, will the Senator further yield?

Mr. McNAMARA. I am happy to yield further to my distinguished colleague from Tennessee.

Mr. GORE. I recognize that there is a political climate such as the Senator has described. I shall not be bemused by a political climate, and I trust that the subcommittee, so ably led by the distinguished senior Senator from Michigan, and the full Senate Committee on Public Works, so ably led by the senior Senator from New Mexico [Mr. CHAVEZ], will not be bemused.

We are confronted with a national necessity. The national welfare, the national security, is inescapably and inextricably involved in adequate highway transportation, not only the national security from a military standpoint, but from the standpoint of employment, from the standpoint of prosperity.

I want to see this national necessity kept on schedule. I know that we need additional revenue. There are sources to which the Congress can turn.

The Senate Committee on Finance, of which I am a member, is now in the act of making an appropriate adjustment of the tax laws so as to require the insurance industry to bear a more equitable and realistic share of the tax burden. In this effort we have, belatedly, the support of the Treasury Department; and also the general cooperation of the industry itself—likewise belatedly. But we are moving in the correct direction. There are many more areas to which we can turn, to close the loopholes in the tax laws, and to strike from the tax laws inequities and favoritism, thereby providing the necessary revenue to promote and bring to completion such programs as the highway program, which is necessary to national security, to prosperity, to employment, and to economic well-being.

Mr. McNAMARA. Again, I thank my colleague from Tennessee for his very able contribution.

Vigorous arguments undoubtedly will be offered in this debate to show why we should not take the action proposed. Let us look at them.

The first and foremost argument—one that has been with us since the beginning of this session—will be the budget, to which I have made reference.

We must, of course, face the issue of the budget. All the Senators for whom I am speaking want to see a balanced budget in the fiscal year 1960. Some of us believe that the money which this amendment will cost can be met through economies elsewhere in the budget. Some of us believe that additional revenues should be obtained through closing tax loopholes and removing inequities in the tax structure legislation which is within the province of Congress.

I am certainly glad to hear a member of the Committee on Finance, the distinguished Senator from Tennessee [Mr. GORE] state that the Committee on Finance is now giving serious consideration to the question of tax loopholes.

Mr. GORE. Mr. President, will the Senator yield?

Mr. McNAMARA. I am glad to yield to my distinguished colleague from Tennessee.

Mr. GORE. The Committee on Finance is presently dealing with only one instance of favoritism to income from a particular source. I am glad it is doing that much. The able Senator will perhaps recall that it was a year ago when I undertook to bring about action by the Senate to prevent an extension of such favoritism.

Mr. McNAMARA. I recall it very well.

Mr. GORE. I am glad that the committee and the administration are now cooperating to that end. However, there are many more loopholes which can be dealt with equitably and fairly and realistically. This should be done before Congress proceeds to lay additional taxes upon those who are already carrying a disproportionately large share of the burden.

Mr. McNAMARA. I thank the Senator.

Mr. FREAR. Mr. President, will the Senator yield?

Mr. McNAMARA. I yield.

Mr. FREAR. I should like to ask the Senator from Tennessee a question if the Senator from Michigan will permit me to do so without his losing his right to the floor.

Mr. McNAMARA. I shall be glad to yield under those conditions.

Mr. FREAR. The Senator from Tennessee has opened a subject which concerns all of us, because we are desirous of finding increased revenue before we increase the tax burden of our people who are already bearing a heavy tax burden. I should like to ask the Senator to what other fields he is referring in his remarks. The Senator mentioned the tax on insurance companies, and he referred to other fields that we might look into in connection with an increase in taxes.

Mr. GORE. I referred to other fields in which we could make appropriate and equitable adjustments to remove favoritism which now prevails. I shall be glad to list some of them. One is the tax credit on income from corporate dividends. Another is the foreign tax credit, which is a credit against taxes to

our country for alleged taxes paid to foreign countries. Another would be in the field of unjustifiably high depletion allowances in some instances. Another would be what I regard as unjustifiable treatment for so-called capital gains. Another large field is in the administration of the law itself, particularly with reference to expense accounts. If I had a few more moments to give thought to the question of the able Senator, I believe I could suggest perhaps two or three times the number that I have already listed.

Mr. FREAR. That seems to be a fair list to start with.

Mr. GORE. Yes; at least it would occupy the committee for a few days.

Mr. FREAR. It certainly would. I am not familiar with the dollar and cents revenue these programs might bring into the Treasury. Does the Senator have any idea how much would be brought into the Treasury as a result of the enactment of such a program?

Mr. GORE. It would depend upon how realistically and adequately Congress dealt with the instances of tax favoritism. I would say that if we require the insurance industry alone to bear a fair and equitable share of the burden of Government and national defense, that this alone might provide enough additional revenue to keep the highway program on schedule.

Mr. FREAR. I assume the Senator is speaking in terms of $500 million or more which would be realized.

Mr. GORE. $500 million or more.

Mr. FREAR. Of course, when we say "more" that can go pretty high. However, it would be in the neighborhood of that figure. Is that correct?

Mr. GORE. Yes. If the Senator from Michigan will yield further——

Mr. McNAMARA. I am glad to yield.

Mr. GORE. I should like to say that the committee has enjoyed—and I have been heartened by the extent of it—the rather general cooperation of the insurance industry itself. Of course, many representatives have asked for amendments which would ease the burden with respect to their own companies. I do not criticize them for doing it.

I believe the Senator will agree that as we have approached this difficult and vexatious task, we have had the general and, to me, surprisingly general cooperation of the industry itself.

Mr. FREAR. There is no reason, I suppose, for the able Senator to believe that all the industries would offer the kind of cooperation which the insurance companies have offered with regard to closing the loopholes which the Senator has mentioned.

Mr. GORE. I have not seen very much manifestation of it.

Mr. FREAR. I thank the Senator from Tennessee and also the Senator from Michigan for permitting us to engage in this discussion, which I believe has been quite interesting.

Mr. McNAMARA. I agree it has been interesting. I am glad to have the contribution of the Senator from Delaware. I hope now that he is convinced and will vote for our substitute. The answer may lie in a combination of the two approaches.

But, in any case, all of us believe that we must balance the budget through other means than deserting the unemployed of this country in this time of great and urgent need.

We feel it is strange, to say the least, that the position of many persons in responsible positions appears to be that this great and rich country can afford to be humane, or even generous, until an arbitrary date on the calendar, June 30, 1959. It is strange that after that date we must cease to have humanitarian impulses, must harden our hearts, must steel ourselves against the temptation to be compassionate, and must concern ourselves, beginning promptly at 12:01 a.m. on July 1, with reduction of Federal expenditures as the overriding objective of our national existence.

The next argument is that this amendment of ours is a dole. I have not heard that argument in this body, but it was made in the testimony of the Administration on H.R. 5640.

It is not a dole. It provides assistance only to those whose past work record entitles them to better social insurance than is now provided by existing unemployment compensation laws.

The farm supports we provide for keeping crops out of production, through the soil bank, is not a dole. The tax break we give to oil producers through the depletion allowance is certainly not regarded as a dole by those who fight for its maintenance each year.

We who represent States which are most affected by unemployment have, for the most part, given vigorous support to measures which have materially advanced the welfare of people in other parts of the Nation.

Mr. HARTKE. Mr. President, will the Senator yield?

Mr. McNAMARA. I am glad to yield to the distinguished Senator from Indiana.

Mr. HARTKE. I compliment the senior Senator from Michigan for the forthright stand he is taking in behalf of the unfortunate people who cannot have anyone represent them when it comes to payroll lobbying in Congress. Certainly the Senator's type of representation is the highest type of unselfish service. I am glad to be a cosponsor of the pending amendment.

I noticed yesterday that the President was given credit for scoring a tremendous victory in the House of Representatives in connection with the problem which the Senator has just mentioned, namely, the advancement of the welfare of the people of all parts of the Nation. I hear many people on both sides of the political fence talk about States rights, and that the unemployment problem should be handled by the States.

I ask the Senator from Michigan how, in good common sense, how, in good conscience, the President can ask Congress to support a program to help other nations, when he must know how important it is to help unfortunate people at home.

I have been before those people. A 29-year-old father of two children has walked up to me and said, "I need a job. You get me a job." I did not know where to get him a job. He said, "When I was a child, I stole. I have tried to live a good life since that time. But I have a wife and two children. I am 3 months behind in my house payments and 2 months behind on my car payments. My unemployment compensation has expired. Either you get me a job or I will steal again."

I do not know how the President can expect Congress to vote for foreign aid funds if we refuse to help our people at home, and, frankly, I shall refuse to do so. This is not a matter of selfishness; it is purely a matter of survival.

I listened to the President's message, in which he spoke about fiscal responsibility. Five million unemployed does not indicate fiscal responsibility. It represents 5 million persons who cannot pay taxes to help balance the budget.

I am confident that the Senator from Michigan, like myself, when we heard the President's message, was hopeful, as I was, that we were entering a period of high prosperity and a reduction of unemployment.

The fact is that in Indiana thousands of persons are still out of work. I was visiting in my State last weekend. Everyone at home is yelling for help—not only the unemployed, but the owners of small grocery stores and drug stores also want help.

I do not say this is exclusively the responsibility of the Federal Government, but I say that Congress will have to find ways to provide relief. Something must be done to help the people who are unable to take care of themselves.

Unemployment compensation is not the ultimate answer. I should like to see the show get back on the road. I should like to see people live as they once lived. I should like to see people go back to work, and not be allowed to starve.

If 5 million people continue to be unemployed, if there should be another recession—and there is no guarantee that the economy is not headed that way—and if a popular demagogue should arise, there would be great danger.

What is here proposed may be the greatest investment which the United States can make for the benefit of its own people. I am very happy that the Senator from Michigan is continuing his great fight.

Mr. McNAMARA. I thank the Senator from Indiana. I am somewhat alarmed by what he has said. He stated that if he had to make a decision as to whether to provide funds to help our own people in this emergency or to provide funds for the foreign aid program, the mutual security program, he would oppose the expenditure of funds for mutual aid because of the unemployment situation at home. He alarms me when he makes that statement.

Mr. HARTKE. I favor helping people overseas, but whenever the President asks Congress to decide as between the people at home and the people overseas, I, in good conscience, cannot desert the people at home. That is all I am saying.

Mr. McNAMARA. My concern or alarm is that perhaps we are not evaluating the matter properly. Certainly we had better be concerned with the unemployed people at home. But when we consider a matter such as mutual security, I think it must be considered by itself. We must consider what its benefit will be, not with respect to a portion of the people in our own economy, but with respect to the overall good.

I hope the Senator from Indiana will reserve his final decision on how he will vote on mutual security, because I am alarmed by his coming to such a conclusion rapidly under these circumstances.

I like his enthusiasm for the program which is now under consideration. I dislike to see anything which will dampen it. Nevertheless, I hope he will reserve his final judgment on mutual security until he hears from the committee and the Administration.

Mr. NEUBERGER. Mr. President, will the Senator yield?

Mr. McNAMARA. I yield.

Mr. NEUBERGER. The statement just made by the Senator from Michigan is, I think, characteristic of his statesmanship and political courage. In my opinion, the easiest thing we could do would be to say that we will oppose foreign aid because some necessary and needed program at home has been sacrificed. That happens all the time. Yet if we carried such a philosophy to its logical conclusion, we could say that we would not vote funds for 50 jet fighter planes because streets had not been paved in front of our homes or because hospitals were needed in certain communities of our States. All of us know that there are compelling, urgent human needs at home which are not being met; and I think that is a tragedy and a disgrace.

But I always have approved of the position taken by the Senator from Michigan, who is advocating and trying to take care of the needs at home. He has never tried to equate the urgent and compelling demands in our own country with what we must do to defend the free world overseas. I repeat: I think that is characteristic of the Senator from Michigan.

I am afraid that probably the most ready thing to do, politically, is to go home and say to our constituents, "If it were not for the foreign aid program, you could have a new school on the corner; you could have a scholarship for every student you want to send to college; you could have a 4-lane highway through every county; you could have a new hospital in every community;" and so forth. That probably is true. But it also might be true that nuclear bombs could be falling on the new schools, hospitals, and highways.

While we do not like to have the resources of the United States spent upon undertakings overseas, we also realize that the United States and the rest of the free world must be defended. So I commend the Senator from Michigan for the statesmanlike attitude he takes in this rather difficult situation.

Mr. McNAMARA. I thank the Senator from Oregon for his generous statement. I do not think I am deserving of the compliment in the words in which he has phrased it. I think what confronts us is one problem. The problem is not divisible to the degree which he has indicated.

We are concerned with the economy of the people of the Nation, and we are concerned with the security and defense of the Nation. What is being sought by the bill under consideration relates to both those programs.

The simple fact is that the United States is wealthy enough to take care of both categories, and we must take care of both. I do not look upon the position I am taking as a display of political courage; I think it is a recognition of conditions as they exist today.

Mr. NEUBERGER. If we do not take care of both categories——

Mr. McNAMARA. God help us.

Mr. NEUBERGER. I could not do better than duplicate the words of the Senator from Michigan.

Mr. McNAMARA. I thank the Senator from Oregon.

Mr. President, we have fought for water reclamation and public power projects for underdeveloped sections of the Nation. By the enactment of these measures, the standard of living has been vastly increased for the people in these regions.

When employment in Michigan was high—when auto production was soaring—our taxes helped build these vital projects in other areas. The same is true of the taxes collected in Pennsylvania, Massachusetts, Minnesota, and other States which now bear the brunt of the industrial recession.

We were delighted to do this. We were proud to do this. What was accomplished in the Tennessee Valley was as much a mark of glory for us as it was for the valley residents. The same is true of the vast projects in our Western States.

These great efforts were not doles. They were living proof that America is an indivisible Union of States. By helping our neighbor we were, in truth, helping ourselves.

I have made no effort in the past to conceal my dismay at the callous attitudes this administration has displayed. I am shocked that their attack on the amendment which we offer is to label it as a dole.

But this Congress, I hope, is not of similar mind. We enjoy our strength because of a tremendous vote of confidence we received last November.

This was not a mandate to ignore the needs of our country. It was in appreciation of past leadership, and a mandate to continue it.

We are here to lead; to offer and enact solutions that have been ignored or belittled by the administration.

This brings me to another argument that will be offered here today. We will be told that the President will not sign such an amendment as we propose.

We will be told that if we send him such a bill, it will be vetoed and those now drawing benefits will be cut off from help.

Let me go to the first point. I cannot conceive of a less relevant point than the threat of a Presidential veto. We have our job to do. It is rare when our opinion is sought as to what Presidential proposals are acceptable.

The opponents of this amendment will make a great "hearts-and-flowers" appeal for those who will be cut off if we do not rush the House version through by April 1. We are concerned for them, too, but we are equally concerned about the 90 percent of the unemployed who will be ignored completely if the House version passes.

I know the Senate has been working hard, and is anxious to get away for the Easter recess beginning Thursday.

But, Mr. President, I, for one, am willing to stay in this Chamber as long as is necessary in order to have the Senate pass a bill which will be really meaningful in this area.

Mr. MORSE. Mr. President, will the Senator from Michigan yield to me?

The PRESIDING OFFICER (Mr. McCARTHY in the chair). Does the Senator from Michigan yield to the Senator from Oregon?

Mr. McNAMARA. I yield.

Mr. MORSE. As the Senator from Michigan knows, until this moment I have not been able to participate in the debate on this measure, because of the fact that in the Senate Committee on Labor and Public Welfare we have been in almost continuous session in connection with writing up the so-called Kennedy-Ervin labor reform bill. We finished it just a few minutes ago; and, by the overwhelming vote of the Committee, under the leadership of the able Senator from Massachusetts [Mr. KENNEDY], we voted to report that bill to the Senate.

However, I would not want this RECORD to close without saying a word of endorsement of the position taken by the Senator from Michigan in support of his amendment. I wish to commend him for the vision and the leadership he has displayed in connection with this unemployment-insurance-benefit bill. I think each Senator is able to see very clearly the decision he is called upon to make on this issue. The rollcall vote will be very significant. I am sure that the people of the Nation will recognize it as one of the key votes of this session.

I desire to state that I am sick at heart over the action the Senate took the other evening on the depressed-areas bill. I was very disappointed that the Senate would pass that very-much-needed bill by a majority of only 49 to 46. The unanswerable record which was made in support of the needs of the communities of the Nation which are in a depressed situation, and which have on their municipal doorsteps the problem of what to do with the thousands and thousands of unemployed in the many metropolitan, small-town, and rural areas of the country called for a much larger majority vote.

Here, again in respect to the pending amendment we are confronted with the same question, it seems to me, in so far as the basic issue is concerned. The

simple questions which are put to each of us in connection with the two bills are these: Are there depressed areas? Are there unemployed? Does the evidence which has been submitted to the Senate show clearly that present depressed areas will continue for some time in the future to be depressed? Does the record on this bill show that the several million of those who presently are unemployed will continue to be unemployed for some time in the future?

Mr. President, after we dispose of this measure today, I intend to make a major speech on the subject of the economic condition of the Nation at the present time. I shall not paint a happy picture or a bright picture, because the facts will not warrant it.

Despite all the propaganda of this Republican administration, as a Democrat I do not propose to join the administration in misleading the American people in regard to the economic situation which confronts them. As a Democrat, I do not intend to join the administration in doing the injustice which it proposes to continue to visit upon the millions of unemployed in this country, and in repeating its practice of passing the buck to the States.

This problem has become a national one; and in connection with it there is a national responsibility, as is recognized by the Senator from Michigan [Mr. McNAMARA] by way of the amendment he has submitted.

Mr. President, I intend to fulfill what I consider to be my national responsibility in the Senate. So I shall support the amendment of the Senator from Michigan; and I shall continue to criticize the leadership of the Democratic Party if that leadership continues to support the buck-passing policy of the Eisenhower administration in connection with the great humanitarian issues confronting the people of the Nation. In fact, the Democratic leadership of my party on too many issues seems to be the advance political agents of this Republican administration. The metooism of our Democratic leadership on too many Republican unsound proposals is becoming sickening to many Democrats.

Those who now are unemployed are entitled to the benefits the Senator from Michigan proposes to have them receive by means of his amendment.

Mr. President, as a liberal and as one who believes in enlightened capitalism, I also believe that the merchants on the main streets of America are entitled to the support which the Senator from Michigan seeks to give them.

I wish to say that any Democratic Senators who vote against the amendment of the Senator from Michigan will be voting against the small businessmen of the Nation who need the economic stabilizing benefits of unemployment insurance benefits, because there are many depressed areas in which the small businessmen on the main streets of the municipalities cannot write any more figures on their cuffs. They have granted all the credit their cuffs will permit them to grant; and they are entitled to the economic stabilization and the other business benefits which will flow from the amendment of the Senator from Michigan [Mr. McNAMARA]. So I am proud to support it.

Mr. McNAMARA. Mr. President, I thank the Senator from Oregon for so vigorously calling attention to certain matters to which the rest of us have not given sufficient consideration, and also for pointing out what this amendment will do in aiding the entire economy, including the businessmen to whom he has referred. I am certainly very happy to have his comments made a part of the RECORD.

Mr. President, I believe it would be helpful for us to think about what Easter Sunday is going to be like for the 4.7 million unemployed, if we fail to take the necessary action.

Several of the House spokesmen, in the course of their remarks in support of House bill 5640, expressed a fervent hope that the Senate would make its version a realistic and humanitarian answer to the problem of unemployment.

I shall leave to my colleagues on the Finance Committee who share our view, the explanation of why they voted this measure onto the floor in the hope that we would make it a bill with solid content—different from the token gesture which it now is.

I have taken time to state why we must take this action.

I close with one final observation: This Congress will be called upon to make major decisions during the coming 18 months. We shall decide on measures which will affect the preservation of freedom itself. But we cannot lead abroad if we have not demonstrated our capacity to lead at home. If our system of democratic capitalism is to prevail outside our shores, it must certainly prove itself at home.

I am loath to point out to so many of my distinguished colleagues the role that the Federal Government has played in making that system work to date. To many of my colleagues, the evidence is so overwhelming, and has been so often referred to, as to be trite.

This is not the time to ignore the lessons of our recent domestic history. Today we have—instead—the power to make the point more dramatically apparent.

We must make clear that the golden rule is not the rule of gold.

Mr. RANDOLPH. Mr. President, will the Senator from Michigan yield to me?

The PRESIDING OFFICER (Mr. HART in the chair). Does the Senator from Michigan yield to the Senator from West Virginia?

Mr. McNAMARA. I am very happy to yield to the Senator from West Virginia.

Mr. RANDOLPH. Mr. President, Senate bill 1323, which, in the form of an amendment, is the proposal to which the Senator from Michigan [Mr. McNAMARA] has so ably addressed his remarks, has the cosponsorship of many Members of the Senate; and I believe it important to say that S. 1323 was not hastily considered by those of us cosponsoring it.

Mr. McNAMARA. That is entirely correct.

Mr. RANDOLPH. It was the subject of deliberate study. The compelling remarks which have been made today should at least elicit the most careful thought of the Members of the Senate who perhaps have not given attention to the subject in the way the Senator from Michigan has explained it this afternoon. I commend him; and I join him in supporting the proposed legislation he has so ably advocated. It is a privilege to be associated with him in this effort.

Mr. McNAMARA. I thank the Senator for calling attention to the fact that the proposal was not hastily designed or prepared. Practically all of my staff has been laboring for weeks, and for long hours, I assure my colleagues. The members of my staff worked until late last night, after midnight, to get final figures together, so I could have the most up-to-date available figures from all over the country and make this presentation today.

Mr. GRUENING. Mr. President, will the Senator yield for a brief comment?

Mr. McNAMARA. Yes; I yield to the Senator from Alaska.

Mr. GRUENING. I was much impressed with the sentence in the closing remarks of the very able senior Senator from Michigan when he said:

> We cannot lead abroad if we have not demonstrated our capacity to lead at home.

Does the Senator not think there is a corollary to that statement, namely, that if we have not demonstrated our capacity to take care of our needs at home, we have no right to begin to take care of the needs of others abroad?

Mr. McNAMARA. I think that is true; but I repeat, I am sure this country is well enough, strong enough, wealthy enough, and has the conscience to do both jobs.

Mr. GRUENING. We hope it will at least take care of the folks at home.

Mr. McNAMARA. Amen.

Mr. KEFAUVER. Mr. President, will the Senator yield?

Mr. McNAMARA. I am glad to yield to the Senator from Tennessee.

Mr. KEFAUVER. I wish to join other Senators in congratulating my colleague the Senator from Michigan for his excellent speech on a very carefully prepared amendment, which is certainly deserving of serious consideration on the floor of the Senate.

The Senator from Michigan in his speech has made several statements which reflect his fine qualities of statesmanship and the broad view he has of public affairs. For instance, in one place in his statement he said that what was accomplished in the Tennessee Valley was as much a mark of glory for us as it was for the valley residents, and the same is true of the vast projects in our Western States.

The Senator from Michigan always looks at matters from the viewpoint of how they affect the Nation as a whole, realizing that unless our economic policies and economic conditions are healthy in every area of the country, we cannot have an entirely healthy nation. I commend the Senator from Michigan.

Mr. McNAMARA. I thank my distinguished colleague for his very kind remarks and his contribution to the dis-

cussion of the substitute we are attempting to have adopted in the Senate today as an amendment of the bill which was reported by the committee.

Mr. President, I yield the floor.

PRICES AND WAGES IN THE STEEL INDUSTRY

Mr. KEFAUVER. Mr. President, a most timely and vital event has just taken place at the White House. I should like to read into the RECORD a wire service dispatch telling of this event, and follow it with a few pertinent remarks. The dispatch reads:

President called on labor and management today to settle the steel wage issue on a basis that would not boost the price of steel.

President Eisenhower was asked at his news conference if the Government can do anything to prevent a steel strike.

The President replied it is strictly the policy of his administration to keep outside the business of collective bargaining. Eisenhower added vigorously, however, that here is the place where action will determine if the United States is to continue to go ahead economically and to avoid inflation. Here is the place, he said, for labor and management to show their statesmanship and resolve differences without any advance in the price of the commodity.

Eisenhower said that while his administration does not intend to interfere in the collective bargaining processes it must never be forgotten that the public has to pay if price increases result from these negotiations.

The President said that because the public is affected he is not going to stand silent and, like Pontius Pilate, wash his hands and ignore the matter. Eisenhower repeated emphatically that there should be no settlement that compels steel prices to go up.

Mr. President, I have just heard that the President of the United States at his press conference this morning called upon management and labor in the big steel industry to show their statesmanship and resolve differences in the upcoming wage talks without any advance in the price of steel.

I am delighted to hear that the President has decided to bring to bear on this most serious matter the full weight of his office as Chief Executive of our Nation.

As my colleagues know, only a few weeks ago I called upon David McDonald, president of the Steelworkers Union, and upon Roger Blough, chairman of the board of United States Steel, to make a real effort to stave off an inflationary boost in the price of steel.

My suggestion that the steelworkers limit their wage demands to the increase in productivity was met with silence from Mr. Blough and with an intemperate and unsatisfactory retort from Mr. McDonald.

The Antitrust and Monopoly Subcommittee, of which I am chairman, has been hearing testimony for 2 years now on the subject of administered prices. The big steel industry, it has been determined in these hearings, is a giant which sets the pace for rising prices.

When steel prices go up, the prices of almost everything the consumer uses go up.

What the President of the United States has done today is what I did, in equal seriousness, weeks ago. I hope no one suggests that the President keep his nose out of this important business, because, as I said, then, the price of steel is not just Dave McDonald's business, or Roger Blough's business—it, is the business of the people. I said then that we cannot afford another merry-go-round of price and wage inflation. The President has now said the same thing.

We both have called upon labor and management in this huge bellwether of our industry and economy to show some statesmanship. I think the request is reasonable. I think the responsibility for any more inflation in our economy will fall directly on them if they do not heed these earnest pleas.

Mr. MORSE. Mr. President, will the Senator yield?

Mr. KEFAUVER. I yield, very happily.

Mr. MORSE. Before I ask my questions, I commend the Senator from Tennessee for the fine leadership he has given the Senate in recent years in connection with his Antitrust and Monopoly Subcommittee work. I think he has done well to point out to both management and labor that they have responsibilities to avoid inflation.

I should like to have the Senator understand that my question is not subject at all to the interpretation that I would favor a wage increase in the steel industry at the present time, because I do not know what the facts are. I would be somewhat surprised if the wages of the steelworkers have kept up with the changes in the cost of living. Of course, in a time of economic emergency, when there may be a threat of inflation, labor, too, has the obligation to make sacrifices in the interest of a stable economy. But I should like to put this question to the Senator: Does his subcommittee have any evidence that at any time during the past 6 years any wage increase granted the steelworkers of America justified any increase in the cost of steel?

Mr. KEFAUVER. Our subcommittee has, in its hearings, gone into the price increases and into the wage increases. I would have to have before me the statistics relating to the amount of the wage increase and price increase each year in order to give a specific answer to the question of the Senator from Oregon.

I think what happened in August of last year might be fairly typical. At that time, aside from any increase in the productivity of labor—and the productivity of labor in the steel industry has been increasing substantially—there was a wage increase which, according to management, would have added to the cost of manufactured steel about $2.50 a ton. According to the labor figures, the wage increase would have added about $2.15 or $2.25 a ton. According to Gardiner Means, who is a disinterested and able economist, the added cost to the production of steel last year by the wage increase was about $1.75 a ton.

The price, however, was increased $6 a ton, two or three times what the wage increase justified, according to the figures used by almost everyone.

Mr. MORSE. If the Senator will permit an interruption, that is the point I wanted to bring out.

I think the record will show, and I know the Senator has the evidence before his committee, that for the past 6 years, or, for that matter, even longer, there has not been a single wage increase in the steel industry with respect to which the steel companies have not increased the price of steel considerably more than the added cost to the production of steel caused by the wage increase. In other words, the industry has used the wage increases as an opportunity to impose upon the American consumers steel price increases far beyond the cost of the wages increases. Does the Senator dispute that statement?

Mr. KEFAUVER. No. The Senator is correct.

Our analyses of the various price increases show that the steel companies, following the wage increases, increased prices far above what would have been necessary to compensate for the wage increases.

In fairness I wish to point out that if we consider the average profit the steel companies have been accustomed to make, some of the wage increases would have justified some price increases, but not to the extent the prices were increased.

Mr. MORSE. That is the point.

Mr. KEFAUVER. I also desire to point out that I have always been friendly to the American working men and women. I should like to see every workingman receive a good wage. I have been friendly to the cause of the workers. However, I think from their own point of view at the present time, with many thousands of people unemployed in the steel industry, it would perhaps be much better for the workers themselves to forego a few extra cents in wages an hour and limit their demands to the increased productivity, with a viewpoint of bringing more people back to work and getting the economy rolling, so that their fellow workers can be employed.

Furthermore, if we have the same merry-go-round we have had before, a year from now or 6 months from now the small additional amount the wage earner might receive will be washed out by the decreased value of the dollar, as the Senator from Oregon so well knows.

Mr. MORSE. Will the Senator permit one or two more questions? I think this is a vital subject.

Mr. KEFAUVER. I yield further.

Mr. MORSE. Is it not true that the steel industry today is producing at considerably below capacity?

Mr. KEFAUVER. The steel industry at one time last year went down to about 50 percent of capacity.

One remarkable thing—which proves the point about administered prices—is that ordinarily when production of an industry declines, the industry lowers its price in order to obtain more business and bring production up. However, in the face of the operation at 50 or 55 percent of capacity in the steel industry, prices were maintained and were even increased.

At the present time, the steel industry is operating in the neighborhood of 80 percent of capacity, to some extent because there is a feeling in the country and in the industry that there is going to be a steel strike which will close down the mills. Therefore, many manufacturers are buying steel so as to weather the period ahead.

Mr. MORSE. Is it true that there is a demand for steel in excess of the present productive activity of the industry? In other words, could the steel industry sell much more steel than it is now producing?

Mr. KEFAUVER. The steel industry could sell much more steel if the prices were somewhat lowered. We have been losing our foreign markets in steel. Many of the domestic users of steel are turning to other products as substitutes for steel. If there were not a price increase every year, certainly there would be a sufficient demand for steel to keep the plants going at full capacity.

Mr. MORSE. Is it true that the steel industry as a whole has been making more money by producing less steel and selling it at higher prices than it could make if it produced more steel and sold it at more reasonable prices? It is my understanding that if the industry produced more steel and sold it at more reasonable prices, the industry might make as much money and it would help put thousands of men back to work.

Mr. KEFAUVER. It is undoubtedly true that in the steel industry as well as in the other heavy industries such as the automobile industry, there is a break-even point; that is, an industry must have production up to a certain amount in order to break even. Whatever is produced above that point, in an increasing percentage brings more and more profit. I do not know exactly the break-even point in the steel industry, but it is lower than the break-even point in most industries. The fact that the steel industry has been able to operate at 50 or 55 percent of capacity and still make money indicates that the break-even point is somewhere below that percentage figure. The steel industry could make a great deal more money, could give more people employment, and could contribute more to the economy, if it would sell steel at a lower price. In that way the steel industry could produce more steel and operate more nearly at plant capacity, rather than by keeping the prices high and running at a reduced capacity.

Mr. MORSE. I close my questioning of the Senator from Tennessee by saying that I think he has made a valuable contribution in his studies of the steel industry. I hope he and his committee will continue the investigation of conditions in this industry.

I hope the White House will start paying some attention to the production policies of the steel industry, because what we have been confronted with from the steel industry amounts in fact to a species of "highjacking" of our economy.

The steel industry has been underproducing and overcharging, with the result that there has been a very bad effect on the economy as a whole. Whenever we find any major industry—whether it be the steel industry, the oil industry, or any other major industry—having such a tremendous influence on the economy as a whole, it is the duty of Government to step in and to impose those minimum checks necessary to stop that kind of exploitation.

I think action by the President of the United States is long overdue in regard to the steel industry and in regard to making recommendations to the Congress as to what legislation should be enacted in order to prevent the steel industry from following a price, production, and employment program that is disruptive of our economy. In my judgment we have let the steel industry run wild in regard to a price structure that has given it exorbitant profits. It is about time for us to say to the steel industry, "Under a system of enlightened capitalism you have no right to follow principles of cartelism." The policy of underproducing and overcharging is typical of the cartel system. Furthermore let us keep in mind that the steel industry is in fact a highly subsidized industry, I say that because so much of its huge profits come out of the Nation's defense program. Here is an industry that should be regulated by Government in the national interest.

Mr. KEFAUVER. I thank my distinguished colleague from Oregon very much for his contribution to the discussion.

I think his points are indisputably well taken: First, the price of steel is of the greatest possible importance in our economy, in the determination of the question whether we are to have inflation or not.

Second, that at the present time the price of steel is fixed by the conscience of management. It is an administered price. Whether the industry is operating at 80 percent or 50 percent of capacity, the price is fixed, and all steel companies follow the administered price. The present inflation is being led by the cost of steel.

Third, for a long time—since last May, and even before that—many of us have been urging the President to bring together the leaders of the steel industry and the leaders of the United Steel Workers, and appeal to their patriotism, asking each side to make some concessions in order to try to hold down the price increase of last year.

The President stated that he hoped it would be held down, but the great influence of his Office was not brought to bear. I am happy to say, however, that the statement from the White House today shows that the President is more deeply concerned about the subject. I hope this means that he will really place the force and strength of the Office of the Presidency behind the effort to hold down prices, and ask for a reasonableness on both sides, in order that we may stop inflation, and avoid another round of inflation, which will come just as surely as the price of steel is raised, at the end of June or later.

Our hearings on administered prices have shown that steel prices are directly responsible for inflation in our economy. More and more this fact has come to be accepted by a large number of economists, and now the President of the United States has joined this urgent cause. Now is the time for real statesmanship in the industry, if we are to control the destructive inflation which eats up everyone's dollars, including the dollars earned by the steelworkers themselves.

DEATH OF SAMUEL WILDER KING, FORMER DELEGATE IN CONGRESS FROM HAWAII

Mr. GRUENING. Mr. President, it is with great regret and profound sorrow that I have to report the death in Honolulu of Samuel Wilder King, former Delegate from Hawaii in Congress and former Governor of Hawaii.

Samuel Wilder King was a great statesman and a wonderful human being. I got to know him first when I came to Washington in 1934 as the first Director of the newly created Federal agency, the Division of Territories and Island Possessions of the Department of the Interior.

Sam King was shortly thereafter Hawaii's Delegate. I worked closely with him and found him—as all who knew him were bound to find him—able, lovable, public spirited, a charming gentleman, and a devoted public servant. He was already at that time, 25 years ago, profoundly concerned about statehood for Hawaii. Hawaii did not have many problems of concern to the Congress, as did Alaska. Hawaii was an almost self-sufficient, well-governed Territory, economically a going concern. I believe the principal battle in Congress we had in those years was in relation to adequate sugar quotas and perhaps to work to repeal the one discrimination from which Hawaii suffered; namely, its inability to refine all the sugar it produced. There were some other problems in relation to homesteading. Statehood for Hawaii—first-class citizenship for Hawaii's people—was Sam King's great concern.

Sam King was of part Hawaiian origin. In his veins flowed both the blood of his Anglo-Saxon ancestry and his Polynesian forebears: the strain of that great race of navigators who, long befor the coming of the white man, spanned the wide reaches of the Pacific in great canoes, and were appropriately called "Vikings of the Dawn." Sam King spoke the melodious Hawaiian tongue fluently. He had a deep feeling, not merely for his fellow descendants of Polynesian ancestry who constituted the entire population of Hawaii up to the time of the discovery of those islands by Captain Cook and the subsequent coming of the New England missionaries and others, and who have given the Hawaiian Islands their beautiful customs and folkways, their music and dances, their generous use of flowers as shown by that unique Hawaiian bouquet—the flowering lei, which is the symbol of Hawaii's aloha—but he was also keenly sympathetic with the problems of all the diverse racial groups which together constitute the amalgam of races in Hawaii, who, thoroughly

American in their principles, spirit and actions, constitute the finest example of ethnic democracy under the American flag.

Sam King was a graduate of the Naval Academy, I believe in the class of 1913. He had retired from the Navy with the rank of lieutenant commander because he felt that his then slender salary was inadequate to support his splendid family of wife and five children. Immediately after Pearl Harbor, he rejoined the Navy, was promoted to the rank of commander and then to captain, and served with distinction in the Pacific theater of operations. While he was actively aiding in the defense of our Nation he was very understanding of the plight in which the Americans of Japanese descent—the Nisei in Hawaii—found themselves. Wholly aware of their unquestioned patriotism and 100 percent loyalty, and the difficult situation in which they found themselves because of the totally unfounded and unjust suspicion that their loyalty to the American flag might not be absolute, he missed no opportunity to defend them and in the heat of war-aroused passions, was occasionally severely criticized for this proper and gallant attitude so characteristic of him. The outstanding patriotism of those Americans of Japanese descent has been proved in blood beyond peradventure since that time in World War II and in Korea.

Those of us who knew Sam King, were rejoiced when the Eisenhower administration appointed him Governor of Hawaii. He was the first Governor who, through his part Anglo-Saxon and part Polynesian ancestry, was a true representative of the diverse strains which make up the population of Hawaii. He and his wife, Pauline, brought all the grace and charm and warmth of hospitality, which is characteristic of Hawaiians, to Iolani Palace, the seat of the government of Hawaii, and to their official residence in Washington Place. Those who knew him deeply deplored the failure of the Eisenhower administration to reappoint him to the governorship. We greatly mourn his untimely passing. The only consoling aspect of this tragic loss is that Sam King lived to see statehood come to Hawaii—the statehood for which he worked so earnestly and devotedly beginning a quarter of a century ago, and for which he laid the foundation on which his worthy successors as Delegates to Congress—the late Joseph Rider Farrington, his widow, Betty Farrington, and John A. Burns—were able to build until victory was achieved.

The deepest sympathy of all those who knew Sam King and his family will go out to Pauline, his lovely wife, and their five wonderful children. There will be few flowers left growing in Hawaii today; the love of the people of Hawaii will bring them to his bier.

Mr. KEFAUVER. Mr. President, will the Senator yield?

Mr. GRUENING. I yield.

Mr. KEFAUVER. I was shocked to learn this morning of the passing of Samuel Wilder King. I join my colleague from Alaska in paying tribute to his life, his character, and his devotion to public duty.

When I first became a Member of the House of Representatives in 1939, Mr. King was the Delegate from Hawaii. He was very active, and always thoughtful. As has been stated, he worked hard for Hawaiian statehood. He made a great contribution to the thinking of many Members of the House of Representatives on political and economic subjects.

I had the privilege to visit Hawaii when he was there. It was gratifying to find the high esteem in which he was held by his fellow citizens of Hawaii.

Mr. President, it speaks well for the type of representation Hawaii will have in the House of Representatives and in the Senate, now that she has become a State, to look back and think of the outstanding Delegates who have served Hawaii in the House of Representatives. Samuel King was the first one I knew. As I remember, he was succeeded by Joe Farrington, a Republican. Following Joe Farrington's death, his widow succeeded him for a time. Then more recently JOHN A. BURNS has been making an outstanding record in representing the people of Hawaii.

With persons of this kind chosen to represent Hawaii, we can be sure that the people of Hawaii will have a high caliber of representation in the Senate and in the House.

It is my pleasure to know Mrs. King and the other members of the family. I join my colleague in expressing our deep sorrow and sympathy to them.

Mr. CARLSON. Mr. President, I regret very deeply to learn of the death of Sam King. I appreciate very much the splendid statement the Senator from Alaska has made with regard to his service. It was my pleasure to serve with Sam King for many years in the House of Representatives when he was the Delegate from Hawaii. I have known no man who has been a more devoted, able, and consecrated servant of the people than Sam King. He served the people of Hawaii very well indeed. He was a gentleman at all times. He never passed up an opportunity, as the Senator from Alaska has said, to discuss the importance of the Hawaiian Islands and of their need for statehood. That was one of the problems on which he worked constantly. It was my great privilege to be associated with Sam King. I learned to know also Mrs. King and the family, and I, too, extend my sincere sympathy to them.

Mr. KEATING. Mr. President, it was a shock to me to hear of the death of Sam King. I join in all the warm and kind sentiments which have been expressed by the distinguished Senator from Alaska. Sam King had left the House of Representatives when I became a Member. Joe Farrington was the Delegate at the time. However, the work and devoted effort and courage which Sam King had shown in his representation of the people of Hawaii were often the subject of discussion in the cloakroom. His great moral courage during World War II was particularly the subject of comment. He represented the very best of what we have learned to be the outstanding characteristics of the Hawaiian people. His bloodstream was typical of the finest of those Islands.

I join in expressing regret at his passing, and in extending deepest sympathy to his wife and family.

Mr. BRIDGES. Mr. President, I wish to join the distinguished Senator from Alaska [Mr. GRUENING] in paying my tribute to Sam Wilder King, formerly the Delegate to Congress from the Territory of Hawaii, and formerly the Governor of Hawaii. I knew him well, and I valued his friendship. I recognized him as a great public servant, a fine friend, and one whose public service to the Territory he represented and to this country will long be remembered.

Mr. SCOTT. Mr. President, I am one who served in the other body with the late Delegate Samuel Wilder King. I knew him when he was Governor of the Territory of Hawaii. I join with all of his friends who are deeply grieved at his passing. He was an able statesman, a fine executive, and a beloved citizen.

Mr. MURRAY. Mr. President, I wish to join my colleagues in expressing my personal sorrow, and sense of personal loss, at the death of former Governor Samuel Wilder King, of Hawaii. Through long years he and I were closely associated in the fight for statehood for Hawaii. My sorrow at his passing is tempered with satisfaction, at least, over the fact that he lived to see his dream of full equality in our Union of States for his people become reality.

In our long, common effort for enactment of statehood legislation I learned to admire him and to respect him greatly as a man as well as a devoted, dedicated public servant.

I well recall that when last I visited the then Territory of Hawaii, as chairman of the Committee on Interior and Insular Affairs, Governor King was in office, and it was he who came aboard the boat that brought me into beautiful Honolulu. He greeted me on behalf of the people of Hawaii, then immediately on the way to the hotel we plunged into work on Federal legislation for the Territory.

He was a tireless, resourceful worker and battler; the soon-to-be State of Hawaii and the Nation both are the poorer for his passing.

Mr. President, I was the ranking minority member of the Interior and Insular Affairs Committee in the 83d Congress when the nomination by President Eisenhower of Samuel Wilder King to be Governor of Hawaii was reported favorably to the Senate, which confirmed him without a dissenting vote.

I ask unanimous consent that an extract from those hearings appear in the RECORD at this point.

There being no objection, the extract was ordered to be printed in the RECORD, as follows:

STATEMENT OF HON. JOSEPH R. FARRINGTON, DELEGATE IN CONGRESS FROM THE TERRITORY OF HAWAII

Delegate FARRINGTON. Mr. Chairman, I am Joseph R. Farrington, the Delegate to Congress from Hawaii, and I am appearing to recommend prompt action on the confirmation of Mr. King, who has been nominated

to be Governor of the Territory of Hawaii. I think that is especially important, as you have pointed out, because the Legislature of the Territory was convened yesterday for its regular biennial session, and they are anxious to have the new Governor qualified for very obvious reasons.

I do not believe it is necessary for me to make an extended statement about Mr. King, because I think he is personally acquainted with every member of this committee, with the possible exception of one. It is my opinion that he would be the choice of the overwhelming majority for the people of Hawaii. The great popularity of that choice was attested to on Tuesday night, when he returned home to Hawaii, following the announcement Monday of his appointment. He was welcomed by an enormous throng, and with the greatest of enthusiasm. The people of Hawaii believe that Samuel Wilder King is better equipped than any other man in the Territory to meet the unique responsibilities of that office at the present time.

He was born in Hawaii. He graduated from the U.S. Naval Academy after receiving an appointment from the Delegate to Hawaii. After his resignation from the Navy, he was elected to the Board of Supervisors of the City and County of Honolulu, and then in 1934 he was elected as Delegate to Congress, where he served with distinction for a period of 8 years. He served in the Navy during the period of World War II, and since its conclusion he has been a resident of Hawaii, and called upon repeatedly to deal with serious problems confronting the Territory. He is equipped in every respect for the office, and I trust his confirmation will be very prompt.

The CHAIRMAN [Senator Hugh Butler of Nebraska]. His latest assignment, I understand, Mr. Delegate, was as chairman of the constitutional convention.

Delegate FARRINGTON. Yes; he served as chairman of the constitutional convention in 1950, that drafted the constitution of what we hope will soon be the State of Hawaii.

He is also chairman of the Hawaii Statehood Commission at the present time.

The CHAIRMAN. I will say for the record that before taking this matter up and laying aside temporarily the submerged lands case, I conferred with the members of the minority as well as the majority of the committee, and it was by unanimous consent that this action was taken at this time.

Now, are there any questions that anyone wants to ask Mr. Farrington?

Senator BARRETT. I agree wholeheartedly with everything that my good friend, Joe Farrington, said about Mr. King, and I have no questions to ask, Mr. Chairman.

Senator KUCHEL. I have no questions.

The CHAIRMAN. Mr. Cordon?

Senator CORDON. Mr. Chairman, I have known Mr. King for a number of years, and I have been closely associated with him in connection with investigations into Hawaiian statehood matters, I have conferred with him many, many times here, and I know that in Hawaii he is probably better loved than any individual in the islands. I am sure that his appointment will meet with almost universal agreement in all of the islands. He is a competent man in his own right, and he has a background of experience, and I am sure that it is an ideal selection for the high position of Governor of the Hawaiian Territory.

The CHAIRMAN. Senator ANDERSON.

Senator ANDERSON. It was my pleasure to serve in the Congress in the House of Representatives with Sam Wilder King in the 77th Congress. The space in the House Office Building was a little crowded, and they had to make some new offices up on the fifth floor, with four different Representatives moving there. My office was next to the office of Sam Wilder King. I think that I got to know him about as well as almost anyone in the House of Representatives. If there could be a finer selection for Governor of Hawaii than Sam Wilder King, I do not know who he is. I think he is thoroughly representative of all of the people. I say that in order to make sure that we cover the political parties out there, and I say it for this reason, that he served in the Congress at a time when the Democrats were in control of the House, and they naturally had a responsibility for listing the Delegate along on the Democratic side, because it is traditional to list Delegates with the majority party. He served in the Congress and left the Congress without my finding out that he was a Republican. I am happy to say that every contact that I had with him was as fine as the experience could be with an individual. I think he is an extremely qualified person, and he has a lovely family; they are fine folks and they are good citizens, I am sure. I would be very happy to vote for him.

The CHAIRMAN. That is a splendid statement from Senator ANDERSON.

I will request, Mr. Farrington, that you file the biographical sketch with the reporter.

(The document referred to is as follows:)

"BIOGRAPHICAL DATA ON SAMUEL WILDER KING

"Samuel Wilder King, a candidate for the Presidential appointment to the governorship of Hawaii, has long and with distinction served his country, his native community, and his party.

"As a naval officer he saw service through two world wars. As a public official he was elected and reelected to four successive terms as Delegate to Congress from Hawaii. As a veteran Republican Party member and official, he served his party in capacities ranging from precinct club worker to central committee chairman.

"Samuel Wilder King is a native son of Hawaii. He was born in Honolulu on December 17, 1886. He attended St. Louis School, the old Fort Street School, and Honolulu High School, now McKinley High School.

"He was appointed to the U.S. Naval Academy by Delegate Jonah Kuhio Kalanianaole in June 1905. He graduated in 1910.

"He married Pauline Evans, of Honolulu, on March 18, 1912. Two daughters and three sons were born of this marriage.

"Family data

"His father was Capt. James A. King, who came to Hawaii in the 1860's to become a pioneer in the interisland shipping industry. Later, from 1893 to 1898, James A. King served as Minister of the Interior in the then Republic of Hawaii.

"His mother was Charlotte Holmes Davis King, the descendant of a distinguished part-Hawaiian family founded by her great grandfather, Oliver Holmes, who came from Plymouth, Mass., and settled on Oahu in 1793. Oliver Holmes married Mahi, the daughter of a high chief of the island of Oahu, and, for a brief period, under Kamehameha I, served as governor of that island.

"Naval record

"Upon his graduation from Annapolis, Samuel Wilder King served for 2 years with the Pacific Fleet as a junior watch officer aboard the old U.S.S. *South Dakota*. The next 4½ years, from 1912 to 1916, were spent with the Asiatic Fleet as watch officer on U.S.S. *Cincinnati;* executive officer of U.S.S. *Villalobos;* and commanding officer, while still an ensign, of the U.S.S. *Samar*. The latter two vessels were gunboats on the Yangste River patrol, where he served for 30 months.

"World War I found him a department head on U.S.S. *St. Louis,* on escort duty in the North Atlantic, convoying troops and cargoes to France and England. After service on the staff of Adm. Hilary P. Jones, war's end saw him in command of an armed yacht, U.S.S. *Harvard,* in European waters and, later, in command of the U.S.S. *Aphrodite,* in English and German waters during the armistice negotiations.

"A brief tour of shore duty followed and he returned to the 14th Naval District, Pearl Harbor, as district intelligence and morale officer. When the Navy participated in the South Seas exploring expedition of 1923–24 to all the islands northwest of Hawaii from Nihoa to Midway, to Wake Island and the islands southwest from Palmyra to Jarvis, Samuel Wilder King was in command.

"On December 31, 1924, he resigned his Regular Navy commission, remaining in the Naval Reserve until 1928, with the rank of lieutenant commander, and engaged in the real-estate business in Honolulu.

"The interval to World War II was devoted to public and civil service.

"In 1942 Mr. King had already been nominated to his fifth term as Republican Delegate to Congress. He withdrew from the campaign after the primary election voluntarily, returning to active Navy service at the age of 56 with the rank of lieutenant commander. He requested and was granted a tour of duty in the Pacific combat area.

"World War II record

"As Lieutenant Commander King he served on the staff of the commanding general, Samoan Defense Area, when that sector was still in the front line. He helped occupy and prepare advance bases beyond Funafuti in preparation for the Gilbert Islands occupation. He served briefly at Majuro Island in the Marshalls and then participated in the attack on Eniwetok Atoll where he remained for a period as port director. Later he was in command of the port director's unit in the attack on Saipan, and remained there to become commander, naval base, under Major General Jarman as island commander.

"For his services at Saipan, Mr. King was awarded the Legion of Merit and promoted from commander to captain, United States Naval Reserve. He stood by to assume command of all five ports of debarkation as overall port director in the projected invasion of Kyushu Island. He remained on active duty voluntarily to serve as port director at Wakanoura, Japan, the port of debarkation of the Sixth Army, which served as the occupation force for Osaka, Kobe, Kyoto, and Nagoya.

"He returned to his home in Honolulu in December 1945, and was retired with the rank of captain as of February 1946.

"Civic record

"As a civilian between two World Wars, Samuel Wilder King found time to devote to many civic interests. One of these stemmed from the conviction that if the political party system were to persevere and prosper it must be nourished at its roots, the precinct club. Sam King for 30 years has been a member and active worker in his, the first precinct, fifth election district.

"With his military record, it was natural that the welfare and affairs of veterans should compel his time and personal interest. His membership in the Veterans of Foreign Wars dates back 30 years. He is a past department commander, VFW.

"As a member of the American Legion, he is a charter member of Honolulu Post No. 1, and a past department vice commander.

"He is a member of the Honolulu Realty Board and has served that body as president.

"He is a member and past president of the Hawaiian Civic Club; member, Alii Chapter, Hui Kamehameha, a Hawaiian fraternal organization; and member and past president, Hawaiian Historical Society.

"Public record

"Samuel Wilder King's record of service in varied appointive and elective positions continues as an impressive and notable one.

"He was a member and executive secretary of the Territorial entertainment committee to receive and entertain the U.S. Fleet on its first visit to Hawaii in 1925.

"He was named to the Territorial tax commission that reorganized the tax system and established the taxation maps bureau to simplify identification of real property.

"In April 1932 he was appointed to fill a vacancy on the Board of Supervisors of the City and County of Honolulu.

"He ran for election as supervisor at the 1932 election and was 1 of 2 Republican members to survive the Democratic 'landslide' of that year.

"Gov. Lawrence M. Judd named him as one of the three home-rule commissioners who proceeded to Washington to oppose the passage of the Rankin bill, which would have removed residential requirements for appointment of the Territorial governor, secretary, and justices and judges of the Territorial courts, thus paving the way for 'carpetbag' appointments. The commission was successful in its mission; it convinced the administration that the legislation was both unnecessary and repugnant to the principle of home rule and it was withdrawn from consideration.

"In 1934 Sam King ran for Delegate to Congress against the Democratic incumbent and won the election.

"He was reelected in 1936, 1938, and 1940. In 1942, in the primary election for Delegate, Mr. King received 3½ votes to 1 for his Democratic opponent. It was at this point that he made his decision to give up his congressional seat to return to active duty with the Navy. Upon his return to civil life in 1946, as a member of the Governor's emergency housing committee, he aided in the development of a program that greatly relieved the acute housing shortage.

"Long a leader, in Congress and in private life, in the Hawaii statehood movement, Mr. King has served as a member of the Hawaii Statehood Commission since its creation in 1947, and as its chairman since 1949.

"For 1 year he served as chairman of the Hawaiian Homes Commission, a Territorial agency for the settlement of Hawaiians on public lands. During his tenure there was worked out a major program for the development of a pastoral project on the island of Hawaii.

"Political record

"Sam King has been an active Republican Party worker for three decades. For one of these he functioned at the precinct-club level, an ideal training site for one who was to devote so much of his life to party organization and elective public service. He rose steadily in the party councils as shown by the successive party posts he held.

"In 1934, before becoming a candidate for Delegate to Congress, he had served as chairman of the Republican Territorial central committee. He had served as chairman of the Republican preconvention platform committee and of the convention resolutions and platform committee on several occasions.

"He was chairman of the 1948 Republican Territorial central convention and keynote speaker of the 1950 convention.

"He was a delegate to the Republican National Convention of 1936, 1940, 1948, and 1952; serving as chairman of the delegations from Hawaii in 1940 and 1952.

"The constitutional convention, authorized by the Territorial legislature to frame a State constitution for Hawaii with 63 elected delegates, gave Mr. King an opportunity for further distinguished service to his homeland.

"He was the only constitutional convention delegate running at large on Oahu elected outright at the primary. When the assembly convened for its historic purpose, Mr. King became the unanimous choice of the delegates for president of the constitutional convention.

"It is worthy of note that the majority report of the U.S. Senate Committee on Interior and Insular Affairs, in discussing the State constitution, said:

" 'The committee feels that this constitution speaks for itself * * * as an example of the political maturity of the people of Hawaii.' "

Senator LONG. I move Mr. King be confirmed.

Senator KUCHEL. Seconded.

The CHAIRMAN. The motion is made and seconded that the nomination be reported favorably to the Senate.

I will say for the benefit of those present that Mr. SMATHERS is on his way here. I have the proxies for some others who are not present. However, I believe when all members are heard from the report will be unanimous.

(NOTE.—Senators Eugene D. Millikin, George W. Malone, Arthur V. Watkins, Henry C. Dworshak, James E. Murray, and George A. Smathers subsequently advised the chairman they desired the RECORD to show that they joined in making the vote of the committee unanimous in favor of the nomination of Mr. Samuel Wilder King, of Hawaii, to be Governor of the Territory of Hawaii.)

Mr. BARTLETT. Mr. President, I should like to be counted among those who on the floor of the Senate this day have paid tribute to Samuel Wilder King. The news of his death came as a shock, and I, for one, received it with a feeling of personal loss. I had known him for almost 20 years.

Sam King was a great son of a great island people. His dedication to his beloved Hawaiian Islands was complete, and he served them well in his many years in public office. Sam King was both a Delegate in Congress and the Governor of the Territory of Hawaii, and he sought always to change the political status of the islands from territorialism to statehood.

He served the people of the Nation well, too, during his distinguished career in the U.S. Navy.

My deep personal sympathy goes to his family. We all will miss Sam King.

THE LABOR REFORM BILL

Mr. GOLDWATER. Mr. President, today the Committee on Labor and Public Welfare finished its work of more than a month on the so-called labor reform bill and voted to report the bill to the Senate.
